The consolidated program at Fort Rucker would be conducted entirely in helicopters and in helicopter simulators.

WHAT IS THE ANALYTICAL BASIS OF THE UHPT CONSOLIDATION PROPOSAL?

The Conferees on the FY 1977 Defense Appropriations Bill directed a study and report on UHPT consolidation and alternative ways of conducting UHPT. The study began in September 1976 and was completed in March 1977. The study method included analysis of data provided by the Services, field visits, and extensive discussions with responsible training and financial experts of the Services. The Services made formal comments on the draft report of the study findings; their comments were either accepted and integrated in the report or included in the report along with the reasons why they were not accepted. The report, submitted to the Congress in April 1977, provides a comprehensive explanation of all aspects of the issue and fully supports the proposal to consolidate UHPT.

WOULD TRAINING IN THE CONSOLIDATED COURSE SATISFY THE REQUIREMENTS OF EACH OF THE SERVICES?

Air Force student helicopter pilots have been trained by the Army since 1970. Air Force officials have repeatedly stated that they are well satisfied with the quality of the training in the Army program.

The Secretary of the Navy recently requested that Navy and Marine Corps students be provided additional flying hours and simulator hours in the consolidated course. The Deputy Secretary of Defense, in order to assure that Navy and Marine Corps helicopter pilots receive the training those Services deem necessary, has agreed to provide the additional training. Navy and Marine students will therefore be trained in a "195/50" syllabus (195 helicopter flying hours, 50 flight simulator hours) rather than the 175/40 syllabus which will be used for Army and Air Force students. The following table compares training in the 195/50 syllabus in the consolidated UHPT program with training in the current Navy UHPT program.

	Consolidated program (195/50)	Current Navy program Fixed-wing	Current Navy program Helicopter
Flying hours:			
Fixed Wing	----	91.0	----
Primary helicopter	50	----	34.5
Advanced helicopter	145	----	65.5
Total	195	91.0	100.0
Simulator hours:			
Fixed-wing	----	31.2	----
Helicopter	50	----	24.0

In the consolidated program, as the table shows, Navy and Marine Corps students will receive, as compared to the current Navy training:

More total flying hours (195 vs. 191).

Almost twice as many helicopter flying hours (195 vs. 100).

More than twice as many flying hours in the advanced training helicopter, the UH–1 (145 vs. 65.5).

Twice as many helicopter simulator hours (50 vs. 24). In addition, the simulators used by the Army are high-capability teaching devices; the Navy's are cockpit procedures trainers of limited capability.

Given these facts, Navy and Marine Corps graduates of the consolidated program would have received considerably more intensive helicopter instruction than they would if they had taken the present Navy UHPT course.

WHAT PROVISIONS ARE BUILT INTO THE CONSOLIDATED UHPT PROGRAM TO INSURE THAT THE DIFFERING TRAINING REQUIREMENTS OF EACH SERVICE ARE MET?

First, it should be understood that all UHPT programs, whether consolidated or separate Service programs, have the common objective of producing helicopter pilots with basic flying skills. The Navy UHPT program does not produce qualified ASW pilots, and, in fact, has relatively little training directly related to flying at sea; the Army program, similarly, does not turn out qualified helicopter gunship pilots. Training in specific operational aircraft for specific missions is provided in advanced flight training conducted by the parent Service after completion of UHPT. This training, which is particularly oriented toward the missions of the parent Service, will not be affected by the proposal to consolidate UHPT.

However, full allowance is made in the consolidated UHPT program for meeting Service-unique training requirements. Within the consolidated syllabus, some 30 flying hours (50 for Navy and Marine students) and a portion of the simulator hours will be reserved for *Service-unique training*. Each of the Services will designate the type of training to be conducted in these segments, and military instructor pilots of the parent Service will conduct the training. During its Service-unique segment, the Navy, for example, will have ample opportunity to provide its students at least as much carrier landing training (Fort Rucker is only about an hour from Pensacola, where Navy's training carrier is based) as it now provides its students. Similarly, instrument flying, tactical training or any other subject can receive additional emphasis in the Service-unique segment.

In addition to designing its own Service-unique segment, each Service will have the opportunity to influence the consolidated program through its instructor pilots and liaison personnel stationed at Fort Rucker. A task group, with representatives from each Service, has been established by the Department of Defense and is reviewing the consolidated syllabus. Mutual agreement has been reached on the core syllabus, and the details of the Service-unique segments are being worked out.

WILL THE ELIMINATION OF FIXED-WING TRAINING FROM UHPT FOR NAVY/MARINE STUDENTS, AS WILL OCCUR IF UHPT IS CONSOLIDATED, BE HARMFUL?

Navy and Marine Corps graduates from the all-helicopter UHPT course will have had 195 flying hours in helicopters as compared to 100 in the Navy course. They therefore will have received considerably more intensive training as helicopter pilots. Fixed-wing training, in itself, is not necessary to produce helicopter pilots.

Generally, because of the very high cost of flight training, all pilots should continue to serve in one aircraft community unless there is a compelling requirement for some portion to be cross-trained into other types of aircraft. Certainly, all Navy and Marine Corps UHPT graduates should continue as

helicopter pilots during the four or five years of their initial obligated service. At the end of that period, about half of these pilots can be expected to leave the service. Of the remainder, some will require cross-training, either to fill a deficit in a fixed-wing aircraft community or to occupy the relatively few positions which require dual qualification. The consolidation proposal recognizes this cross-training requirement and allows for its funding beginning in FY 1981.

WHAT SAVINGS ARE AVAILABLE THROUGH UHPT CONSOLIDATION?

Consolidation would reduce funding requirements for UHPT by more than $90 million over the five-year period FY 1978–82. Manpower requirements would be reduced by over 1,900 military and 250 civilian spaces in each year.

The five-year funding savings shown above are somewhat smaller than the savings ($103.8 million) shown in the DoD Report on UHPT Consolidation. Subsequent to the submission of the Report to the Congress, the Secretary of the Navy requested that Navy and Marine Corps students receive additional training time (the 195/50 syllabus rather than the 175/40 syllabus). Based on the statement of the Secretary of the Navy, the Chief of Naval Operations, and the Commandant of the Marine Corps that the 195/50 syllabus would completely satisfy Navy and Marine Corps UHPT requirements, the Deputy Secretary of Defense decided to provide the additional 20 flying hours and 10 simulator hours to Navy and Marine Corps students.

The cost of this additional training reduces the five-year savings to a level somewhat greater than $90 million. However, these savings are still so substantial that they do not detract from the validity of the consolidation proposal, particularly since the additional cost would pay for training which would provide full satisfaction of Navy and Marine Corps UHPT requirements.

HOW ARE SUCH LARGE SAVINGS POSSIBLE?

Without consolidation, Navy would require about $30 million in investment funding to continue its separate program, as shown below:

Procurement:	*million*
T–34C aircraft to replace aging T–28's	$23.0
Simulator	3.0
Construction:	
Outlying field and simulator building	3.2
Total	29.2

Army requires no investment funding to undertake the consolidated UHPT mission. Fort Rucker is operating well below its capacity and can assume the additional student load without any new facility construction. Ample numbers of TH–55 primary trainers are on hand or in storage; sufficient UH–1 aircraft can be transferred from the Navy UHPT program and from elsewhere in the Army inventory.

Consolidation would save over $60 million in military personnel costs and operating funds over the period FY 1978–82. Consolidation takes advantage of economies of scale which are available in a single program but not in two separate ones. Fort Rucker has more than enough capacity for the consolidated student loads. Consolidation eliminates most of the overhead costs which are inherent in the separate Navy program.

The large personnel reductions are made possible by economies of scale and by the fact that Fort Rucker makes efficient use of resources, including greater use of contracts—for aircraft maintenance, refueling, and instruction—than the Navy program.

DO THESE SAVINGS INVOLVE A BASE RELEASE?

No savings from bare release actions are included in the consolidation savings; the savings are entirely the result of phasing out the separate Navy program and consolidating all UHPT students and resources into a single program.

ARE THE CLAIMED SAVINGS GENUINE?

The savings were derived (1) from data submitted by the Navy on the resources required for its separate UHPT program and (2) from Army estimates of the additional costs it would incur in training the students who would otherwise be trained by the Navy. Appropriate adjustments were made to these resources to account for other relevant factors. All pertinent resource data are included in the DOD Report on UMPT Consolidation submitted to the Congress.

The estimated savings, as shown in the Report, were analyzed and agreed to by senior financial officials of the Department of the Navy. One minor program question remains to be decided which would affect cost; there is agreement, however, about the resource implications (less than $1 million a year) of this issue, which involves the extent of contract vs. uniformed instruction for a familiarization flying segment. The Army states that it can conduct the consolidated program with the additional resources allotted to it in the consolidation plan.

The General Accounting Office also reviewed the DOD Report on UHPT Consolidation and the source data used in the resource analysis. In its report to the Congress, GAO verified the savings as stated by DOD and, in fact, indicated that the savings were somewhat underestimated.

Based on the method of computation, the intensive review of the data, and the GAO's verification of the validity of the claimed savings, there is no doubt that the savings can be realized through UHPT consolidation.

WHAT IS THE DEGREE OF SUPPORT WITHIN THE DEPARTMENT OF DEFENSE FOR UHPT CONSOLIDATION?

The Secretary of Defense, the Deputy Secretary of Defense and the Secretaries of the three Military Departments have all expressed strong support for consolidation. The Army is fully prepared to undertake the increased training mission with the resources provided. The Secretary of the Navy, the Chief of Naval Operations, and the Commandant of the Marine Corps have stated that the 195/50 syllabus, which Navy and Marine Corps students will receive, would completely satisfy Navy and Marine Corps UHPT requirements.

The proposal for UHPT consolidation also has support outside the Department of Defense. The General Accounting Office reviewed the DOD Report on UHPT Consolidation; the Comptroller General of the United States, in a report to the Congress, has recommended that the Congress approve consolidation. The Defense Manpower Commission expressed its strong support for the concept of UHPT consolidation. In addition, the House Appropriations Committee, after very extensive hearings on the issue during the period 7–9 June 1977, approved the consolidation proposal. The full House has approved the FY 1978 Defense Appropriations Bill, which embodies the consolidation proposal.

Mr. ALLEN. I ask unanimous consent that a report by the Marine Corps, appearing on page 430, et seq., of hearings before a subcommittee of the Committee on Appropriations, House of Representatives, 95th Congress, 1st session, part 6, be printed in the RECORD in full.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

HEADQUARTERS MARINE CORPS ROUTING SHEET (5711)
JAN. 13, 1977

CONSOLIDATED UNDERGRADUATE HELICOPTER TRAINING, TRIP REPORT, JAN. 4–7, 1977

[Key to operation code: C—Signature, G—Information. Routing—The numbers to show order or routing]

Avn Analysis Br (AAO)	1	C

Note: AAQ brief—Joint memo for the record is the report of recent trip to Fort Rucker and NAS Pensacola to compare Army and Navy undergraduate helicopter training.

JOINT MEMORANDUM FOR THE RECORD

Subj: Consolidated Undergraduate Helicopter Training; Trip Report, 4–7 Jan 1977

1. During the period 4–7 January 1977 a group of USMC officers visited the U.S. Army Aviation Training Center, Fort Rucker, Alabama, and the Naval Air Training Command, Pensacola, Florida. The purpose of the visit was to become familiar with both the Army's and the Navy's undergraduate helicopter pilot training systems in order to form a base for comparison. An objective comparison is considered beneficial in view of the consolidated UHPT issue both in OSD and Congress.

2. USMC members of the party were:

Colonel P. G. Boozman, Head, Aviation Training Branch;

Colonel W. R. Ledbetter, Head, Aviation Analysis Branch;

Colonel B. H. Mann, AC/S G–3, 3rd MAW;

Colonel J. L. Shanahan, CO, MAG–26, 2d MAW; and

Colonel C. H. Pitman, OPA, Navy.

Navy had been invited to provide representatives for the visit. Naval officers present at Fort Rucker were:

Captain Coffman, AC/S N–3, CNATRA.

Commander Thompson, CO, HT–18, CNATRA.

3. Itinerary:

4–5 Jan Fort Rucker.

6–7 Jan Pensacola (NAS Whiting).

4. The following comments represent a consensus of opinions of the USMC officers making the visit. All topics had been discussed with the Navy representatives; however, their views are not included in the following:

A. OBJECTIVES OF TRAINING PROGRAMS

(1) The Army system trains UH–1 helicopter pilots to a combat capable level. The Navy system, on the other hand, trains pilots to a basic level for entry into combat readiness training squadrons.

(2) Comparison of the programs is difficult due to the difference in training philosophies. Since the Army has no post graduate training squadrons and sees no requirement for fixed wing training, it must orient its training from the beginning to meet combat training objectives. The Navy, traditionally, has desired pilots more thoroughly trained in fundamental airmanship. The Navy's advanced helicopter syllabus reflects this philosophy, being weighed toward fixed wing and/or instrument training and devoting only 16.5 hours (10 sorties) to helicopter tactics as compared to the Army's 40 hour advanced tactics training.

(3) While both the Army and the Navy basically meet their training objectives, the suitability of those objectives to meet USMC requirements (expressed or desired) is a question to be resolved. The tasks required of an Army UH–1 Pilot are not the same as those required of a USMC CH–46/CH–53

pilot. Precise tailoring of the Army syllabus would be necessary to ensure training reflects USMC doctrine for employment of helicopters. After comparison of the two systems it was obvious that the Navy's syllabus should be more tactically oriented as is the advanced jet syllabus. However, it is recognized that additional helicopter tactical training may not be feasible with current assets. In any case identification of desired changes to the Navy syllabus is considered necessary.

B. TRAINING SYSTEMS

(1) Army System:

(a) The Army system of instruction uses classroom lectures, programmed texts, practical exercises, simulators and flight instruction. Programmed texts are complemented by various instructional media—sound-slide, mock-ups, instructional television (ITV). An extra study learning center is available for self help and referral extra study. The learning center has available all instructional media as well as instructors on duty. The Army's instructional facilities in some cases are "home-made" and the result of innovative thinking of instructors; however, quality in presentation of instructional material has not been sacrificed.

(b) The Army's integration of cockpit procedures trainers and flight simulators into the training program is excellent. The 2B24 UH–1 Operational Flight Trainer (OFT) is an outstanding training device and produces real savings in flight hours. Of significance is the use of each student's flight instructor as his simulator instructor, thus preserving the integrity of the training evolution.

(c) The Army's system is centrally managed and coordinated. Its single site location directly supervised by an officer of flag rank provides opportunity to be as dynamic as required by changes in Army tactics and doctrine.

(2) Navy System:

(a) The Navy's system, like the Army's is designed around the latest thinking in instructional technology with the main difference being the reliance of the Navy almost exclusively on programmed texts. A shortcoming in executing this philosophy is the lack of a learning center and the absence of self pace instructional media. The simulators used by the Navy are outdated, being of 1950's technology. No high fidelity simulator is available at this time. T–34C operational flight trainers are programmed for use by FY–80, however, delivery of aircraft is during January 1977. The Navy has funding available in the current year for a building to house a 2B24 UH–1 OFT; however, these funds are being withheld pending resolution of the UHPT issue. If the Navy retains UHPT, it is estimated this OFT will not be in the syllabus until 1979.

(b) Although the Navy has centralized management of all flight training by CNATRA at Corpus Christi with immediate supervision by the Training Wing Five Commander at NAS Whiting, the assets devoted to helicopter training when compared with those devoted to fixed wing training seem inadequate. This may be attributable to lack of helicoper pilot representation in the CNATRA or TRARON Five staffs.

C. ADVANTAGES OF ARMY SYSTEM

(1) Pilots are combat capable (by Army standards) UH–1 pilots on completion of UHPT.

(2) Expressed goal of the Army is to produce the best possible combat pilot.

(3) Army system stresses flight crew coordination. During UH–1 phase, students not under instruction ride in jump seats to assist the pilot under instruction by filling co-pilot duties. This system doubles the students air time and raises the learning curve.

(4) Stability in instructor/student assignments. During each phase instructors fly with the same students except for flight checks. This includes simulator instruction.

(5) Army simulators are more capable to support the training program.

(6) Army system is unified system with central control at one site.

(7) Learning center supports academics.

(8) Army uses a mini-airways system for radio instrument training. This permits short-leg instrument flights within the Fort Rucker airspace. Matching slow speed of helicopters with short legs provides more experience in radio point to point navigation.

(9) Army system produces pilots in 33 weeks. Schedule is adhered to.

D. DISADVANTAGES OF ARMY SYSTEM

(1) Tactics taught are Army airmobile tactics which may not reflect USMC doctrine.

(2) Army helos are not equipped with TACAN.

(3) Army system produces a restricted (helo-only) pilot.

(4) Present plans for consolidated UHPT call for Pre-Flight to be taught at Pensacola with an attendant extra move for the student.

(5) Marine Corps' ability to influence the syllabus may be restricted.

E. ADVANTAGES OF NAVY SYSTEM

(1) Helo primary is taught in a turbine powered helo (TH–57).

(2) Professional development is continuing in that all instructors are USMC/USN officers. Constant officer contact is considered beneficial.

(3) USMC has some control over syllabus.

(4) Centralized USMC control over students at Pensacola through MATSG.

(5) Fixed wing training meets stated USMC requirements. Students are dual-trained pilots.

F. DISADVANTAGES OF NAVY SYSTEM

(1) Programmed text not supported by adequate instructional media.

(2) Helo community seems to receive less than its fair share of assets.

(3) Navy syllabus provides less helo time than Army (101 vs 175 hrs).

(4) Training syllabus (and supporting facilities) is not oriented toward tactical mission (either Marine or Navy).

(5) Students do not normally graduate within programmed training time.

(6) Navy uses "Plow-back" instructors. Briefings stated that 41% of UHPT instructors were plow-back. (Marine Corps does not plow-back instructors).

G. ADDITIONAL IMPRESSIONS

(1) Concern was expressed that the helicopter pilot is considered a "second-class citizen". The division of assets in CNATRA, at first glance, seems to favor the fixed wing community. Lack of solid helicopter pilot representation on the CNATRA or Training Wing staff either substantiates or perpetuates this, as does the selection process which channels students into the helo/jet pipelines. The selection process, which sends students with the highest flight grades in fixed wing primary to the jet pipeline, is designed to reduce attrition in the more costly jet pipeline; however, the manner in which it may be executed reduces helicopter training to a form of punishment, e.g. "If you don't do good, you'll be sent to helicopters". In comparison, the Army places the highest importance on the production of quality aviation officers, thereby elevating the helicopter pilot to the position of a most vital link in the Army's tactical chain.

(2) The Army's having a one site training base under direct command of a flag officer drives the Army's system to respond to tactically oriented instruction. While the Navy has an officer of equal rank commanding the training effort his span of control reaches physically from Florida to Texas and functionally across three diverse training pipelines with the emphasis seeming to be given to jet training. Under this system of management, the Army Training Command is more responsive, on its own initiative, to the needs of its field commands.

(3) The Navy system is three-phased (and considering Combat Training Squadrons, four-phased). Pilots fly the T–28 (T–34C), TH–57, TH–1 (and later fleet type aircraft). The Army system is two phased, TH–55 and UH–1. The Army benefits from this arrangement since its operational units are equipped with the UH–1. The Navy's system wastes flight time by requiring pilots to fan three aircraft plus a fourth in readiness training squadrons.

(4) An initial point of concern by the officers on the visit was the lack of professional development realized through contact with the civilian contract instructors in the Army as opposed to military instructors. While this remains valid, it is believed the use of civilian pilots does not detract from training but rather simply fails to add this value. The experience level of civilian pilots at Fort Rucker generally far exceeds that of military flight instructors, especially in the realm of flight instruction. The Army's standardization system seems adequate to assure quality.

(5) It was the consensus that the Army's training system is preferred; however, the content of the Army's syllabus to meet USMC requirements must be validated.

(6) Any lack of the Navy's system to be responsive to the Marine Corps' desires is, in part, the result of insufficient input to CNATRA by USMC. This is partially the result of the forum established for input/feedback, e.g. units through fleet commanders to CNATRA as opposed to submitting to CNATRA a unified USMC input by CMC. This was discussed with Captain Coffman, CNATRA N–3, who agreed the input channels should be revised.

H. RECOMMENDATIONS

(1) Provide input to the Navy to insure the CNATRA produce meets USMC requirements.

(2) USMC endorse acceleration of new simulators into the training syllabus.

(3) CNATRA upgrade training media support.

(4) Review current assignment of USMC representatives on the CNATRA staff to ensure USMC input is continuous.

(5) Revalidate the Navy's syllabus including the ratio of fixed wing to helicopter flight time.

(6) It was the concensus that fixed wing training is not required to produce a well qualified helicopter pilot; however, the value of fixed wing training of a Marine aviator is recognized. It is recommended that the Marine Corps' ability to sustain this program be reassessed.

5. It is the additional recommendation of the undersigned that pending resolution of the current UHPT issue, no unilateral action be taken by the Marine Corps to change the helicopter training system. If the Navy should retain UHPT responsibility, demands should be placed on the Navy to upgrade the quality of training. If CNATRA cannot respond to USMC desires, the feasibility of moving USMC UHPT to the Army be explored.

6. OTTF will take for action the review of the execution of the current pipeline screening process.

P. G. BOOZMAN,
Head, Aviation Training Branch.
W. R. LEDBETTER,
Head, Aviation Analysis Branch.

Mr. ALLEN. I read from that report, signed by W. R. Ledbetter, head, Aviation Analysis Branch, and P. G. Boozman, head, Aviation Training Branch. In it, they give an interesting comment about the concern having been expressed that the helicopter pilot is considered a second-class citizen.

They speak of the selection process in the Navy, "which sends students with the highest flying grades in fixed-wing primary to the jet pipeline, is designed to reduce attrition in the more costly jet pipeline; however, the manner in which it may be executed reduces helicopter training to a form of punishment."

This is Navy training.

e.g. "If you don't do good, you'll be sent to helicopters". In comparison, the Army places the highest importance on the production of quality aviation officers, thereby elevating the helicopter pilot to the position of a most vital link in the Army's tactical chain.

That is the type of attitude they give a helicopter pilot in the Navy training according to the Marine report.

Mr. CHILES. Will the Senator yield?

Mr. ALLEN. Yes.

Mr. CHILES. How much rank can that fellow attain in that vital link in that Army chain, what is the highest rank he can attain?

Mr. ALLEN. Well, the Senator must know the answer.

Mr. CHILES. I thought the answer was a warrant officer. I think the Army pilots attain the rank of warrant officer as long as they are flying helicopters and a Navy pilot could be an admiral.

So he has already been punished if he could become an admiral.

Mr. ALLEN. I yielded on the Senator's time.

This report is what is stated by the Marine officers who made the inspection.

Now, let us go on.

Mr. GARN. Will the Senator yield?

Mr. ALLEN. No; I have only about 5 minutes.

Mr. GARN. We could take it out of our time.

Mr. ALLEN. It was the consensus in the report, they went to both places, it was the consensus that the Army's training system is preferred.

Now, this referred to some of the testimony here by full colonels before the House committee—full colonels, helicopter pilots in the Marine Corps. They were asked on page 439 of this hearing, and Colonel Ledbetter is a Marine helicopter pilot:

Mr. EDWARDS. What was your assessment after you made that trip?

Colonel LEDBETTER. My assessment was that we preferred the training that was given at Fort Rucker, as helicopter pilots, because the tactical training given at Fort Rucker was not included at Pensacola.

We decided we needed the training given at Fort Rucker and we so stated in our trip report.

That same opinion is expressed on page 442 by Colonel Pitman in answer to the question:

Mr. EDWARDS. Do you have any hesitation at all about recommending the program at Fort Rucker?

Colonel PITMAN. No, sir.

Mr. President, I reserve the remainder of my time.

Mr. STENNIS. Mr. President, I yield 3 minutes to the Senator from Utah.

Mr. GARN. Mr. President, I wanted to reply to that statement.

I recognize the distinguished Senator from Alabama was only quoting one Marine colonel. I think that is a terribly disparaging remark to be made in testimony, or any place else, because I would refer back to the very tough standards for getting inflight training, to begin with, in either the Air Force or the Navy.

I did not get what I wanted to go to when I went to advanced training. I ended up in seaplanes.

To begin with, by the standards necessary for selection for this colonel to make a statement that helicopter pilots are second-class pilots, not having the same ability, I think is a ridiculous statement, because people who get to that flight training to begin with are highly qualified in the testing procedure to get there.

For him to use that as a statement of punishment, there are a lot of people, friends of mine, that graduated in the same class who asked for helicopter training, among the highest qualified in basic fixed-wing. In fact, the fellow in my class at the top of my class, asked for helicopter training. I just dispute that testimony by a Marine colonel.

Mr. ALLEN. Mr. President, I yield myself such time as I may require.

The distinguished Senator from Florida must have misunderstood me because I understood him to say that only Army helicopter pilots could get just to the rank of warrant officer.

Actually, Major General Maddox, who was in charge of Fort Rucker, was a helicopter pilot. He was a major general, contrary to what the distinguished Senator said, that no admirals fly helicopters, they fly fixed-wing.

I just wanted to straighten the Senator's statement out.

Mr. President, I reserve the remainder of my time.

Mr. GLENN. Will the Senator yield?

Mr. STENNIS. Three minutes?

Mr. GLENN. Four.

Mr. STENNIS. I yield the Senator 4 minutes.

Mr. GLENN. I think we have a lot of statements being bandied around out of context that require clarification.

I do not know Colonel Ledbetter in the Marine Corps. I do not know whether his reference referred to all of the training at Fort Rucker or whether he was referring to a specific type of combat training, perhaps a simulated course, and perhaps it was taken out of context in that regard.

As far as any helicopter pilots being considered second class in the Marine Corps, that is not the case—absolutely not the case.

There is, however, as the Senator from Florida indicated, a difference in attitude, a very great different in attitude, as far as the career pattern and potential of personnel being brought into the Navy or Marine Corps, as contrasted to the Army.

The Army is clear. They want the bulk of pilots to be in the warrant officer category. That is their specialty. They are not expected to go to flag rank status.

However, in the other bodies, it is the opposite. Every officer in the service has a career track open to him, whether he is a helicopter pilot, a fighter pilot, a transport pilot, or whatever his specialty may be.

That is also one reason for the cross training that starts out with fixed wing. Even if they go into helicopter, they have some fixed-wing background and can be later cross training for other pilot tasks with less delay than if they had not had that previous training in the early stage of their flight career.

I think to try to say the colonel speaks for the whole Marine Corps when he refers to training at Fort Rucker is not the case. It may have been a specialized case he was referring to, or by referring to helicopter pilots as being second-class pilots. Perhaps he was trying to obscure the fact that this cross training and different career possibilities open to the pilots exist.

I thank the Senator for yielding time.

Mr. BENTSEN. Mr. President, I support the committee amendment to prohibit the consolidation of pilot training during the coming fiscal year.

The previous administration proposed an extremely unwise and militarily unsound consolidation which would have moved Navy pilot training out of the Corpus Christi Naval Air Station and downgraded this important base to a Naval air facility, without a training mission.

This action was proposed despite some of the best flying weather, some of the most extensive flying space and some of the finest equipped training fields in the Navy's inventory.

I am pleased, Mr. President, that the current administration is taking a new look at this proposal which, in my opinion, would have been harmful both to our Nation's defense effort and to a community which is suffering from a serious unemployment problem, particularly among Mexican-Americans.

At present, Secretary of the Navy Graham Claytor is reevaluating the proposed Corpus Christi pullout. Deputy Secretary of Defense Charles Duncan has instituted a similar restudy.

Mr. President, I make no secret of the fact that I am urging both Secretary Duncan and Secretary Claytor to reverse the decision and I believe that once the previous administration's action is reexamined on its merits such a reversal will be made.

In the interim, though, the Appropriations Committee has decided to preclude

the Navy—and all other military services—from taking premature steps to consolidate pilot training during the coming year.

I support the committee's efforts and urge adoption of the committee amendment.

Mr. STENNIS. I yield to the Senator from Florida.

Mr. CHILES. Mr. President, we might be ready to yield back our time and get to a vote on this.

Mr. STENNIS. What is the pleasure of the Senator from Alabama?

Mr. ALLEN. I am ready to yield back the remainder of my time.

Mr. STENNIS. We are talking about time now that was allotted to the original committee amendment.

Mr. ALLEN. Yes.

Mr. STENNIS. That is the pending matter.

I am ready to yield back my time.

Mr. ALLEN. I yield back my time. I move to lay on the table the committee amendment.

I ask for the yeas and nays.

Mr. STENNIS. Will the Senator yield to me?

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. STENNIS. I thank the Senator.

There was some misunderstanding before. Ordinarily, we do not have committee amendments coming up following an appropriation bill. But in this case, this amendment came up with the bill, but was excepted—is that not correct—excepted from our general agreement?

Mr. ALLEN. That is correct.

Mr. STENNIS. Therefore, it stands here the——

The PRESIDING OFFICER. The Chair would announce that the motion of the Senator from Alabama is not debatable.

Mr. ALLEN. I withdraw the motion in order that the Senator might have something to say about it.

Mr. STENNIS. That is all right.

I thank the Senator from Alabama.

Mr. ALLEN. Now my motion to table.

The PRESIDING OFFICER. The question is on agreeing to the motion to lay on the table the committee amendment.

The yeas and nays have been ordered and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Arkansas (Mr. McCLELLAN) and the Senator from New York (Mr. MOYNIHAN) are necessarily absent.

I further announce that, if present and voting, the Senator from Arkansas (Mr. McCLELLAN) would vote "nay."

Mr. STEVENS. I announce that the Senator from Wyoming (Mr. WALLOP) is necessarily absent.

I also announce that the Senator from Maryland (Mr. MATHIAS) is absent on official business.

I further announce that, if present and voting, the Senator from Wyoming (Mr. WALLOP) would vote "nay."

The result was announced—yeas 21, nays 75, as follows:

[Rollcall Vote No. 304 Leg.]

YEAS—21

Abourezk	Goldwater	Proxmire
Allen	Huddleston	Sarbanes
Bellmon	Kennedy	Schweiker
Burdick	Leahy	Sparkman
Chafee	McGovern	Stevenson
Clark	McIntyre	Weicker
Culver	Percy	Zorinsky

NAYS—75

NOT VOTING—4

Mathias	Moynihan	Wallop
McClellan		

So the motion to table was rejected.

UP AMENDMENT NO. 684

Mr. ALLEN. Mr. President, I call up my unprinted amendment.

The PRESIDING OFFICER. The clerk will report.

Mr. STENNIS. Mr. President, may we have quiet?

The PRESIDING OFFICER. The well will be cleared.

The Clerk will report.

The assistant legislative clerk read as follows:

The Senator from Alabama (Mr. ALLEN), for himself, Mr. SPARKMAN, Mr. GOLDWATER and Mr. PROXMIRE, proposes an unprinted amendment numbered 684 to the language inserted by the committee amendment:

On page 62, line 18, at the end of the amendment add the following: "This provision shall expire on July 1, 1978.".

Mr. ALLEN. Mr. President, I yield myself 3 minutes.

Mr. President, some of the Senators may possibly have thought the closing or the consolidation of the helicopter training in one place might have been precipitate action, although I hardly see how they could have thought that since the matter was recommended by the last administration and by this administration as well, by the Department of Defense in the last administration and the Department of Defense in this administration.

But with the thought that possibly some were thinking of the economic dislocation that might possibly have taken place in the event the training should be consolidated, the purpose of this amendment would be to provide that no steps toward the consolidation could be taken before July 1 of next year, which would allow approximately one year from this time for the implementation or start of implementation of the consolidation. That is what the amendment does in its entirety. That is the purpose of it, to provide an opportunity to protect against any possible dislocation that might take place by reason of the consolidation, to allow plenty of time for the consideration of all of the various angles in the event of economic dislocation.

It would be 1 year under this amendment that Senator SPARKMAN, Senator GOLDWATER, Senator PROXMIRE, and I have introduced, it would be July 1 of next year, before the program could start being implemented.

I hope the Senator will accept the amendment and, if they do, I then have no objection to the committee amendment.

Mr. STENNIS. Mr. President, will the Senator yield on that point here?

Mr. ALLEN. I yield.

Mr. STENNIS. Will the Senator state again the substance of the amendment that the program should not be implemented or started until June 30 of next year?

Mr. ALLEN. July 1, yes.

Mr. STENNIS. July 1 of next year?

Mr. ALLEN. That is accomplished. The committee amendment provides that funds under the bill cannot be used to affect the consolidation. The amendment says that no funds can be used prior to July 1 of next year. So it would be a period of approximately 1 year before the consolidation could be started on its implementation.

Mr. STENNIS. The point I explain as I read it is the amendment that the committee is sponsoring here says "none of the funds appropriated" shall be used for the consolidation, and so forth. It just says "none shall be used," period.

Mr. ALLEN. That is correct.

Mr. STENNIS. If that is correct, why go on and add an amendment to that and say until after July 1? What does that mean if it does not mean an attempt to authorize a change at that time? I cannot understand the English language.

Mr. ALLEN. It would authorize the start of a change, starting July 1, but under the bill the change would be effective starting October 1 of this year.

Mr. STENNIS. I respectfully submit to the Senator that if there is a real meaning to this 21 to 75 vote, the conclusion here is that it just shall not spend any money on making this change, period.

Mr. ALLEN. That is the reason for the amendment, I state to the Senator.

Mr. STENNIS. Yes; but the meaning is already clear and certainly if the Senator wants it authorized for the beginning year of July 1, 1978, there will be plenty of time to get that done later.

Mr. ALLEN. That is what the amendment does. Senators can act accordingly. I was not trying to argue with the distinguished Senator from Mississippi, I say.

Mr. STENNIS. I understand.

Mr. ALLEN. I am going to yield back the remainder of my time.

Mr. STENNIS. Does any Senator want any time yielded?

Mr. President, I do not want to use any time but just to restate what I have said by way of a question. To just be sure that we get this clear now on page 62 there appears proposed section 857 and, we just voted on the matter by way of a motion to table the amendment, which provides:

SEC. 857. None of the funds appropriated in this Act may be used for the consolidation or realignment of advanced undergraduate pilot training squadrons of the Navy as currently proposed by the Department of Defense.

And the vote that goes with it. Why say more?

Mr. STONE. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. STONE. Would Senators who voted "no" on the motion to table then also wish to vote "no" to this amendment?

Mr. STENNIS. Yes, I should think so. I do not speak for them but that is my point.

Mr. President, I do not want to try to cut anyone off from debate. If there is anyone else who wishes to speak, of course, I want to make this motion, but frankly, I think the time has about run out on us. It is clearly understood what this vote would be; therefore, I shall move to table—well, I yield back the time. Did the Senator from Alabama yield back his time?

Mr. ALLEN. Yes.

I call for the yeas and nays.

Mr. STENNIS. All right.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Alabama.

Mr. ALLEN. Does the Senator withdraw the motion to table?

Mr. STENNIS. Yes, I withdraw that motion. I did not actually make it.

Mr. GOLDWATER. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. GOLDWATER. A parliamentary inquiry over here.

The PRESIDING OFFICER. All right.

Mr. GOLDWATER. Have the yeas and nays been ordered?

The PRESIDING OFFICER. The yeas and nays were ordered.

Mr. GOLDWATER. I would hope as one who has fought for this consolidation almost every year that I have been here and having been——

Mr. CHILES. Mr. President, is this a parliamentary inquiry?

The PRESIDING OFFICER. Yes.

Mr. CHILES. All time has been yielded back.

Mr. GOLDWATER. I am trying to help the Senator. If he does not want help, fine.

Go ahead and vote.

The PRESIDING OFFICER. Is there objection to withdrawing the motion to table.

Without objection, the motion to table is withdrawn.

Mr. STENNIS. I did not make a motion to table.

The PRESIDING OFFICER. The yeas and nays are requested.

Is there a sufficient second?

Mr. STENNIS. Mr. President, just a parliamentary situation. I made no motion to table. I said let me explain such a motion but I decided not to make it.

The PRESIDING OFFICER. All time having been yielded back, the question is on agreeing to the amendment of the Senator from Alabama.

On this question the yeas and nays have been ordered and the clerk will call the roll.

The second assistant legislative clerk called the roll.

Mr. GOLDWATER. Regular order, Mr. President.

The PRESIDING OFFICER (Mr. MATSUNAGA). The Senate will be in order. Senators will please clear the aisles. Senators will please be seated.

Mr. CRANSTON. I announce that the Senator from Arkansas (Mr. MCCLELLAN) and the Senator from New York (Mr. MOYNIHAN) are necessarily absent.

Mr. STEVENS. I announce that the Senator from Wyoming (Mr. WALLOP) is necessarily absent.

I also announce that the Senator from Maryland (Mr. MATHIAS), is absent on official business.

I further announce that, if present and voting, the Senator from Wyoming (Mr. WALLOP) would vote "nay."

The result was announced—yeas 23, nays 73, as follows:

[Rollcall Vote No. 305 Leg.]

YEAS—23

Abourezk	Goldwater	Proxmire
Allen	Kennedy	Sarbanes
Bayh	Leahy	Schweiker
Bellmon	McGovern	Sparkman
Burdick	McIntyre	Stevenson
Chafee	Metcalf	Weicker
Clark	Nelson	Zorinsky
Culver	Percy	

NAYS—73

Anderson	Case	Eastland

NOT VOTING—4

Mathias	Moynihan	Wallop
McClellan		

So Mr. ALLEN's amendment was rejected.

Mr. STENNIS. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. STONE. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. JAVITS. Mr. President, I ask unanimous consent that Win Wheeler may have the privilege of the floor during this debate.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STENNIS. A parliamentary inquiry, Mr. President.

The PRESIDING OFFICER. The Senator will state it.

Mr. STENNIS. This is a committee amendment, and I now move that the Senate proceed to adopt the committee amendment.

The PRESIDING OFFICER. The question is on the adoption of the committee amendment.

The committee amendment—UP amendment No. 682—was agreed to.

Mr. STENNIS. Mr. President, I move to reconsider the vote by which the committee amendment was agreed to.

Mr. STONE. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. STENNIS. Mr. President, inquiries have come in—and I do see the Senator from Oklahoma, whom I am not trying to cut off—on the list of people who had amendments and which we discussed this morning. Senator HATHAWAY has an amendment.

FOURTH REMAINING COMMITTEE AMENDMENT

The PRESIDING OFFICER. The question now recurs on the committee amendment on page 28, lines 9 and 10, as amended.

Mr. STENNIS. May we identify that amendment by a further title, Mr. President?

The PRESIDING OFFICER. It is on page 28, lines 9 and 10.

Mr. STENNIS. Mr. President, if I may say, that is merely a matter of a change in the figure in the total line of $3,294,000,000.

The PRESIDING OFFICER. The Chair will state that the amendment was amended but not agreed to. It must be agreed to in order to be disposed of be-

fore any other amendment may be considered.

Mr. STENNIS. I am sorry, I did not understand the Chair.

The PRESIDING OFFICER. If the Chair will be permitted to put the question, we may proceed expeditiously. The question is on agreeing to the committee amendment, as amended.

The committee amendment, as amended, was agreed to.

The PRESIDING OFFICER. Under the previous order, the Senator from Oklahoma is recognized.

AMENDMENT NO. 522

Mr. BELLMON. Mr. President, I have an amendment at the desk. I ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

Under the previous order, the Senator from Oklahoma will be recognized for 30 minutes and the opponents will be recognized for 30 minutes.

The assistant legislative clerk read as follows:

The Senator from Oklahoma (Mr. BELLMON) proposes a printed amendment No. 522.

On page 28, line 25, and continuing to page 29, line 1, strike "$3,953,918,000" and insert in lieu thereof "$3,511,418,000".

Mr. STENNIS. Will the Senator yield?

Mr. BELLMON. I yield.

Mr. STENNIS. If I may continue for about a half minute, Mr. President, there are some other amendments that I judge will not take a great deal of time. There is a point of order here. I am not contesting the Senator's right to the floor. He has the floor. But I did not make an agreement for him to have the floor over others who have been waiting. That is all I have to say. I thank the Senator.

Mr. BELLMON. Mr. President, I will be very brief. I have no intention of taking anything like 30 minutes.

The PRESIDING OFFICER. The Senator is recognized for 30 minutes.

Mr. BELLMON. I have no intention of taking 30 minutes. I believe I can say what I have to say in 3 minutes.

Mr. President, what this amendment does, very briefly, is to strike the $442 million in this bill for continued research and development on the B–1 bomber. As Members know, yesterday the Senate voted 59 to 36 to remove these funds from this bill which would have been used to procure the B–1. The President has already decided that he does not want to purchase this aircraft. I am at a loss to understand why we propose to spend roughly a half billion dollars to perform research and development on an aircraft we have already junked. To me, it is most extraordinary. It is almost like the Ford Motor Co. spending millions of dollars to do research and development on the Edsel after they decided not to build that automobile.

I went so far as to ask the Air Force for their reasons for wanting this money. I am not sure they do want it, but at any rate, they have given me a list of reasons for going ahead with the R. & D. on the B–1. I would like to take a moment to read these for the information of the Senate. To me they are the most unpersuasive arguments for spending a half billion dollars I have ever heard:

B–1 development program has been highly successful to date. President and Secretary of Defense have determined that cruise missiles are preferable alternative to the B–1.

If that is the case, why go ahead with the R. & D. on the B–1?

President has cancelled the B–1 production and plans for deployment.

Cruise missile development for use with the B–52 force has been accelerated.

President has recommended that further B–1 development and testing should continue in the event cruise missile alternatives should run into technical difficulty.

Further R&D and continued testing on the B–1 will provide:

More definitive answers to future bomber effectiveness and operations;

The needed aerodynamics, electronic countermeasures techniques, and technical base as a hedge for future aircraft applications;

Additional opportunity to capitalize on expenditures to date improving emerging systems and developing new systems and techniques.

Lack of a definitive SALT agreement.

Relations with the Soviets and the world situation could deteriorate in the absence of future agreements.

Fall back positions where technology is not fully proven are not unique and may be required.

Our strategic concept for the future includes manned aircraft and continued B–1 R&D will provide our nation with an effective and flexible option.

Would avoid the necessity to start completely anew by maintaining a skilled technical team and data base.

Definitive Air Force plans for future B–1 R&D are currently being formalized and will appropriately be subject to review by the upcoming hearings.

Mr. President, this list of reasons simply does not make sense and is no justification for our spending roughly a half billion dollars on more research and development for aircraft that we are simply not going to build. There seems to be some feeling that if we go on with R. & D. and if conditions with the Soviets worsen, somehow, we can open a spigot and suddenly, we will have a fleet of B–1 aircraft ready to put into service. The fact is, and I think every Member knows it, that once we stop the production of the B–1, as we have now done, it will take years to gear up and build a fleet of these aircraft. If we are going to have the B–1's, we have to go into production now. Spending this money for R. & D. absolutely makes no sense.

Mr. President, the effect of this amendment is to stop the R. & D. on the B–1 aircraft, just as we have stopped the production of this bomber. I urge approval of the amendment.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President, I shall be quite brief. In the budget this year, along with the major request for the B–1, there was a request in round numbers for $440 million that was classified and carried on the books, in the bookkeeping, as research and development. That came to our committee in the general overall authorization bill. On the Armed Services Committee, we have a Research and Development Subcommittee that is headed by the Senator from New Hampshire. He and his coworkers do a marvelous job, in quality and quantity.

I just say this about it: It is not at all unusual for an expensive plane, a bomber and so forth, to be carried on a program of what is called, on the record, research and development for some years. The early part of any missile that might be added, like the SRAM, would originate in R. & D. So it is not extraordinary for these sums to be here.

I yield now to the Senator from New Hampshire, who is versed in this subject and knows what the amount is for. I yield him 10 or 15 minutes.

Mr. McINTYRE. So much time as I may need. I do not believe it will be 15 minutes.

I am happy, Mr. President, to join with the chairman of the Armed Services Committee and the floor leader on the appropriations bill to remind my colleagues, as Senator GOLDWATER has referred to it a number of times, that there is no presto change-o and we now have cruise missiles that will be everything we want them to do. Cruise missiles are very much in the research and development stage.

Somehow, I think that there is a feeling that the B–1 is now gone and the cruise missile has taken over. Far from it. The idea of a manned bomber still persists. The B–52 will be put into some sort of rephasing, reconditioning, to handle the new cruise missiles as they are developed.

In the meantime, the B–1, with a tremendous amount of money already spent on it, probably the finest aircraft of its type ever built, costly beyond belief, almost—I remember, my friends in the Senate, when we first encountered this aircraft in R. & D., it was labeled as a $26 million aircraft. Nevertheless, there is a great deal to be learned, there is a great deal still to be done with the B–1 before it is completely phased out.

In the technical field, the fourth aircraft is designed and ready for testing very shortly in the very important field of electronic countermeasures. It will be tested, I believe, severely as to its ability to operate and to fit in the ECM or the electronic warfare of the future. It would be a shame to turn that testing program off.

There is, to be sure, some $440-odd million in the R. & D. I am sure that the D.D.R. & E., the Research and Development Office in the Pentagon, in Defense, will probably be altering some of their plans that they originally had for testing. There may be some reassignment of funds.

I notice here in this statement that it says that the $442 million will partially fund completion of the R. & D. aircraft at a total of $137.7 million; further development of the engine at $52.4 million; procurement of avionics at $44.3 million; and testing and management of the program at some $281 million.

There is going to be some modification, I am sure. Without a shadow of a doubt, all of that money that is being appropriated in this bill for the research and development will be well used for the benefit and for the knowledge of manned aircraft of the future.

I think, too, we ought to point out to our good friend from Oklahoma that the President's decision recommended not only that the B–1 be closed down, but it also recommended a continuation of the R. & D. program. The R. & D. program was to be carried on for two reasons: First, because, as I mentioned—I could go into great detail. I could give you more acronyms in 5 minutes than you ever heard. But also, as a hedge for possibilities that might occur in the SALT talks. There is a possibility, as we look forward over a 10- or 12-month span—I think that is about all that we are looking forward to here—that the B–1 will be kept alive before we get into the tremendous expenses, I might say to the Senator from Oklahoma, of settlements. The settlements we shall have to make with the various manufacturers and subcontractors have not even been entered into yet.

There is a need here to hedge on the national security plane for the SALT talks. It is also very necessary not to be carried away with the idea of all of the ALCM's and the SLCM's and the GLCM's—these are the various acronyms that we have for our various cruise missiles, including, of course, the one you have all seen bursting out of the water, the Tomahawk. There are plans now to change the Tomahawk and put it aboard the B–52.

There is a move afoot to shorten the range of the ALCM–A and go with the ALCM–B, with 1,700 nautical-miles, or 1,680.

But I say to my good friend from Oklahoma that the cruise missile is not in the armament force today. The cruise missile is 4, 5, or 6 years down the road, with problems that it may confront that we do not know.

Does the Senator from Oklahoma know what an unk-unk is? I bet he does not.

Mr. BELLMON. Will the Senator yield?

Mr. McINTYRE. Does he know what an unk-unk is?

Mr. BELLMON. Does the Senator know I am talking about R. & D. on the B–1, not the cruise missile? This amendment does not talk about the cruise missile. Why talk about an airplane that is in the scrap pile? Why do we go on researching and developing this aircraft?

I am not talking about R. & D. on the cruise missile. I am talking about research and development funds for an aircraft that is as dead as a dodo bird.

Mr. McINTYRE. I would not say to my good friend from Oklahoma that research and development is dead for manned aircraft. Far from it.

An unk-unk, just so we all know, is an unknown-unknown. Sometimes, that is what happens with the best of the cruise missiles: an unknown-unknown that you never expect; they find that they cannot take the TERCOM guidance, cannot give us the accuracy.

In answer to the Senator's question, no, not everything is being laid in the lap of the cruise missile. The manned bomber is still around and the manned bomber needs improvement. The stuff that we are learning in the R. & D. for the B–1 could well be applied to the new B–52 or whatever we are going to call it.

Incidentally, this Senator may—I certainly hope next year—bring the Pentagon in and ask them to consider a stretched version of the FB–111. Because, as the good Senator from Arizona knows and I know, this is the only aircraft we have that can penetrate supersonically at 200 feet.

So there are many, many reasons, I say to the Members of the Senate, why the research and development program should be brought to an orderly close, but it should be done with every attempt to gain all the knowledge we need and with the time utilized for a possibility of a hedge or a change of options that might occur to the President.

Mr. BELLMON. Mr. President, I yield myself an additional 3 minutes.

Let me ask the Senator from New Hampshire: This $440 million is for use in fiscal year 1978. How much longer is this kind of research and development going to continue? We decided not to build a B–1 bomber. The Senator from New Hampshire wants to spend a half billion dollars researching and developing this equipment. Are we in another 10-year R. & D. program on manned aircraft? What is the planning?

Mr. McINTYRE. That is a good question. I certainly would not want to say we are all done with manned aircraft because President Carter, or somebody, said the B–1 could not be built.

That is a good controversial question, whether that B–1 should be built.

I do not know why we should drop everything, throw hammer and pliers down, and not think about any more manned aircraft.

Mr. BELLMON. Is that not the effect of the President's decision and the Senate vote to stop construction of the B–1?

Mr. McINTYRE. Yes, stop the B–1, and other programs have been stopped, but not the idea of a manned bomber or a manned aircraft.

Mr. BELLMON. I am at a loss to know what manned aircraft the committee has in mind.

Mr. McINTYRE. Well, not every one is a B–1.

Mr. BELLMON. What aircraft is the committee considering building if the B–1 is not going to be procured?

Mr. McINTYRE. I cannot look deep into the hearts and brains of the Pentagon and tell the Senator that.

I know I am thinking about the FB–111.

Mr. BELLMON. The fact is that there is no aircraft on the horizon if we are not building the B–1.

Mr. McINTYRE. There is a possibility of a stretch version of the FB–111. This is presently in our SAC force.

It has the weaknesses of having very short legs. But it is still a very fine aircraft.

I believe I am correct when I say that the technical skill that built the FB–111 is a precursor of the B–1, and more that was in that first one is in the B–1.

If I do not make myself clear, I never will.

Mr. BELLMON. The Senator has not made it clear to me why we need spend $422 billion doing R. & D. on an aircraft we decided not to procure.

Mr. GARN. Will the Senator yield?

Mr. BELLMON. First, I yield to the Senator from North Dakota.

Mr. YOUNG. When the plan for the B–1 was continuing for the production of five additional planes, the figure for R. & D. was $442.5 million.

Now that the production of the plane has been terminated, the Senator from Oklahoma makes a good point. I would not think they need all that money. Maybe the Senator from Oklahoma would consider a cut $100 million. The Air Force could certainly get along with $100 million less since the plane has been terminated, rather than go ahead full speed.

I would think we could take a reduction of at least $100 million.

Mr. BELLMON. I yield to the Senator from Utah.

Mr. GARN. I am not sure I can answer the question, but as one who feels the President made a tragic error concerning production of the B–1, I think even keeping the door open a very slim amount and continue R. & D. and testing is vital in the eventuality that there are changes, SALT or whatever.

I think the President made his decision prematurely. There are possibilities of changes in the Russian attitude.

No matter how slim, as one who felt we should have built it, I think the President was violating the law with regard to the 1977 budget.

I think the Senate should be aware of that, that he has stopped production on Minuteman III. But the law that was designed to get Richard Nixon also applies to President Carter.

I suggest it is about time he sent up a rescission order. He does not have authority to just stop without the consent on the 1977—I am not talking about 1978.

I am using this to make a point, that I suggest the President send up a rescis-

sion order on both Minuteman III and the B–1 because we can build five, six, and seven, have three more aircraft for further testing, for about what the closedown costs.

We can build the extra 50 Minuteman III's for less cost than the 10 he is going to build.

So the President is violating the law.

The PRESIDING OFFICER. The Senator's 3 minutes have expired.

Mr. BELLMON. Three additional minutes.

I agree with the Senator from Utah. We should not have stopped building it. But since the decision has been made, the point of this amendment is not to waste R. & D. funds on an aircraft the President and Senate agreed we will not procure.

Mr. GARN. Let me make another comment which the Senator from New Hampshire was making, that on R. & D., we learned a lot from the B–70. The B–70 was junked, but we certainly learned a lot about the technology.

So I do not think we can assume this R. & D. will be wasted if it is never built.

Mr. BELLMON. The language of the section reads:

For expenses necessary for basic and applied scientific research, development, test, and evaluation, including maintenance, rehabilitation, lease, and operation of facilities and equipment, as authorized by law.

My amendment would still allow $3,511 million for that purpose. So we are not stopping all R. & D., just on the B–1. That is what the $440 million this budget is intended to accomplish.

There is still $3.5 billion left here for the purposes I have just enumerated.

So this does not stop all R. & D. on manned aircraft.

Mr. President, I reserve the remainder of my time.

Mr. GLENN. Will the Senator yield me a couple of minutes?

Mr. STENNIS. Yes, I yield the Senator 4 minutes.

Mr. GLENN. I thank the Senator from Mississippi.

I would like to comment on this.

I think the main reason I worked for continuing this research is that we are not that locked in yet, on certainty, that the cruise missile is here now, is ready, and we can forget everything else.

I look at this funding as an insurance policy, No. 1. That is first and foremost.

Second, we have a tremendous amount of data still to be obtained with the B–1. If our progress in the past is any indicator of how things will be found, we have used research in the past even on planes that were not being built that has benefited us.

I think when we have a brand new wing form, a new aerodynamic shape, it certainly is in our best interest to get all this information back into our data base that we can possibly get.

I say to the Senator from Oklahoma, when we do this, it may have tremendous benefits quite apart from the B–1.

I am not trying to further the B–1 program even though I favored it mainly for its conventional warfare role, not its triad role the Pentagon tried to sell it on.

The base I am looking for may even have application over into the cruise missile area. We may learn aerodynamic things from this shape of the B–1 that will benefit us in smaller airplanes, fighter airplanes, cruise missiles.

In fact, some experimenting with cruise missiles can best be done off a B–1, if we talk about supersonic launchers, as the Senator from New Hampshire mentioned was made possible a while ago if we go to an FB–111.

So there are all kinds of data to be obtained out of that airplane. We would be pennywise and pound foolish if we took everything at this point and said that we will not reap the benefit of all this potential knowledge we are getting.

It is this query into the unknown that set our country apart from most other nations. This is an opportunity to expand our information and our beliefs that may be able to be applied to cruise missiles, other missiles, aircraft, as well as supersonic aircraft, doing research on preventing sonic booms from reaching the ground, to move into an SST area.

All sorts of things could be gotten out of this to make it well worth this expenditure of funds.

I thank the Senator from Mississippi.

The PRESIDING OFFICER. Who yields time?

Mr. BELLMON. I yield an additional 3 minutes.

I ask this of the Senator from Mississippi: This figure of $3.9 billion that is in the bill anticipated the construction and purchase of five new aircraft. That is money that was to be used in R. & D. in connection with the operation of those planes. It seems to me that, at the minimum, we could take out some of the money. Perhaps it is going too far to suggest striking all the R. & D. on the B–1, but I do not understand why, if we are not going to purchase the planes, we need the same number of dollars to go on with the R. & D. that was anticipated when we were planning on procurement.

Mr. STENNIS. Mr. President, the Senator makes a legitimate inquiry, and he is wise to say that he does not even advocate throwing it all out.

Here is the best itemization that I have available. The first item is this B–1, the completion of it, and there is bound to be more related material. They have $137 million for that, and that is the fourth aircraft. We have three completed, as the Senator will recall, and this was in the process. They will finish it and take care of the related matters.

The next thing we have is the further development of the engines. In other words, this process of development, as the Senator understands, is not just pure research. That is the working part of it that has already been made.

The procurement of avionics in that field, $44 million. Testing and management of the program, $208 million.

Covering the whole thing, it may be that later some of this money—I would not know how much—might become available for other purposes; and that is where we sometimes have a transfer or a reprograming, and so forth.

The explanation made here by the Senator from New Hampshire and the Senator from Utah is the best explanation I know of.

As one who was for it and wants to see it come back, I would not want to surrender this part of the B–1 program, if the facts change somewhat or opinions change I do not want to lose any time that goes with it. If we take this money out—even any part of it—without a microscopic examination of how much can be spared, I think we would make a great mistake.

Mr. BELLMON. Will there be an examination of these funds?

Mr. STENNIS. Yes. I am sure there will be. I can think of one offhand. Senator McINTYRE and his subcommittee will go into this matter. That is more or less a continuing thing.

Mr. BELLMON. The figures the Senator has read total approximately $400 million—$137 million for the fourth plane, $44 million for avionics, and $208 million for testing. That leaves $100 million unaccounted for.

Mr. STENNIS. I said that $52.4 million is another item in those figures. That is all I have in my hand.

The staff members work on this the year around, and they work with what I call the bookkeepers from the Department of Defense. The Appropriations Committees of the House and the Senate check out these matters. There is a surveillance to it.

Mr. YOUNG. Mr. President, will the Senator yield?

Mr. BELLMON. I yield.

Mr. YOUNG. I wonder if the Senator from Oklahoma would accept an amendment to cut the figure by $100 million.

All he would have to do is change the last figure on line 3 to $3,853,918,000.

When we go to conference, and since the House has a higher figure, we can consider both amounts, we can accept the House figure and leave all the money in there or take the lower figure. Since they are not going ahead with five production planes, the Senator from Oklahoma makes a good point. Some saving can be made. We will have a week or two before the conference, and if they can prove they need all the money, we can put it back in.

Mr. BELLMON. Mr. President, I will take a part of the suggestion of the Senator from North Dakota and change the amendment to read "$3,753,418,000."

I ask for the yeas and nays on the amendment.

Mr. STENNIS. Mr. President, will the Senator yield on that? Can he identify that?

Mr. BELLMON. That is a reduction of $200 million.

Mr. STENNIS. So the Senator proposes to reduce his amount by $200 million.

Mr. BELLMON. I propose a cut of $200 million.

Mr. STENNIS. The Senator asked for the yeas and nays.

The PRESIDING OFFICER. Is there objection to the amendment being so modified? The Chair hears none, and the amendment is so modified.

Mr. BELLMON. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. STENNIS. Mr. President, the Senator from Nevada is a member of our committee, a very valuable one. He is versed in these matters. I yield him 5 minutes.

Mr. CANNON. I thank the chairman for yielding.

Mr. President, the purpose of the continuation of the B–1 R. & D., as has been stated, was a hedge against the cruise missile technical problems. I am sure Senators have read in the press that, supposedly, the cruise missile had been fired six times and three had been failures. I am sure the technical problems can be overcome. The President's desire to go ahead here was simply as a hedge against the technical problems and as an option in the SALT-related matters, which I think is extremely important.

With respect to the money figures, there is $442.5 million in fiscal year 1975 for the B–1 program. That is in the R. & D. As has been explained, $137.7 million would be taken to complete the fourth aircraft, and it would be cheaper to complete it than to terminate it at this time. In addition, it would give us another test bed for this research.

The Senator has said that we are not going ahead with production, so why have any further research and development? Senators may recall the B–70 program some years ago. The determination was made long before the termination of the research and development program that the B–70 would not be put into production, but it turned out to be a very important test bed, and much was learned from that in the research program over a number of years, before the B–70 was finally stood down. That technology has been put into effect in connection with the B–1 program and with other programs of our aircraft development.

In addition to the $137.7 million for the completion of the fourth B–1, the engine of this aircraft is going to require more research and development funds, and that is $52.4 million. For procurement of the avionics, there is $44.3 million, and then the testing and management of the program, $208.1 million.

With the completion of the fourth B–1, we will have four of the aircraft to run out through this test and development and research program, to learn the things we should learn, now that we have the fourth aircraft, or 3½.

We certainly do not want to just say we are going to junk them, that we will stand them down, that we will put them out in the bone yard. We can learn much in the next few years from the use of these four aircraft, through the research and development program. That $208 million is important toward testing of the cruise, running the test missions, and learning all the things we should learn.

As has been pointed out by Senator GLENN and other Senators, we can learn a lot from this program that can be used in other applications, and it may very well be useful in the cruise missile program itself.

I thank the Senator for yielding to me.

The PRESIDING OFFICER. Who yields time?

Mr. BELLMON. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. The time of the Senator from Mississippi, is it yielded back?

Mr. STENNIS. Mr. President, I am not going to take over a minute. I do know, as a fact, Mr. President, that those who have worked on the B–1 in opposition to it over the years do not want this research and development now stricken out. I know I can refer, I think, to the Senator from Iowa who worked hard and offered an amendment here 2 years ago and in debate yesterday or the day before he said he did not oppose the R. & D. I am just illustrating that.

I would not attempt to say that all of it is going to be used, all of it is going to be needed, but I think it would really be a mistake, and a serious one, to go to taking it out, just a figure we would take out of the air.

As far as it would go with the Senator, we could say we will review this matter further, and if it turns out this matter can be a saving, we will take the appropriate action.

Mr. YOUNG. Mr. President, I wonder if the Senator would consider a reduction of $100 million, and we could put it back if we found it absolutely necessary?

Mr. STENNIS. I would not object to it if I just felt a little more certain of where the line is there, Senator. I do not have a firm idea at all.

Mr. BELLMON. Mr. President, if the Senator will yield to me for a moment, this matter will be in conference if we cut the $200 million out of the amount, and it could be adjusted after conference with the House. If we do not make any adjustment it will go right on through, and we will have no chance to examine it. It seems a good device to change the figures so at least there will be a discussion with it when the conference with the House is held.

Mr. STENNIS. I appreciate the sentiments of the Senator from Oklahoma. He is always thoughtful. But we would just be taking more of a chance than we should take under the facts as we know them now. We certainly will give a surveillance on this matter, and I just have to stand on the figure.

I thank the Senator. If he wants to yield back his time——

The PRESIDING OFFICER. Does the Senator from Mississippi yield back the remainder of his time?

Mr. STENNIS. Yes.

The PRESIDING OFFICER. The Senator from Oklahoma yielded back his time.

Mr. BELLMON. Mr. President, I would like to use the remainder of my time for just a moment here, another 2 minutes.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. BELLMON. Mr. President, let me point out to the Senate now what has been done. The amendment which would have originally stricken all of the R. & D. funds for the B–1 has been modified so it leaves in half that amount, roughly.

We have taken out $200 million so that roughly $250 million would remain. The original amount was put in the bill contemplating the procurement of five additional aircraft. It seems to me the $250 million we have left in the budget is more than adequate.

I would also like to point out this matter will be in conference with the House and if, in the meantime, it is shown that all the funds are needed then clearly the figure could be adjusted upward during the conference.

So, Mr. President, I yield back the remainder of my time.

Mr. STENNIS. I yield back my time.

The PRESIDING OFFICER. All time having been yielded back, the question is on agreeing to the amendment of the Senator from Oklahoma. The yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Arkansas (Mr. MCCLELLAN) is necessarily absent.

Mr. STEVENS. I announce that the Senator from Maryland (Mr. MATHIAS) is absent on official business.

The result was announced—yeas 27, nays 71, as follows:

[Rollcall Vote No. 306 Leg.]

YEAS—27

Abourezk	Danforth	Muskie
Bayh	Hart	Nelson
Bellmon	Haskell	Packwood
Biden	Hatfield	Pell
Brooke	Javits	Percy
Bumpers	Kennedy	Proxmire
Case	Leahy	Roth
Chafee	McGovern	Stevens
Church	Moynihan	Young

NAYS—71

Allen	Durkin	Inouye
Anderson	Eagleton	Jackson
Baker	Eastland	Johnston
Bartlett	Ford	Laxalt
Bentsen	Garn	Long
Burdick	Glenn	Lugar
Byrd, Harry F., Jr.	Goldwater	Magnuson
	Gravel	Matsunaga
Byrd, Robert C.	Griffin	McClure
Cannon	Hansen	McIntyre
Chiles	Hatch	Melcher
Clark	Hathaway	Metcalf
Cranston	Hayakawa	Metzenbaum
Culver	Heinz	Morgan
Curtis	Helms	Nunn
DeConcini	Hollings	Pearson
Dole	Huddleston	Randolph
Domenici	Humphrey	Ribicoff

Riegle	Sparkman	Thurmond
Sarbanes	Stafford	Tower
Sasser	Stennis	Wallop
Schmitt	Stevenson	Weicker
Schweiker	Stone	Williams
Scott	Talmadge	Zorinsky

NOT VOTING—2

Mathias McClellan

So Mr. BELLMON's amendment was rejected.

Mr. STENNIS. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. DOMENICI. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Several Senators addressed the Chair.

Mr. STENNIS. Mr. President, I yield to the Senator from Colorado for a unanimous-consent request.

Mr. HART. Mr. President, I ask unanimous consent that William Lind of my staff have the privilege of the floor during the deliberations and votes on this measure.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STENNIS. Mr. President, if I have just 1 minute, for the information of the Senate we have several so-called small amendments here. The Senator from Oklahoma (Mr. BARTLETT) has an amendment.

The PRESIDING OFFICER. The Senate will be in order.

Mr. STENNIS. The Senator from Oklahoma, as I say, has an amendment. I do not know whether you have a list down there or not, that the leaders have prepared, but I am sure that this amendment is one we can readily dispose of on a voice vote.

The PRESIDING OFFICER. The Senator from Oklahoma.

UP AMENDMENT NO. 685

Mr. BARTLETT. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The second assistant legislative clerk read as follows:

The Senator from Oklahoma (Mr. BARTLETT), for himself and Mr. Bellmon, proposes an unprinted amendment No. 685:

On page 64, after line 8, insert the following:

SEC. 861. None of the funds appropriated in this Act may be used for increasing the unit equipment (u.e.) of individual Air National Guard squadrons assigned the A–7 aircraft.

Mr. STENNIS. Mr. President, this is a small amount of money, but it is an important matter. I hope we can have quiet.

The PRESIDING OFFICER. The Senate will be in order. The Senator from Oklahoma has 15 minutes, and the Senator from Mississippi has 15 minutes.

Mr. BARTLETT. Mr. President, the Air National Guard has had for some time a program of replacing the old, obsolete F–100 planes. This program has been proceeding ahead with the transfer of A–7's from the Air Force to the Air National Guard, and it has been proceeding very well.

However, there was action taken in the House Appropriations Committee that would alter and change this method and this approach and program of assigning A–7 aircraft to squadrons. All this amendment says is that none of the funds appropriated in this act may be used for increasing the unit equipment of individual Air National Guard squadrons assigned the A–7 aircraft.

Mr. President, my amendment would restrict the use of appropriated funds to increase the number of A–7 aircraft assigned to Air National Guard units. This amendment relates to $5 million that was not requested by the administration and which contains strings opposed by the Air Force and the Air National Guard. If used as the House report suggests, this $5 million which was added in the House would delay modernization of Air National Guard tactical fighter squadrons, would spread thin money available for the operation of the Air Guard squadrons, and could require additional expenditures in the next three fiscal years of over $24 million just based on this 1 year's action alone. Let me explain.

In considering the Defense appropriations bill, H.R. 7933, the House Appropriations Committee added $5 million to the operation and maintenance appropriations for the Air National Guard in order to take 36 A–7D fighter-bombers which are scheduled to be transferred from the Active Air Force to the Air National Guard and give these A–7D aircraft to Air Guard Squadrons which already have A–7's. The House proposal would divide 36 A–7D aircraft among six existing Air Guard A–7D squadrons in order to raise their authorized strength to 24 aircraft instead of the present 18 aircraft each. These units getting additional A–7D fighters could then train more pilots and increase the number of support personnel on their rolls. At the same time, the two squadrons which would have been modernized with the 36 A–7D fighters will be forced to retain the 48 obsolete F–100 fighters which the administration, the Air Force, and the Air Guard had hoped to replace. The Senate Appropriations Committee accepted this proposal without comment in their report. Because of the serious consequences of this House initiated action, I ask that the managers of this bill, Senator STENNIS and Senator YOUNG accept my amendment and take it to conference.

Mr. President, I understand this amendment is acceptable to the chairman.

Mr. STENNIS. Yes. Mr. President, I yield first to the Senator from North Dakota. May we have order?

The PRESIDING OFFICER. The Senate will be in order.

Mr. YOUNG. Mr. President, this amendment does not require additional money, but it would distribute the planes among the Air National Guard squadrons in a manner more in line with their requests and needs.

The Air Force and Air National Guard plans to transfer 54 A–7's from the Active Air Force to the Air National Guard. The 54 A–7's would be assigned to two Air Guard Squadrons—18 A–7's to each squadron, and the remaining 18 A–7's would be assigned to Air National Guard Training. This plan would increase the A–7 squadrons in the Guard from 9 to 11 plus aircraft for training.

The House Appropriations Committee proposes to assign 6 aircraft to 8 Guard Squadrons that are presently assigned 18 A–7 aircraft. This will hold the Guard to 9 A–7 squadrons and require 24 aircraft squadrons in the future.

Mr. STENNIS. Mr. President, I have conferred with the other members of the committee on this proposal. It does not involve any new money. It does not add any planes, or anything like that. It has to do with how certain planes are used. It would modify provisions in the House bill on the subject.

We need this one, I think, and I thank the Senator from Oklahoma for bringing it up.

Mr. BARTLETT. I thank the Chairman. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. Does the Senator from Mississippi yield back his time?

Mr. STENNIS. I yield back the remainder of my time, Mr. President.

The PRESIDING OFFICER. All remaining time having been yielded back, the question is on agreeing to the amendment of the Senator from Oklahoma.

The amendment was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment. The Chair has a listing on them. The Senator from New Hampshire is to be recognized next. Is the Senator from New Hampshire in the Chamber? If not, the Chair recognizes the Senator from Kansas (Mr. DOLE).

UP AMENDMENT NO. 686

Mr. DOLE. Mr. President, I send an unprinted amendment to the desk for myself, Mr. DOMENICI, Mr. HELMS, Mr. DURKIN, and Mr. BARTLETT, and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The second assistant legislative clerk read as follows:

The Senator from Kansas (Mr. DOLE), for himself and others, proposes an unprinted amendment No. 686:

On page 64, between lines 8 and 9, insert a new section as follows:

SEC. 861. None of the funds appropriated by this Act may be expended by the Department of Defense for purposes of negotiating or bargaining with any individual, organization, or association with respect to terms or conditions of military service of members of the armed forces.

Mr. DOLE. Mr. President, may we have order?

The PRESIDING OFFICER. The Senate will be in order. On this amendment the Senator from Kansas has 30 minutes and the Senator from Mississippi has 30 minutes.

Mr. DOLE. Mr. President, I ask unanimous consent to add as cosponsors of the amendment the Senator from Alaska (Mr. STEVENS) and the Senator from Delaware (Mr. ROTH).

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. DOLE. Mr. President, very simply stated, this amendment would prohibit

any funds appropriated by this act to be used to negotiate or bargain with any individual, organization, or association with respect to the organization of unions and union activities in the military services throughout fiscal year 1978. It would, in the opinion of this Senator, provide a stopgap from potential unionization of 2 million plus members of the armed services while pending legislation on that subject is thoroughly debated. As the Senator from Kansas understands, hearings are now being held. I think the distinguished Senator from Mississippi and others are moving ahead with that legislation.

It would also reflect the overwhelming public sentiment opposing unions in the military. According to a recent Gallup Poll survey, of a representative sample, 3 persons in 4, 74 percent of those interviewed, were against the introduction of unions into military, 13 percent were in favor, and the remaining 13 percent undecided.

Above all, it would maintain the defensive strength of our country.

Mr. STENNIS. Mr. President, may we have order? I believe we can gain time by listening to the Senator.

The PRESIDING OFFICER. The Senate will be in order.

UNIONS IN THE MILITARY: A BAD CONCEPT

Mr. DOLE. Mr. President, the idea of unionizing the armed services is frightening to this Senator. It is unthinkable that any influence should be allowed to interrupt the military chain of command in an age where every policy, every strategy, every tactic is based upon instant response of the American servicemen and women.

OPPOSITION

Opposition of unions in the military has long warned that diluting the single-purpose of a national defense force would inevitably undermine the military chain of command and invite complexities involving picketing and picket lines and temptation for insubordination.

According to a recent Gallup poll survey, three persons in four, 74 percent, interviewed oppose unionization of the military. Another 13 percent say they favor the idea and 13 percent are currently undecided. Interestingly, opposition to organizing the Armed Forces is found to be nearly as great among members of labor unions as in nonunions. Even Mr. Meany, an important figure in the U.S. labor movement, has gone on record against military unions.

UNIONS IN THE MILITARY: AN EROSION OF DISCIPLINE

Discipline is the indispensable ingredient in military operations. The military is not, and cannot be a democratic organization. There is not room for negotiation or vote on whether commands are to be followed. National security requires that military organization be able to count on instant obedience to orders.

The Senator from Kansas shudders to think that union stewards and military leaders might, if this preposterous concept is allowed to materialize, haggle over the weight of the soldier's pack, how many days a sailor can be out to sea, how many pushups a marine can do, or whether a GI can wait for a dry and clear day to go on maneuvers. Mr. President, think of the opportunities a soldier would have to demand a pay raise, et cetera. Suppose enemy ships were off the U.S. coast ready to land; would that not be a good time for U.S. unionized troops to demand a pay raise?

SUPREME COURT RULING ON A SOLDIER'S CONSTITUTIONAL RIGHTS

There will be those who will challenge the prohibition against joining a union as an infringement of the constitutional rights of the individual serviceman.

It has long been recognized that military personnel enjoy the protection of constitutional rights. However, those rights in this case, as in others, must yield to the unique role of the military. The need for discipline, obedience, and unswerving loyalty is an absolute military necessity. The Supreme Court has recognized the unique role of the military with the following statement:

. . . The rights of men in the Armed Forces must perforce be conditioned to meet certain overriding demands of discipline and duty. U.S. Ex. Rel. Toth v. Quarles, 350 U.S. (1955).

Last March, the Court held that—

A military organization is not construed along democratic lines and military activities cannot be governed by democratic procedures. Military institutions are necessarily far more authoritarian; military decisions cannot be made by vote of the interested participants.

EXISTING LEGAL BARRIERS?

There are in existence numerous legal barriers to the unionization of the armed services. These laws and regulations, which are numerous and broad in scope, strongly discourage unionization but do not forbid it. Mr. President, my amendment which will bar the expenditures of any funds appropriated in this act for purposes of negotiating with unions in the military, will provide a temporary but definite and unquestionable prohibition of this activity.

PRESIDENTIAL AND CONGRESSIONAL RESPONSIBILITY

The Congress and President Carter have a duty to cancel out any prospect of military unions—a duty that overrides both political and philosophical support of the union movement in the civilian sector. Responsibility for immediate action preventing unionization in the military is on the President and the Secretary of Defense. The President has legal authority to issue an Executive order banning union membership. He should issue that order. The Secretary of Defense also has the authority to issue directives to the military banning union membership and activities.

To put the matter to rest once and for all, Congress should move quickly to pass one of several pending bills to ban military unionization. I believe my amendment is a step in the right direction in that it will provide a temporary ban of union activities in the military while unchallengeable legislation is thoroughly debated, considered, and acted upon by Congress. Such unchallengeable legislation has been introduced by the most distinguished and able Senator from South Carolina, and I commend him for his dedication and hard work on this sensitive issue.

I have discussed this amendment with the distinguished Senator from Mississippi. The last thing this Senator wants to do is in any way offend the distinguished floor leader of this bill. The Senator from Kansas offers the amendment in an effort to send a signal and, in effect, support the hearings now being conducted by the Armed Services Committee.

Mr. President, with that in mind, the Senator from Kansas reserves the remainder of his time.

Mr. DOMENICI. Will the Senator yield?

Mr. DOLE. I yield to the distinguished Senator from New Mexico.

Mr. DOMENICI. Mr. President, I am privileged to be a cosponsor with the Senator from Kansas on this measure. I would like to say to the distinguished Senator from Mississippi that I join as cosponsor not in any way to infringe on the hearings which I know he is having in the Armed Services Committee, but, rather, to make sure that those in our country who are attempting to promote this organization of our military into unions understand that during the period of time that this bill covers, while the Senate may be debating an affirmative-type law prohibiting the conduct, for any of those who might think they could force our military into negotiating this would be a strong buttress for the military leaders to say they cannot, in this interim, use any tax dollars to negotiate or spend time on that kind of effort.

I believe that is the intention of the Senator from Kansas, to strengthen their position to make sure that not one penny of the funds herein can be used by the military in time, negotiating, going to meetings, where the subject matter is the potential unionization, in whole or in part, of any of our military troops. I thank the Senator for letting me cosponsor.

Mr. DOLE. The Senator from New Mexico is exactly right. This is to undergird and to firm up any view that someone might have who may be appearing before the hearings. It is in no way intended to be anything but supportive of those hearings.

I would like to add at this time the distinguished Senator from Maine (Mr. HATHAWAY) and the distinguished Senator from Wyoming (Mr. WALLOP) as cosponsors to the amendment. I yield 2 minutes to the distinguished Senator from New Hampshire (Mr. DURKIN).

Mr. DURKIN. I thank the Senator. After cosponsoring this measure, I realized hearings were being conducted. It was not to disrupt the hearings, but it does disturb me when I turn on the morning news on TV to see that national labor leaders are actively discussing the subject of organizing the military. It is something which causes great concern to me.

I urge my colleagues to adopt this amendment which would prohibit any funds being expended to negotiate in any way with any union organization with respect to the military. We have enough problems in the military.

I believe there is a place for unions in this country, and I support the union movement, generally.

I think it is absolutely asinine and a serious threat to military readiness to have union organizations in the military. I thank the Senator from Kansas for yielding.

Mr. STENNIS. Mr. President, I fully appreciate all the intentions of the Senator from Kansas and everyone else who has worked on this program. But with great deference, Mr. President, in the first place, this is a legislative matter, unmistakably, it is a legislative question, it is a legislative responsibility, and this is an appropriations bill which is not supposed to carry legislation.

I am not trying to make that point on the amendment of the Senator.

The very heart of the matter is that there is nothing like this going on now. The Secretary of Defense has testified that he is not carrying on, and is not going to carry on, anything with the unions, any negotiating of any kind. This amendment puts a prohibition on any funds being used to negotiate.

The Secretary of the Navy has made a very strong witness before our committee on the Thurmond bill. I introduced a bill later seeking to make it a more comprehensive bill in support—we could not tell just how some points were going to be decided—of that principle. The other Secretaries of the services have testified either in person or by representation as to what is going on now.

There is no threat or danger of any officer in office now carrying on with this money.

We have had some excellent testimony in the hearings this morning and yesterday morning. There will be more testimony Friday, if we can meet. Anyway, there will be a bill reported by our committee within a few days, and I believe it will have very broad support in the committee.

It is going to have meaning in it. It is not a punishing bill, but it has meaning. It is comprehensive. It is going to cover the problem. I am strongly for it. I do not think any kind of constitutional rights or the Bill of Rights can overcome the duty on the Congress concerning the military departments and their regulation.

There will be a bill here, Mr. President. I am not begging anyone to do anything, but I think the correct legislative thing to do is to leave it to that bill.

Number two, this, it seems to me, will just kind of smoke up the thing, though not intentionaly. It will blur the issue some and create an unknown situation.

My bill is moving along. The Senator from South Carolina has worked on it diligently and with great persistence. He has worked on it very hard and has made a real contribution. He is head man on it, not the chairman of the committee.

I am satisfied that this subject is under control and we will have a bill the Members can support. We wanted to have the right kind of a hearing.

I wish the Senator would withdraw his amendment.

Let me yield to the Senator from South Carolina.

Mr. THURMOND. Mr. President, I commend the able and distinguished Senator from Kansas on taking the position he does to prohibit unionizing the military. However, I believe it would be better if we allowed this permanent bill to proceed. We are holding hearings. We have already held a good many. We held a hearing today, and we will hold another one tomorrow. The distinguished chairman of the Armed Services Committee has promised that we will get the bill out within a few days. That will be a permanent bill.

If this particular amendment is adopted, it will only apply to this year's bill. If we could not do any better, that would help, and I would certainly go all out for that. However, since we can bring this bill out and pass a permanent bill, I believe it is better to do that. I would hope in view of that the able and distinguished Senator from Kansas will see fit to withdraw his amendment.

I might also say that we have 43 cosponsors on this permanent bill. I believe the distinguished Senator from Kansas is one of those sponsors. I am heartily in accord with his thinking concerning the importance of this subject, because it is very important. We have been bringing out the threat, how the AFGE is working to organize. It is important that we act and not delay. We have been promised action by the distinguished chairman (Mr. STENNIS). In view of that, I would hope the Senator would withdraw his amendment.

Mr. STENNIS. The Senator from Rhode Island and I have discussed this. I yield 2 minutes to the Senator.

Mr. CHAFEE. I rise in support of the statement of the distinguished chairman of the Committee on Armed Services. I say that it just does not seem to me that that is an appropriate way to proceed. I think that the Senate is overreacting in this situation. There is legislation under consideration. I think that, really, what we should turn our attention to in connection with this matter is to make the All-Volunteer Force concept a great success.

I do express my admiration for the report that Senator STENNIS and Senator MCCLELLAN and that committee have produced in here with their comments on the All-Volunteer Force. I think that is what we want to turn our attention to, making service life as attractive as possible.

Therefore, I wish to join in the sentiments expressed by the distinguished senior Senator from Mississippi.

Mr. DOLE. Mr. President, first I ask unanimous consent that the distinguished Senator from Utah (Mr. GARN) be added as a cosponsor of the amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. DOLE. Mr. President, the Senator from Kansas, of course, certainly supports the distinguished chairman. We have known for many months of the interest that the distinguished Senator from South Carolina (Mr. THURMOND) has in this broad and complex problem. In fact, the Senator from Kansas was privileged to join as one of the early sponsors of the Thurmond proposal. I also have great respect for the committee process. But I hope we have demonstrated, by what I think is almost unanimous support in this body, that the Senate of the United States, as a body, would support this type of amendment.

I hope it may be helpful to the distinguished Senator from South Carolina, the distinguished chairman of the committee (Mr. STENNIS), and the distinguished Senator from Rhode Island, and others, as they proceed with the hearings.

The Senator from Kansas hopes that the committee hearings move very quickly. I shall withdraw the amendment, based on the assurances that I have received from the distinguished Senators from South Carolina and Mississippi that work on this issue will move quickly.

Before withdrawing the amendment, the Senator from Kansas will only state one more time: There has been a great deal of publicity, in the past few days, about unionization of the military. It is not something that is on the back burner. It is something being considered actively by certain unions, something that is being talked about and discussed on television, radio, and in the newspapers. It is the right time to be discussed. But I hope, based on the statements made, we can expect, before the recess or shortly after the recess, a bill to come forth from the committee. With this in mind, the Senator from Kansas withdraws the amendment. Furthermore, I would like to assure the distinguished chairman and the distinguished leader in this effort (Mr. THURMOND) that the Senator from Kansas endorses and supports their efforts wholeheartedly.

Mr. THURMOND. I congratulate the able Senator from Kansas on this action. We feel that this is the best procedure. We feel that, within a few days, we shall have a bill out of the committee.

I admit, it has been there a long time, 2 years. But at the same time, we have a commitment that it will come out soon and we hope to get action promptly. It is important that we pass this bill without delay.

Mr. STENNIS. Mr. President, may I take a half minute to thank the Senator from Kansas and others?

I repeat, Mr. President: What I wanted to get was a balanced bill that had meaning in it that could be passed with broad support. I believe we have reached that point.

Mr. DOLE. I appreciate those remarks.

The amendment was withdrawn.

AMENDMENT NO. 523

Mr. GOLDWATER. Mr. President, I call up my amendment No. 523 and ask that it be considered.

The PRESIDING OFFICER (Mr. MELCHER). The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Arizona (Mr. GOLDWATER), for himself and Mr. BENTSEN, proposes amendment No. 523.

On page 2, line 10, strike out "$8,704,357,000" and insert in lieu thereof "$8,704,733,000".

On page 8, lines 14 and 15, strike out "$2,795,436,000" and insert in lieu thereof "$2,811,586,000".

Mr. GOLDWATER. Mr. President, I shall not take more than 10 minutes on this, if that much. I just want to explain the amendment and call the attention of my chairman to what I have to say.

This amendment No. 523 sponsored by Senator BENTSEN and myself, restores $16.5 million to operate the overseas American Forces Radio and Television service and restore the Armed Forces Office of Information mini-TV program.

The recommendation of the Appropriations Committee to eliminate the American Forces Radio and Television funds could mean the end of this service to our overseas military and civilian personnel and their dependents.

This service could be terminated because the committee has directed the DOD to convert this service to a nonappropriated fund activity. The committee has directed the Department to sell commercial time on the American Forces Radio and TV network in order to fund this operation. The DOD has estimated it would take some $80 million to make this transition if it were legal to sell commercial time.

However, the DOD reports such an activity would be contrary to the laws and the agreements we have with host nations which specifically forbid the use of commercials. Our own broadcast industry, which provides programs to AFR–TV at minimum cost, also prohibits commercials based on a 1958 agreement. In addition, unions and guilds who donate their members' services also prohibit commercial use of their product. These prohibitions are also contained in other governmental agreements in order that we do not infringe on the foreign commercial radio and television station operations.

Thus, the committee recommendation to sell commercials seems impractical, since it would be in violation of existing agreements. The end result of not restoring these funds will be to end the AFR–TV service, since there is no way, other than through appropriated funds, that they can meet operating expenses.

Mr. President, the second part of the amendment restores $1.1 million for a system the services are using that is called Mini-TV. We have military personnel assigned to numerous isolated areas throughout the world where they do not have access to the services of AFR–TV. To cope with that problem, the DOD has developed Mini–TV by which, through the use of cassettes played back on video tape, they are able to provide programs to our military personnel. This avoids the expense of creating a costly transmission system if we were trying to broadcast to some of these remote areas.

Mr. President, in sum, the question of using appropriated versus nonappropriated funds for our American Forces Radio and TV network has been reviewed periodically and the determination is it can only work with appropriated funds. Simply stated, there is no way to raise the necessary amounts to operate as a nonappropriated fund activity. The selling of commercial time is in violation of existing host nation agreements and is not a practical solution.

I urge adoption of the amendment.

Mr. President, before I end, I ask unanimous consent that a message from General Ellis, CINCUSAFE, to General McBride in Washington on this subject be printed at this point in my remarks.

There being no objection, the message was ordered to be printed in the RECORD, as follows:

MESSAGE FROM ELLIS TO MCBRIDE RE AFR–TV

Subject: Senate Appropriation Committee (SAC) recommendations/AFRT funds.

1. We have received disturbing reports the committee has deleted $15.5 million FY 78 funds for programs. Operations and maintenance of Overseas American Forces Radio and Television (AFRT) (to include Mini–TV) from the appropriations bill. We understand the committee directed that conversion of these operations to nonappropriated fund activities take place immediately, that DOD explore the feasibility of raising revenue by selling commercial advertisements, and that military personnel funds budgeted for this activity have been deleted from the bill. This command strongly objects to the Senate Appropriations Committee recommendation to place AFRTS under nonappropriated funding for the following reasons:

A. AFRT as an appropriated fund activity is absolutely essential for the effective management of our air forces in Europe. Any possibility of a loss of AFRTS as a command resource, through nonavailability of NAF monies would seriously jeopardize our ability to communicate with the men and women of USAFE. Broadcasting is the single most important mass communications medium available to this command. Therefore, any deterioration of AFRTS would reduce our ability to accomplish the mission.

B. While AFRTS provides entertainment, it more importantly serves as a command communications tool. It is vital for emergency communications to insure the safety and welfare of our people as well as the security of our nation.

C. In addition to this emergency link with Air Force people, our stations provide a means of communication on important Air Force policies, programs and procedures. Broadcast interviews with commanders, commander's hot line programs, and interviews with key staff people allow the commander to inform his people on key issues and often avoid problems that could occur. For example, in a base housing area in Germany, there were a series of alleged rapes which had the community in a near panic. The community commander used the local AFRT outlet to personally give periodic reports on the status of dependent protection and to clarify the many rumors which were being circulated throughout the community.

D. These types of communications are specifically command functions and should be available through appropriated funds. Any chance that nonappropriated funds would not provide AFRTS outlets with adequate operating funds, qualified broadcast personnel, broadcast equipment and supplies or quality programming would severely hamper the execution of command.

E. Another area of concern is the right of every American to obtain consistent and immediate broadcast of accurate and unbiased news. To the military member it is particularly important since he must discharge his responsibilities as a voter and citizen outside the boundaries of the United States. In many USAFE locations the only timely news available is through AFRTS outlets.

F. The most serious dangers of becoming a nonappropriated fund activity is the loss of outlets which are now established under USAFE management and a loss of quality AFRTS programming acquisition.

(1) It is illegal in many countries to use AFRTS for commercial purposes. For example, the chief of staff for the Portuguese Air Force in a letter dated 20 Aug. 54, authorizing the TV station at Lajes Field, Azores, states, quote: It (AFRTS station) cannot be used for commercial or propaganda purposes of any kind. Unquote. Turkish law states, quote: No fee will be charged (by AFRTS) in any way, for the transmission. Unquote. Commercials could be interpreted as revenue producing and, therefore, as charging a fee. Other countries in Europe have similar laws and rules. Should commercials be used we would undoubtedly lose our right to broadcast either temporarily or permanently in most of the countries where we now have outlets.

(2) The loss of quality news and entertainment programming is a serious concern. Most AFRT radio and television programming material is provided at a very nominal cost to AFRTS. Normal fees, as unions and guild charge, have been waived. Should AFRTS be placed under NAF and begin charging for commercials, even for local commercials, the unions and guilds would certainly begin charging for their services. The amount for these services have been estimated to be about 80 million dollars per year. Any decrease in the quality of AFRTS radio and television entertainment programming, to reduce those costs, would result in a large audience dropoff and reduce the effectiveness of AFRTS as a critical information channel with Air Force people.

Your assistance to support the present AFRTS system as an appropriated fund activity in the congressional conference committee deliberations is strongly urged.

Mr. GOLDWATER. I urge the adoption of the amendment.

Mr. BENTSEN. Mr. President, I strongly endorse the amendment of the Senator from Arizona to restore funding for the Armed Forces Radio-TV network and the Mini-TV program. My reasons are quite simple. The American Forces Radio and Television system performs an indispensible function for servicemen and their dependents. However, the committee action would silence this important link to the outside world.

Many of my colleagues have experienced the isolation and hardship of life at remote or foreign military posts. That loneliness still exists today but the Armed Forces Radio and Television system has been able to reach all portions of the globe and fulfill the need for a voice from home.

At places like the outback of Alaska and ships at sea, news, entertainment and emergency broadcasts have helped keep military morale high.

Lives have been saved and injuries avoided due to emergency broadcasts during a typhoon in Korea and a tanker fire in Germany, just to cite a few examples.

Obviously, none of these services come free. The House recognized this fact when it included over $15 million for the American Forces Radio and Television Service and Mini-TV program. However, the Appropriations Committee struck the funds, believing that "the same type of entertainment services could be provided through a nonappropriated fund activity with significant savings to the Government." I am all in favor of saving money,

but because of the peculiar circumstances of this program, we will not be able to accomplish the Appropriations Committee's hoped for saving without sacrificing the program itself.

Mr. President, as the Senator from Arizona has pointed out, agreements exist in virtually every country where U.S. bases are located preventing commercial enterprise or competition with host country broadcasting outlets. Also, the $80 million in free programing that we currently receive would be lost due to a 1958 agreement that states no commercial use of these materials will be allowed.

And even if it was allowed, I ask you, who would buy these commercials in Turkey or Taiwan? There is no Madison Avenue style market waiting for another medium to promote its products.

The committee has done a commendable job in dealing with such a complex subject as military appropriations. However, its action with regard to Armed Services Radio and TV and the Mini-TV program will not stand up to careful examination.

I need only quote a telegram from four-star Gen. Robert E. Huyser, Deputy Commander in Chief of European Command, to bring home the importance of this program and the need to restore the funding:

> We are deeply concerned that [the striking of funds] will stop all Armed Forces Radio and T.V. operations in this theater. . . . American Forces Radio and Television in this theater is vital in transmitting mission-essential information to the Forces. Armed Forces Radio and T.V. is also vital as a contingency means of communications in the event of emergencies. In peacetime, American Forces Radio and Television is a key means of keeping our people overseas in touch with American society. Finally, the fledgling mini-T.V. program is a key morale builder for the many servicemen who, due to their remote location, having nothing else.

Mr. GOLDWATER. I thank my friend from Texas.

Mr. STENNIS. Mr. President, I shall have something to say a little later. I want to yield some time to the Senator from North Dakota. I yield such time as he may use.

Mr. YOUNG. Mr. President, I think the Senators from Arizona and Texas make a good case. If the Defense Appropriations Committee were considering this today with more time on the new developments, this amendment would not have been in the bill.

So I urge that the amendment be accepted.

Mr. STENNIS. I thank the Senator.

One point that has arisen, Mr. President, I call this to the attention of the authors, the matter of having some of this in conference. It is thought that good can come from that and some adjustments can be made and some understandings had.

Let me suggest we reduce the amendment $2 million and that amount will be in conference and we will have a chance to work on it and get some better understanding.

Mr. GOLDWATER. Mr. President, I think that is a good, just, fair discussion.

I know the problems of going into conference with the House on this. I thank my leader for being willing to make it $14.6 million instead of $16.6 million.

Mr. BENTSEN. I would like the record to show I am a cosponsor on that.

Mr. STENNIS. Let us get the figures correct. Make it $13.6 million and that would give us $2 million only in conference.

The PRESIDING OFFICER. Will the Senator from Arizona send his modification to the desk?

Mr. GOLDWATER. The modification was made by my chairman.

The PRESIDING OFFICER. Does the Senator seek to have his amendment modified?

Mr. THURMOND. Will the Senator yield for just a very brief statement?

Mr. STENNIS. Just a second. There is a little confusion here about the figures. We may be together on it already.

If we could make that last figure $2,809,000,000 instead, of $2,811,000,000, that would leave $2 million only in conference and that would be our lever we would have to work on.

Mr. GOLDWATER. That is correct.

Mr. STENNIS. Is that the Senator's figure?

Mr. GOLDWATER. Yes.

The PRESIDING OFFICER. The Senator's amendment is so modified.

Mr. BENTSEN. Let me understand, that is $2,809,686,000?

Mr. STENNIS. Yes.

Mr. BENTSEN. All right.

Mr. STENNIS. That is right, $686,000.

Mr. THURMOND. Mr. President, I am strongly in favor of restoring funding for the Armed Forces Radio and Television Service.

Mr. President, I rise in support of this amendment to restore funding for the Armed Forces Radio and Television Service which provides information and entertainment to American servicemen and women stationed overseas.

This network is the prime source of military information and national and international news for military personnel and their dependents overseas. The Senate Appropriations Committee recommended that approximately $16 million be deleted from the budget and that this program be completely funded by nonappropriated funds. The services unanimously say that such a change will be the end of the Armed Forces Radio and Television Service. It seems to me that this is a small price to pay considering the importance of Armed Forces Radio and Television Service to our military and their dependents overseas.

The Senate Armed Services Committee has just recently conducted hearings on the issue of military unionization. At this hearing, testimony was received from military witnesses at all levels. Their testimony indicated that the erosion of service benefits has adverse impact on morale of the servicemen and was the main reason some of them were considering turning to unions. It seems to me that to take away the Armed Forces Radio and Television system and thereby removing the sole link that our servicemen and women overseas and their dependents have to their own country would certainly have a damaging impact on their morale.

In addition to the morale factor, I understand that the Armed Forces Radio and Television Service provides communications during periods of emergencies such as power failures, civil disturbances in foreign countries and crises caused by the weather. Therefore, I urge my colleagues here in the Senate to support this amendment and restore funding for the Armed Forces Radio and Television Service.

The PRESIDING OFFICER. Who yields time?

Mr. GOLDWATER. I will yield back all my time.

Mr. STENNIS. I yield back my time.

The PRESIDING OFFICER. All time having been yielded back, the question is on agreeing to the amendment, as modified, of the Senator from Arizona.

The amendment, as modified, was agreed to.

AMENDMENT NO. 524

Mr. GOLDWATER. Mr. President, I have another amendment which I call up.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

> The Senator from Arizona (Mr. GOLDWATER), proposes an amendment numbered 524, as modified.

Mr. GOLDWATER. Mr. President, I have had so many modifications today, it is hard to know whether I modified it or not.

That is the amendment that has not been modified and probably will not be.

The PRESIDING OFFICER. The Chair informs the Senator from Arizona it will be necessary to have unanimous consent.

Mr. GOLDWATER. 524 was the amendment I wanted read, without modification.

The PRESIDING OFFICER. The Senator from Arizona will need unanimous consent to offer his amendment because it strikes a portion of the bill which has already been amended.

Mr. GOLDWATER. I ask unanimous consent that such be done.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment will be stated.

The assistant legislative clerk read as follows:

> The Senator from Arizona (Mr. GOLDWATER) proposes an amendment No. 524:
>
> On page 3, line 11, strike out "$7,149,609,000" and insert in lieu thereof "$7,154,509,000".
>
> On page 7, line 17, strike out "$8,146,638,000" and insert in lieu thereof "$8,152,838,000".

Mr. GOLDWATER. Mr. President, please do not allow this to be confusing. We are talking about $11.1 million.

Mr. President, my amendment restores $11.1 million to the Air Force O. & M. account for the accelerated copilot enrichment program which was cut by the Appropriations Committee. This program is called the ACE program.

Since 1968, Air Force flying hours have been cut more than 50 percent. The many reasons for this are not germane

to the issue before us. What is a major and valid concern is that the flying hour programs of the Air Force has been pared down to the point at which only a minimum acceptable level of readiness is sustained. At this level of endeavor, the young copilots of the Strategic Air Command, who will be the B–52 and KC–135 aircraft commanders of the future, will not have the needed air experience and maturity when they are needed to assume the added responsibilities.

Look at the facts.

In 1968, a young copilot, just graduating from pilot training, sat beside a seasoned aircraft commander who was about 35 years old with 14 years of service and 3,600 hours of flying. Today, this copilot sees a younger, 31-year-old man, with about 2,400 hours. In 1983, the Air Force projects the typical aircraft commander will have only 1,700 hours. This aircraft commander, who has the heavy responsibility of other crewmen's lives and an expensive weapon system, must have the maturity, experience, and confidence to accurately respond to stress situations and provide confident leadership to the crew.

The Air Force sought alternatives. They determined that, by supplementing mission aircraft flying with flying in a less costly aircraft, where the young copilot would be making decisions for himself, in the air and on his own, the maturing process could be accelerated. The concept was tested with three Air Force commands participating and found valid.

Because of the limited resources available for program execution, the commands were examined to determine the greatest need. The Strategic Air Command was selected.

The committee report states that MAC and TAC rejected the program as not appropriate or cost effective. The missions of the three participating commands are separate and distinct; however, the test parameters were held constant to provide a common baseline. Obviously, the results varied. As an example, the mission of TAC is event intensive. Because of this, TAC pilots rapidly gain experience and maturity. The TAC portion of the test showed that the less experienced pilots benefited from their program participation; whereas, the benefits derived by the more experienced pilots were not as apparent.

On the other hand, MAC, due to air traffic congestion at the home station of the test group, sent the pilots TDY for program participation. MAC test results were dramatically affected because of this. The impact of being TDY decreased the participants accrual of mission aircraft flying time. Both MAC and TAC said in their test reports that, for the program to be effective in their particular commands, minor changes would be required in the program concept. Neither command rejected the program as stated in the committee report.

The Appropriations Committee report also states that the ACE program is particularly inappropriate for the KC–135 crews. This was based on a small increase in the average hours flown by each KC–135 aircraft—about 319 hours in 1977 to 343 in 1978. In 1973, the hours were over 500 per aircraft; and, as late as 1975, it was 420. The overall trend is down, not up. Moreover, the KC–135 copilot accrues less time per year than his B–52 counterpart. Today, the average tanker copilot flies 246 hours per year; whereas, for the average B–52 pilot, it is 264. Second, KC–135 flying is less event intensive; that is, the KC–135 copilot has less things to do in an hour than his partner in the B–52. But the main concern remains; neither copilot is getting his mettle tested sufficiently to take over as a mature, experienced aircraft commander when his turn comes.

Finally, the committee agrees that more flying time improves readiness, but questions the basis for the ACE program. It believes the Air Force to be seeking a way to use excess T–37 and T–38 resources. First, the ACE program is not the case of pilots flying more; these supplemental hours are needed for the pilots to fly enough. Second, it was the immediacy of the need that directed the use of the available T–37 and T–38 resources. The Air Force had, concurrently with the flying test, embarked on an aircraft study. The goal of this study was to establish a conceptual design for a dedicated ACE aircraft. The funds for this study were cut from the fiscal year 1977 budget.

We must support this essential, cost-effective program. The modest costs will reap large dividends in the readiness of Strategic Air Command.

Mr. President, I have been concerned for quite a few years about the number of Air Force captains and majors who are leaving the command. I have been investigating it as much as I can in my visits to various places and in my flying with the various members of the Air Force. While I have not gone far enough to make an absolute statement on this, it appears more and more to me that when a young man reaches the age to be a captain or a major and his cockpit time is so restricted that he sometimes does not get 4 hours a month, he begins to say to himself, "What is there in this for me? What does the Air Force mean? I joined it to fly."

Mr. President, I think we made a tremendous mistake in the so-called interests of cutting expenses when we cut the flying time of flying personnel. All of us who have served in the Air Force regardless of what we are, can remember the way we looked forward to almost unlimited flying, going places on weekends, going into strange fields, improving our techniques and improving our abilities. That is the whole essence of the Ace program.

What I am asking is that we restore $11.1 million for this program, which will pay off and pay off and pay off so many more times in this that it would be ridiculous to make an estimate. I want to see young captains and young majors staying in the Air Force. That goes for the Navy, the Marines, and the Army, also—not leaving the services with the idea that the grass is a little greener in the airline yard or some private flying yard.

I rest my case with my chairman.

Mr. STENNIS. Mr. President, this concerns training and training time, training pay. We have looked into this matter. I have conferred with the Senator from North Dakota. A great part of the amendment is good, and we have agreed to it. We have a situation about which there should be a better understanding.

Suppose the Senator drops a million dollars on each of these, as he did before. He has two items. We will have that in conference, and with that as a base, we can get into this matter. I understood that perhaps he would be agreeable.

Mr. GOLDWATER. As in the case of the other amendment, will the Senator offer any other figure that seems acceptable?

Mr. STENNIS. The Senator has here $7,154,000 and I was guessing to make that $153 million.

Mr. GOLDWATER. That is correct.

Mr. STENNIS. That would be $1 million.

Then, dropping down to the last line, the paper I have shows $8,152 million. The Senator might make that $151 million.

Mr. GOLDWATER. That is correct.

Mr. STENNIS. Will the Senator modify his amendment?

Mr. GOLDWATER. Mr. President, I send to the desk a modified amendment bearing those figures.

The PRESIDING OFFICER. The amendment will be so modified.

The modified amendment is as follows:

On page 3, line 11, strike out "$7,150,731,000" and insert in lieu thereof "$7,155,631,000".

On page 7, line 17, strike out "$8,186,638,000" and insert in lieu thereof "$8,192,838,000".

Mr. STENNIS. Mr. President, I am authorized by the Senator from North Dakota to say that he joins in this and supports it.

Mr. GOLDWATER. I thank the chairman and my good friend from North Dakota. I can assure them that the Strategic Air Command will be extremely grateful.

Mr. STENNIS. Mr. President, I yield back the remainder of my time.

Mr. GOLDWATER. I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment as modified.

The amendment as modified, was agreed to.

Mr. STENNIS. Mr. President, the time is running out fast.

UP AMENDMENT NO. 687

Mr. HATHAWAY. Mr. President, I send an amendment to the desk.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Maine (Mr. HATHAWAY) proposes an unprinted amendment numbered 687.

Mr. HATHAWAY. Mr. President, I ask unanimous consent that reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 45, line 7, after "NATO" insert the following: "so long as such agreements with foreign governments comply with the requirements of section 36 of the Arms Export Control Act and, where applicable, with section 814 of the Department of Defense Appropriation Authorization Act, 1976".

Mr. HATHAWAY. Mr. President, this amendment has the effect of insuring that a provision in the bill which permits the Department of Defense to procure specialty metals from foreign sources does not in any way override or supersede provisions of existing law which require the Department of Defense to report international agreements on reciprocal weapons purchases.

On August 2, 1976, I offered this same amendment to last year's DOD appropriation measure, and the Senate approved it. At that time, I pointed out that my concern in this area was based upon the controversy surrounding the Army's decision to procure a Belgian-made machinegun instead of an American-manufactured one, made by Maremont Corp. located in Saco, Maine.

The Army's decision, made in March of 1976, was widely reported in the media to be part of a package deal allegedly entered into by the United States and Belgium in the spring of 1975, involving the latter nation's commitment to enter into a consortium of European nations to coproduce over $2 billion of the U.S.-manufactured F–16 aircraft.

As a result of these allegations, I offered amendments to procurement authorization legislation and to foreign military sales legislation, which were approved and have now become part of existing law. Those amendments required that, in the future, any quid pro quo deals be disclosed to Congress, and Congress be given an opportunity to determine whether such deals are in the national interest.

The amendment I am offering today is a necessary one to insure that the mandate of my previous amendments is met. The pending amendment will prevent the language contained in the reported version of the bill from being construed as waiving such disclosure requirements.

Mr. President, that is the gist of the amendment.

The language on page 45 of the bill which allows the purchase of specialty metals from countries other than the United States in certain circumstances. This amendment is intended to insure that the language of the bill does not undercut or supersede provisions in underlying authorization legislation which require the administration to reveal or disclose to Congress any quid pro quo arrangements entered into with foreign nations.

Mr. DURKIN. Mr. President, will the Senator yield for a question?

Mr. HATHAWAY. I am happy to yield to the Senator from New Hampshire.

Mr. DURKIN. Does this amendment have anything to do with importing chrome from Rhodesia or the Soviet Union?

Mr. HATHAWAY. No, it does not.

Mr. President, I have discussed this amendment with the distinguished chairman of the committee. I do not believe there are any problems in it.

I reserve the remainder of my time.

Mr. STENNIS. Mr. President, this amendment has been thoroughly examined by the staff, and other members of our committee have looked at it. The Senator from North Carolina has looked into it, and Senator NUNN and Senator CULVER, who work on this subject have looked at it. We can take the amendment to conference, as we did last year. I hope we can get further with it than we did before.

I thank the Senator for not suggesting that we would do anything less than our best. We will try harder.

Mr. HATHAWAY. I know the Senator will do his best. I wish him luck and hope he makes out better than he did last year.

Mr. STENNIS. Again, the Senator has been waiting here since about 12 o'clock, and I am glad he has got his time.

I yield back all of my time.

The PRESIDING OFFICER. Does the Senator from Maine yield back his time?

Mr. HATHAWAY. I yield back my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Maine.

The amendment was agreed to.

POINT OF ORDER ON COMMITTEE AMENDMENT

The Senator from North Carolina.

Mr. HELMS. I thank the Chair.

Mr. President, I make a point of order that the committee amendment found in section 843(g) of this bill is general legislation and is not in order to a general appropriations bill under rule XVI. Specifically, Mr. President, I am referring to page 53, line 15, beginning with section (g) and running through the word "rendered" on page 54, line 9.

Mr. President, the proposed Appropriations Committee amendment, comprising section 843(g) of this legislation, was a last minute tag on designed, so its proponents contend, to curb abuses in the CHAMPUS program. The idea is to tie in CHAMPUS payments to the same formula as medicare, that is, a "cost-reimbursement" system. Under the present practice, the hospitals and doctors serving CHAMPUS patients charge the usual and prevailing rate in the area—in other words, the same as they charge private patients. The medicare formula arbitrarily sets bureaucrat-dictated fees, and the net result will be the lowering of fees for CHAMPUS patients.

While the purported purpose of this amendment is to put an immediate end to widespread abuses, it is interesting to note that the most optimistic estimated cost saving is only $30 million out of a $600 million program, or about 5 percent. Assuming that not all of the reductions achieved by changing formulas are abuse-curbing reductions, this amendment will achieve cost reductions resulting from alleged abuses at substantially less than 5 percent. This token amount of savings means one of two things: Either the alleged abuses do not exist, or this amendment is ineffective in dealing with them.

I have made the procedural point that this amendment is legislation on an appropriations bill—which indeed it is. But this is more than just a procedural nicety. One of the reasons we have rule XVI, prohibiting legislation on an appropriations bill, is to prevent hasty and ill-conceived action without adequate perusal by the appropriate authorization committee. It is noteworthy that there was no opportunity for hospitals to testify, or to express views on this change, because no advance knowledge of the language change was expressed in the Appropriations Committee proceedings. If there is a problem with the use or abuse of CHAMPUS benefits, then let this question be addressed by the Armed Services Committee which is in a better position to judge the effect of remedial legislation on the entire defense mission.

The present amendment is flawed throughout with difficulties, most of which are the kind that tend to arise from overly simplistic and hasty solutions to a problem. Let me list some of these difficulties:

First. Most health economists, Members of Congress with a health background, Government health planners, budget specialists and administrators of health programs reject such a reimbursement system as one which is archaic, unfair and lacking any incentive to reward efficiency or cost containment initiatives;

Second. The administrative costs for each hospital providing CHAMPUS services to convert to another cost reimbursement system would be high. These costs would have to be added to the CHAMPUS program patients or absorbed by the hospital. It is not as simple as making a second copy of the medicare cost report for CHAMPUS, since only the medicare formula will be used, not the medicare cost forms. A second, third, or fourth cost finding process will have to be added—depending on whether the hospital also services medicaid, Blue Cross, and CHAMPUS patients, as well as medicare—as well as another set of reimbursement forms and instructions. Finally, a CHAMPUS cost reimbursement would require another audit of a hospital's accounts.

Third. The hospital would have to raise its rates to commercial insurance patients, and to those who self-pay, in order to recover the losses a hospital sustains in a so-called cost reimbursement system.

Fourth. Many hospitals whose CHAMPUS population is small may choose to refuse CHAMPUS patients, rather than take on another loss program. This is certain to create great concern among active duty and retired service families in many members' areas.

Last, and most important, the change in the CHAMPUS formula would be perceived by our servicemen as another "erosion of benefits." It may be true, as some argue, that the erosion is more perceived than real. The important thing, however, is that such a perception, true or untrue, undermines morale and exacerbates the currently difficult recruiting problems. Unless we are ready to go back to the draft, we had better pay heed to this problem. The purported $30 million saving to the Government may be more than offset by higher costs associated

with increasing dissatisfaction among our servicemen. Such dissatisfactions can translate into millions of dollars of increased spending due to higher turnover, a.w.o.l., and desertion, increased recruiting expenditures, and the possible need for greater monetary inducements.

Speaking of cost, it should not be overlooked that estimates indicate that the additional administrative costs to the hospitals as a result of this amendment would run at least $5–$10 million. If CHAMPUS has problems, certainly we can come up with a better solution than more bureaucracy, paperwork, and redtape.

This amendment is a classic example of being penny wise and pound foolish. By the time one adds up the administrative costs, the erosion-of-benefits cost, the higher cost to private patients and commercial health insurers—which will be passed on in higher premiums—the $30 million will quickly vanish.

For these reasons, I urge my colleagues to strike this section by voting "no" on the germaneness issue.

The PRESIDING OFFICER. The Senator from Mississippi.

Mr. STENNIS. Mr. President, I was interrupted here on another matter on this bill. Does the Senator make a point of order; is that correct?

Mr. HELMS. Yes. I have made it, I would say to my friend from Mississippi.

Mr. STENNIS. As I understood the ruling here last night, Mr. President, before the Chair rules the proponents have to raise the point of germaneness, is that correct? Will the Chair state the rule? I really do not understand it, and I think a lot of my colleagues would like to hear it too.

The PRESIDING OFFICER. If the question of germaneness is made before the Chair rules, then the point of order is laid aside and the question of germaneness is submitted to the Senate without debate.

Mr. STENNIS. All right.

The PRESIDING OFFICER. To be decided by a majority vote.

Mr. STENNIS. I thank the Chair.

I do raise the question of germaneness.

Mr. HELMS. Mr. President, before the Senator raises it——

Mr. STENNIS. I will withhold it.

Mr. HELMS. Mr. President, last evening, as my dear friend, the able Senator from Mississippi.

The PRESIDING OFFICER. The Chair must advise the Senator from North Carolina that a point of order is not debatable.

Mr. HELMS. I ask unanimous consent that I be permitted to proceed for 2 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HELMS. I thank the Chair.

I raised a point of order last evening. The point of order was sustained by the Chair as well-taken. The Chair was obviously correct. As the distinguished Senator from Mississippi has pointed out, his having failed to raise the question of germaneness prior to the ruling of the Chair resulted in the striking of this committee amendment.

Now, Mr. President, I did not want to take advantage of my friend from Mississippi. I never want to take advantage of any colleague. So I asked unanimous consent last evening that it be in order for me to withdraw my point of order with the understanding that I would make it again today. I did this to accommodate the able Senator from Mississippi. He is now aware of the provisions of Rule XVI and the appropriate precedents of the Senate.

The PRESIDING OFFICER. Without objection, the point of order is withdrawn.

Mr. HELMS. Mr. President, I believe the Chair misunderstands the situation. I did not ask unanimous consent to withdraw it today. I was simply in the process of reciting what happened yesterday.

Mr. STENNIS. Mr. President, I thank the Senator. If I understand the situation we are back to the same place now, I raise the question then of germaneness.

Mr. HELMS. I ask for the yeas and nays, Mr. President.

Mr. STENNIS. I want to make a parliamentary inquiry, Mr. President, following the ordering of the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. STENNIS. Mr. President, is there not some way now to get before this body the information in some manner by the Chair as to just what the situation is when the Senate finds itself confronted here with matters that are not understood and the question is not subject to debate. I ask the Chair to be resourceful.

The PRESIDING OFFICER. The Chair must advise the Senator from Mississippi that the motion is not debatable. The Chair, under Senate rule XVI, now submits to the Senate the question raised by the Senator from Mississippi (Mr. STENNIS), namely, is the amendment germane or relevant to the subject matter in the House-passed bill?

Mr. STENNIS. I ask the Chair to let me put a unanimous-consent proposition here to the body for a brief, very brief, minute or two statement by the Chair to the membership here of what the facts are in connection with this situation. If that can be given by unanimous consent, the Chair can just put the question.

The PRESIDING OFFICER. Without objection, it is so ordered, and the Senator from Mississippi is recognized to make that unanimous-consent request.

Mr. STENNIS. I was going to ask the Chair—just to be sure—there is no partisan flavor in the thing—to explain to the body here what the parliamentary situation is and the meaning. I have made the point here, I have raised the question, of germaneness.

The PRESIDING OFFICER. It is up to the Senate to decide whether the amendment is germane.

That is prescribed by the Senate rules which include the fact that it is nondebatable. But the Chair will state, however, that where the House has opened the door the Senate has allowed germane amendments to come in if the Senate determines they are germane under the rule I have just enunciated.

Mr. STENNIS. Mr. President, if I may say, I think the Chair has correctly stated the situation here. There is language in this House bill on this subject. Therefore, it is germane.

The PRESIDING OFFICER. With that, the Chair puts the question.

Mr. HELMS addressed the Chair.

The PRESIDING OFFICER. Does the Senator from North Carolina wish to be heard.

Mr. HELMS. I ask unanimous consent, Mr. President, that I may be heard.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. HELMS. A parliamentary inquiry, Mr. President.

The PRESIDING OFFICER. The Senator will state it.

Mr. HELMS. Will the Chair advise the Senate if, in fact, the Presiding Officer last evening ruled the point of order raised by the Senator from North Carolina was well taken?

The PRESIDING OFFICER. The Chair ruled last night that the point of order was legislation on an appropriation bill and was well taken.

Mr. HELMS. Exactly, I thank the Chair.

The PRESIDING OFFICER. But the question of germaneness was not raised in a timely fashion.

Mr. HELMS. I understand, of course, and I thank the Chair. That is the situation of last evening that I have just described.

Mr. President, I ask unanimous consent that a portion from the July 18 RECORD, page 23553, be printed in the RECORD of today at this point. It will, perhaps, be useful later to Senators who are not in the Chamber—there are only a few of us here—when they try to explain their vote to veterans, military personnel and hospital administrators who will feel the adverse effects of this committee amendment, if it is not stricken. Also, I might add, the patients of hospitals who will suffer increased costs of hospitalization.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

POINT OF ORDER

Mr. HELMS. Mr. President, I raise a point of order that the amendment comprising section 843(g) of H.R. 7933 is general legislation and not in order to a general appropriations bill under rule XVI.

I ask for a ruling that section 843(g) constitutes legislating on an appropriations bill. That subsection changes hospital payments from charges to cost reimbursement for services to CHAMPUS beneficiaries. By requiring hospitals to accept substantially reduced CHAMPUS payments as payment in full, the appropriations bill clearly charges existing CHAMPUS authorizing legislation which originated in the Armed Services Committee. The Appropriations Committee has the power to propose restrictions on and reduction in funding, but it cannot change the substance of the authorizing statute.

Section 843(g) provides that no funds may be used to pay hospital charges in excess of costs as determined under medicare. That provision will reduce CHAMPUS payments to

hospitals by approximately $33 million of about 5 percent.

Under current law, hospitals are not required to accept CHAMPUS payments as payment in full for services rendered. In practice they have done so because CHAMPUS has paid current hospital charges. Since acceptance of reduced CHAMPUS reimbursement as payment in full is a new legislative proposal changing the substance of authorizing legislation, it is not a proper amendment on an appropriations bill.

The PRESIDING OFFICER. The point of order has been raised by the Senator from North Carolina that the language on page 53, beginning with line 11, is legislation on an appropriations bill. Under paragraph 4 of rule XVI, the point of order is well taken. The language objected to is legislation on an appropriation bill, and therefore the amendment is not in order.

Mr. STENNIS. Mr. President, the Chair is ruling now with reference to language in the House bill, to which certain language was added by the Senate committee. I raise the issue of germaneness—that the additional language added by the Senate committee is germane to that House language.

Mr. President, may we have order?

The PRESIDING OFFICER. The Senate will be in order. The Chair must hear the point being made.

Mr. STENNIS. Mr. President, I know this is raised in good faith, but in all fairness to all involved, we should get down to section 843, on page 52, which is language in the appropriations bill put there by the House; and it is subject to a point of order if originally raised here as Senate language. But it is already in the bill, and we are not permitted to modify it in any way, except on the ground of germaneness, and it is germane to the language of the House bill.

Mr. HELMS. Mr. President, I ask for the yeas and nays.

Mr. STENNIS. It is in order, notwithstanding the point made.

Mr. ROBERT C. BYRD. Mr. President, will that Senator yield?

Mr. STENNIS. I yield.

Mr. ROBERT C. BYRD. Mr. President, no debate is in order once a point of germaneness has been raised. I ask unanimous consent that the rollcall vote which I understand Mr. HELMS will request go over until tomorrow. Senators on both sides have been told that there will be no more rollcall votes tonight.

The PRESIDING OFFICER. Under the precedents of the Senate, the point raised by the Senator from Mississippi regarding germaneness comes too late, because the point of order raised by the Senator from North Carolina had been sustained. Once sustained, the question of germaneness is moot.

Mr. STENNIS. Mr. President, that is all right. I do not mind that. But there seem to be some lessons taught to the Senate here. This matter of germaneness is raised many times, and the membership are all the time telling what they are voting on and how to interpret the issue, and many of them have come to me about it. I am not complaining.

Mr. HELMS. Mr. President, will the Senator yield?

Mr. STENNIS. Yes.

Mr. HELMS. Mr. President, I ask unanimous consent that it be in order for the Senator from North Carolina to request that there be a rollcall vote notwithstanding the ruling of the Chair with respect to the point of order.

Mr. STENNIS. Mr. President, if the Senator will yield, there will have to be some discussion of this matter.

Mr. HELMS. I understand.

Mr. STENNIS. On each side, a short discussion.

Mr. HELMS. I did not want the Senator to be shut off.

Mr. STENNIS. That is mighty nice, mighty fine. I was not complaining. I just say we ought to do something about these rules.

Mr. ROBERT C. BYRD. Mr. President, the point of order has been made and the issue has been settled. I did not understand that the Chair had ruled when the Senator from Mississippi raised the question of germaneness, but the matter is settled.

Mr. HELMS. From my point of view that is satisfactory, but I did not want the Senator from Mississippi to be cut off, and I am perfectly willing to have a vote.

Mr. STENNIS. I am advised, Mr. President, if the Senator will yield, you can withdraw it and redo the thing tomorrow, and we will get a vote in that way.

The PRESIDING OFFICER. It would take unanimous consent.

Mr. HELMS. I will be glad to do that. I ask unanimous consent to be permitted to withdraw it, with the understanding that I will raise the point of order tomorrow.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. STENNIS. Mr. President, since we are into this, page 52 of the printed bill here, section 843, carries the House amendment, and the latter part of it is the Senate amendment put in by the committee at least. That is really what we are voting on. It is germane and, therefore, not subject to a point of order, in my opinion.

Mr. HELMS. Mr. President, I ask unanimous consent that I be permitted 1 additional minute.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HELMS. I am confident the able Senator from Mississippi agrees that we both wish this matter could be discussed fully before the Senate——

Mr. STENNIS. Yes.

Mr. HELMS (continuing). So that our respective positions could be heard. I suspect that many a Senator will, in the complex circumstances, regret their votes. But under the rules of the Senate, it is not possible for Senators to understand, so I am ready to vote.

The PRESIDING OFFICER. The yeas and nays have been ordered.

Mr. HELMS. Mr. President, I do not want to preempt the majority leader, but if he desires a 10-minute vote on this question it may save some time.

Mr. ROBERT C. BYRD. Mr. President, I make the request that there be a 10-minute limitation on this rollcall and on the final passage rollcall.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

The yeas and nays have been ordered. The question occurs on whether or not the amendment is germane or relevant to the House-passed bill. The clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Arkansas (Mr. MCCLELLAN), the Senator from South Dakota (Mr. ABOUREZK), the Senator from South Dakota (Mr. MCGOVERN), and the Senator from Alabama (Mr. SPARKMAN) are necessarily absent.

Mr. STEVENS. I announce that the Senator from Arizona (Mr. GOLDWATER), and the Senator from Connecticut (Mr. WEICKER) are necessarily absent.

I also announce that the Senator from Maryland (Mr. MATHIAS) is absent on official business.

The yeas and nays resulted—yeas 62, nays 31, as follows:

[Rollcall Vote No. 307 Leg.]

YEAS—62

Allen	Durkin	Metcalf
Anderson	Eagleton	Metzenbaum
Bayh	Eastland	Moynihan
Bellmon	Glenn	Muskie

Hatch	Pell	

NOT VOTING—7

Abourezk	McClellan	Weicker
Goldwater	McGovern	
Mathias	Sparkman	

The PRESIDING OFFICER. On the question of germaneness there are 62 yeas and 31 nays, and the amendment is held germane.

Mr. STENNIS. Mr. President, I move to reconsider the vote by which the germaneness of the amendment was affirmed.

Mr. JACKSON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

UP AMENDMENT NO. 688

Mr. JACKSON. Mr. President, I call up an unprinted amendment which I have at the desk.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk proceeded to read the amendment.

Mr. JACKSON. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 28, line 25, insert the following: Strike the amount $3,953,918,000 and insert in lieu thereof $3,954,218,000.

Mr. JACKSON. Mr. President, this is a very simple amendment. It would restore $300,000 for the Air Force project RAND, and bring that appropriation up to the level authorized.

Mr. STENNIS. Mr. President, we have been into this matter, and it is a relatively small amount. That is not controlling, but we think this amount should be restored.

Mr. YOUNG. Mr. President, we concur with Senator STENNIS.

Mr. STENNIS. We support the amendment.

The PRESIDING OFFICER. Is time yielded back?

Mr. STENNIS. I yield back the remainder of my time.

Mr. JACKSON. I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Washington.

The amendment was agreed to.

Several Senators addressed the Chair.

The PRESIDING OFFICER. The Senator from Georgia.

Mr. NUNN. Mr. President, I would like to ask the Senator from Mississippi one question. It relates to base operating support. On page 34 of the report——

The PRESIDING OFFICER. Who yields time?

Mr. NUNN. Will the Senator from Mississippi yield me 1 minute?

Mr. STENNIS. I yield the Senator 1 minute.

Mr. NUNN. On page 34, there are a good many bases singled out in terms of base operating support. The committee, as the Senator from Georgia understands, made an overall lump sum cut. As I understand the table on page 34, it is illustrative but not mandatory or directive in terms of directing or allocating these particular cuts. Is my understanding correct in that regard?

That is to say, the Department of Defense has the discretion to allocate the cuts as they see fit, and this table is discretionary; it is not meant to be mandatory or directive.

Mr. STENNIS. Yes, I think the Senator is correct. In fact, on page 43 of the report, the last sentence reads:

The committee does not expect implementation of these reductions to result in any base closures, but rather in a more rational and reasonable allocation of base operating support costs at installations in the United States.

Mr. NUNN. The authorization committee has also made a similar statement.

My concern is that I do not think we have a common definition of base operating support. I would like to see the Department of Defense go into this in detail, and not just make arbitrary cuts across the board without seeing if there are differences between the bases in terms of defining base operation support.

Mr. STENNIS. I think the Senator is correct.

Mr. TOWER. Mr. President, will the Senator yield for a question? I want to follow up on the question of the Senator from Georgia.

Mr. STENNIS. I yield.

Mr. TOWER. For example, in my own State, there is a suggested reduction of $11.4 million in the base support budget for the naval air station at Beeville. This would be a cut of 64 percent. I want to make it clear that cut is not mandated.

Mr. STENNIS. Yes. That is the way I understand it, that it is not mandated. But the Senator from Georgia may be more familiar with that than I am.

Mr. NUNN. That is exactly the point the Senator from Georgia was raising. It is my position that it is illustrative only, and is not mandated. I think that is the position of the committee.

Mr. STENNIS. Yes. I refer to this paragraph on page 32 in the report, which I ask unanimous consent to have printed in the RECORD at this point.

There being no objection, the excerpt from the report (No. 95–325) was ordered to be printed in the RECORD, as follows:

The Committee has displayed below the results of this analysis. Although the funding reductions have been made to the various service budgets, the Committee wishes to emphasize that the military departments will be permitted to reallocate the reductions in a way that is different from that shown below. The Committee does not expect implementation of these reductions to result in any base closures, but rather in a more rational and reasonable allocation of base operating support costs at installations in the United States.

Mr. YOUNG. It is my understanding that the cuts are discretionary.

Mr. STENNIS. Yes, I think that is correct; the cuts are discretionary.

UP AMENDMENT NO. 689

Mr. HART. Mr. President, I send to the desk an unprinted amendment, and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Colorado (Mr. HART) proposes an unprinted amendment numbered 689.

Mr. HART. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

On page 7, line 17, insert the following:

Strike the figure, "$8,191,838,000," and add in its place the figure "$8,191,862,000."

Mr. HART. I ask unanimous consent that it be in order to offer this amendment at this time.

The PRESIDING OFFICER. Without objection, the amendment is in order.

Mr. HART. Mr. President, this amendment would clarify that in the Senate bill there should be added $24,000 for additional Air Force ROTC scholarships that are badly needed for officer candidates with scientific and technical training. The House has deleted these funds. The Air Force believes very strongly, since there are 475 scholarship slots to be made available by these funds, that they should be included in the Senate bill. I hope very much the Senate will accept the amendment and add it to the Senate bill.

As I say, Mr. President, the purpose of this amendment is to add $24,000 to the Air Force ROTC scholarship program. This money was deleted by the House, and the Senate agreed to the deletion. The House also included language deleting 475 Air Force ROTC scholarships.

I believe that this $24,000 for these 475 spaces is a cost-effective investment. The Air Force has an increasing requirement for officers with scientific and technical backgrounds. The Air Force ROTC scholarship program is structured to produce more officers with this type of background. Of the 475 scholarships deleted by the House, about 90 percent will go to students with scientific and technical majors. The majority of these scholarships will be awarded to cadets preparing for pure scientific and technical officer assignments with some scholarships awarded to flying and missile officer candidates. The latter group will have the opportunity for assignment to scientific and technical areas following completion of their initial tour of rated duty.

Air Force ROTC is the Air Force's largest source of commissioned officers. Air Force ROTC has a production goal of 2,830 line officers per year, of which some 1,550 must have degrees in the scientific and technical disciplines. Scholarships are the key ingredient in attracting high quality students to enroll in ROTC programs, in order to meet the Air Force requirement for scientific/technical officers. Scholarships enable the Air Force to compete with industry for these select individuals. Additionally, scholarships offer expanded opportunities for women and minorities to complete their education at a college of their choice.

Reinstatement of the 475 scholarships deleted by the House and Senate Appropriations Committees will put the Air Force ROTC program more in line with the Army and Navy ROTC programs, in terms of number of students authorized. The 475 additional scholarships are needed to offset a projected shortfall of 450 officers in the scientific and technical areas in fiscal year 1980.

I urge the Senate to agree to restore this $24,000, for 475 additional Air Force ROTC scholarships.

Mr. STENNIS. Mr. President, this concerns the Air Force ROTC, a program of $24,000. They have 275 ROTC scholarships in 1978. The House denied this request, but I think it ought to at least go to conference. We will see what we can do about it.

The PRESIDING OFFICER. Do the Senators yield back their time?

Mr. HART. I yield back the remainder of my time.

Mr. STENNIS. I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Colorado.

The amendment was agreed to.

UP AMENDMENT NO. 690

Mr. TOWER. Mr. President, I have an amendment at the desk. I ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Texas (Mr. TOWER) proposes unprinted amendment No. 690.

On page 28, lines 17 and 18, strike out $4,025,214,000 and insert in lieu thereof: $4,031,214,000.

Mr. TOWER. Mr. President, this amendment relates to the Navy Tactical Flag Command Centers. The requested $6.1 million was removed by the House. The Senate Appropriations Committee accepted this cut and did not restore the funds. The House cut was based on the mistaken view that these centers are used simply as a message handling system. This is not the case. These centers are

in fact the command and control operations for the Navy. They are a major element of the Navy's command and control network.

The command and control communications, is an area in which our forces need considerable improvement. I think the House was mistaken in their concept of what this was for.

I would urge the committee to accept this amendment and take the matter to conference where it can be formally discussed and deliberated upon there.

Mr. STENNIS. Mr. President, I yield myself 2 minutes.

Senators have heard the statement of the Senator from Texas that he learned this was taken out by the House by mistake. He offered his amendment a few minutes ago and we looked it over and talked to him, Senator Young and I. We will take the amendment to conference with the understanding that we will get into the facts fully and thoroughly to see what we can do on that basis. I would not want to take it and say we were just going to stand on it or die. We will try to examine the facts and make a judgment.

Mr. TOWER. I think the amendment will stand on its own merits and will certainly prevail in conference. I yield back the remainder of my time.

Mr. STENNIS. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Texas.

The amendment was agreed to.

UP AMENDMENT NO. 691

Mr. HART. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The second assistant legislative clerk read as follows:

The Senator from Colorado (Mr. HART) proposes an unprinted amendment No. 691.

Mr. HART. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 28, line 17, insert the following: Strike the figure, "$4,031,214,000" and add instead the figure, "$4,032,214,000."

Mr. HART. Mr. President, I ask unanimous consent that it be in order to offer this amendment at this time.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HART. Mr. President, the purpose of this amendment is to add $1 million to the appropriation for the advanced hydrofoil program, for a total of $1.5 million in that program; $1.5 million is the figure authorized for this program.

This program is a most important one in terms of developing the new technology Navy which this Nation badly needs. Hydrofoils have great promise, particularly in the critical field of antisubmarine warfare. A number of nations are pursuing active programs in military hydrofoils, including Britian, Italy, and the Soviet Union. The U.S. Coast Guard is currently using a hydrofoil to enforce the new 200-mile fishing zone.

The advanced hydrofoil program is needed if the United States is to continue to be active in this important field.

This hydrofoil craft program is the Navy's only in-house technological base for advanced hydrofoil ships. This program's recent efforts have included a study involving conceptual development of a large ASW-capable hydrofoil craft. Quite recently, in fact within the past 2 months, NATO and other allies have shown a keen interest concerning the development of such a ship. These countries are:

United Kingdom;
Federal Republic of Germany;
France; and
Netherlands.

These countries obviously realize that their navies must capitalize on new technologies which will allow them to build small, high-speed ships that are quite capable of doing the job of much larger conventional warships. More specifically, certain of these allies have expressed a desire to participate with the U.S. Navy in design and feasibility studies for a large hydrofoil configured primarily for the ASW mission.

The United States could directly benefit from such a joint development program, which would eventually lead to the introduction of a highly effective ASW hydrofoil into the fleet.

Besides NATO's interest in a large hydrofoil, the advanced hydrofoil program element includes funds to demonstrate the ASW potential of the smaller PHM. The PHM, built initially for antiship attack, could also be modified to give it a dual-mission capability to include ASW. These ASW demonstrations are now being planned by the Navy. They are in keeping with the intent of the report of the Committee on Armed Services authorizing appropriations for the fiscal year 1978 budget. The Senate report stated:

The Navy should explore possible antisubmarine warfare applications of the PHM utilizing a different weapon/sensor suite.

It is in view of these two considerations—the interest by four of our allies in participating in design and feasibility studies for a large ASW hydrofoil, and the need to demonstrate the ASW potential of our smaller PHM class—that I offer this amendment.

Mr. STENNIS. Mr. President, this matter has been in and out of the bill for a good while. The Senator from New Hampshire has looked into it some. There is some difference of opinion. This is only $1 million. I believe it is worth taking to conference. I have talked this amendment over with the Senator from Colorado. I will take it on that basis. Some figure has to be reached. We will see what we can do about it. I have consulted with Senator YOUNG and he is also agreeable.

The PRESIDING OFFICER (Mr. BUMPERS). Is all time yielded back?

Mr. HART. Mr. President, I yield back the remainder of my time.

Mr. STENNIS. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Colorado.

The amendment was agreed to.

UP AMENDMENT NO. 692

Mr. STENNIS. Mr. President, I believe we are about through. I found something which had been lost.

The PRESIDING OFFICER. Will the Senator suspend until the Senate is in order?

Mr. STENNIS. Mr. President, I will send this amendment to the desk, but I want to make an explanation first.

There is a program carried on by the Department of Commerce within one of its units, what they call NOAA, tracking and studying hurricanes and other weather conditions. There was a memorandum of understanding between the Department of Commerce and the Air Force about who was going to pay the bill of $2.6 million. They never could agree on it and the thing got lost. Neither one of them has the money unless we put the $2.6 million back into the bill, which I had overlooked. The trouble about this is that this is in Mississippi.

[Laughter.]

Mr. STENNIS. But it is money I am sure the Government owes. If it is not put somewhere, there is not going to be any money to pay it. I am going to see if we cannot make it come out where the Department of Commerce will have to pay it. I believe they will. But we have to have some money to pay it now. I hope the Senators will vote to put this into the bill. It got left out and I did not know about it until after the bill had been reported.

Mr. YOUNG. Will the Senator yield?

Mr. STENNIS. Yes.

Mr. YOUNG. I think this is the most meritorious amendment in the whole bill.

Mr. STENNIS. I thank the Senator. That is a fine start.

[Laughter.]

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Mississippi (Mr. STENNIS) proposes an unprinted amendment No. 692.

On page 4, line 18, strike "$173,083,000" and insert in lieu thereof "$174,400,000".

On page 10, line 20, strike "$372,650,000" and insert in lieu thereof "$373,944,000".

The PRESIDING OFFICER. If all time has been yielded back, the question is on agreeing to the amendment.

The amendment was agreed to.

Mr. STENNIS. That is within the budget, too, Mr. President, whosever budget we decide to put it into.

Mr. President, those are all the amendments I know about.

ADDITIONAL STATEMENTS SUBMITTED

Mr. INOUYE. Mr. President, I call to your attention two paragraphs on page 43 and 44 of the Senate Appropriations Committee Report on the Defense Appropriations bill which speaks about the role of psychiatric nurses and nurse-midwives in providing quality health care to a large segment of our civilian and military population. Again this important role and need is emphasized in the July 12, 1977 Washington Post editorial, which I ask unanimous consent to have printed in the RECORD.

Qualified psychiatric nurses and nurse-midwives provide much needed health

care to families and individuals of civilian and military personnel. These health services include counseling services to problem children and adults, in addition to giving anticipatory guidance to families with young children, and mothers through the maternity cycle. These professional nursing services are provided many times via a team approach so that each professional discipline's expertise is maximized and the patient or family received the appropriate quality care. This kind of cooperative health care cannot help but improve the effectiveness of the health care that is delivered. Equally, each discipline must be reimbursably recognized in this effort of health delivery to this segment of the population.

I believe that the qualified, certified psychiatric nurse and nurse-midwife should be accorded reimbursable recognition and a position of policymaking authority in matters of reimbursement for professional services given to families and individuals of the civilian and military personnel. I do hope that the Government will critically look at this untapped nurse resource and favorably recognize the preventive role of psychiatric nursing and nurse-midwifery and its potential impact on the delivery of health services to a 9.5 million segment of the population.

Accordingly, I am especially pleased that the Senate Committee on Appropriations has directed the independent reimbursement of these two nursing specialists under CHAMPUS and feel that the objective data which will be obtained from this pilot program will be extremely worth while during our forthcoming deliberations regarding the role of nursing services under a comprehensive national health insurance program.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RURAL HEALTH AND MEDICARE

"Shortage areas" is the term used by the American Medical Association and others to describe those parts of the country that lack doctors. They are mostly rural places. In Minnesota, 297 rural towns have no doctors. In Nevada, citizens in 15 rural counties constitute 19 per cent of the population but are served by less than six per cent of the state's physicians. Throughout Appalachia, county after county has no doctor.

Nobody doubts that rural citizens surely suffer from this shortage of doctors. What is irksome is that they suffer more than they need to for the reason that the current Medicare law does not allow reimbursement for services provided by nurse practitioners and physician assistants. As written in 1972, the Medicare provisions within the Social Security Act require that a physician be present at the health clinic or facility if reimbursements are to be made. With no doctors and no reimbursements, many rural health clinics have been forced to close, many more are threatened by closings. One of the ironies of the situation is that patients have been receiving excellent care from these physician extenders. In recent hearings before the House Ways and Means subcommittee on health, Dr. Jesse Walker of Clairfield, Tenn. said that 75 to 90 per cent of the patients at his clinic can be treated by the non-physicians. The patients, Dr. Walker added, feel they are receiving quality service.

Several bills to remedy this situation are now before the Ways and Means Committee and the Senate Finance Committee. Immediate action is needed. As the Appalachian Regional Commission has warned, more than 40 of its 200 mountain clinics are seeing their grants run out this summer. The problem has to do not with unused or costly services but with Medicare payments' not coming in to keep the clinics going. The commission has taken the lead in this issue and argues persuasively that if adequate health care can be provided by nurse practitioners and physician assistants—many of whom were trained in the past few years to fill the doctor void—then the least Congress can do is broaden the law to keep the clinics open.

Sens. Dick Clark (D-Iowa) and Patrick Leahy (D-Vt.) have proposed a useful bill that would offer a comprehensive approach. Many in Congress appear willing to allow reimbursement in clinics that are so remote and small that they can never support a full-time doctor. But they are reluctant to reimburse the work done by nurse practitioners and physicians assistants at slightly larger clinics that do have full-time doctors. The latter account for the majority of the rural clinics nationwide. The Clark-Leahy bill would cover both types of clinics. Even then, rural Americans would remain underserved. According to recent figures from the Department of Health, Education and Welfare, the nation has 3,019 rural medically underserved areas with only some 700 rural clinics among them.

The Clark-Leahy legislation has 54 cosponsors. The question is whether the Finance Committee will take up the matter when it is expected to mark up the Medicare bill later this month. Not to address the issue is likely to mean that many rural citizens will find themselves short not only of doctors but of all health workers.

H.R. 7933: A DANGEROUS PROPOSAL TO RESTRICT GOVERNMENT SERVICES CONTRACTS

Mr. TOWER. Mr. President, in the form passed by the House, H.R. 7933 contained substantial restrictions on the contracting out of Government services. Section 852 of the House version would prohibit the Department of Defense from converting certain base operating functions to a contractor operation and it would severely limit the use of certain commercial contracts to be physically performed at an installation.

The Senate Appropriations Committee, in its wisdom, deleted section 852 from the bill currently before us. The committee recognized that section 852 would restrict the ability of the Department of Defense to achieve maximum efficiency in its base operations.

As the ranking Republican on the Armed Services Committee, I would like to call to the attention of my colleagues a hearing held by the Subcommittee on Manpower and Personnel on July 12, 1977. At that time, we heard from a number of administration witnesses, including the Assistant Secretary of Defense, Manpower, Reserve Affairs and Logistics and the the Administrator for Federal procurement policy, both of whom strongly opposed the House-passed restriction. The committee also received the views of Secretary of Defense Brown to the effect that section 852 would be basically inconsistent with section 809 of H.R. 5970, the Defense authorization bill, in the form in which that measure passed the Senate just 1 week ago.

Mr. President, the Office of Management and Budget announced on June 13, 1977, that a comprehensive review of the Federal Government policy concerning contracting out for goods and services will be conducted. A moratorium on further contracting out was not established; however, OMB announced that a careful and judicious analysis would precede any contract for private sector services. In addition, OMB is now in the process of reviewing and revising OMB Circular A–76—the standards applicable to the contracting out of services—which is scheduled for completion in September of this year.

Section 809 of the Defense Authorization bill, which I referred to earlier in my remarks, contained a moratorium on the contracting out of any commercial or industrial Defense activities to March 15, 1978. I strongly opposed that provision but, notwithstanding my efforts, it emerged from the House-Senate conference.

Against this backdrop, we simply cannot tolerate a restriction of the type suggested by the House for inclusion as Section 852 of the measure now before us. Section 852, as proposed, would not only be inconsistent with a policy which the Congress as a whole announced 1 short week ago but it would, in the words of Assistant Secretary of Defense John White, "introduce uncertainty and result in delays . . . in necessary maintenance." It could severely hamper DOD's efforts to maintain its equipment in an emergency situation where adequate Government personnel were unavailable, or at least not at a reasonable cost to our taxpayers.

Government services contracts can in appropriate situations permit the Department of Defense to take advantage of less costly forms of manpower, in furtherance of our military requirements. We should not deny our citizens and taxpayers the flexibility offered by this contracting out authority.

OMB objects to section 852; the Defense Department objects to section 852; the Senate Appropriations Committee objects to section 852; and the Senate as a whole objects to section 852. I am hopeful that our colleagues in the other Chamber will soon see the light and end this folly.

IMPLEMENTING THE LABOR SURPLUS POLICY: COMMITTEE AMENDMENT TO SECTION 823

Mr. HATHAWAY. Mr. President, I commend the Committee on Appropriations and its distinguished chairman for including in the reported version of section 823 a much-needed and long-overdue modification to the so-called Maybank amendment.

The committee amendment will remove a substantial impediment to the successful utilization of defense manpower policy No. 4, the so-called labor surplus policy, which was originally intended to direct Federal procurement contracts into areas of substantial or persistent unemployment.

The amendment will provide the Secretary of Defense with the flexibility he needs to award total contracts to firms located in such labor surplus areas.

Mr. President, to explain the problems in prior existing law and the need for this amendment, I ask unanimous consent that a fact sheet, which I prepared for the committee, along with my letter to

Chairman McCLELLAN, be printed in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

FACT SHEET ON AMENDMENT TO SECTION 823—BUY AMERICA PROVISION

1. The proviso—"No funds shall be used for the payment of a price differential on contracts made for the purpose of relieving economic dislocations," known as the Maybank Amendment, has been included in every DoD appropriation since 1953.

2. Defense Manpower Policy Number 4, initiated pursuant to Executive Order in 1952, requires that certain procurement contracts be set aside for bidding in areas of substantial unemployment.

3. In fiscal year 1975, labor surplus concerns received preference awards of $74.4 million, or 0.19 percent of DoD procurement.

4. This negligible utilization of DMP–4 is due to a General Accounting Office interpretation of the Maybank amendment and DMP–4. That interpretation requires that any contract contemplated for a DMP–4 set-aside must be split into at least two production runs; one of these runs is bid out among all types of firms to establish a ceiling price for the DMP–4 reserved portion.

5. This interpretation restricts DMP–4 to use on only those few contracts susceptible to two economical production runs, and creates unnecessary red tape for contracting officers.

6. Such interpretation ignores the extreme likelihood of competitive prices emanating from competition among labor surplus concerns. A recent count by the Labor Department determined that over 800 labor markets across the country were characterized by substantial unemployment.

7. The Committee Amendment to Section 823 would grant discretionary authority to the Secretary of Defense or his designee to set-aside an entire contract for competition among labor surplus concerns if he determines that there is sufficient competition from such concerns to insure a reasonable price to the government.

8. Similar amendments were included in the Senate version of this bill in each of the last three years.

9. Prior objections were made to this change as being potentially prejudicial to small business set-aside program—to the extent that more contracts went into labor surplus program, fewer might be available for small business set-asides.

10. Such objections are mitigated by provisions contained in Senate version of H.R. 692 (S. 1442), which passed Senate on May 19, 1977. Title IV of this bill stipulates that labor surplus and small business set-aside programs be coordinated by giving first preference to small business within labor surplus areas, second preference to small business outside such areas, third preference to larger firms within such areas, and so on. The conference on this bill is scheduled to begin tomorrow.

WASHINGTON, D.C.,
June 23, 1977.

Hon. JOHN L. McCLELLAN,
Chairman, Committee on Appropriations, Dirksen Senate Office Building, Washington, D.C.

DEAR JOHN: It is my understanding that the full Committee on Appropriations will be marking up the DoD Appropriations bill on June 29, and floor action by the full Senate is scheduled shortly thereafter.

Over the past few years, I have appreciated very much your cooperation and assistance with respect to amendments I have offered to the so-called Maybank amendment contained in the general provisions of this bill. My goal has been to modify this language to the extent necessary to allow greater utilization of Defense Manpower Policy #4. I particularly appreciated your consideration last year in including such a modification in the reported version of the bill. On the floor, I offered what amounted to a perfecting amendment, which you graciously accepted, to conform the language to that recommended by the General Accounting Office. This language is detailed in GAO's letter to Chairman Ribicoff of the Governmental Affairs Committee in connection with S. 2659, a bill I introduced last Congress, which was referred to his Committee. I have enclosed for your convenience the relevant portion of the Congressional Record of August 2, 1976, which includes this letter on page S. 13115.

I would therefore appreciate the following change included in this year's bill as reported:

In Section 723, immediately after "No funds shall be used for the payment of a price differential on contracts made for the purpose of relieving economic dislocations.", insert the following: "except that nothing herein shall be construed to preclude total labor surplus area set-asides pursuant to Defense Manpower Policy No. 4 (32A C.F.R. Chapter 1) or any successor policy if the Secretary or his designee specifically determines that there is a reasonable expectation that offers will be obtained from a sufficient number of eligible concerns so that awards will be made at reasonable prices".

This language is virtually identical to that approved by the Senate last year, but includes one technical change, and would accommodate any alteration in DMP 4, should the executive so decide. It also would allow the Secretary of DoD to delegate his authority to subordinates. This latter change has been recommended informally by officials of the Office of Federal Procurement Policy.

My staff has discussed this with Mr. David Lyles, of your staff, and I am grateful for his assistance on this issue.

Best personal regards,
Sincerely,

WILLIAM D. HATHAWAY,
United States Senator.

[From the CONGRESSIONAL RECORD, August 2, 1976]

COMPTROLLER GENERAL OF THE UNITED STATES,
Washington, D.C., April 6, 1976.

Hon. ABRAHAM RIBICOFF,
Chairman, Committee on Government Operations, U.S. Senate.

DEAR MR. CHAIRMAN: By letter of December 8, 1975, you requested our comments on S. 2659, 94th Congress, a bill to repeal the prohibition against payment of a price differential on certain Department of Defense (DOD) contracts made for the purpose of relieving economic dislocations, and to state the manner and order in which contracts will be awarded to carry out labor surplus area and small business set-aside programs. While the law which this bill in part seeks to amend has expired, the Committee staff has informally requested that we provide our comments on the bill due to the recurring nature of its provisions.

The bill would repeal section 823 of the 1975 DOD Appropriation Act, Pub. L. 93–437, which prohibited the use of appropriated funds for payment of a price differential on contracts made for the purpose of relieving economic dislocations. Similar provisions have been contained in prior appropriation acts, and this provision was also contained in section 723 of the 1976 DOD Appropriation Act, Pub. L. 94–212. An attempt to delete this provision from the 1976 DOD Appropriation bill was defeated in conference. H. Rept. 94–710, 94th Cong., 1st Sess. 60 (1975).

We have held that this type of provision precludes expenditure by DOD of appropriated funds under any contract awarded on the basis of a labor surplus area set-aside in excess of the lowest price obtainable on an unrestricted solicitation of bids or proposals . We have also held that set-asides for surplus labor areas of more than 50 percent of particular procurements can be justified only by definite determinations that prices on the non-set-aside portion of the procurement could not reasonably be expected to be greater than for the total quantity of the procurement. While no Federal law specifically authorizes a preference for labor surplus areas in the award of Government contracts, such a preference is contained in Defense Manpower Policy No. 4 (Revised), 32A C.F.R. Chapter 1, and Department of Labor Regulations, 29 C.F.R. Part 8, and is in turn contained in the Armed Services Procurement Regulation (ASPR) and the Federal Procurement Regulations (FPR). However, the prohibition against payment of a price differential for these contracts is also contained therein.

Whether the legislation should be enacted is a policy matter for the Congress to decide. If the bill is to be enacted, we recommend the inclusion of a provision in the bill as follows:

(c) No total set-aside shall be made under the authority of paragraph (b) above unless the contracting agency determines that there is a reasonable expectation that offers will be obtained from a sufficient number of eligible concerns so that any awards will be made at reasonable prices.

Sincerely yours,

R. F. KELLER,
Acting Comptroller General of the United States.

Mr. HATHAWAY. Mr. President, as further background on the need for this amendment, as well as of previous efforts to accomplish this goal, I ask unanimous consent that three items be printed in the RECORD at this point: My testimony of June 2, 1977, submitted to the Subcommittee on Minority Enterprise and General Oversight of the House Small Business Committee, an excerpt from Senate Report 94–184, filed May 16, 1977, detailed parallel action by the Senate Small Business Committee in connection with the 1978 SBA authorization bill which passed the Senate on May 19, 1977, and finally, excerpts from the CONGRESSIONAL RECORD of April 25, 1977, in connection with the introduction of S. 1380, my bill which is cosponsored by the distinguished senior Senator from Michigan (Mr. GRIFFIN).

There being no objection, the material was ordered to be printed in the RECORD, as follows:

TESTIMONY OF SENATOR WILLIAM D. HATHAWAY

Mr. Chairman, I regret that I am unable to testify in person before this hearing of your Subcommittee, but I am pleased to have the opportunity to submit written testimony.

First, I commend the distinguished Chairman and the members of the Subcommittee for holding these hearings on Defense Manpower Policy Number 4, the so-called Labor Surplus Policy.

This policy, first made effective in 1952, applies to both defense and civilian procurement and to large and small concerns. Generally, DMP–4 requires that priority be given to the awarding of contracts and to the placement of subcontracts to concerns which shall perform a substantial proportion of the production on those contracts and subcontracts within areas of concentrtaed unemployment or underemployment or within labor surplus areas.

Unfortunately, the Labor Surplus Policy has not been fully implemented and therefore remains largely dormant. In fiscal year 1975, labor surplus concerns received $74.4 million or 0.19 percent in preference awards of prime contracts in excess of $10,000 from the Department of Defense procurement agencies.

DMP–4 has been of considerable interest to me for a number of years and I am pleased that recently a number of other Members of Congress and other elected officials throughout the country have shown a strong interest in making this program more workable.

One of the primary reasons that the Labor Surplus Program has not worked well is a provision of existing law, the Maybank Amendment, which has been included in every Defense Appropriations Act since 1953. This language states:

"No funds shall be used for the payment of a price differential on contracts made for the purpose of relieving economic dislocations."

This language has been interpreted by the General Accounting Office to apply to both defense and civilian procurement and to prohibit the setting-aside of a total contract for competition among labor surplus concerns. The GAO views the Maybank Amendment to mandate instead the splitting of all contracts otherwise eligible for DMP–4 into at least two production runs, one of which is open to competition among all firms, inside and outside labor surplus areas. Under the GAO interpretation, the open competition on one portion of the contract determines the highest price payable on the remaining portion of the contract to be set aside for labor surplus areas. This construction is based on the theory that the best price can only be obtained by an open competition among all sorts of firms and would not be obtainable under a total set-aside to labor surplus areas. Such a theory might have made some sense in times of low levels of unemployment where there were few qualifying labor surplus areas, but makes little sense today.

I might add that in 1953, when Senator Maybank first introduced his amendment, unemployment was only 3-percent. In a time of 7.3-percent unemployment when approximately 800 areas across the country were designated by the Secretary of Labor as having substantial unemployment in a count made a year ago, setting aside a Government contract for procurement among firms in these areas would surely yield a competitive price. Furthermore, the GAO interpretation which refuses to allow such a total set-aside severely limits the labor surplus area set-aside program's goal of helping alleviate localized severe unemployment. The time has come to change the statutory structure to allow total labor surplus set-asides and to eliminate the GAO's tortured construction to the Maybank amendment. I have attempted in each of the last three sessions of Congress to amend the Defense Appropriations Act to modify the Maybank Amendment to allow for total labor surplus area set-asides where the Secretary of Defense or his designee specifically determines that a reasonable price will result. The Senate has accepted these modifications each time, but the changes have been dropped in Conference, due apparently to concern over the impact which such a change might have upon small business set-aside programs.

It has been my belief that the Labor Surplus Program and the small business set-aside program were totally compatible and mutually complementary. But in order to ensure that the interests of small business are fully protected and enhanced in any altered structure, it is probably necessary to establish by statute a system of priorities for the implementation of the Labor Surplus Program which guarantees that small businesses located within labor surplus areas receive highest priority in the awarding of total labor surplus area set-asides, and that small businesses located elsewhere receive preferential treatment thereafter.

With this in mind, on April 25, 1977, I introduced S. 1380 which amends the DoD Appropriation Act and establishes a priority structure for the awarding of small business and labor surplus area set-asides. This structure protects the interests of small business and ensures that it benefits from an expansion of the Labor Surplus Program. I have included this bill, as well as my introductory remarks which appeared in the Congressional Record as Appendix 2 to my testimony, and ask that this material be included in the record for this hearing.

Also, of particular interest to this Committee, included in Title IV of the Senate amendments to H.R. 692, the SBA Authorization bill, as approved by the Senate on May 19, are similar provisions intended to integrate the goals of the small business and labor surplus set-aside programs. Attached as Appendix I to my testimony is the relevant excerpt from Senate Report 95–184 which explains these provisions in more detail. I am hopeful that, based on the findings of today's hearings, these provisions will receive favorable consideration in the course of the upcoming Conference on the differing versions of H.R. 692.

Since I am unable to appear today to respond personally to any questions which Members of the Subcommittee might have, I would be pleased to respond subsequently to such questions.

Mr. Chairman, thank you for this opportunity.

SMALL BUSINESS ADMINISTRATION AUTHORIZATIONS AND DISASTER LOAN PROGRAM AMENDMENTS

TITLE IV—PROCUREMENT ASSISTANCE

BACKGROUND ON LABOR SURPLUS SET-ASIDE SECTION

Section 2 of the Small Business Act stipulates as a declared policy of the Congress that a "fair proportion of the total purchases and contracts or subcontracts for property and services for the Government . . . be placed with small business enterprises. . . ."

To implement this policy, section 15 of the act mandates that small businesses shall receive awards or contracts, or any parts thereof, whenever it is determined by SBA and the contracting procurement agency "(1) to be in the interest of maintaining or mobilizing the Nation's full productive capacity, (2) to be in the interest of war or national defense programs, or (3) to be in the interest of assuring that a fair proportion of the total purchases and contracts for property and services for the Government are placed with small business concerns. . . ."

This language is the statutory basis for the small business set-aside program by which contracts or parts of contracts are allocated for competition solely among small business concerns.

In fiscal year 1976, small businesses received approximately $12.4 billion in procurement awards from both defense and civilian procurement agencies out of a total of approximately $57 billion, or 22 percent. But of the $12.4 billion awarded to small business, only $3.19 billion were for set-asides.

Almost three-fourths of the aggregate value of procurement awards made to small firms, therefore, resulted not from set-aside procedures, but rather from small companies succeeding in open competition with large concerns. The net result was that small business set-asides constituted approximately 22 percent of the value of total procurement contracts awarded to smaller businesses and only 5.6 percent of overall Federal procurement.

The committee believes that in order to meet the requirements imposed by existing law, an increased number and proportion of contracts, with an increased aggregate value, should be subject to set-aside procedures. It is also the committee's conclusion that small firms should be assured a "fair proportion" of Federal procurement. An appropriate target goal should be a proportion equal to not less than the small business proportion of private employment in the economy of the United States. As of last year, this figure was approximately 55 percent. It is clear that there is a great need for expansion of contract set-asides to achieve this goal.

This bill specifically authorizes $13 million for salaries and expenses for procurement assistance. These funds are to be used to employ an increased number of procurement officers to increase the number and total value of set-asides, and to develop a procurement data bank of small business concerns.

In order that these increased set-asides are awarded to those businesses which have the greatest need and could most benefit from such contracts, the committee feels it appropriate that priority be given to concerns which are located in areas of concentrated unemployment, underemployment, or labor surplus areas. In establishing this priority, the committee intends that there be greater coordination and interaction between the small business set-aside procedures and the set-aside procedures established pursuant to Defense Manpower Policy No. 4 (32A C.F.R. Part 8), the so-called Labor Surplus Policy. This policy, first made effective in 1952, applies to defense and civilian procurement and to large and small concerns.

Unfortunately, the Labor Surplus Policy has not been fully implemented and therefore remains largely dormant. In fiscal year 1975, labor surplus concerns received $74.4 million or 0.19 percent in preference awards of prime contracts in excess of $10,000 from the Department of Defense procurement agencies. Expansion of this total would be of benefit to the small business sector since, in fiscal year 1975, these small businesses received approximately 77 percent of the DOD labor surplus preference awards. In the preceding fiscal year, the figure was 76 percent.

One of the principal reasons that the labor surplus program has not been adequately implemented is that under a General Accounting Office interpretation of existing law, labor surplus set-aside contracts must be split into two or more units. One of those units must be bid among all eligible firms to establish a competitive price. If Labor Surplus concerns can meet this price on the reserved portion of the contract, they are eligible to receive that portion as a labor surplus area set-aside.

While this procedure insures that the procurement agency receives a reasonable price on the total production run of the contract involved, it artificially restricts the number of contracts going into this program to contracts susceptible to being split into two production runs. It also ignores whether a reasonable price for the entire contract could be obtained from labor surplus area concerns.

SUMMARY OF LABOR SURPLUS SET-ASIDE SECTION

The Small Business Act is amended to authorize total labor surplus area set-asides if the head of the procurement agency involved "determines that there is a reasonable expectation that offers will be obtained from a sufficient number of eligible concerns so that awards will be made at reasonable prices."

The amendment requires that a contracting agency give highest priority to the setting aside of a total contract for performance by small business concerns eligible for labor surplus area contracts. If this is not feasible due to a lack of reasonable expectation that offers will be obtained from a suf-

ficient number of eligible small business concerns, the contracting agency would then consider setting aside the entire contract to small firms regardless of their location. If this is not feasible, next consideration would be given to setting aside part of the contract for small business concerns regardless of location. Final consideration would be given to a total set-aside for large and small firms eligible for labor surplus area contracts.

[From the CONGRESSIONAL RECORD, Apr. 25, 1977]

EXCERPTS

By Mr. HATHAWAY:

S. 1380. A bill to amend the Department of Defense Appropriation Act, 1977 to authorize labor surplus area and small business set-aside programs, and for other purposes; to the Committee on Governmental Affairs.

UNEMPLOYMENT AND FEDERAL PROCUREMENT POLICY

Mr. HATHAWAY. Mr. President, the bill I introduce today would channel a greatly increased number of Government procurement contracts into areas of high unemployment. It is similar to amendments I have offered to Department of Defense appropriation bills during the last three sessions of Congress. Each of these amendments was accepted by the Senate, but was subsequently dropped in conference. The Senate has therefore approved the goals of this proposed legislation 3 years in a row and I am hopeful that these changes will ultimately be enacted into law during the 95th Congress.

MODIFIES MAYBANK AMENDMENT

The bill I propose today would modify language contained in the 1977 defense appropriations bill, and in every DOD appropriation since 1953. The language I wish to modify is the so-called Maybank amendment, named after Senator Burnet R. Maybank who first introduced it. It states that:

No funds shall be used for the payment of a price differential on contracts made for the purpose of relieving economic dislocations.

Senator Maybank's goal was to prohibit the DOD from paying more for textiles obtained from mills in New England than from mills in other parts of the country, particularly the South, where labor costs were lower. At that time the DOD was prone to pay these higher costs in an attempt to stop or slow the trend of many New England firms moving to areas with lower labor costs. The Maybank amendment was intended to counteract this regional favoritism which imposed higher costs for the defense of the country as a whole.

As we all know, most of the mills moved, and therefore the historic phenomenon to which the Maybank amendment was addressed no longer is significant.

LABOR SURPLUS AREA SET-ASIDE PROGRAM

The Maybank amendment, however, has lived on, and become a significant problem in its own right as it has affected the DOD's labor surplus area set-aside program.

This program was initiated in 1952 under Defense Manpower Policy No. 4 which requires that certain procurement contracts be set aside for bidding in areas of substantial unemployment. The program was meant to preserve management and employee skills useful to the Nation's defense during times of economic downturns. This program is a valuable one, and ought to gain increased attention today as unemployment hovers at an unacceptable level of 7.3 percent.

The General Accounting Office has, however, in its construction of the Maybank amendment and the labor surplus area set-aside program, limited implementation of the goals of the latter by its determination that a defense procurement contract cannot be totally set aside for award to firms located in labor surplus areas, but rather must be split up into two or more units with at least one of those contract units beginning bidding competitively among all firms, within and without labor surplus areas. Under the GAO interpretation, the open competition on a portion of the total contract award determines the highest price payable on the remaining portion of the contract to be set aside for labor surplus areas. This construction is based on the theory that the best price can only be obtained by an open competition among all sorts of firms and would not be obtainable under a total set-aside to labor surplus areas. Such a theory might have made some sense in times of low levels of unemployment where there were few qualifying labor surplus areas, but makes little sense today.

I might add that in 1953, when Senator Maybank first introduced his amendment, unemployment was only 3 percent. In a time of 7.3-percent unemployment when approximately 800 areas across the country were designated by the Secretary of Labor as having substantial unemployment in a count made a year ago, setting aside a Government contract for procurement among firms in these areas would surely yield a competitive price. Furthermore, the GAO interpretation which refuses to allow such a total set-aside severely limits the labor surplus area set-aside program's goal of helping alleviate localized severe unemployment. The time has come to change the statutory structure to allow total labor surplus set-asides and to eliminate the GAO's tortured construction to the Maybank amendment.

SPECIFIC PROCEDURES

My bill would allow the Secretary of Defense or his delegate, the contracting officer, to make a total set-aside to labor surplus areas of a Government contract when the Federal Government will not be forced to pay an unreasonable contract price. In order to make the determination the officer should look at the number of labor surplus areas, the overall unemployment level the number of firms within the labor surplus areas willing and capable of performing such contracts and the probability of such firms competing such contract at a fair and reasonable cost.

This determination would be made on a contract-by-contract basis, substituting specific criteria for the present procedure which arbitrarily decides that a total labor set-aside is not feasible.

The procedure I suggest for allowing total labor surplus area set-asides borrows heavily from current procedures followed by a contract officer in placing a procurement into a total small business set-aside, regarding which the Armed Force's procurement regulation states that:

"The entire amount of a procurement may be set aside for exclusive small business participation if the contracting officer determines that there is a reasonable expectation that officers will be obtained from a sufficient number of responsible small business concerns so that awards will be made at reasonable prices."

This procedure has worked well for such total small business set-asides. The procurement officers solicit bids from available firms on bidders lists compiled by the Small Business Administration and from lists compiled by the DOD of firms which have bid in the past on other contracts to insure adequate competition. The same sort of lists could be obtained of the labor surplus area firms.

The contracting officer has an additional safeguard against an unreasonably high bid price under total small business set-aside which would also be available under a total labor surplus area set-aside; he may cancel the set-aside and readvertise among all firms.

My bill would extend these well established and workable procedures to make them applicable to total labor surplus area set-asides, and would remove the current blanket prohibition against such set-asides.

PRIOR OBJECTIONS

My bill would not mandate a total labor surplus area set-aside in situations where such a procedure would prove uneconomical. In previous Congresses I had attempted an outright repeal of the Maybank amendment. In fact, the last session of the 93d Congress, an amendment offered by Senator PASTORE and myself which did repeal Maybank, was accepted by the Senate, but dropped in conference, apparently due to DOD opposition. The DOD objected to outright repeal because in certain circumstances a total labor surplus set-aside would not result in an economical contract price, such as where there were an insufficient number of firms within the labor surplus area to generate a fair price. I appreciate the nature of such objections and have drafted the bill accordingly. The bill would preserve the positive features of the Maybank amendment and at the same time unfetter the labor surplus area set-aside program, so badly needed in today's economy.

Based on my prior experiences in having this proposed change in law rejected by House conferees due to expressed opposition from the Department of Defense, I would like to make my colleagues aware of some of the arguments raised against this proposed change, and my rebuttal to these arguments.

In this regard, I prepared two letters to Chairman MCCLELLAN in November of 1975. I ask unanimous consent that these letters be printed in the RECORD at this point.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

U.S. SENATE,
Washington, D.C., November 26, 1975.

Hon. JOHN L. MCCLELLAN,
Chairman, Senate Appropriations Committee, Washington, D.C.

DEAR JOHN: I understand that you have been contacted by the Department of Defense regarding its objection to the Senate amendment to H.R. 9861, which modifies the Maybank Proviso to permit a procurement contract to be totally set aside for firms located in labor surplus areas where the Secretary of Defense determines that sufficient competition exists in these areas to insure a reasonable price to the government. Such a total set-aside is not possible under the current G.A.O. interpretation of the Maybank Proviso.

First, I would like to stress that the amendment as finally drafted was intended to meet the previously expressed objections from DOD to my earlier attempts to repeal the Maybank Proviso. On those occasions, the DOD had objected on the grounds that the Maybank Proviso was necessary lest the government be forced to pay unreasonable prices on contracts, whether or not procured through the labor surplus set-aside program. Consequently, my amendment this year was intended both to allow for total labor surplus area set-asides and insure that contracts would be bid at a fair price to the government. At the time the amendment was offered, I was advised that the DOD had no objections, that it met DOD's concerns. Now it is disturbing that a new source of objection has arisen, and ironic that DOD bases its objection over a concern for small business. While I understand that the DOD opinion could change upon further reflection, I wonder whether this further objection ought to be considered to be in good faith, and not simply motivated out of an aversion to any change in status quo.

The DOD's objection, as I understand it, is based upon a concern that such a modification would result in fewer contracts going to small businesses which are not located in

labor surplus areas. As you may recall, the same concern was expressed last year by the Small Business Administration to a Senate amendment which would have repealed the Maybank Proviso. At that time I offered a rebuttal to their expressed concern, but unfortunately the amendment was dropped in Conference. I repeat that rebuttal now.

The Small Business Act provides that small businesses shall receive a fair proportion of total government purchases and contracts. To implement this mandate, the Armed Services Procurement Regulations establish preference categories when set-asides are to be made.

A procurement officer gives primary consideration, or first preference to making a small business set-aside, a portion of which is further set aside for small business located in a labor surplus area. Thus the first preference is given to small business both in and out of labor surplus areas.

Second preference is given to partial set-asides in labor surplus areas. With the modification of the Maybank Proviso, total set-asides could be given to those labor surplus areas.

Third preference is given to total set-asides to small business only with no part of the proceurement being reserved to small businesses located in labor surplus areas.

Fouth preference is given to partial set-asides to small business.

The DOD seems to be concerned that, if the restriction against total set-asides is eliminated from the second preference category, more procurements will go into the labor surplus area program and fewer procurements will be assigned to the third category giving total set-asides for small business only.

Last year, 73.4 percent of the contracts set aside for labor surplus areas went to small business. I am of the opinion that, with the authority to make total set-asides to labor surplus areas, larger numbers of contracts will go to this program, and small business will most likely retain its proportionate share. The enlargement of the labor surplus area program has a two-fold purpose—one, to aid small business and the other to alleviate unemployment in labor distressed areas.

If modifying the restrictive language of the Maybank Proviso does result in fewer contracts being set aside for small business under the third preference, then in accordance with the mandate of the Small Business Act, the preference categories should be rearranged to assure that a fair proportion of purchases and contracts go to small business.

In fact, a reordering of these relative priorities is now being considered by the Office of Federal Procurement Policy of the Office of Management and Budget. Mr. Hugh Witt, Administrator of the O.F.P.P., stated in testimony at hearings before my Subcommittee on November 11 that a determination would be made within 60 days of that date. The Senate amendment, by allowing total labor surplus set-asides, would give the O.F.P.P. increased flexibility in making such a determination.

The claim that allowing for increased use of the labor surplus area set-asides would injure small business located outside labor surplus areas rests on a false premise: that any increase in one program would result in a concurrent loss in the other. It is far more likely that small businesses located both inside and outside labor surplus areas would benefit from an increase in the variety of set-aside programs which the DoD must fulfill. In this way the total number of contracts going to small business in all areas would increase.

My intention in offering the amendment to modify the restrictive language of the Maybank Proviso from the Defense Appropriations bill was to aid small business in an area which I feel is being hampered by the restrictions of the Maybank Proviso. I believe that the modification will be an aid to small business, and I urge the members of the conference committee to support the modification of this restrictive language from the legislation before it.

With best regards.

Sincerely,

WILLIAM D. HATHAWAY,
U.S. Senator.

U.S. SENATE,
COMMITTEE ON LABOR AND
PUBLIC WELFARE,
Washington, D.C., December 2, 1975.

Hon. JOHN L. MCCLELLAN,
Chairman, Senate Appropriations Committee, Washington, D.C.

DEAR JOHN: I would like to supplement my letter to you dated November 26, to explain further my goal in offering my amendment to H.R. 9861 and my hope that this amendment will be retained in conference.

It is my understanding that the Department of Defense has now been joined in opposing the amendment by the Small Business Administration and the Office of Federal Procurement Policy. I would agree that the united opposition of these different entities of the Executive Branch ought to be carefully considered, but also ought to be examined for motive and purpose.

All of these entities seem to be concerned that any increased emphasis on the labor surplus area set-aside program would necessarily have an adverse impact upon the small business set-aside program. Such a result would be contrary to existing law and contrary to the intent of my amendment. I suspect that this charge on the part of these entities is motivated more by an affection for the status quo than any legitimate dispute regarding the impact of the amendment.

At heart, the objections are based on a unified sentiment that the amendment would be difficult to administer, that it would be hard to simultaneously fulfill the Nation's defense goals and to channel contracts to areas of high unemployment and to small business. Of course the task may be difficult but it can and ought to be done. Without the amendment it will never be done and the labor surplus area set-aside program will continue as a dead letter with little if any practical significance.

All of the expressed objections could be met with a simple reordering of the current Armed Services Procurement Regulations, to allow for total labor surplus area set-asides and uphold the precedence of small business in this and other set-aside programs. I would envision the following priority structure emerging from this administrative change in regulations:

1. Highest priority be given to total set-asides for small businesses located within labor surplus areas, followed by:

2. Total set-asides for small business located anywhere, then:

3. Partial set-asides for small business anywhere, and finally:

4. Total set-asides for firms located within labor surplus areas, whether or not small businesses.

Such a change in the priority structure or something very close to it would be required in order to assure the precedence of small business as mandated by the statutory authority of the Small Business Act. I believe the SBA makes a mistake in seeing the current regulations as static and not requiring such change.

Regulations are not static and must change as their statutory underpinnings change. Let us not lose this opportunity to remove an anachronistic constraint from the Defense Appropriations legislation simply because the Executive branch prefers not to amend its regulations.

Sincerely,

WILLIAM D. HATHAWAY,
U.S. Senator.

Mr. HATHAWAY. Mr. President, in order to make totally clear my intention that small business not be adversely affected by modification of the Maybank proviso and to insure that small business, both within labor surplus areas and outside such areas receive special consideration and priority in Government procurement procedures, the bill I am introducing today in subsection (b) stipulates the order of priority as delineated in my previous letter to chairman MCCLELLAN.

The difficulties I have experienced in seeing this needed change become law have in large part resulted from the lack of attention given and lack of understanding regarding our very complex Federal procurement procedures.

I first learned of the existence of Defense Manpower Policy No. 4 and of the impediment posed by the Maybank amendment in the course of my work as chairman of the Subcommittee on Government Procurement, but I understand that my interest and expertise in this area are not shared by all of my colleagues.

Consequently, I was most pleased to learn that the Northeast-Midwest Research Institute on March 28, 1977, published a complete history and analysis of DMP 4 titled "Federal Procurement and Regional Needs: The Case for Defense Manpower Policy Number Four." The Institute was set up by the Northeast-Midwest Economic Advancement Coalition, and at the request of its chairman, Congerssman MICHAEL HARRINGTON, has embarked on a study of our Federal procurement policies. Its initial report on DMP–4 prepared by Laurence Zabar, is an excellent piece of research, and highlights the need for expansion of DMP–4 and elimination of the impediment to this goal posed by the Maybank amendment.

Mr. President, I ask unanimous consent that at the conclusion of my remarks the text of my bill be printed in the RECORD, and that subsequent thereto, Mr. Zabar's excellent study be printed in the RECORD along with its appendixes, as further background to the goals of this proposed legislation.

There being no objection, the bill and study were ordered to be printed in the RECORD, as follows:

S. 1380

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) the second proviso to section 723 of the Department of Defense Appropriation Act, 1977, is amended by inserting immediately after "economic dislocations" the following: "except that nothing herein shall be construed to preclude total labor surplus area set-asides pursuant to Defense Manpower Policy No. 4 (32A C.F.R. Part 8) if the Secretary specifically determines that there is a reasonable expectation that offers will be obtained from a sufficient number of eligible concerns so that awards will be made at reasonable prices".

(b) In carrying out labor surplus areas and small business set-aside programs, departments, agencies, and instrumentalities of the executive branch shall award contracts, and encourage the placement of subcontracts for procurement to the following in the manner and in the order stated:

(1) Concerns which are located in labor surplus areas, and which are also small business concerns, on the basis of a total set-aside.

(2) Concerns which are small business concerns, on the basis of a total set-aside.

(3) Concerns which are small business concerns, on the basis of a partial-set-aside.

(4) Concerns which are located in labor surplus areas on the basis of a total set-aside.

FEDERAL PROCUREMENT AND REGIONAL NEEDS: THE CASE OF DEFENSE MANPOWER POLICY No. 4

(By Laurence Zabar)

EXECUTIVE SUMMARY

At the request of Congressman Michael J. Harrington, Chairman of the Northeast-Midwest Economic Advancement Coalition, the Northeast-Midwest Research Institute has examined how federal procurement can be used to stimulate economic activity in areas of high unemployment.

The vital importance of this question is clear: In FY 77, the federal government spent more than $60 billion on procurements—approximately four times the annual amount requested by the President for his economic stimulus program.

The concept of targeting federal procurement moneys to areas of economic need dates to the early 1950's and is embodied in Defense Manpower Policy Number Four (DMP–4), issued by the Director of Defense Mobilization in 1952. The Institute studied the use of DMP–4 by the Defense Department which is responsible for 73% of federal procurement this fiscal year. The study reveals that the program has been used for only a tiny fraction of procurements and that its use has fallen since 1964.

During the year of greatest use, 1964, DOD spent .69% of a $25 billion procurement budget under the provisions of DMP–4. In the period 1973–1975, a period when unemployment rates in some sections of the country reached heights unattained since the depression, DOD spent only .23% of its total procurement budget under DMP–4. In each of those years, the percentage decreased from the preceding year: from .36% in 1973, to .30% in 1974, to .19% in 1975.

This study details the procurement process under DMP–4 and outlines limitations in its design and execution. The concluding section lists alternatives for change including:

A redefinition of the unemployment rate triggering the use of DMP–4; changes in legislation; and

A wide variety of changes in administration to make the program more effective and efficient.

Future Institute research will study this policy vis-a-vis at least three other major departments of the government that engage in substantial procurement activity: The Department of Labor, the Department of Health, Education, and Welfare, and General Services Administration. Additional research will also explore the use of DMP–4, with respect to facilities in addition to procurements.

I. DESCRIPTION AND HISTORY OF DMP—4

Targeting federal procurement funds to areas of economic stagnation is not a new concept. In the summer of 1951, no general government policy was to encourage total commitment to defense production, in support of the U.S. engagement in Korea. Numerous firms, however, contacted the Office of Labor in the National Production Authority, wanting to know why they were not being awarded defense contracts while they had unused facilities and idle manpower.

In 1951 CIO Textile Workers met in Washington with The Office of Labor to request that the government take immediate action to relieve the serious unemployment in the region's textile industry.

In response to this request, the Office of Labor contacted the Central Military Procurement Information Office of the Munitions Board. The Board replied that there was no legal means for DOD to channel contracts to firms or areas to relieve unemployment. It quoted from a DOD pamphlet:

No legislation exists which will permit the selective placing of contracts based on size of a business concern without regard to lowest cost."

The Office of Labor did not agree with that opinion and contacted numerous DOD officials concerning the placing of contracts in labor surplus areas in order to relieve unemployment. DOD repeatedly took the position that its procurement policies were controlled by the 1947 Armed Services Procurement Act (P.L 413, 80th Congress), which required that only the most advantageous contract awards be made. DOD interpreted "most advantageous" to mean the lowest price.

The Office of Labor countered by quoting Section II(c)(1) of the Act which stipulates that the advertising policies in awarding contracts need not be complied with during a national emergency. Labor argued that since President Truman had declared a national emergency on December 16, 1950, DOD's interpretation was not applicable.

The Office of Labor also quoted five other opinions and directives that were at odds with DOD's version of awarding contracts to firms in labor surplus areas.

After a meeting on unemployment with Congressional leaders, in September of 1951, President Truman directed the Office of Defense Mobilization (ODM) to undertake a review. The ODM review determined that one of the solutions to the unemployment problem was the placement of government contracts in the area.

As a result of the study, the Office of Defense Mobilization, on February 7, 1952, issued Defense Manpower Policy Number Four (DMP–4). The purpose of DMP–4 was "to provide for procurements by negotiated contracts and purchases with responsible concerns which are in an area of current or imminent labor surplus . . ." (For text, see appendix 1)

To accomplish the objectives of DMP–4, regulations provided that preference in certain federal contracts be given to employers who would perform substantial portions of awarded contracts in areas which the Department of Labor classified as "persistent" or "substantial" unemployment areas.

In 15 years of operation, however, this program never realized its expected potential. DOD during this period spent an average of only $23 million per year of a multi-billion dollar budget for procurements under DMP–4.

Due to low levels of participation, a major revision of this program was introduced by the Director of the Office of Emergency Planning in October, 1967 This modification created a new category of high unemployment areas: "sections of concentrated unemployment or underemployment."

The mandate of the revised DMP–4 program was specified in the Federal Register on July 20, 1968: (For full text see Appendix 2)

"It is the policy of the Federal government to encourage the placing of contracts and facilities in sections of concentrated unemployment or under-employment and in areas of persistent or substantial labor surplus with preference being given in accordance with regulations prescribed by the Secretary of Labor in making the best use of their available resources . . ."

Describing procurement agencies:

"All procurement agencies shall use their best efforts to award negotiated procurement contracts to contractors who will perform a substantial portion of the production on those contracts within or near sections of concentrated unemployment or within labor surplus areas, giving preference to contractors in accordance with regulations prescribed by the secretary of Labor to the extent that procurement objectives will permit."

Furthermore, the Secretary of Commerce is directed to:

". . . assist employing establishments, certified in accordance (with the provisions detailed above) which have agreed to perform contracts in or near sections of concentrated unemployment or underemployment by (a) providing such firms with timely information on proposed Government procurements; (b) maintaining current information on the manufacturing capabilities of such firms with respect to Government procurement and disseminating such information to Federal procurement agencies . . ."

Despite these revisions, neither contract awards or jobs created for the unemployed increased under DMP–4. Between 1967–1969, DOD averaged an increase of only .02% over the 1952–1966 period in the value of procurements secured under DMP–4 in relation to total procurements. (See Section III)

A revision of the process governing certification of firms took effect May 1, 1970.

II. PROCUREMENT PROCESS UNDER DMP–4

During the Senate hearings on the Defense Appropriations Bill in 1953, Senator Burnet Maybank (D-SC) offered an amendment that prevented any preferential treatment on price to firms located in labor surplus areas when bidding on defense contracts. Senator Maybank's goal was to prohibit the Department of Defense from paying more for textiles produced in New England mills than they would have to pay were the textiles purchased from southern mills. DOD at this time was willing to pay the higher price in an attempt to slow the exodus of many New England mills to areas of the country with cheaper labor costs.

The Maybank amendment has been added routinely to the Defense Appropriations Bill each year since 1953. This year (FY77) the language of the amendment read: "provided further, that no funds herein appropriated shall be used for the payment of a price differential on contracts hereafter made for the purpose of relieving economic dislocation;"

In 1972, the interagency Surplus Manpower Committee set up by DMP–4 determined that the only way to insure that the government can comply with Maybank was to insure that only those products that can be divided into two full production runs be considered under DMP–4. This determination used the theory that a reasonable price—the lowest or "base price"—can be determined only if bids are invited from all interested firms and that this price cannot be obtained if a contract award is totally set aside for a labor surplus area.

When a procurement agency identifies such a "splittable" item and decides to offer part of that contract to a labor surplus area firm under DMP–4, the contract is processed according to the following methodology:

The contracting officer publicizes the procurement as a "labor surplus area set-side." This means that 50% of the award is set-aside to be bid on only by those firms certified for preference. This is known as the "reserved" portion. The other 50%—the "unreserved" portion—is open to all employers to bid on. To be considered in negotiations on the reserved portion, however, employers must also have bid on the unreserved part of the contract.

The contrating officer initially awards the unreserved portion to the lowest bidder. Once this "base price" has been determined, the reserved part is offered, at the base price, to firms in this prioritized manner:

1. Small firms with a first preference rating.

2. Large firms with a first preference rating.

3. Small firms with a second preference rating.

4. Large firms with a second preference rating.

5. Small firms with a third preference rating.

6. Large firms with a third preference rating.

7. Small firms not located in a labor surplus area and with no preference certificate.

If no firm in a labor surplus area can accept this contract, it is then offered to any firm that can meet the base price.

EXAMPLE OF DMP–4 IN PRACTICE

An agency must purchase 100 widgets. Bids are accepted from all interested firms on the unreserved portion of the contract (50 widgets) and the contract is awarded to the lowest bidder. Assume, however, that the lowest bidder can produce widgets for $1.00 each but can only produce 25. The contract for the remaining 25 on the unreserved portion is awarded to the next lowest bidder (for the sake of this example, assume that bid was $1.05 each).

Once these contracts are awarded and the base price determined, the reserved portion of the contract is offered to labor surplus area firms at the highest price paid on the unreserved portion, that is, $1.05 each. If no firm is capable of producing 50 widgets at this price, the contract is available to any firm nationwide at the lowest price paid on the unreserved portion—$1.00 each.

The Maybank amendment, coupled with the GAO interpretation discussed earlier, effectively insures that the more expensive procurements will not be directed to labor surplus areas under DMP–4. Only such products as clothing, food, construction supplies, medical supplies, etc. can be divided into two full production runs and therefore set-aside under DMP–4. Obviously, the cost for these split-table items cannot compare to the cost of an engine for a nuclear submarine.

For the past three years, Senator William Hathaway (D-Maine) has introduced an amendment to the Defense Appropriations Bill to repeal the Maybank amendment. During the debate on the FY77 Defense Appropriations Bill, Senator Hathaway's amendment provided: ". . . that no funds herein appropriated shall be used for the payment of a price differential on contracts hereafter made for the purpose of relieving economic dislocation, except that nothing herein shall be construed to preclude total labor surplus area set-asides pursuant to Defense Manpower Policy Number Four . . . if the Secretary specifically determines that there is a reasonable expectation that offers will be obtained from a sufficient number of eligible concerns so that awards will be made at reasonable prices."

This amendment passed the Senate by a voice vote on August 2, 1976 but was not discussed by the House when it considered the Defense Appropriations Bill. The amendment did not survive the House-Senate Conference. Senator Hathaway is likely to offer the same amendment again this year.

Should the Maybank amendment be repealed, the result would be that the contracting officer of DOD will be able to award a total set-aside of a government contract to a labor surplus area under DMP–4, if the Secretary of Defense determines that the government will be paying a reasonable price. This would substantially increase the number and value of contracts which could be awarded to labor surplus areas.

The Secretary could use any of a variety of methods for determining if a reasonable price was being paid; such as:

1. Using the last price paid for a similar or identical item, plus a normal inflator, or percentage of a normal inflator, to discourage "self-fulfilling inflation";

2. Employing experts knowledgable in the market for specific items to recommend a reasonable price or range of prices; and

3. Developing an explicit permissible price difference between the lowest bid price and the lowest DMP–4—certified firm bid price, such as .5% or 1%. This permissible difference would represent the net "price" the Federal Government is willing to "pay" to use procurements to promote employment in depressed regions. The permissible difference would be applied to all procurements, or some sub-set of all procurements.

III. PATTERNS OF UTILIZATION OF DMP–4

Between December 1972 and December 1975, the number of areas within each classification has changed as follows: (See Chart A)

1. The number of labor surplus areas has increased by 30 percent.

2. Areas of persistent unemployment have declined by 46 percent (due, in part, to the rise in the average national unemployment rate).

3. Areas of substantial unemployment have increased by 139 percent.

Thus, the number of major areas of persistent and substantial unemployment almost doubled between 1972 and 1975. Yet, during the same period the number of certified establishments under DMP–4 has grown by only 4.5 percent. (See Chart B)

The limited use of this program by DOD may discourage many eligible firms from expending the effort, minimal as it is, to obtain preference certificates. Since FY72, the ratio of the value of DOD contract awards under DMP–4 to the total DOD contract awards has dropped from .62 percent to .19 percent (less than one-fifth of 1 percent). In FY75 this amounted, to an outlay of only $64 million of a procurement budget of over $40 billion. (See Chart C)

There is also evidence that the federal dollars being spent under this program are not being targeted to areas of greatest need. For example, in FY74, the Boston area received 18 percent of all DMP–4 awards from DOD (worth $13 million); in FY75, while unemployment rose, this area received only 8 percent of all DMP–4 awards from DOD (worth $4 million). In contrast, the Atlanta region, with substantially less unemployment, received 21 percent of all DMP–4 awards in FY74 (worth $15 million) and 39 percent in FY75 (worth $19 million). (See Chart D)

The minimal use of DMP–4 can be attributed to some extent to the limitations imposed by the Maybank amendment. No explanation can be found, however, for the existing regional disparity in the allocation of federal dollars under DMP–4 by DOD.

CHART A

NUMBER OF LABOR SURPLUS AREAS (LSA's)

Area classification	Total, December 1972	Number, December 1975	Substantial, December 1972	Unemployed, December 1975	Persistent, December 1972	Unemployed,[1] December 1975	Total (percent)	Percent change in numbers, December 1972–75: Substantial	Persistent
Major areas [2]	45	131	36	122	9	9	+191	+239	0
Other areas [3]	830	1,009	325	741	505	268	+22	+128	−47
Total areas	875	1,140	361	863	514	277	+30	+138	−46

[1] For explanations and definitions of area classifications see Area Trends. In times of a rising national unemployment rate, persistent unemployment may become "substantial."
[2] Major labor areas usually have at least 2 central cities with a population of 50,000 or more. In most cases the geographical boundaries are the same as an SMSA.
[3] In most cases, areas smaller than the 150 major labor areas listed in Area Trends.

Note: Sections of concentrated unemployment and underemployment eligible for certification under the DMP–4 program, have not increased or decreased for some years. See Area Trends for definitions and listings.

IV. ALTERNATIVES FOR CHANGE

Several alternatives exist to allow the DMP–4 program to more fully realize its potential for economic development. These include the following:

1. The definition of "substantial unemployment" could be revised upward. This definition, 6 percent, has not been changed in the 24 years that this program has been operative. The 6 percent definition now includes nearly every area in the country and thus gives little, if any, selective advantage to firms located in areas especially hard hit by recession.

2. The requirement that only those items that can be split into two production runs be included could be eliminated or altered to include total set-asides of some contract awards to firms located in labor surplus areas. An instrument like the Hathaway amendment would accomplish this end and would establish the machinery necessary to direct the more expensive defense contracts to areas of highest unemployment.

3. The administration of DMP–4 can be made more effective. Because DMP–4 only encourages placing facilities and contracts in areas of high unemployment; the increased use of the DMP–4 program would appear to require an Administration willing to enforce this policy rigorously. This can be done through:

(a) Increased training of federal procurement agents in the DMP–4 program;

(b) Increased staff for DMP–4 administrators in Department of Defense, Department of Labor, Department of Health, Education and Welfare, Department of Commerce, General Services Administration, and other appropriate agencies;

(c) Increased public encouragement by federal and state agencies of obtaining DMP–4 preference certificates and increased technical assistance by these agencies to interested firms;

(d) Lengthening the time a DMP–4 certificate is usable by a firm;

(e) Federal encouragement of large contractors to put production into plants in areas of high unemployment;

(f) Requiring government agencies to set and meet dollar amount quotas to meet in the implementation of DMP–4; and

(g) Providing for more equitable distribution and efficient targeting of DMP–4 use.

CONCLUSION

Unemployment continues to be a major national problem. This year (FY77), the Federal government will spend $174 billion—nearly 40% of the total budget—on income maintenance programs (Food Stamps, welfare, unemployment compensation); funds that could be used to enhance cities, improve educational facilities, and clean up the environment were they not needed to bolster a lagging economy.

The potential for effectively utilizing the Federal procurement process to aid areas suffering from chronic unemployment exists. Specifically, Defense Manpower Policy Number Four was implemented in 1952 to serve just this purpose.

The Department of Defense, with a procurement budget of over $47 billion, is capable of targeting some of these funds through DMP–4, to firms located in areas in particular need of economic stimulation. Our research, however, demonstrates a very minimal use of this program by DOD. This can be explained, in large part, by three factors:

1. The lack of commitment by any previous administration toward addressing the unemployment problem through the procurement process;

2. The absence of any educational campaign, either on the federal or state level, directed toward those who could benefit from this program; and

3. The limitations imposed by the Maybank amendment.

The enormous potential of DMP–4 can never be realized if these obstacles remain substantially in place.

APPENDIX I.—DEFENSE MANPOWER POLICY NO. 4

Subject: Placement of Procurement in Areas of Current or Imminent Labor Surplus.

I. INTRODUCTION

The aim of the mobilization program is to develop and maintain the necessary military and economic strength to carry out the policy of the United States to oppose acts of aggression and promote peace. As was declared in Defense Manpower Policy No. 1, success of the mobilization program requires efficient use of all our resources, including manpower as well as facilities. The conversion from civilian to military production, unless carefully coordinated, would result in dislocation, causing serious waste of manpower and facilities in many areas and thereby reducing our defense potential. The overriding need is to obtain on schedule the goods and services required for defense. In achieving this goal, every effort must be made to hold to a minimum any waste of manpower which may result from materials shortages and conversion to defense production.

II. PURPOSE

The purpose of this Defense Manpower Policy No. 4 is to provide for procurement by negotiated contracts and purchases with responsible concerns which are in an area of current or imminent labor surplus (including a surplus of manpower possessing skills necessary to the fulfillment of Government

contracts and purchases), in cases where the public interest dictates the need for doing so in order to achieve the following objectives:

a. To coordinate conversion from civilian to military production;

b. To minimize strains and dislocations in the economy resulting from such conversion;

c. To preserve employee skills necessary to the fulfillment of Government contracts and purchases;

d. To maintain productive facilities;

e. To assure utilization of the Nation's total manpower potential by making use of the manpower resources of each area; and

f. To help assure timely delivery of required goods and services by locating procurements where the needed manpower and facilities are fully available.

III. IMPLEMENTATION

By virtue of the authority vested in me by Executive Order 10193 and to supplement the national Manpower Mobilization Policy issued by the President on January 17, 1951, and to carry out the purpose set forth above, it is hereby ordered that:

1. There is created a Surplus Manpower Committee. The members of the Committee shall be appointed by the Chairman of the Manpower Policy Committee and shall include representatives from the Department of Defense, Department of Labor, Atomic Energy Commission, Defense Production Administration, General Services Administration, Small Defense Plants Administration and National Production Authority.

2. The Defense Manpower Administration of the Department of Labor will certify to the committee the existence of surplus labor area under standards to be established by the Secretary of Labor.

3. Upon such certification of surplus labor area the Committee shall obtain from the appropriate manpower and production agencies manpower facilities information which shall include the following:

a. The nature and extent of the labor surplus involved, including the availability of skills necessary to the fulfillment of Government contracts and purchasees, and the need for preserving these skills in the national interest.

b. The nature and extent of the facilities involved, including their suitability and availability for the fulfillment of Government contracts and purchases, and the need for maintaining these facilities in the national interest.

4. The Committee shall make findings in appropriate cases that:

a. There exists an area of current or imminent labor surplus, including a surplus of manpower possessing skills necessary to the fulfillment of Government contracts;

b. There exists in such area facilities suitable and available for the employee skills found surplus in (a);

c. The public interest dictates the need for the negotiation of Government contracts, at reasonable prices, in such area although lower prices might otherwise be obtainable elsewhere, in order to achieve the purposes of this policy as set forth in II above;

d. Such findings may set forth any other factors which may assist in the placement of contracts in such areas including (1) an indication of the dollar amount of contracting which is desired to be placed in such area based upon the amount and timing of Government needs and (2) a determination of the maximum price differential considered appropriate to effectuate paragraph 4(c) hereof.

5. The Committee shall report these findings to the Director of Defense Mobilization with a recommendation that he notify the Department of Defense and the General Services Administration that he has concluded that it is in the public interest to give preference to such area in the placement of contracts in accordance with the findings of the Committee. The recommendations of the Committee shall be reviewed within the Office of Defense Mobilization to determine the relationships of such recommendations to other policies affecting procurement for which the Office of Defense Mobilization has responsibility, and if there are conflicts, they shall be resolved by the Director.

6. On receipt of such notification from the Director of Defense Mobilization, the Department of Defense and the General Services Administration shall (a) determine what procurement contracts can be fulfilled by utilization of the manpower skills and facilities described in the Committee's surveys and findings (b) take all practicable steps, consistent with other procurement and military objectives, other than price, to locate procurement in the areas covered by the Committee's findings; and (c) within a reasonable time, report to the Director of Defense Mobilization the steps taken, and furnish any other relevant information requested by him.

7. After receiving reports in accordance with paragraph 6(c) above, the Committee shall request from the appropriate agencies information concerning the utilization of manpower in the area involved, and shall report to the Director the effects of the actions taken, with recommendations as to whether it is necessary to continue to give preference to such area in the placement of contracts.

8. When the application of this policy would have a major effect on the operation of an entire industry, appropriate recommendations shall be made to the Director relative to that industry in lieu of recommendations relative to specific geographical areas. In such cases, after notice to and hearings of interested parties, consideration will be given to a separate certification applying to the entire industry.

9. This Manpower Policy No. 4 shall not be deemed to authorize the payment of prices higher than ceiling prices established by the Office of Price Stabilization.

10. The appropriate departments and agencies shall furnish information to carry out this policy.

11. This policy shall take effect on February 7, 1952.

TITLE 32A.—NATIONAL DEFENSE, APPENDIX 2
CHAPTER 1.—OFFICE OF EMERGENCY PLANNING

(Defense Manpower Policy 4, Revised)

DMP 4.—Placement of procurement and facilities in sections and areas of high unemployment

Pursuant to the authority vested in me by Executive Order No. 10480 and Executive Order No. 11051, as amended, Defense Manpower Policy No. 4 is hereby amended to read as follows:

1. Introduction. Success of the defense program depends upon efficient use of all our resources, including manpower and facilities, which are preserved through practice of the skills of both management and workers.

A primary aim of Federal manpower policy is to encourage full utilization of existing production facilities and workers in preference to creating new plants or moving workers, thus assisting in the maintenance of economic balance and employment stability. When large numbers of workers move to already tight areas, heavy burdens are placed on community facilities—schools, hospitals, housing, transportation, utilities, etc. On the other hand, when unemployment develops in certain areas, unemployment compensation costs increase and plants, tools, and workers' skills remain idle and unable to contribute to our defense program.

2. Purpose. It is the purpose of Defense Manpower Policy No. 4 to direct attention to the potentialities of sections of concentrated unemployment or underemployment and of areas of persistent or substantial labor surplus for the placement of procurement contracts of the location of new plants or facilities, and to assign responsibilities to specified officials of the Government to carry out the policy stated below.

3. Policy. It is the policy of the Federal Government to encourage the placing of contracts and facilities in sections of concentrated unemployment or underemployment and in areas of persistent or substantial labor surplus with preference being given in accordance wtih regulations prescribed by the Secretary of Labor in making the best use of the available resources in order to achieve the following objectives.

(a) To preserve management and employee skills necessary to the fulfillment of Government contracts and purchases;

(b) To maintain productive facilities;

(c) To improve utilization of the Nation's total manpower potential by making use of the manpower resources of each area;

(d) To help assure timely delivery of required goods and services and to promote readiness for expanded efforts by locating procurement where the needed manpower and facilities are fully available.

4. Implementation. By virtue of the authority vested in me by Executive Order No. 10480 and Executive Order No. 11051, as amended, and to carry out the purpose and policy objectives set forth above, the following assignments of responsibilities are made to the specified officials of the Government:

(a) The Secretary of Labor shall:

(1) Classify sections of concentrated unemployment or underemployment, and areas having a persistent or substantial surplus of labor under standards to be established by the Secretary of Labor.

(2) In cooperation with State and local authorities, provide labor market data and related economic information in efforts to assist in the initiation of industrial expansion programs in these areas.

(3) Identify skills which are in surplus supply within such sections and areas and make this information available to firms requiring such skills and interested in establishing new plants and facilities.

(4) Identify occupations and skills for which labor will be needed by new or expanding industries; and, in collaboration with other government agencies, make assistance available to area institutions and manpower users in developing on-the-job apprentice or other training programs for developing skills of the workforce.

(5) Certify employing establishments which have agreed to perform contracts in or near sections of concentrated unemployment or underemployment and which have agreed to comply with regulations of the Secretary of Labor with respect to the employment of disadvantaged applicants.

(6) Prescribe regulations establishing the order of preference in which procurement contracts shall be awarded with respect to sections of concentrated unemployment and underemployment and areas of persistent or substantial labor surplus.

(b) All procurement agencies shall:

(1) Use their best efforts to award negotiated procurement contracts to contractors who will perform a substantial proportion of the production on those contracts within or near sections of concentrated unemployment or underemployment or within labor surplus areas, giving preference to contractors in accordance with regulations prescribed by the Secretary of Labor to the extent that procurement objectives will permit: Provided, That in no case shall price differentials be paid for the purpose of carrying out this policy.

(2) Where deemed appropriated, set-aside portions of procurements for negotiations at prices no higher than those paid on the balance of these procurements exclusively with firms which have agreed to perform or cause

to be performed a substantial proportion of the production on these contracts within or near sections of concentrated unemployment or underemployment or within labor surplus areas, giving preference to firms in accordance with regulations prescribed by the Secretary of Labor: Provided further, That firms which have agreed to perform in areas not meeting the minimum size qualifications for classification by the Secretary of Labor shall be eligible for participation in set-asides, if these firms submit a certificate issued by the Secretary of Labor that a persistent or substantial labor surplus exists in the area in accordance with standards and procedures prescribed by the Secretary of Labor.

(3) Assure that firms that have agreed to perform contracts in or near sections of concentrated unemployment or underemployment or within labor surplus areas that are on appropriate bidders' lists will be given the opportunity to submit bids or proposals on all procurements for which they are qualified. Whenever the number of firms on a bidders' list is excessive, there will be included a representative number of firms from labor surplus areas.

(4) In the event of tie-bids or offers on any procurement, award the contract to the firms which has agreed to perform a substantial proportion of the contract in or near sections of concentrated unemployment or underemployment or in persistent or substantial labor surplus areas by incurring costs on account of production or manufacturing in such sections or labor surplus areas (by itself or its first-tier subcontractors) that amount to a substantial proportion of the contract price, giving such preference as the Secretary of Labor may by regulation prescribe.

(5) Encourage prime contractors to award subcontracts to firms that have agreed to perform a substantial proportion of the production on those subcontracts in or near sections of concentrated unemployment or underemployment or in labor surplus areas.

(6) The preferential actions described in this policy shall in addition to other such actions to which firms may be entitled because of performance in substantial labor surplus areas, such as additional preference under the "Buy American Act."

(7) Cooperate with the other agencies listed herein in achieving the objectives of this policy.

(c) The Secretary of Commerce shall:

(1) In cooperation with State development agencies, the Secretary of Defense, the Administrator of General Services, and the Administrator of the Small Business Administration, assist employing establishments, certified in accordance with sec. 4(a)(5) above, which have agreed to perform contracts in or near sections of concentrated unemployment or underemployment and manufacturers in areas of persistent labor surplus in obtaining Government procurement business by (a) providing such firms with timely information on proposed Government procurements; (b) maintaining current information on the manufacturing capabilities of such firms with respect to Government procurement and disseminating such information to Federal procurement agencies.

(2) Urge firms planning new production facilities (where Federal assistance or interests are involved) to consider the industrial location advantages of sections of concentrated unemployment or underemployment and labor surplus areas.

(3) Provide technical advice and counsel to groups and organizations in such sections or areas on planned industrial parks, industrial development organizations, expanding tourist business, and available Federal aids.

(d) The Administrator of the Small Business Administration shall make available to small business concerns in sections of concentrated unemployment and underemployment and labor surplus areas all of its services, endeavor to insure opportunity for maximum participation by such concerns in Government procurement, and give consideration to the needs of these concerns in the making of joint small business set-asides with Government procurement agencies.

(e) There is hereby continued in operation within the Office of Emergency Planning the Surplus Manpower Committee:

(1) This Committee shall be chaired by the Director of the Office of Emergency Planning, or his designee, and shall include representation from the Department of Defense (including the three military departments), Department of Commerce, Department of Labor, General Services Administration, and Small Business Administration.

(2) The Committee shall advise the Director of the Office of Emergency Planning on policies, procedures, and activities in existence or needed to carry out the purpose of this policy.

(3) When an entire industry, which sells a significant proportion of its production to the Government, is generally depressed or has a significant proportion of its production units located in sections of concentrated unemployment or underemployment or in areas of persistent or substantial labor surplus, the Committee may make appropriate recommendations relative to that industry in lieu of recommendations relative to specific geographical areas. In such cases, after notice to and hearing of interested parties, the Director of the Office of Emergency Planning will give consideration to appropriate measures applicable to the entire industry.

(f) All Federal departments and agencies shall give consideration to labor surplus areas, particularly to persistent labor surplus areas, in the selection of sites for Government-financed facilities expansion, to the extent that such consideration is not inconsistent with essential economic and strategic factors that must also be taken into account.

(g) Notifications No. 38.39, 53, 57, and 58, dealing with the placement of procurement with the textile, shoe, apparel, shipbuilding, and petroleum and petroleum products industries, are continued in effect to the extent that they are not inconsistent with this revised policy.

Effective date. This revised policy shall take effect upon the date this document is filed with the Office of the Federal Register.

Dated: October 16, 1967.

APPENDIX 3

In the revised Department of Labor regulations, effective May 1, 1970, the Secretary of Labor established the following order of preference for applicable Federal contracts:

A. First Preference Group: Employers who will perform or cause to be performed a substantial portion of a Federal contract awarded under this program: (1) in or near classified sections of concentrated unemployment or underemployment, or (2) in areas of persistent unemployment, or (3) in areas of substantial unemployment, providing that such contracts or substantial portions thereof will be performed in an establishment(s) certified by the Department of Labor in accordance with its regulations pertaining to the employment of disadvantaged workers.

B. Second Preference Group: Employers, regardless of where they are located, who will perform or cause to be performed a substantial portion of a Federal contract awarded under this program in an establishment(s) which has been certified by the Department of Labor in accordance with its regulations pertaining to the employment of disadvantaged workers.

C. Third Preference Group: Employers who will perform or cause to be performed a substantial portion of a Federal contract awarded under this program in areas of persistent or substantial unemployment.

D. Priority for Small Business Concerns: Federal procurement procedures implementing DMP-4 give priority to small business concerns. Thus, within each of the preference categories listed above, small business concerns shall receive first consideration in making awards under the program. In the event all set aside contracts under this program have not been awarded to employing establishments eligible or such preference under categories A, B, and C above, small business concerns not eligible for such preference will be afforded an opportunity for an award of a contract at the highest award price paid on an unreserved portion of the contract. However, no price differentials shall be paid in connection with any of the above mentioned preference categories.

III. REQUIREMENTS FOR CERTIFICATION

To be eligible for first or second preference, an employer must submit with his bid a copy of a certificate of preference issued by the Department of Labor or its authorized representative to the bidding employer or the subcontractor designated to perform the substantial portion of the contract. To be certified in the first or second preference group, an employer must meet the conditions outlined below:

A. First preference group certificate

1. The establishment must be located

a. In or near a classified section of concentrated unemployment or underemployment, or

b. In an area of persistent unemployment, or

c. In an area of substantial unemployment

2. Irrespective of whether a contract is awarded as a result of the certification, the employer must agree, in writing, to comply with the following provision

a. The employer will hire, in the certified establishment, a proportion of disadvantaged residents from the classified labor surplus area equaling at least 25 percent of the total new hires each month, beginning with the first full month following the date of certification and continuing until the expiration of the validity period of the certificate or the completion of an awarded contract or subcontract, whichever is later. This commitment relates both to new hires to replace turnover and to new hires for expansion purposes.

b. The disadvantaged new hires shall be identified and referred by the local State employment service office, the local Concentrated Employment Program agency, or by any other nonprofit community agency designated by the local employment service office of the Manpower Administrator's Representative (MAR) as a referral source.

c. The employer will furnish to the certifying employment service office, by the tenth of each month, a report of new hire activity for the previous calendar month. The report shall include the following:

(1) A statement of the total number of new hires in the certified establishment.

(2) A list of names and social security numbers of the disadvantaged residents of the classified labor surplus area who were hired during the month.

(3) The identity of the employment service office or agency which identified and referred each of the disadvantaged residents of the classified labor surplus area.

B. Second preference group certificate

1. The employer, regardless of location, must agree in writing to comply with the following provisions, regardless of whether or not a contract is awarded as a result of the certification:

a. The employer will hire a proportion of disadvantaged workers equaling at least 15 percent of the total new hires in the certified establishment each month, beginning with the first full month following the date of certification and continuing until the expiration of the validity period of the certificate or the

completion of an awarded contract or subcontract, whichever is later. This commitment relates both to new hires to replace turnover and to new hires for expansion purposes.

b. The disadvantaged new hires shall be identified and referred by the local State employment service office, the local Concentrated Employment Program agency, or by any other nonprofit community agency designated by the local employment service office as a referral source.

c. The employer will furnish to the certifying employment service office, by the tenth of each month, a report of new hire activity for the previous calendar month. The report shall include the following:

(1) A statement of the total number of new hires in the certified establishment.

(2) A list of names and social security numbers of disadvantaged workers hired during the month.

(3) The name of the employment service office or agency which identified and referred each of the disadvantaged workers.

C. Third Preference Group. No certificate is necessary for the third preference group, since no commitment to employ disadvantaged workers is required. The location of the bidding employer or his designated subcontractor in an area of persistent or substantial unemployment is sufficient to qualify for third preference.

IV. CERTIFICATION PROCEDURES

A. Responsibility for Certification. Local offices of State employment security agencies are responsible for certifying establishments for first and second preference. First preference group certificates will be issued by the local employment service office which has administrative jurisdiction over the classified labor surplus section or area. Where the employing establishment applying for certification is located in the administrative area of a local employment service office other than the office that serves the classified labor surplus area, the two offices will collaborate in deciding whether the establishment is eligible for certification, compliance, and reporting functions.

Second preference group certificates will be issued by the local employment service office which serves the administrative area in which the employing establishment is located.

B. Review of Applications for Certification. Within five working days after receipt of an application for certification, an authorized local employment service staff member will review the application, preferably in the presence of the applying employer's representative, to insure that the application is completed correctly and to clarify any points that may have a bearing on the employer's eligibility for certification or his ability to comply with the agreement. Information received from the employer's representative during the discussion may also be used to determine the type of service which the certified employment may require and the measures employment service staff and other agencies must take to insure referral of a sufficient number of applicants.

Upon completion of the review, the employment service manager should verify all information which is not known to be factual. For example, if the employment service manager does not know that public transportation exists in the manner described by the employer's representative, the information should be verified. When the application has been reviewed, the employment service manager will either approve or disapprove the application and proceed with the issuance or denial of the certificate.

C. Disapproval of an Application for Certification. If the eligibility of an employer is questionable, the area or local office manager should review the application with appropriate officers in the State agency. The State agency may authorize approval or disapproval of questionable applications. If both the local office and State agency agree that an application should be disapproved, the area or local office manager will notify the employer in writing. The notification should include the following:

1. Reasons for disapproval.

2. Statement of the employer's right to request reconsideration by the U.S. Department of Labor.

3. Procedure for requesting reconsideration.

V. SERVICE TO EMPLOYERS

Identification and Referral of Disadvantaged Applicants. Local employment service offices are responsible for providing a sufficient number of disadvantaged applicant referrals to enable certified employers to hire the required percentage.

Local employment service offices, the Concentrated Employment Program agencies, and other referring agencies are also responsible for providing intensive employability services in accordance with the Human Resource Development (HRD) concept so that the disadvantaged applicants will be better equipped to enter a job with a certified employer.

Disadvantaged applicants referred to employers in the first preference group must be residents of the classified labor surplus area. There is no residence restriction on the disadvantaged applicants referred to employers in the second preference group.

VI. RESPONSIBILITY OF CERTIFIED ESTABLISHMENT

A. Employment of Disadvantaged Applicants. Under provisions of the agreement for First Preference Group Certification, an employer is obligated to employ a percentage of disadvantaged residents of classified labor surplus areas which equal 25 percent of the total number of new hires at the certified establishment each month for the duration of the validity period of the certificate, or the completion of an awarded contract or subcontract, whichever is later.

The agreement for Second Preference Group Certification obligates an employer to employ a percentage of disadvantaged applicants which equals 15 percent of the total new hires at the certified establishment each month for the duration of the validity period of the certificate, or the completion of an awarded contract or subcontract, whichever is later. While an employer must obtain at least the required percentage of disadvantaged applicants from local employment service offices or other designated sources, he is not relieved of the responsibility for providing job opportunities acceptable to disadvantaged applicants. The intent of DMP–4 is not served unless disadvantaged applicants enter a job in the certified establishment, continue in gainful employment, and have equal opportunity for upward mobility.

B. Monthly Report of New Hire Activity. Certified establishments are required to submit a monthly report covering employment activity which occurred during the previous month. The report is to be submitted to the certifying employment service office by the tenth of each month covering the first full month following certification, and each subsequent month during the certificate's validity period, or the completion of an awarded contract or subcontract whichever is later.

C. Surrender of Certificates. Certified establishments may surrender their certificates at any time unless they are performing a contract which has been awarded on the basis of the certificate. The return of such certificates to the issuing local employment service office releases the employing establishment from its commitment to hire disadvantaged applicants and submit monthly reports.

VII. COMPLIANCE PROCEDURES

A. Responsibility. Local employment service offices which certify employers for preference are also responsible for insuring that employers comply with the agreement for certification. In situations where the certified employer is in the administrative area of a local employment service office other than the certifying office, the two offices work together to bring the certified employers into compliance. Employment service representatives are also to be available to give technical assistance to certified firms by suggesting practices which industry has proved to be successful in retraining and retaining newly hired disadvantaged workers, including equal opportunity for good wages and working conditions and upward mobility.

B. Recall of Certificates. Certificates will be recalled by the local employment service office whenever an establishment fails to submit the required reports for 2 months and cannot be persuaded to do so; or whenever the proportion of disadvantaged new hires falls below the agreed proportion for 2 consecutive months or 2 months in any 3-month period. After all efforts have been made to bring an employer into compliance with his agreement and it becomes necessary to recall a certificate, the employment service local office manager should review the case with the appropriate official in the State agency. If the State agency agrees that the certificate should be recalled, the employment service local office manager will notify the employer by letter that the certificate is being recalled and will not be valid after a specified date. Copies of the letter will be forwarded to the State agency, the Regional Manpower Administration office, and the Manpower Administration national office. In addition, if the employer is currently performing a contract awarded under this program, the procurement officer who awarded the contract should be notified of the recall of the certificate and given a copy of the notification of recall. The notification to the employer should include the following:

1. Reason(s) for recall.

2. Statement of the employer's right to request reconsideration by the U.S. Department of Labor.

3. Procedure for reconsideration.

VIII. RECONSIDERATION OF LOCAL OFFICE ACTION

A. Rights of Employers to Request Reconsideration. The Code of Federal Regulations (Section 8.9 Part 8, Subtitle A. Title 29) provides that any employer denied a certificate of eligibility may request reconsideration or review by the Secretary of Labor, or his authorized representative. The Secretary has authorized the Manpower Administrator to review such requests and render a decision.

The disapproval of an application for certification, or the recall of a certificate, constitutes denial of a certificate. In either case, therefore, employers may request reconsideration.

B. Procedures for Requesting Reconsideration. If the employer wishes to have his case reconsidered, he will be instructed to prepare a statement of justification and to forward the request for reconsideration to the appropriate Regional Manpower Administration office.

Upon receipt of a request for reconsideration, the regional office will secure from the State agency information pertinent to the case. After a review of all the facts, if the regional office determines that an employer is eligible for certification, an explanation will be made to the State agency which, in turn, will cause the employer to be certified. When the regional office agrees with the State agency that the employer should not be certified, all correspondence and other pertinent information, including the regional office's recommendation, will be forwarded

to the Manpower Administration national office for final determination. The national office will inform the employer of the decision by letter signed by the Manpower Administrator. Copies of the decision and appropriate instructions will be transmitted to the regional office and State agency.

CONSTRUCTION OF NEW AMMUNITION PLANTS

Mr. DOLE. Mr. President, the legislation now before the Senate, H.R. 7933, contains funds for the construction of a new ammunition complex at Bay St. Louis, Miss. This plant will produce the 155-millimeter conventional artillery round. The justification for this new construction is we have a need for a greater ammunition production capacity than presently exists. At some points in the Vietnam war, our capacity to produce 155 millimeter rounds nearly equaled the demand by our Armed Forces.

The Senator from Kansas has always been an advocate of a strong national defense posture. One important component of our defense capability is the readiness of the United States to engage in conventional warfare. If the members of the Armed Services Committee feel that expanded capacity for production of 155-millimeter rounds is required, I accept their learned judgment.

COST MUST BE CONSIDERED

Since the Senate and House have agreed that expanded production capability for the 155-millimeter shell is necessary by passage of S. 1474, the Military Construction Authorization Act, the only remaining question is the proper way to spend these funds. The answer turns on whether the money can be best spent for new facilities or upgrading of present plants.

Mr. President, the Parsons Ammunition Depot in Parsons, Kans., has been involved in the production of 155-millimeter rounds for many years. Unfortunately, the use of this facility has been declining. Employment during the recent war was over 5,000 workers. By May of 1977, the number of people employed at this plant had dropped to 764.

The plant at Parsons is in need of modernization to be able to produce at its maximum potential; however, this modernization would not be as costly as building an entirely new facility. A large part of the capacity of the Parsons plant is being wasted while a new plant is being proposed.

NEED FOR FOCUS ON AREAS WITH PLANTS

Any new plants that are constructed should be placed in areas where existing plants are being closed, or at which production is curtailed. In Parsons alone, 315 people with experience in munitions manufacture have been laid off in the past 2 years. The loss of these jobs has had an adverse effect on the economy of that part of the State of Kansas. These skilled persons should be considered in any new construction of ammunition plants.

The areas which the Army has utilized for production of munitions in the past should be given priority consideration in the construction of new facilities. Existing production capacity must not be ignored in any plans which look toward our future needs.

During Senate consideration of S. 1474, the military construction authorization bill, the Senator from Kansas had an extended discussion with the distinguished chairman of the Senate Armed Services Committee, Senator STENNIS, on the future of the Parsons Munition Plant. At that time, he emphasized both the present need for expanded capacity in the production of 155 millimeter shells and the future place of the Parsons Ammunition Plant in the Army's plans.

Senator STENNIS outlined the Army's plans to request $36.5 million for modernization of the Kansas Army Ammunition Plant in Parsons in future budget requests. The chairman of the Armed Services Committee also stated that even with the Bay St. Louis plant, the United States would only have half of the capacity needed in case of war. This shows the need for continued operations at the existing plant at Parsons.

I ask the distinguished manager of this bill whether he feels that the Appropriations Committee will look favorably on requests for modernization for the Parsons Munitions Plant if present projections for the needs of 155 millimeter shells continue?

Mr. STENNIS. As I said in my discussion with the Senator on May 13, 1977 during consideration of the military construction authorization bill, I support the program to modernize our ammunition production base. The Appropriations Committee has fully supported this program in the past and I see no reason for that support to diminish.

Mr. DOLE. If the Armed Services Committee should propose funds for increased utilization of the Parsons plant in the future, would the Appropriations Committee be disposed to support the request to enhance the status of the Kansas Army Ammunition plant in Parsons?

Mr. STENNIS. I cannot speak specifically for the Appropriations Committee, but I have every reason to believe that any request to improve our ammunition production base that can be justified will be favorably considered. As far as the Parsons plant is concerned, I am advised that current Army plans call for expenditures of $20 million in fiscal year 1980 and $16.5 million in fiscal year 1981. These programed expenditures, together with ongoing construction worth in excess of $20 million, I think demonstrates the Army's commitment to continued operations at the Parsons plant.

Mr. DOLE. I understand the plans for the Bay St. Louis facility are pretty firm. However, I wanted these assurances from the manager of this bill as to the future of the Parsons plant if the Bay St. Louis is built. I want to make clear that I intend to continue to push for greater utilization of the ammunition plant in Parsons because use of it will be cost-effective as compared with building of new facilities. The existing capacity in the Parsons plant should be an integral part of the Army's future production plans for 155 millimeter shells.

THE IMPORTANCE OF READINESS

Mr. NUNN. Mr. President, I wish to commend the Appropriations Committee for creating a specific Secretary of Defense readiness fund. Although the $300 million provided in the fund amounts to less than one percent of the total budget for operations and maintenance, it increases flexibility if unforeseen readiness improvements can be identified.

From my own investigations of our defense posture in Europe, I am concerned that insufficient attention has been paid to readiness in that region. I believe that we need to be sure that our equipment is ready and available in case an attack comes without the comparatively lengthy warning time on which we continue to base our force planning.

If properly used, this fund can stimulate urgent improvements in readiness. However, since we cannot foresee precisely what requirements might emerge for operations and maintenance 18 months from now, I believe this fund is a positive contribution to our national security posture.

Mr. SASSER. Mr. President, I commend the members of the Subcommittee on Defense Appropriations. I believe this bill before the Senate today is a good legislation. The defense bill recommended by the committee balances the needs of this country for a strong and credible defense with the limited budgetary resources and fiscal restraints faced by the Federal Government.

In particular I want to commend the subcommittee for recommending the initial appropriation for construction of a new RDX/HMX explosive production facility.

This new arsenal expansion is certainly needed by the Department of the Army. Currently there is only one RDX/HMX production facility in this country—the only one in the Western World for that matter. To me it just does not make sense to depend on only one plant to produce this necessary explosive. One site makes our production capability vulnerable to any number of mishaps such as natural disaster or sabotage.

It is my understanding that the Defense Department has stated that there is a mobilization shortfall of 9 million pounds per month of RDX—a 30-percent shortfall if this Nation were to enter a war.

The demand for RDX-HMX is growing. The needs of the NATO countries are expanding. Also, it should be pointed out that HMX will be utilized as a propellant for the Trident submarine.

So, all the factors taken together indicate that there is a need to expand our RDX/HMX production capability.

This bill provides a total of $44.4 million which is the entire budget request for this facility. Included are $17.9 million for long lead time steam plant equipment and $26.5 million for design work.

The Defense bill which was approved by the House of Representatives deleted these funds. I hope that the Senate conferees will make a strong case in confer-

ence for keeping these funds in the final version of the bill.

I also want to point out that the Department of Defense is considering three possible sites for this proposed arsenal expansion. One of those sites is in my State of Tennessee—in Milan. I want to point out to the Senate that the Milan site will be the most cost efficient location for this new plant. Total cost to the taxpayers would be $334.7 million if the plant is eventually built in Milan, Tenn. This is a savings of at least $16 million when compared to the cost estimates of the other two possible locations.

The Defense Department is currently reviewing the various proposals and is assessing the need for additional RDX/HMX manufacturing capability.

It is my hope that the officials at the Department of Defense will make a favorable determination concerning the needs for a new arsenal expansion. I believe that the facts merit construction of this new facility.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment of the amendments and the third reading of the bill.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time.

Mr. BAKER. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. All time has been yielded back. The bill, having been read the third time, the question is, Shall it pass? On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK), the Senator from Arkansas (Mr. MCCLELLAN), the Senator from Alabama (Mr. SPARKMAN) and the Senator from South Dakota (Mr. MCGOVERN) are necessarily absent.

Mr. STEVENS. I announce that the Senator from Arizona (Mr. GOLDWATER) and the Senator from Connecticut (Mr. WEICKER) are necessarily absent.

I also announce that the Senator from Maryland (Mr. MATHIAS) is absent on official business.

The result was announced—yeas 91, nays 2, as follows:

[Rollcall Vote No. 308 Leg.]

NOT VOTING—7

Abourezk	McClellan	Weicker
Goldwater	McGovern	
Mathias	Sparkman	

So the bill (H.R. 7933) was passed.

Mr. STENNIS. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. HOLLINGS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. STENNIS. Mr. President, I move that the Senate insist upon its amendments and request a conference with the House on the disagreeing votes of the two Houses thereon, and that the Chair be authorized to appoint conferees on the part of the Senate.

The motion was agreed to and the Presiding Officer (Mr. BUMPERS) appointed Mr. MCCLELLAN, Mr. STENNIS, Mr. MAGNUSON, Mr. PROXMIRE, Mr. INOUYE, Mr. HOLLINGS, Mr. EAGLETON, Mr. CHILES, Mr. SASSER, Mr. YOUNG, Mr. CASE, Mr. STEVENS, Mr. SCHWEIKER, and Mr. BROOKE conferees on the part of the Senate.

Mr. STENNIS. Mr. President, I yield the floor.

STATE - JUSTICE-COMMERCE-JUDICIARY APPROPRIATIONS, 1978—CONFERENCE REPORT

Mr. HOLLINGS. Mr. President, I submit a report of the committee of conference on H.R. 7556 and ask for its immediate consideration.

The PRESIDING OFFICER. The report will be stated.

The legislative clerk read as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 7556) making appropriations for the Departments of State, Justice, and Commerce, the Judiciary, and related agencies for the fiscal year ending September 30, 1978, and for other purposes having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses this report, signed by all of the conferees.

The PRESIDING OFFICER. Without objection, the Senate will proceed to the consideration of the conference report.

(The conference report is printed in the House proceedings of the RECORD of June 30, 1977.)

Mr. HOLLINGS. Mr. President, on June 30, 1977, we filed the conference report on the appropriations for the Departments of State, Justice, Commerce, the Judiciary and related agencies for fiscal year 1978. This report was printed as House Report 95–476 and since it has been available for some time I will merely highlight the decisions made in the conference.

The conference agreement amounts to $7,709,432,000 in new budget authority for fiscal year 1978. Due to the give-and-take on the 90 Senate amendments to this bill, the conference agreement is actually higher than both the Senate and House versions; but, is of course within the range for each of the individual items. The conference agreement is approximately $91 million less than the amount allocated to the subcommittee under the first concurrent resolution, and reflects the additional congressional priorities that were included in our $7.8 billion allocation in the first concurrent resolution.

In addition, the conferees agreed on $211,515,000 of the supplemental appropriations inserted by the Senate for certain agencies funded by this bill. The major portion of the supplemental appropriations will replenish the Small Business Administration's disaster loan fund.

DEPARTMENT OF STATE

Going back to the 1978 appropriations, we recommended a total of $1,234,970,000 for the Department of State. The main item in the conference was the Senate amendment to delete $19,250,000 of technical assistance included in the U.S. assessed contributions to international organizations. The Managers from the House did not want to interrupt the funding cycle but are agreed that the technical assistance should be funded through voluntary contributions and not by substantial increases in the assembled budgets of the various international organizations. Next year I plan a comprehensive investigation of this technical assistance in conjunction with the Subcommittee on Foreign Assistance, chaired by the distinguished Senator from Hawaii (Mr. INOUYE). The Department and the various international organizations are now on notice that the Committee on Appropriations is going to thoroughly evaluate both the merits of the technical assistance and the mechanism for making the U.S. contributions.

DEPARTMENT OF JUSTICE

The conference agreement provides a total of $2,300,619,000 for the Department of Justice. We had a major issue in the Law Enforcement Assistance Administration and managed to split the difference with the House of Representatives. Since there is considerable interest in this appropriation, I ask unanimous consent to have printed in the RECORD at this point tables comparing the budget and the conference allowance for the LEAA, as well as a State distribution of the conference amount for parts B, C, E, and the juvenile justice and delinquency prevention formula funds.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

EXHIBIT I

LAW ENFORCEMENT ASSISTANCE ADMINISTRATION

[In thousands of dollars]

Budget activity	Fiscal year 1978 budget	Fiscal year 1978 conferee allowance	Change
1. Direct assistance (formula grants):			
Planning formula grants	60,000	50,000	−10,000
Corrections formula grants	35,454	29,849	−5,605
Juvenile justice formula grants	47,625	64,000	+16,375
Criminal justice formula grants	301,352	253,717	−47,635
2. Collateral assistance:			
Criminal justice programs	53,179	44,773	−8,406
Correctional programs	35,453	29,849	−5,604
Juvenile justice programs	27,375	36,000	+8,625
Community anti-crime programs	10,000	15,000	+5,000
Technical assistance	12,000	11,000	−1,000
Educational assistance and special training programs	34,218	34,218	
National Institute of Law Enforcement and Criminal Justice	22,000	21,000	−1,000
Data systems and statistical assistance	22,000	16,000	−6,000
3. Public safety officer's benefit program	15,000	15,000	
4. Management and operations	28,844	26,844	−2,000
Total	704,500	647,250	−57,250

EXHIBIT II

LAW ENFORCEMENT ASSISTANCE ADMINISTRATION DISTRIBUTION OF PTS. B, C, E, AND J.J. & D.P. FORMULA FUNDS FOR FISCAL YEAR 1978

[In thousands of dollars]

State	Pt. B	Pt. C	Pt. E	J.J. & D.P.
Alabama	$852	$4,240	$499	$1,106

Virgin Islands	270	97	12	50
Trust territory	264	139	16	50
Total	50,000	253,717	29,849	64,000

Mr. HOLLINGS. The Senate prevailed in our amendments to implement the antitrust enforcement grants to the States and in our language concerning the supervision of U.S. prisoners in non-Federal institutions. With respect to the later amendment, we anticipate improved management and better accountability in the change we inserted to make the U.S. Marshal Service responsible for the persons detained in jails.

We compromised on the Immigration and Naturalization Service at a level of 454 positions over the budget estimate. The additional positions will booster the Border Patrol's effort to control the entry of illegal aliens, particularly over the southwest border that is a major concern of the Senator from Arizona (Mr. DE CONCINI); and provide additional staff in the offices as many Senators have complained that INS is not answering the phones or being responsive to requests of Members and the public.

DEPARTMENT OF COMMERCE

For the Department of Commerce, the conference agreement provides a total of $1,923,275,000. We obtained a split on the additional amount we provided to the Economic Development Administration, including $15 million to implement the new section 204 redevelopment area loan program. For this new program we retained the 50/50 allocation of the funds between the redevelopment areas with populations under 100,000 and those exceeding 100,000 originated by the Senator from Vermont (Mr. LEAHY).

The other major Commerce item was the National Oceanic and Atmospheric Administration where we retained all of the amendments of major concern to the Senators, such as, the new aquaculture research facility in Oregon, the data buoys and other programs proposed by the Senators from New England, and a continuation of the Coastal Zone Management funding levels we established in the 1977 supplemental. We also obtained approval of the full $15,500,000 requested by the President for the design and construction of the NOAA western regional center at Sand Point in Seattle, Wash.

THE JUDICIARY

Our amendments under the judiciary were minor and were completely accepted by the managers from the House so that a total of $444,318,000 is provided for the courts and related functions. Our amendments reflected another management improvement in that we were able to eliminate some superfluous appropriation language.

RELATED AGENCIES

For the related agencies, the conference agreement provides a total of $1,806,250,000. The major items include an additional $10 million over the Senate amount to provide a total of $205 million to the Legal Services Corporation. The agreement also provides $935 million for the Small Business Administration, and we were able to prevail in having all the administrative funds budgeted in the salaries and expenses appropriation, a change that has long been needed. The House also accepted the additional amounts we put into the bill for the new radio facilities for the Board for International Broadcasting and the U.S. Information Agency that was requested too late for House consideration.

Mr. President, I want to acknowledge the valuable assistance of the distinguished Senator from Connecticut (Mr. WEICKER) in developing this bill. He was present throughout all our hearings and deliberations and was a constant source of support and wisdom. We have been full partners throughout this process and I look forward to a long and pleasant relationship together on this subcommittee.

Mr. President, it will be recalled there are no funds in the bill for the Inter-

national Labor Organization as the United States has decided to withdraw from this organization.

When the bill was before the Senate, our distinguished colleague, the Senator from New York (Mr. MOYNIHAN) indicated his longstanding interest with respect to the International Labor Organization. He did formative work as a student and followed its development throughout the years, particularly when he was at the United Nations. I want the Senator from New York to be recognized at this point to bring the Senate the history and the record of the United States with respect to its original international organization.

I am glad to yield now to the Senator from New York.

Mr. MOYNIHAN. Mr. President, I thank the distinguished manager of the bill for his graciousness in allowing me these moments. While it might, in ordinary circumstances, be an occasion on which one would ask the indulgence of the Senate to speak, even to a brief extent, on this matter, I think this may be a different occasion.

Mr. President, in this Chamber in the year 1919, the U.S. Senate debated at great length and made its fateful decision not to accept the Treaty of Versailles which had been negotiated and brought back to the United States by President Woodrow Wilson.

In that debate, one of the major questions about the treaty had to do with the International Labor Organization. The debate was not a hostile one, but an inquiring one, for it was known that this was a matter with which President Wilson had deeply associated himself.

The group at the Versailles Peace Conference which drew up the charter of the ILO was headed by Samuel Gompers, head of the American labor movement. Later, on every occasion when President Wilson spoke on his famous trip west—from which he returned in a coma—and when he spoke of the ILO he spoke of the hopes that it had contained for the world.

Mr. President, in 1934, the United States joined the ILO, the first organization of its kind we ever joined.

Now, Mr. President, we must face the prospect that is explicit in the report of the conference committee that we are now to leave the International Labor Organization.

We have never before taken such a move and it is appropriate that this body note and state to the world what we do and why we do it.

Mr. President, the Appropriations Committee report states: The amount recommended by the committee does not include any funds for payment to the International Labor Organization and no funds were requested for that purpose, since the United States has notified that organization of its intent to withdraw. That notice of intent was given on November 6, 1975. Contributions covered the required 2-year waiting period, which expires on November 6, 1977, have already been made. Subsequent funding will depend on the decision regarding continued membership in the ILO."

Mr. President, I stand here, concerned and somber, to state that the United States now almost certainly, as anticipated by the conference committee, will withdraw. We have never done such a thing. We do it with solemnity, with care, and with the greatest reluctance.

Mr. President, I was the U.S. Permanent Representative to the United Nations in 1975 at the time our notice to withdraw was given. I trust it will not too much impair the standards of discretion in these matters to say that I wrote the letter. I ask unanimous consent that the letter of November 5 stating our intention be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NOVEMBER 5, 1975.

The DIRECTOR GENERAL,
International Labor Office,
Geneva, Switzerland.

DEAR MR. DIRECTOR GENERAL: This letter constitutes notice of the intention of the United States to withdraw from the International Labor Organization. It is transmitted pursuant to Article 1, Paragraph 5, of the Constitution of the Organization which provides that a member may withdraw provided that a notice of intention to withdraw has been given two years earlier to the Director General and subject to the member having at that time fulfilled all financial obligations arising out of its membership.

Rather than express regret at this action, I would prefer to express confidence in what will be its ultimate outcome. The United States does not desire to leave the ILO. The United States does not expect to do so. But we do intend to make every possible effort to promote the conditions which will facilitate our continued participation. If this should prove impossible, we are in fact prepared to depart.

American relations with the ILO are older, and perhaps deeper, than with any other international organization. It is a very special relationship, such that only extraordinary developments could ever have brought us to this point. The American labor movement back into the 19th century was associated with the international movement to establish a world organization which would advance the interests of workers through collective bargaining and social legislation. Samuel Gompers, President of the American Federation of Labor, was Chairman of the Commission which drafted the ILO constitution at the Paris Peace Conference. The first meeting of the International Labor Conference took place in Washington, that same year. In 1934 the United States joined the ILO, the first and only of the League of Nations organizations which it did join. The Declaration of Philadelphia in 1944 reaffirmed the Organization's fundamental principles and reformulated its aims and objectives in order to guide its role in the postwar period. Two Americans have served with distinction as the Directors-General; many Americans have contributed to the work of the organization. Most particularly, the ILO has been the object of sustained attention and support by three generations of representatives of American workers and American employers.

In recent years, support has given way to increasing concern. I would emphasize that this concern has been most intense on the part of precisely those groups which would generally be regarded in the United States as the most progressive and forward-looking in matters of social policy. It has been precisely those groups most desirous that the United States and other nations should move forward in social matters which have been most concerned that the ILO—incredible as it may seem—has been falling back. With no pretense to comprehensiveness, I should like to present four matters of fundamental concern.

1. THE EROSION OF TRIPARTITE REPRESENTATION

The ILO exists as an organization in which representatives of workers, employers, and governments may come together to further mutual interests. The constitution of the ILO is predicated on the existence within member states of relatively independent and reasonably self-defined and self-directed worker and employer groups. The United States fully recognizes that these assumptions, which may have been warranted on the part of the western democracies which drafted the ILO constitution in 1919, have not worked out everywhere in the world; in truth only a minority of the nations of the world today have anything resembling industrial democracy, just as only a minority can lay claim to political democracy. The United States recognizes that revising the practices and arrangements of the ILO is not going to restore the world of 1919 or of 1944. It would be intolerable for us to demand that it do so. On the other hand, it is equally intolerable for other states to insist that as a condition of participating in the ILO we should give up our liberties simply because they have another political system. We will not. Some accommodation will have to be found, and some surely can be found. But if none is, the United States will not submit passively to what some, mistakenly, may suppose to be the march of history. In particular, we cannot accept the workers' and employers' groups in the ILO falling under the domination of governments.

2. SELECTIVE CONCERN FOR HUMAN RIGHTS

The ILO Conference for some years now has shown an appallingly selective concern in the application of the ILO's basic conventions on freedom of association and forced labor. It pursues the violation of human rights in some member states. It grants immunity from such citations to others. This seriously undermines the credibility of the ILO's support of freedom of association, which is central to its tripartite structure, and strengthens the proposition that these human rights are not universally applicable, but rather are subject to different interpretations for states with different political systems.

3. DISREGARD OF DUE PROCESS

The ILO once had an enviable record of objectivity and concern for due process in its examination of alleged violations of basic human rights by its member states. The Constitutions of the ILO provides for procedures to handle representations and complaints that a member state is not observing a convention which it has ratified. Further, it was the ILO which first established fact-finding and conciliation machinery to respond to allegations of violations of trade union rights. In recent years, however, sessions of the ILO Conference increasingly have adopted resolutions condemning particular member states which happen to be the political target of the moment, in utter disregard of the established procedures and machinery. This trend is accelerating, and it is gravely damaging the ILO and its capacity to pursue its objectives in the human rights fields.

4. THE INCREASING POLITICIZATION OF THE ORGANIZATION

In recent years the ILO has become increasingly and excessively involved in political issues which are quite beyond the competence and mandate of the Organiza-

tion. The ILO does have a legitimate and necessary interest in certain issues with political ramifications. It has major responsibility, for example, for international action to promote and protect fundamental human rights, particularly in respect to freedom of association, trade union rights and the abolition of forced labor. But international politics is not the main business of the ILO. Questions involving relations between states and proclamations of economic principles should be left to the United Nations and other international agencies where their consideration is more relevant to those organizations' responsibilities. Irrelevant political issues divert the attention of the ILO from improving the conditions of workers—that is, from questions on which the tripartite structure of the ILO gives the Organization a unique advantage over the other, purely governmental, organizations of the UN family.

In sum, the ILO which this nation has so strongly supported appears to be turning away from its basic aims and objectives and increasingly to be used for purposes which serve the interests of neither the workers for which the organization was established nor nations which are committed to free trade unions and an open political process.

The International Labor Office and the member states of the Organization have for years been aware that these trends have reduced support in the United States for the ILO. It is possible, however, that the bases and depth of concern in the United States have not been adequately understood or appreciated.

I hope that this letter will contribute to a fuller appreciation of the current attitude of the United States toward the ILO. In due course the United States will be obliged to consider whether or not it wishes to carry out the intention stated in this letter and to withdraw from the ILO. During the next two years the United States, for its part, will work constructively within the ILO to help the Organization return to its basic principles and to a fuller achievement of its fundamental objectives.

To this end, the President is establishing a Cabinet-level Committee to consider how this goal may be achieved. The Committee will of course consult with worker and employer representatives, as has been our practice for some four decades now in the formulation of our ILO policy. The Committee will also enter into the closest consultations with the Congress, to the end that a unified and purposeful American position should emerge.

Mr. MOYNIHAN. Mr. President, I would like to note the second paragraph which says simply, "having stated our intention under article I, paragraph 5, of the Constitution of the Organization which provides that a member may withdraw provided that a notice of intention to withdraw has been given 2 years earlier to the Director General and subject to the member having at that time fulfilled all financial obligations arising out of its membership."

And this is a letter from the Secretary of State, wherein he also states:

Rather than express regret at this action, I would prefer to express confidence in what will be its ultimate outcome. The United States does not desire to leave the ILO. The United States does not expect to do so. But we do not intend to make every possible effort without a corresponding response. If this should prove impossible we are, in fact, prepared to depart.

The United States in a tradition that began with the Declaration of Independence, stated its concerns, and expressed its terms. We spoke of the erosion of tripartite representation. We spoke of a selective concern for human rights.

Mr. President, I ask the patience of my colleagues in listening to this paragraph:

The International Labor Conference for some years now has shown an appallingly selective concern in the application of the ILO's basic conventions on freedom of association and forced labor. It pursues with violation of human rights in some member states. It grants immunity from such citations to others. This seriously undermines the credibility of the ILO's support of freedom of association, which is central to its tripartite structure, and strengthens the proposition that these human rights are not universally applicable, but rather are subject to different interpretations for states with different political systems.

In sum, Mr. President, the Communist world, having totally destroyed the right of free association and collective bargaining, has become immune nonetheless from censure by the ILO.

It is only those societies which still have some vestige of freedom left, or, indeed, are wholly free—as for example the State of Israel—that are the continued objects of the totalitarian assault in this.

Mr. President, with good faith, the American business community and the American labor movement which both helped to fund this organization, which both brought the United States into it, went back to Geneva and for 2 long years sought two simple propositions: First, that there would be a single standard for the rights and responsibilities of charter membership; and second, that the ILO would seek to avoid political issues in order to go about its work, which is primarily concerned now with the developing world and the new nations.

Mr. President, in June this year that effort failed.

Mr. President, I ask unanimous consent to have printed in the RECORD a succession of news stories from the New York Times in which the headlines read simply, "U.S. Is Defeated In Move To Keep 'Political' Issues Out of U.N. Labor Agency"; "Arabs Stage New Move Against Israel in ILO Despite U.S. Warnings"; finally, a plaintive thought, the now director urging us to remain after we had said we would leave if our plan and proper conditions were not attended to.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the New York Times, June 4, 1977]

U.S. IS DEFEATED IN MOVE TO KEEP "POLITICAL" ISSUES OUT OF U.N. LABOR AGENCY

GENEVA, June 3.—The United States lost the first round tonight in its campaign to keep what it considers extraneous political issues out of the International Labor Organization, a United Nations specialized agency.

The defeat, a result of the combined voting strength of the Soviet bloc and the Arab and other third world countries in the I.L.O.'s assembly of member states, increased the likelihood that the United States would make good its threat to withdraw from the organization.

Using a procedural device, the Communist and third world countries blocked action on an American-inspired proposal that the assembly's rules be amended to screen out politically motivated resolutions unrelated to the I.L.O.'s field of activities or bypassing its constitutional procedures.

Underlying the issue was an Arab-sponsored resolution passed by the Assembly in 1974 calling for I.L.O. action against Israel for alleged "racism and violations of trade union rights" in the occupied Arab territories.

The I.L.O.'s Governing Body, or executive council, recommended the rule change to the Assembly. The United States considers the change as a necessary step away from the "politicalization" that it denounced when it submitted notice of its intention to withdraw from the I.L.O. unless the situation changes. The withdrawal will become effective in November unless it is rescinded.

Today in the I.L.O.'s assembly of government, worker and employer delegates, Mohammed Ennaceur, the Tunisian Minister of Social Affairs, strongly critized the proposed rule change as an attempt to dictate to third world countries.

This brought an angry retort from Daniel L. Horowitz, the American Government delegate, who saw in what he termed the "insinuations" of the Tunisian minister the "kind of accusation we will not accept."

The opponents of the rule change effectively blocked all action by formally abstaining in order to prevent a quorum from being reached in the vote on whether to send the proposal to a committee for examination.

Only two Mexican delegates voted against having the rule change taken up. Although 133 delegates voted in favor, the 219 abstentions decided the issue.

[From the New York Times, June 21, 1977]

ARABS STAGE NEW MOVE AGAINST ISRAEL IN I.L.O. DESPITE U.S. WARNINGS

GENEVA, June 20.—Arab countries today staged a new anti-Israel maneuver in the annual assembly of the International Labor Organization despite warnings by the United States that continued political actions might impel it to go through with its announced intention of quitting the agency.

Backed by the Communist bloc and many third-world countries, the Arabs prevented the adoption by the assembly of a committee report that would have referred to an independent group of legal experts the issue of Israel's treatment of Arab workers in the occupied territories.

This was done by the procedural device of abstaining in the balloting on the report so that it fell short of the required quorum of 277 yes and no votes cast by the government, trade union and employer delegates representing member countries. The vote was 1135 in favor, none opposed and 197 abstaining.

By killing the report after a prolonged and often heated debate, the Arab countries again gave primacy to a resolution that they had succeeded in having adopted in 1974. This accused Israel of "racial discrimination and violation of trade union rights" in the occupied lands and called on the I.L.O. to "take all measures" to correct the situation.

There was no immediate comment from the United States delegation, but throughout the session it had made clear that the outcome of the Israeli issue would weigh heavily on its final decision on whether to remain in the I.L.O. The United States had deplored the "politicization" of the I.L.O. when it gave two-year notice, expiring in November, of its intention to withdraw unless the organization showed an intention to concentrate on its official goal of promoting

better working and living conditions for workers everywhere.

To the United States, the 1974 resolution amounted to a denial of Israel's right to have the discrimination charges against it examined by experts under established I.L.O. procedures before being condemned.

[From the Washington Post, June 29, 1977]

ON LEAVING THE ILO

Will the United States now proceed, for the first time, to pull out of a United Nations agency, the International Labor Organization, with whatever impact that could have on the whole U.N. system? In justified frustration two Novembers ago the United States said it would quit in two years if this ostensibly technical agency didn't mend its grossly political ways. Some improvements subsequently were seen but they were badly undercut at the ILO's annual Geneva conference, just completed. Defying reasonable American demands, a Communist-Third World coalition trampled on due process and socked Israel, sidetracked a rule-change proposal to screen out loaded political resolutions and applied a familiar double standard (attacking only violators on the political right) on human rights. All in all it was a bad show.

If the ILO were just another organization, an administration as keen as this one on seeking global consensus might easily decide that—notwithstanding its predecessor's two-year warning—quitting to protect politicization was less important than staying to talk on. But ILO's charter makes governments only one of three equal partners with workers and employers. And while employer representation is not of great concern to the Chamber of Commerce, worker representation is to the AFL–CIO. Through the ILO, the AFL–CIO has battled to promote human and trade-union rights and to raise labor standards (and, perhaps not incidentally, labor costs) overseas. In brief, George Meany, in leading the charge to hold ILO to its charter and tradition, is not being simply a reflexive anti-Communist.

The United States cannot lightly start down the road of quitting international organizations. The ILO, moreover, has been useful in matters of union and workers' rights and and is a forum for keeping in touch with international proposals to make job creation more central to economic growth. And since, at American urging, a good number of the United States' fellow democracies stuck out their necks to help Washington battle politicization, they must be consulted in planning the next step.

Still, it is hard to make a persuasive case that the organization is so important to American diplomacy that Americans should overlook the damage to credibility and the invitation to anti-Americanism that could result from slinking away, unrequitted, from the Ford and Carter administrations' two-year warning to pull out. A cabinet-level committee will now study the two-year record (not just the record of the recent and disappointing Geneva conference). If its verdict is to quit in November, so be it.

[From the Wall Street Journal, June 29, 1977]

DEJA VU AT THE ILO

The International Labor Organization, founded at the end of World War I to promote the well-being of workers around the world and later turned into an agency of the United Nations, has just finished its annual conference in Geneva. Near the end, the organizations Director General addressed a public plea to the United States delegation: America had a "duty to itself" not to quit the ILO. The Director General had plenty of reason to be worried about the prospect, for what happened at this year's conference just may have been the last straw for the American camel.

For well over a decade, the ILO has been turning into a forum for the same kind of ideological warfare against us that has corrupted much of the UN system. The Eastern bloc has been insisting that it should not be held to the same standards as the West when it comes to judging how workers are treated. The annual meetings have been condemning nations whose politics are out of favor, without any investigation of facts beforehand. In 1974, the ILO outdid itself and voted to condemn Israel for discrimination, racism and violation of trade union freedoms and rights in the occupied territories. In 1975, the conference admitted the Palestine Liberation Organization to observer status.

American representatives to the various UN agencies have tended to dismiss the importance of such resolutions and official gestures. But one force in American life that has held few illusions in these matters is organized labor. When it became clear that the ILO had turned into a propaganda forum, the AFL–CIO saw to it that at least in this one arena the United States would protest in a way that would have to be taken seriously. In December of 1975 the U.S. wrote a letter to the ILO announcing that unless the body changed, we would withdraw at the end of the two-year waiting period required by the organization's rules.

This year's conference came as that two-year waiting period was drawing to a close. When the meeting began, it seemed as if our protest might finally have some effect. The Director General had already told the ILO's governing board that he thought he could take no further action to implement the condemnation of Israel, and the U.S. planned to introduce a rules change that would make it harder for politically inspired resolutions to get to the conference floor in the future.

But these plans and indications proved misleading. The conference sent the U.S. rules change to an unfriendly committee for preliminary consideration, and not surprisingly, our initiative was not heard from again. As for the issue of Israel, the U.S. and the Arabs at first worked out a compromise: Questions about Israel's behavior in the occupied territories would be put back into normal ILO channels and examined, as any such questions would be, by the organization's committee of experts. The Director General would continue to make formal reports on the subject, as required for any resolution, for two more years; and the Arabs would introduce no more floor resolutions on the topic.

But this compromise faltered. When the committee report embodying it actually came to a vote, the conference would not pass it. By refusing to adopt the report, the conference asserted once more that no investigation was necessary. The question of Israel was not an open one. The condemnation must stand. So on this issue as well, the members either refused to believe the U.S. was serious about withdrawing or were willing to risk seeing the organization collapse rather than give us what we wanted.

Now the U.S. has to decide whether it will actually pull out of the ILO this fall; Secretary of Labor Ray Marshall has said we probably will. It's a probability that by now should be faced without too much regret. The ILO was once a symbol of our commitment to internationalism: In 1934 we joined it alone of all the organs of the League of Nations. But 40 years later, when the ILO abandoned its role as a parliamentary institution and became simply a place in which to attack us by attacking our friends, it became just about useless for the goals we had in mind.

Instead, these events should remind us that international forums like the ILO have become a dangerous kind of place for us. The Carter administration has begun an effort to identify the U.S. more closely with Third World concerns; what we've gotten for the effort so far has been exemplified by the treatment we received from the ILO. We'd best not start building a foreign policy around the illusion that we can expect much different in the future. It's been to labor's credit that they, at least, have seen our situation clearly and have been willing to make the hard choices that this situation entails.

[From the New York Times, June 22, 1977]

U.S. IS URGED TO REMAIN IN WORLD LABOR GROUP

GENEVA, June 21.—The director general of the International Labor Organization appealed directly to the United States today to renounce any intention to resign from this United Nations specialized agency.

Francis Blanchard was addressing the annual assembly of the 135-nation I.L.O. that has been meeting here under the shadow of Washington's announced intention to withdraw unless the agency avoided continued involvement in so-called extraneous political issues.

Mr. Blanchard, a Frenchman, urged the delegates of the governments, trade unions and employer associations to what he called this "world parliament of labor" to make every effort to "preserve and strengthen the conditions which will enable the organization to maintain its universal character."

He then concluded by saying: "I make this appeal finally to the United States of America, that great country which has contributed so much to this organization and which has a duty to itself to continue to provide the aid and support that are needed to deal with the great problems of tomorrow for a world that is more fraternal, more just and more free."

The director general's appeal followed a major defeat suffered last night by the United States. The assembly refused to allow Arab charges against Israel of racial discrimination and violations of trade union rights in the occupied territories to be channeled into procedures that would mute their political repercussions.

Mr. MOYNIHAN. Mr. President, on the 29th of June, the Washington Post wrote:

It is hard to make a persuasive case to stay and nothing but an invitation to anti-Americanism can result from slinking away, unrequited, from the Ford and Carter administrations' 2-year warning to pull out.

Finally, Mr. President, I have an article from the Wall Street Journal. The Wall Street Journal is not a publication of the AFL–CIO. Yet, there has been a unique business and labor collaboration going back almost now half a century in the ILO, and together business and labor have said that the time has come to go.

I shall read the last paragraph. Commenting on the events of June, the Wall Street Journal writes:

Instead, these events should remind us that international forums like the ILO have become a dangerous kind of place for us. The Carter administration has begun an effort to identify the U.S. more closely with Third World concerns; what we've gotten for the effort so far has been exemplified by the treatment we received from the ILO. We'd best not start building a foreign policy around the illusion that we can expect much different in the future. It's been to labors' credit that they, at least, have seen our situation clearly and have been willing to make the hard choices that this situation entails.

Mr. President, if it were a fateful hour in 1919 when this body chose not to ratify the Treaty of Versailles, it is no less fateful in this hour, when we, in effect, accept the fact that we now leave the ILO.

I express the hope which I know many Members of the Senate share, and which I know the distinguished manager of the bill shares, that when we do leave, the President of the United States will state the conditions on which we will come back, because we never wanted to go. We helped create that organization before 90 percent of its present members existed as nations. But we will not submit to totalitarian standards of what is freedom and what is not. We will not submit to the politicization of an organization designed to help workingmen, not dictators. We have stated our purpose. We will carry it out. Let the world understand that the United States, with all its patience, has a limit.

This time, this night, the United States says, with the utmost regret, with respect to the ILO, that our patience has been exhausted, our pleas have not been heard and no money can be forthcoming. We are now to leave. Pray God, this makes a sufficient impression upon the members of that body and every other institution in the international system, so that they will understand the conditions under which we will remain, so that they will restore those conditions which may make it possible for us to return.

I know that I have delayed the Senate on this question. It is clearly one which matters personally to me.

I express especially my appreciation for the thoughtfulness of the manager of the bill, the Senator from South Carolina (Mr. HOLLINGS).

Mr. HOLLINGS. Mr. President, I express the thanks of the Senate and in a sense the Nation for the comments and the history made by our distinguished colleague from New York.

We do leave the International Labor Organization with tremendous regret. It is not a split decision. From my own personnel knowledge of 6 years of working on this bill, I know it is a situation that we have haggled with and tried in every way to make our dues current and otherwise to make ourselves felt with respect to human rights. Our interest is really not in international politics but with respect to the rights and conditions of international labor.

The Senator from New York has emphasized that it is not a split decision between business and labor. On the contrary, it is the unanimous conclusion from all sectors of our economy.

I can only say, on behalf of the Senate, as we move along, that I suppose the great thrill of the American system is that in some instances the cream does rise to the top. Certainly it is the case here this evening, with this international scholar in the person of the Senator from New York, who wrote his doctoral dissertation and studied this subject and worked with tremendous pride and dedication on the participation of the United States in the ILO.

It is somewhat tragic to have to make this history tonight, but at least he has made the history clear. We are all indebted to our friend from New York on this score.

Mr. President, I ask unanimous consent to have printed in the RECORD a table that gives the complete results of the conference in tabular form. The table includes a comparison of the conference agreement with new budget authority made in fiscal 1977, the budget estimates for fiscal 1978, and the amounts approved in the House and the Senate versions of the bill.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

Mr. HOLLINGS. Mr. President, I move the adoption of the conference report.

The PRESIDING OFFICER. The question is on agreeing to the motion.

The motion was agreed to.

The PRESIDING OFFICER. The clerk will state the amendments in disagreement.

The legislative clerk read as follows:

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 33 to the aforesaid bill, and concur therein with an amendment as follows:

In lieu of the sum proposed by said amendment, insert: "$15,500,000".

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 52 to the aforesaid bill, and concur therein with an amendment as follows:

In lieu of the matter proposed by said amendment, insert:

"INTERNATIONAL TRADE COMMISSION

"SALARIES AND EXPENSES

"For necessary expenses of the International Trade Commission, including hire of passenger motor vehicles and services as authorized by 5 U.S.C. 3109, $11,500,000: *Provided*, That no part of this appropriation shall be used to pay the salary of any member of the International Trade Commission who shall hereafter participate in any proceedings under sections 336, 337, and 338 of the Tariff Act of 1930, wherein he or any member of his family has any special, direct, and pecuniary interest, or in which he has acted as attorney or special representative: *Provided further*, That no part of the foregoing appropriation shall be used for making any special study, investigation, or report at the request of any other agency of the executive branch of the Government unless reimbursement is made for the cost thereof."

Mr. HOLLINGS. Mr. President, I move that the Senate concur in the amendments of the House to the amendments of the Senate as stated by the legislative clerk.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from South Carolina.

The motion was agreed to.

Mr. HOLLINGS. Mr. President, I move to reconsider the vote by which the motion was agreed to.

Mr. ROBERT C. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

TRANSFER OF MEASURE TO THE UNANIMOUS CONSENT CALENDAR

Mr. ROBERT C. BYRD. Mr. President, I understand that Calendar No. 320 is cleared for unanimous consent. I ask that the clerk transfer the measure to the Unanimous Consent Calendar.

The PRESIDING OFFICER. The measure will be so transferred.

MARITIME APPROPRIATION AUTHORIZATION, 1978

Mr. ROBERT C. BYRD. Mr. President, I ask the Chair to lay before the Senate a message from the House of Representatives on S. 1019.

The PRESIDING OFFICER laid before the Senate the amendment of the House of Representatives to the bill (S. 1019) to authorize appropriations for fiscal year 1978 for certain maritime programs of the Department of Commerce, and for other purposes.

(The amendment of the House is printed in the RECORD of July 13, 1977, beginning at page 22677.

Mr. ROBERT C. BYRD. Mr. President, on behalf of Mr. MAGNUSON, I move that the Senate disagree to the amendment of the House, request a conference with the House on the disagreeing votes of the two Houses, and that the Chair be authorized to appoint conferees.

The motion was agreed to; and the Presiding Officer appointed Mr. INOUYE, Mr. MAGNUSON, Mr. LONG, Mr. GRIFFIN, and Mr. STEVENS conferees on the part of the Senate.

PROTECTIVE SERVICES FOR THE ELDERLY

Mr. ROBERT C. BYRD. Mr. President, there is a measure on the Unanimous-Consent Calendar that was placed there yesterday, I believe—Calendar No. 322. I ask unanimous consent that the Senate proceed to the consideration of that measure.

The PRESIDING OFFICER. The resolution will be stated by title.

The legislative clerk read as follows:

A resolution (S. Res. 203) to provide additional copies of "Protective Services For the Elderly."

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

There being no objection, the Senate proceeded to consider the resolution, which had been reported from the Committee on Rules and Administration with an amendment in line 2, following "hundred" insert "additional", so as to make the resolution read:

Resolved, That there be printed for the use of the Special Committee on Aging one thousand five hundred *additional* copies of its committee print, "Protective Services for the Elderly".

The amendment was agreed to.

The resolution, as amended, was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95-348), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

The printing-cost estimate, supplied by the Public Printer, is as follows:

Printing-cost estimate

1,500 additional copies, at $451.97 per thousand ---------- $677.95

A joint letter in support of Senate Resolution 203 addressed to Senator Howard W. Cannon, chairman of the Committee on Rules and Administration, by Senator Frank Church and Senator Pete V. Domenici, chairman and ranking minority member, respectively, of the Special Committee on Aging, is as follows:

U.S. SENATE,
SPECIAL COMMITTEE ON AGING,
Washington, D.C., June 29, 1977.

Hon. HOWARD W. CANNON,
Chairman, Committee on Rules and Administration, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Senate Resolution 203, pending before your committee, requests printing an additional 1,500 copies of our working paper, "Protective Services for the Elderly," to the Senate. This working paper summarizes legal, policy, and social considerations concerning protective services—such as guardianship, conservatorship, and civil commitment—for older Americans. Several organizations and practitioners in the field of aging have already requested copies of this publication. Requests have also been received from numerous local offices on aging, legal services attorneys, the American Bar Association, mental health practitioners, and many others in the field of aging.

Enclosed is the copy of the GPO cost estimate for the requested additional copies of the report.

Thank you for your consideration of this request and resolution.

With best wishes.

Sincerely,

FRANK CHURCH,
Chairman.
PETE V. DOMENICI,
Ranking Minority Member.

ORDER FOR ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there be a brief period for the transaction of routine morning business, with no resolutions coming over under the rule.

The PRESIDING OFFICER. Without objection, it is so ordered.

Is there routine morning business?

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADJOURNMENT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate stand in adjournment for 30 seconds.

The PRESIDING OFFICER. The question is on agreeing to the motion to adjourn.

The motion was agreed to, and at 8:39 p.m. on Tuesday, July 19, 1977, the Senate adjourned until 8:39:30 p.m. the same day.

AFTER ADJOURNMENT

TUESDAY, JULY 19, 1977

The Senate met at 8:39:30 p.m., pursuant to adjournment, and was called to order by Hon. WENDELL H. FORD, a Senator from the State of Kentucky.

THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to dispense with the reading of the Journal today.

The PRESIDING OFFICER. Without objection, it is so ordered.

ROUTINE MORNING BUSINESS AND CONCLUSION OF MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there now be a period for the transaction of routine morning business without any resolutions coming over under the rule, and that morning business be closed.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECESS UNTIL 11 A.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business today it stand in recess until the hour of 11 a.m. tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROGRAM

Mr. ROBERT C. BYRD. Mr. President, the Senate will convene at 11 o'clock tomorrow following the recess and, at some point during the day, it is my desire to attempt to take up the public financing bill, Calendar Order No. 277, S. 926.

I would hope it would be possible to work out some agreement whereby we could take up the bill, say, Monday of next week without having any filibuster on the motion to proceed, in which case if we were able to do that, I would be willing to also include in that agreement that I would not offer a cloture motion on Monday, and we could use Monday for the debate on the measure itself.

In the meantime then tomorrow, Thursday, and Friday the Senate could proceed with other business that has been cleared for action.

I realize the minority leader is in no position to agree to such a request tonight, but I wanted to state this for the record so it would be in the RECORD and Senators could think about it overnight, and possibly tomorrow before we go into session at 11 o'clock some kind of an agreement could be worked out.

Mr. BAKER. Mr. President, I thank the majority leader for that information and for his observations. The majority leader and I have been conferring during much of the afternoon and I thank him for the courtesy of advising me of his desires and ambitions with respect to not only this matter, but other scheduling matters for the attention of the Senate.

The majority leader is right. I am not in position to agree to anything on this measure at this time. I have conferred at length with many Members on this side of the aisle, and I would freely say it is possible that some sort of an arrangement might be worked out. I do not know that such is possible, but it is worth exploring, and I am willing to explore it.

There are several aspects of the problem that ought to be taken account of by our colleagues as they turn their attention to this matter tomorrow, as I hope they do. For instance, we should determine whether or not there should be an agreement to proceed to the consideration of this measure or whether or not we should have first some consideration of the budget waiver resolution which is also on the calendar.

The question, of course, whether or not we can agree to the consideration of the measure, disposes neither of the question of how long we debate the merits of the controversy itself nor the question of whether some alternative possibility to the financing of elections might be considered.

It is my understanding that the distinguished junior Senator from Oregon has an alternative proposal he would like to offer. While it may be difficult for him to do that in the context of the measure the majority leader identifies as S. 926, Calendar Order No. 277, since that is a bill and since the Packwood amendment probably has revenue features, I would hope, Mr. President, that we could find some way to make sure we have an orderly arrangement for the consideration of this measure and alternatives to this measure.

As the majority leader has expressed his hope to me that we could consider and discuss this matter further tomorrow, I hope he would consider this proposal and on tomorrow as well.

Mr. ROBERT C. BYRD. Mr. President, I certainly will be glad to consider alternatives as the distinguished minority leader has suggested. I think about the only thing we can do at this point is to stand in recess and go home and try to get a good night's sleep and come back tomorrow and see if anything can be worked out.

RECESS UNTIL 11 A.M. TOMORROW

Mr. ROBERT C. BYRD. So, Mr. President, if there be no further business to

come before the Senate, I move, in accordance with the previous order, the Senate stand in recess until the hour of 11 o'clock tomorrow morning.

The motion was agreed to; and at 8:45 p.m. the Senate recessed until tomorrow, Wednesday, July 20, 1977, at 11 a.m.

NOMINATIONS

Executive nominations received by the Senate July 19, 1977.

TENNESSEE VALLEY AUTHORITY

Simon David Freeman, of Maryland, to be a member of the Board of Directors of the Tennessee Valley Authority for the term expiring May 18, 1984, vice Donald Opie McBride, term expired.

THE JUDICIARY

Nicholas J. Bua, of Illinois, to be U.S. district judge for the northern district of Illinois, vice William J. Lynch, deceased.

Earl E. Veron, of Louisiana, to be U.S. district judge for the western district of Louisiana, vice Edwin F. Hunter, Jr., retired.

Stanley J. Roszkowski, of Illinois, to be U.S. district judge for the northern district of Illinois, vice Richard W. McLaren, deceased.

DEPARTMENT OF JUSTICE

John C. Krsul, of Montana, to be U.S. marshal for the district of Montana for the term of 4 years, vice Louis O. Aleksich, term expired.

IN THE ARMY

The following-named officer under the provisions of title 10, United States Code, section 3066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 3066, in grade as follows:

To be lieutenant general

Maj. Gen. Harold Robert Aaron, [redacted], U.S. Army.

IN THE NAVY

Vice Adm. John G. Finneran, U.S. Navy (age 53), for appointment to the grade of vice admiral on the retired list pursuant to the provisions of title 10, United States Code, section 5233.

Rear Adm. Charles H. Griffiths, U.S. Navy, having been designated for commands and other duties determined by the President to be within the contemplation of title 10, United States Code, section 5231, for appointment to the grade of vice admiral while so serving.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

(Statements in connection with bills and joint resolutions introduced today are as follows:)

By Mr. GLENN:

S. 1882. A bill to amend the Omnibus Crime Control and Safe Streets Act of 1968 to authorize the Law Enforcement Assistance Administration to make grants to States for the prevention and detection of certain crimes involving the torching of buildings, and for other purposes; to the Committee on the Judiciary.

ARSON CONTROL ASSISTANCE ACT OF 1977

Mr. GLENN. Mr. President, today I am pleased to introduce the Arson Control Assistance Act of 1977. I believe that it is tragically ironic that we in Congress annually deliberate at length seeking the best approaches for saving and revitalizing our older, urban innercity neighborhoods while simultaneously there is a vicious, rapidly spreading crime that is destroying major portions of some of those same urban neighborhoods which goes virtually unchecked and unnoticed. I am speaking of the crime of arson for profit, known in the vernacular as "Torching." Reduced to its most basic terms, this is the practice of property owners "arranging" for fires and the consequent damage and destruction of marginal urban properties for the purpose of receiving large insurance payments and favorable tax benefits.

THE SCOPE OF THE PROBLEM

Because the FBI does not now classify arson as a major crime, it is very difficult to amass hard specific criminal statistics on incidences of arson. However, from various sources, my staff has compiled these rather startling facts and figures. From 1965 to 1975, the incidence of building arson has increased 325 percent according to the LEAA. This increase has continued. In 1975 alone incendiary and suspicious fires increased by 24½ percent. An estimated 1,000 people, including 45 fire fighters die each year in arson fires, and 10,000 people are injured annually. Arson fires because, they are so difficult to detect and require specialized investigation that many communities lack, often go unreported or are listed as fires of "unknown" origin.

Consequently, these statistics and estimates are probably quite conservative. Many officials in larger cities believe that as many as 50 percent of their fires are maliciously set. In Newark, N.J., a recent increase in the number of vacant downtown buildings was followed by a 500 percent surge in the number of building fires. In Houston, Tex., the fire marshal has described the upsurge in arson as "epidemic." Chicago, Ill.; Seattle, Wash.; New Haven, Conn.; Boston, Mass.; Detroit, Mich., and especially New York City are among other cities that have suffered widespread arson epidemics in recent years.

Arson represents devastating financial losses to its intended victims, insurance companies. The American Mutual Insurance Alliance estimated arson losses of $1.3 billion in 1975 alone, 37 percent of total U.S. fire losses. In 1976 it is estimated that arson losses approached $2.5 billion. How can the terror of the sound of fire engines in the night to a family living in a densely populated, aging urban neighborhood even be calculated?

FEATURES OF THE ARSON CONTROL ASSISTANCE ACT

S. 1882 would do two things that, taken together, will underline Federal interest in more effectively dealing with this crime while preserving the enforcement aspects and prosecution of offenders to local officials operating under local statutes. First, S. 1882 reclassifies arson from a "part two" to a "part one" crime under the FBI is Uniform Crime Reports System. At present, arson is not considered a major or "part one" crime for purposes of the FBI statistical crime index. Murder, forcible rape, robbery, assault, burglary, larceny, and auto theft are so classified and arson is not, even though human and property losses from arson often exceed those of these other major crimes. As a result, specific, official statistical compilations on arson are often nonexistent or incomplete.

Furthermore, the failure to have arson included in the major crimes category serves to isolate this vicious crime from proper public attention and scrutiny, thus reducing the priority that we attach to more effectively dealing with it. We need to move to take the mantle of "white collar respectability" off of this crime and to expose it for what it is, a grave danger to life and property, a large component part of the problems of our urban areas and an increasing menace throughout the Nation.

S. 1882 authorizes and directs the FBI to classify arson as a major crime. Second, S. 1882 adds to the list of specific permissible areas for LEAA law enforcement and criminal justice grants to States and units of local government a category for assistance in the development of programs designed to prevent and detect arson for profit in urban areas. Some States, including my home State of Ohio, have taken the lead in developing more sophisticated technological and law enforcement approaches to arson detection and enforcement. I feel confident that other areas can do the same. LEAA should, like the FBI, begin to treat arson as a major crime and assist communities accordingly.

Mr. President, those are the two major features of the Arson Control Assistance Act of 1977. Together, they will cost little yet they will begin to direct attention and assistance to a crime that is by some accounts becoming almost commonplace and routine while often going undetected, unsolved, and even unreported. I want to take this opportunity to comment in greater detail about the scope of this problem and to make a part of the RECORD some key materials related to the arson issue. Although I certainly recognize that the general crime of arson has a varied cast of practitioners ranging from psychopathic, mentally disturbed individuals to so-called thrill seekers to individuals seeking ways to "speed up" public housing waiting lists, I want to confine my remarks here to the area of the hardcore criminal who has attempted to make arson a for-profit business practice.

Prevention and detection of arson-for-profit will do much to discourage all other forms of arson. I am particularly disturbed that this type of crime has become so frequent and so rampant that it is gaining a certain aura of legitimacy as a "cost of doing business" in the inner city. There is nothing legitimate or respectable about this crime. Arson-for-profit only contributes to further loss of community jobs, homes, business, and insurances coverage for areas already suffering disproportionately from these very same problems.

REASONS FOR THE INCREASE IN URBAN ARSON

Mr. President, we are not speaking of a practice that requires a knowing wink of the eye, we are talking about a costly, wasteful, and terrifying major crime. I think that it is obvious that this crime is directly linked to the overall malaise

of our central cities. Industry and jobs have rapidly moved out of central city areas taking with them much of the middle class and leaving behind large numbers of low-income families, the elderly, and many public assistance recipients.

Consequently, the economic core of many of our cities is not a strong one. Diminished tax revenues, reduced municipal services, rising property taxes, reduced profit margins, all combined with aging structures and a tax structure that encourages depreciation and fast "write-off" have come together as part of the vicious cycle of inner-city life that makes urban property so particularly susceptible to arson-for-profit. An old structure in this cycle is likely to change hands repeatedly and is quite unlikely to be slated for improvements or renovations. Thus, the deterioration accelerates.

Bill Moyers, in his startling CBS documentary on the South Bronx, "The Fire Next Door" referred to this pattern as the "peculiar chemistry of poverty." Indeed, the South Bronx has the dubious distinction of holding the world's record for arson. In just 10 years, more than 30,000 buildings have been burned and abandoned. Researchers from Battelle in Columbus have informed my staff that growth patterns of urban arson can be measured simply by observing these deterioration patterns. S. 1882 will not solve the poverty and housing problems of our cities but, hopefully, it will build a forceful deterrent against those who would exploit and exacerbate those problems.

ARSON ARREST AND CONVICTION RATES

It is estimated that only 9 persons are arrested, 2 convicted and 0.7 incarcerated per every 100 fires classified as incendiary or suspicious. This compares with 21 arrests, 6 convictions, and 3 incarcerations per every 100 of each of the presently classified "major" crimes. These statistics, more than any others, illustrate the extremely difficult nature of arson. As I mentioned, there are usually severe shortages of trained investigative personnel. The investigation itself is often extremely difficult and technical due to damage. Arrests and convictions are rare and even more difficult to obtain where professionals are involved and fraud is the motivation. Even with very few arrests and convictions in the arson-for-profit area, fraud is still implicated in 17 percent of a sample of arson cases.

There are often no clear lines of responsibility for the investigation as between the police and fire departments. Further, arrest and prosecution are complicated by the usual lack of witnesses and the requirements of difficult-to-obtain physical and circumstantial evidence. All of this explains why arson is often called "the easiest crime." Once again, I would like to stress that at present the only central source of national arson statistics is the National Fire Prevention Association, a private, nonprofit organization.

SOPHISTICATION OF ARSON-RELATED CRIMINAL ACTIVITY

The image of the harried, indebted property owner sprinkling gasoline around an abandoned property is an overly generous one when applied to the area of arson-for-profit. In reality, we are speaking of professional "torches" who can earn as much as $300,000 per year, according to arson investigators. These "wages" are percentages of insurance payments. In Detroit, a huge arson-for-profit ring was only recently smashed that involved corrupt home repair contractors and homeowners who, in collusion, "torched" buildings and submitted inflated insurance claims.

Other evidence of organized criminal activity in this area consists of buyers and sellers making "paper" purchases and sales of buildings in order to hike insurance coverage prior to the building's "torching" and ultimate splitting of the insurance proceeds. Other, more basic arson-for-profit methodologies include the "moving in" and hiring of narcotics addicts and teenagers with payments and instructions to burn. Often in New York's Harlem and South Bronx, unscrupulous real estate speculators have used this method to vacate perfectly sound structures that were money losers because they were subject to city rent control laws, or because the tenants had fixed low incomes.

THE ROLE OF THE FAIR ACCESS TO INSURANCE REQUIREMENT

In 1968, Congress passed a well-intentioned law designed to assure insurance coverage for property owners in high risk neighborhoods. Participating States set up quasi-government operations which underwrite coverage of independent companies. Twenty-eight States, most of them industrial, have so-called Fair plans. David Lucht of the National Fire Prevention and Control Administration feels that the Fair plans, because they guarantee even overly insured buildings, represent a tempting plum to the unscrupulous.

In Massachusetts, only 10 percent of Fair policies produced losses in 1974 but those losses wiped out the premium money paid for by the other 90 percent of the policies leaving a $6 million taxpayer debt. Only two States of 28 Fair plan States—New Mexico and Georgia—covered their expenses. So, although Fair is an excellent and vitally necessary program for our cities, it is being undermined and exploited by the arson-for-profit criminal.

Many insurance companies have responded to the arson wave by using the value of the building on the open market as opposed to replacement costs as their standard for damage payments. Business Week magazine estimates that in some areas this is sometimes as little as 10 percent of replacement costs. Obviously, the wave of urban arson has set off a cycle that is damaging and harmful to urban property insurance patterns.

THE ROLE OF OHIO, THE BATTELLE MEMORIAL INSTITUTE, AND OTHERS IN HELPING COMBAT ARSON

Mr. President, I am particularly pleased that the State of Ohio, through State and local government, State insurance officials, and the widely respected Battelle Memorial Institute of Columbus, Ohio, have taken a leading role in combating the rising incidence of arson. In 1975, Ohio formed a Blue Ribbon Arson Committee whose chairman was Mr. Gene Jewell, chief of the State Arson Bureau and whose membership I will make part of the RECORD. The committee commissioned Battelle to do an indepth analysis of the arson problem.

Battelle's project team assembled leading arson investigators, insurance company representatives, and others and came up with extensive and impressive data and recommendations, many of which are included or mentioned in this statement. Battelle has also used its arson expertise in conducting leadership seminars and making a 1976 report on arson to the National Academy for Fire Prevention and Control. Additionally, many substantive technical and procedural recommendations have been made in an October 1976 study for LEAA by the Aerospace Corp., of El Segundo, Calif. The National Fire Protection Association of Boston, Mass., in 1976 contributed still more valuable data and technical investigative materials.

I believe that S. 1882 represents the two primary thrusts of all of the new data and attention given to arson. Specifically, all of the studies have pointed out the need to classify arson as a major crime and to have data on arson collected nationally and disseminated. All of the studies have also pointed out the need for increased, more sophisticated training of law enforcement officials and investigators. Dan Econ, past president of the International Association of Arson Investigators, has pointed out that in 1970 there were 8,000 cases, 9,000 fires classified as "undetermined" and 1,500 "suspicious" fires. Yet, in 1974 Ohio had only eight State arson investigators, excluding Cincinnati, Cleveland and Columbus which conduct their own investigations with small staffs.

DETROIT, MICH.

Detroit has developed a specifically trained staff of arson investigators who are trained for 5 years as firemen and another 5 years as arson specialists. Coincidently, Detroit has reached an arrest rate of 30 percent in its arson investigations, quite a high figure. Unfortunately, Detroit is now faced with the budget necessity of cutting its arson team sharply.

SEATTLE, WASH.

Seattle is considered the model for arson control. Its arson squad of eight firemen and two policemen replaces divided responsibilities. Firemen go through a 180-hour training course on arson. The city has an "arson hot line" and arson alert car on patrol and other innovations. As a result of this intense program, arson losses in Seattle dropped from $3.2 million in 1974 to $1.9 million in 1976.

So, Mr. President, progress in this area is possible and the double thrust of S. 1882 should encourage progress with a minimum expenditure. The two features of this bill go hand-in-glove. Better, more sophisticated training and programs in detection will produce better data as well as better enforcement. National data and the status of "major crime" will result in more attention, more resources and improved enforcement.

Mr. President, I reiterate that this is not simply a matter of criminal law in terms of public policy. The Arson Control Assistance Act of 1977 must be read as a component part of national urban, housing, and economic policy. Arson is an insidious crime that tears at the fabric of all three. I look forward to early hearings and passage of this bill and urge my colleagues to join in support.

Mr. President, I ask unanimous consent that certain material be printed in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

OHIO FAIR PLAN UNDERWRITING ASSOCIATION—BLUE RIBBON ARSON COMMITTEE

Chairman Gene L. Jewell, Chief, State Arson Bureau.

James Brackney, Mgr. Eng. Div., Celina Mutual Insurance Company.

Donald E. Fisher, Exec. Dir., Buckeye State Sheriff's Assn.

Burt Lugannani, Chief, Cincinnati Fire Department.

Corrin J. McGrath, Chief, Toledo Police Department.

Robert M. Peterson, Chairman, Ohio Claims Association.

Clint L. Templeman, Exec. Dir., Insurance Board of Cleveland.

Jerry L. Walke, Ph. D., Director, Drug Abuse Education.

Ex Officio:

Harry V. Jump, Director, Ohio Insurance Department.

Terry E. Drake, State Fire Marshall.

William R. Morris, Chairman, Ohio FAIR Plan Board of Governors.

Richard P. Fogo, Administrator, Ohio FAIR Plan Underwriting Assn.

Frederick E. Hill, Claims Manager, Ohio FAIR Plan Underwriting Assn.

[From "Arson: America's Malignant Crime." Final Report of Battelle Columbus Laboratories, Columbus, Ohio for National Fire Prevention and Control Administration of the U.S. Dept. of Commerce]

THE NEED TO RECLASSIFY ARSON IN CRIME REPORTING SYSTEMS

The almost complete lack of reliable arson statistics leads inevitably to local apathy.

Though records on arson are kept within local and state police and fire agencies, there is only one recognized national source of complete crime statistics. This is the Federal Bureau of Investigation's Uniform Crime Reports. Neither the National Fire Data System of the NFPCA nor the proposed national data system on fire losses being considered by the insurance industry will include specific listings of arson crimes. Nor does the Fire Marshal Reporting Service which is active in 28 states have such specific information. The problem is that within the Uniform Crime Reports arson is not given the "major crime" status of murder, forcible rape, robbery, assault, burglary, larceny and auto theft. It is paradoxical that property losses from arson may exceed those from any of the so-called major crimes.

Because arson is not a major or "Part I" crime, its incidence is not reported with the thoroughness or publicity of other crime reports. Arson actually is recognized as a "Part II" offense, and there are voluntary reporting requirements, but these apparently are generally not observed by the reporting agencies. Each year the "Part I" crime statistics for small and large communities are publicized; they appear in the local press, and they are compared with previous records and the reports from other communities. Not so for arson, where the only local reports are usually those supplied by the fire services on a voluntary basis.

Participants in the seminar recommended that steps be taken immediately through the International Association of Chiefs of Police and its Uniform Crime Records Committee to get arson reclassified as a "Part I" crime. This reclassification should have several consequences:

1. Better reporting of arson cases by law enforcement authorities, possibly leading to an enormous increase in the reported incidence of arson.

2. Better data on arson through existing data systems, leading to information which could be of use to private and public authorities.

3. Increased awareness of the problem through "shock treatment" affecting the public, legislators, public officials and insurance companies.

4. Identification of arson as a law enforcement problem, leading to improved access to applicable sources of funding for research, development, technology and control programs.

5. Increased motivation for the development of training programs for handling arson at all levels.

6. Incentives to get better arson laws on the books, and to involve prosecutors and the judiciary in a more active manner.

7. Greater attention by the insurance industry to preventing arson fraud.

Getting arson reclassified as "Part I" crime is a national need, and that need is becoming recognized by all concerned groups, including police. Because police departments often are "rated" in the public mind by their success in curbing "Part I" crimes, many departments might have a public relations problem. However, an intensive public awareness activity, simultaneous with reclassification, might even turn this potential disadvantage to an advantage by calling attention to the need for law enforcement resources.

RECOMMENDATIONS

Because we recognize that the problem of arson is so intense and is growing so rapidly, it is a national problem. We cannot run the risk of letting it stay a local matter, so there must be national reporting of its incidence through a mechanism that we know is reliable and valid—the FBI Uniform Crime Reporting System. We all have a responsibility to help bring this about by actively involving our own constituent groups—the arson investigators, the police chiefs, the fire chiefs, insurance executives, bankers, judges, lawyers, fire marshal personnel, research workers, trainers and educators.

We recommend that the NFPCA and the National Fire Academy do the following now:

1. Communicate to the directorate of the Federal Bureau of Investigation that national reporting of arson in uniform crime statistics would be of great value to stopping this crime. Indicate that a concerted effort will be made to get arson declared a "Part I" crime.

2. Alert the National Association of Insurance Commissioners to the same need.

3. Make a formal presentation to the International Association of Chiefs of Police, or its Uniform Crime Records Committee, that "Part I" crime status is urgently needed. Indicate readiness to participate in a national effort aimed at public awareness, so that individual police agencies do not receive adverse publicity when the new statistic is introduced.

At the same time these activities are initiated, all concerned public agencies should begin meeting to work out the details of actually implementing the national reporting of arson. The NFPCA should work with the Uniform Crime Records Committee of the IACP in developing reporting standards and formats. The assistance of the Joint Council of National Fire Service Organizations also should be enlisted.

For the insurance industry there is a special responsibility to call attention to the national reporting problem through all of its information activities at national, state and local levels. As a start, the NFPCA must familiarize insurance organizations with this report and establish working lines of communication with each organization, including (but not limited to):

The American Insurance Association
The American Mutual Insurance Alliance
The Association of Insurance Attorneys
The Factory Mutual System
Industrial Risk Insurers
The Insurance Crime Prevention Bureau (Canada)
The Insurance Crime Prevention Institute
All state insurance associations
Major independent insurance companies
Property Insurance Plans Service Office
The Insurance Information Institute
The National Association of Mutual Insurance Companies
The National Association of Independent Insurers
The National Crime Prevention Association
All state FAIR Plan agencies

Similarly, the NFPCA must provide awareness to and establish communications with the American Bar Association and the National District Attorneys Association.

[From Business Week, Feb. 28, 1977]

BUSINESS BATTLES THE ARSONIST

The numbers tell the story. An estimated one-third of the $7.3 billion that business paid in fire insurance premiums in 1976 went to cover arson losses. Half of all fire losses above $250,000 are estimated to result from deliberately set fires. Most alarming, losses caused by incendiary fires are rising faster than losses caused by accidental fires. In 1966 incendiary fires accounted for $363 million, or some 24% of a total fire loss bill of $1.5 billion. By 1975, the latest fully reported year, such losses had reached $1.3 billion, jumping to 37% of a total $3.4 billion.

Shaken by these soaring figures, business and insurance groups that formerly dismissed arson as too minor and too difficult to tackle are mounting organized campaigns against it:

The American Mutual Insurance Alliance (AMIA) is lobbying in state legislatures for legal changes that would make it easier to catch and convict arsonists.

The Insurance Crime Prevention Institute (ICPI) has doubled its staff of investigators to 90 in the past 18 months and started a national program to help its 324 member companies prosecute arsonists.

Individual businesses are improving lighting in their plants, tightening security at entrances, and implementing their own arson-prevention schemes. In Humbolt Park, a northwest Chicago neighborhood with high arson rates, filling station operators refuse to sell containers of gasoline to anyone who has not previously registered as having a legitimate need for them—for instance, as the owner of a power mower or motorboat.

The American Insurance Assn. will soon issue a plan for an industrywide computerized data bank to help investigators spot similarities among suspicious fires. All investigations now start from scratch. Anyone checking a fire that started in, say, the machinery of a near-bankrupt dry-cleaning store has no access to information on other fires that started in dry-cleaning machinery or even on suspicious fires that started anywhere else.

Nobody, in fact, has access to useful information on arson because almost no such information exists. Says Eugene Jewell, chief of the arson bureau in Ohio, one of many states that depend heavily on volunteer firemen: "When you've already asked a volunteer to give up his time fighting fires, how much

more time can you ask him to give up doing paperwork?" And communities with professional fire-fighters usually divide the responsibility for arson between police and fire departments, so neither department pays special attention to incendiary fires.

Part of this information gap may be filled soon by the Battelle Memorial Institute, which is gathering data from 11 major cities, including New York and Chicago, under a grant from the National Fire Prevention & Control Administration, a Commerce Dept. unit. NFPCA is also training arson investigators and preparing a community action manual on preventing and detecting arson.

THE PROFIT MOTIVE

Improved investigation is the crucial issue, says Charles Morgan, president of the National Fire Protection Assn., whose 33,000 members include fire marshals, industry security officers, and other professionals. "If you can take the profit out of incendiary fires, you've got a deterrent," Morgan says.

At present there is not much deterrent: An estimated 1 percent of all arson fires result in an arrest, and only 1 percent of those arrests result in a conviction. The ICPI hopes that its beefed-up investigating staff and national educational program will improve these percentages. Meanwhile, the institute plays the averages by trying to nail arsonists for fraud, which is easier to prove and frequently accompanies arson. "If you're going to burn your restaurant, you're more likely to remove your liquor than to leave it there," says ICPI Director James F. Ahern.

Other organizations are fighting arson along different lines. Insurance companies—some of which formerly paid fire loss claims even before local authorities had finished investigating—have become more aggressive. "We are making dog-gone sure that it isn't arson before we pay the claim," say Roger M. Freeman Jr., president of Allendale Mutual Insurance Co. State Farm Mutual Fire & Casualty Co. seeks more information than it used to from insurance applicants and conducts more frequent inspections of insured premises. Moreover, the industry is increasingly willing to fight dubious claims in court, says Marvin Karp, a Cleveland lawyer who specializes in such cases. "In the past couple of years [the insurance companies] have really gotten their backs up," Karp says. "They now have the courage to say, 'This is arson, and there's evidence that the insured is involved. So let's let the jury decide.' "

CLAIMANTS GET LESS

Juries have also turned tougher. The Metropolitan Chicago Loss Bureau, which monitors claims disputed by its 125 member companies, reports that only 69 claims, asking for a total of $4 million, went to court in the five years before October, 1975, and policyholders collected about two-thirds of that sum. But during the following year, 106 disputed caims, for a total of $6 million, went to court, and the claimants got only one-third of what they had sought. "We may have more people setting fires, but fewer claims are being won," says the bureau's director, Donald H. Mershon.

As for why more people are setting fires for profit, experts offer these explanations:

Some failing businessmen, because of a general decline in moral standards, burn their plants for the insurance money with easier consciences than their fathers would have had. "Today you've got arson in the suburbs, not just the inner city," says Robert M. Hyatt, commander of the Wayne County Organized Crime Task Force.

Arson, formerly a largely do-it-yourself crime, has become professionalized. "Criminals have learned that this is a great area for them," says Victor Palumbo, arson specialist at the National Fire Academy.

State Fair plans (Fair Access to Insurance Requirements) now cover property loss in high-risk neighborhoods formerly shunned by insurance carriers. The plans stem from a 1968 federal law.

For a property owner who has seen the value of his holding plummet as an area deteriorated, the Fair plans provide a temptation "to turn around an set his own fire," says David A. Lucht of the National Fire Prevention & Control Administration. As a result, notes Allendale's Freeman, Fair plans pay out $150 for every $100 of premium income in some New England states, and only two of the 28 plans—those in New Mexico and Georgia—cover their expenses.

In self-defense, some insurance companies have begun to discourage slum arson by changing the basis on which they figure the value of lost property. Instead of the conventional standard—the cost of replacing the lost building—they are paying the amount that the building would have brought on the open market. In the South Bronx, this is sometimes as little as 10% of replacement costs.

CONTROLS THAT WORK

Communities, too, have begun to fight arson. In Seattle, generally considered the model for arson control, officials post conspicuous "Reward" signs on buildings gutted by arson (and pay the rewards for leads to criminals out of a fund established by insurance companies) operate a hot line for citizen reports of suspicious behavior by possible arsonists, and send out an "arson alert car" to patrol the streets each night.

In place of divided responsibility, a fire department arson squad of eight firemen and two policemen has full charge of detecting, arresting, and prosecuting arsonists. Firemen from individual engine companies from throughout the state go through an 180-hour training course on arson. In addition, the city encourages insurers to file civil suits blocking payment of insurance benefits in cases where fires are suspicious but evidence is not hard enough for criminal prosecution.

Apparently these techniques work. The Seattle program got under way after 1974 arson losses reached $3.2 million, more than half of the city's total fire loss. Last year, arson losses came to $1.9 million, 40% of the city's total, according to arson squad chief Richard Hargett.

CHANGING LAWS

The insurance industry, operating through the AMIA, has launched a major lobbying effort to change state laws that the industry claims tie its hands in dealing with arsonists. The AMIA wants other jurisdictions to copy an Ohio law that amends the confidentiality of insurance records to require that insurers give arson investigators data from their claims files. The AMIA also seeks a legal way to open up blind trusts so that law enforcement officials can identify common ownership of burned buildings. And it wants insurers to be able to question applicants for new policies about their past loss records.

In addition, the AMIA also wants badly to have arson reclassified as a "Part I crime" in the national statistics collected by the Federal Bureau of Investigation. At present arson is a "Part II crime," along with gambling, drunkenness, and violating a curfew. Most police departments measure both their towns' lawlessness and their own efficiency by the FBI figures on Part I crimes, and insurance officials hope that promoting arson to the first rank will increase the time and money spent on its prevention, detection, and prosecution. Says Allendale's Freeman: "Certainly arson should be ranked on the same level of heinosity as stealing a bicycle."

[From New York Times, June 20, 1977]

U.S. INQUIRY IS BEGUN ON ARSON IN BRONX

INSURANCE-PAYMENT DATA GATHERED IN BROAD INVESTIGATION OF FRAUD

(By Joseph P. Fried)

A Federal grand jury has begun an investigation into possible arson for fraud in the Bronx, where in recent years entire neighborhoods have been ravaged by fires, first in the South Bronx and more recently in the West Bronx.

The possibility of similar arson in upper Manhattan is also being examined.

Sources in the insurance industry said that the records of some insurance companies had been subpoenaed in recent weeks, apparently as part of an effort to determine whether the companies had been defrauded into making payoffs for fires deliberately set by property-owners or their associates.

One insurance organization, according to one of its officers, has been asked for its files involving all Bronx buildings on which the organization in recent years paid fire-damage claims involving more than $25,000. The organization provided the grand jury with files on more than 30 buildings, both residential and non-residential, the officer said.

The office of the United States Attorney Robert B. Fiske, whose jurisdiction includes the Bronx and Manhattan, declined to provide any information.

A grand jury investigation of the arson situation would appear to indicate that Mr. Fiske has a different view of Federal jurisdiction in this matter than his predecessor, Paul J. Curran, had in 1975. Mr. Curran said then that he did not feel there was a basis for a "broad-scale Federal investigation" into the arson situation in the South Bronx, although he said there might be specific arson cases that he might look into.

Mr. Curran's comments followed a call by local Bronx officials for Federal Bureau of Investigation help in dealing with arson in the borough.

The current investigation appears to involve a relatively broad scale, as indicated by the fact that at least one of the subpoenas for insurance-payment information did not cite any specific buildings, but sought the insurer's records of all Bronx buildings on which payments of more than $25,000 have been made in recent years.

Legal experts said that even though arson itself was not a Federal crime—unless a Federal building was involved—the Federal Government could still have jurisdiction where privately owned property was "touched," if the mails or interstate telephones were used for such things as filing fraudulent insurance claims and receiving payments in arson-fraud schemes.

FEDERAL AID MAY BE A FACTOR

Another possible basis for Federal jurisdiction could be Federal financial involvement in some of the housing that has been hit by fires. The Bronx District Attorney, Mario Merola, has said in the past that apartment properties built or rehabilitated with Federal aid had been among the structures set afire by South Bronx arsonists.

Such aid generally takes the form of mortgage insurance or direct subsidies.

Generally in the United States, Federal prosecutors have begun using the Federal mail-fraud statutes in prosecuting cases of arson for fraud, which is reported to have risen sharply in the last few years.

In New York City, Fire Department officials say that increasing arson, including

arson for fraud, is one of the reasons why structural fires generally, and serious fires in particular, have risen sharply in the city in recent years.

Structural fires have gone up from 36,800 in 1966 to 56,000 last year, a 53 percent rise. Serious fires have risen by 40 percent since 1974 alone—from 3,700 that year to 5,200 last year.

The desire of property-owners to collect insurance, especially on slum-area buildings whose value has otherwise plunged, is not the only arson motive, fire officials say. They also talk of arson by slum-area residents seeking relocation benefits or priority status for public housing; youngsters who set fires in vacant buildings for thrills; people seeking various types of revenge, and "scavengers" who want buildings vacated so they can strip plumbing and other materials to be sold for scrap.

The spread of poverty and building decay in general also have fostered increased fires, officials say. Critics of the city hold that sharp cutbacks in the Fire Department because of the city's fiscal crisis have also contributed.

The most severe plagues of fire have shifted in recent times from the South Bronx and the Brownsville and East New York areas of Brooklyn, which have already been heavily burned out, to portions of the West Bronx and Bushwick and Sunset Park in Brooklyn, officials say.

[From "Survey and Assessment of Arson and Arson Investigation"]

Prepared for LEAA/U.S. Dept. of Justice by the Aerospace Corporation of Elsegundo, California.

TABLE 5.—*Property losses from serious crimes, 1974*

Offense	Property loss [1]	Average loss per offense [2]
Robbery	$142	$321
Burglary	1,181	391
Larceny	816	156
Auto theft	[3] 841	1,246
Arson:		
Incendiary and suspicious	616	3,294
Incendiary and suspicious plus ½ unknown cause	1,284	2,558

[1] Dollars in millions.
[2] In dollars.
[3] Of this 69 percent was recovered.

A comparison of deaths and injuries due to arson and to other serious crimes is shown in Table 6. It should be noted that the deaths and injuries due to arson are included in the total for the categories of murder and aggravated assault, respectively.

Table 7 compares the rate of increase in arson between 1964 and 1974 with the increases in other serious crimes during the same period.[10] Incendiary and suspicious building fires rose more than any other crime category. When one-half the building fires of unknown cause were included, the building arson increase was somewhat less, but still greater than every crime type except robbery.

In view of the relative magnitude of arson, it is surprising that it has not received more attention in the past. This situation is likely due to the lack of a single, well known source of national statistics, as is provided for other offenses by the FBI Uniform Crime Reports.

TABLE 6.—*Deaths and injuries from serious crimes, 1974*

Offense	Deaths	Injuries
Murder	20,600	
Police killed	132	
Aggravated assault		[1] 453,000
Arson: Incendiary and suspicious	1,000	[2] 10,000
Firefighters killed	45	([3])

[1] Includes unsuccessful attempts.
[2] Estimate.
[3] Not available.

TABLE 7.—*Serious crime in 1974 and increase, 1964–74*

Offense	Number 1974	Increase percent 1964–74
Murder	20,600	121
Rape	55,200	159
Robbery	441,000	239
Aggravated assault	453,000	125
Burglary	3,021,000	150
Larceny	5,228,000	109
Motor vehicle theft	974,000	107
Arson:		
Incendiary and suspicious	187,000	127
Building fires	114,000	269
Motor vehicle fires	42,000	62
Wildfires	31,000	22
Incendiary and suspicious plus one-half unknown cause	502,000	95
Building fires	194,000	204
Motor vehicle fires	277,000	65
Wildfires	31,000	22

ARSON: THE GROWING PROBLEM

(By Paul E. Teague)

Like many other components of the montage known as "The Fire Problem," the arson picture did not, until recently, attract the eyes of anyone other than insurance company representatives, fire marshals, and fire fighters. The rest of the population seemed to view arson with either a snicker or a yawn.

One possible reason for that ho-hum attitude was described by the American Insurance Association's W. D. "Pete" Swift in a recent speech before the Insurance Society of New York. Why, he asked, should anyone, including law-enforcement authorities, get excited about "an isolated, low-visibility occurrence with only two persons really interested in the contest—the policyholder and the insurer—and a limited chance of conviction?"

Why, indeed? At first glance, arson, the crime of willfully setting fire to defraud or for other purposes, seems to lack the immediacy or personal threat potential of other problems, such as sickness, murder, robbery, or the struggle to earn a living. Consequently, in terms of priorities, arson has not rated much concern outside the fire protection world.

Times have changed, and as Mr. Swift pointed out, "everybody and his brother wants to get into the act" of combatting arson now. The reason for this new concern is quite simple: There has been a staggering increase in the number of incendiary (deliberately set) and suspicious fires in the United States in the last 10 years. In fact, a 1972 study by the Stanford Research Institute claimed that arson, at that time, was the fastest growing crime in the nation.

That claim may or may not be true, but this much is certain: Arson and other incendiary fires are a major problem today. Consider these statistics:

In 1964, the number of incendiary and suspicious fires, according to NFTA records, was approximately 30,900. In 1974, that number had soared to 114,000, an increase of about 237 percent.

According to "Fires and Fire Losses Classified, 1974," published in the September 1975 Fire Journal, incendiary and suspicious fires in 1974 accounted for 9 percent of all building fires and a disproportionate 17 percent of the related dollar loss. Some fire investigators suggest that at least half of the fires of unknown cause are also incendiary. If this is true, 21.5 percent of the building fires in 1974 and 40 percent of the related dollar loss were deliberately set.

Discounting the category of "Unknown Causes," incendiarism in 1974 was the fifth largest cause of building fires; however, the dollar loss of $550 million incurred due to incendiary and suspicious fires that year was larger than that from any other known cause of building fires.

As a percentage of the total dollar loss caused by fires during the past decade, incendiary and suspicious fires increased from a little over 4 percent in 1965 to almost 15 percent in 1974. Factory Mutual data confirm this trend by showing 8.9, 14.9, 11.2, 12.0, and 14.8 percent respectively for the years 1970 to 1974.

What are the potential costs to the general public of this increase in the rate of arson and incendiary fires? One cost, of course, is rising insurance premiums. Another, more important cost is the potential risk that the flames from an arson or incendiary incident can reach out and directly threaten the lives and property of others not involved in the incident. That this possibility is all too real is demonstrated by the fact than an estimated 1,000 people, including 45 fire fighters, die each year in arson fires.

There are still other costs that stem from arson and incendiary fires. The report on Page 61 of this book shows how one fire alleged to have been an arson incident had a devastating economic impact on an entire community.

All these statistics put the arson picture in better focus. This question remains, however: What can be done about the problem of arson and incendiary fires?

The ultimate answer to that question may have to wait until we know for sure why people set fires. Obviously, profit is a motive, as can be inferred from the correlation between increases in arson and incendiary incidents and downturns in the economy. There are other motives besides profit, however, and Bernard Levin explains these on Page 43.

Even without definitive answers as to why people set fires, there are things that can be done to reduce the rate of arson and incendiary fires. The following is a list of things that have been or are being done:

Insurance companies are beginning to talk to each other about ways to take the profit out of arson and incendiary fires. They are also talking about steps that can be taken to improve the poor conviction rate in arson cases.

Lynn, Massachusetts has instituted an effective anti-arson program that Fire Chief Joseph Scanlon credits with helping to reduce building fires in that industrial city by 29 percent. An essential element of the program is a permanent Arson Squad consisting of one deputy fire chief, one fire prevention officer, one fire fighter, a police lieutenant,

and three police patrolmen, all of whom perform other duties within their respective departments. The Arson Squad keeps a cross-referenced card file to keep track of suspicious fires. The Squad likes to be called to the scene of all suspicious fires as soon as possible, preferably while fire fighters are still on the scene. With the Fire Department in control of the property, the Squad can look for evidence of arson without getting into difficulties about illegal searches.

Since the Arson Squad went into operation, 32 people have been arrested in connection with arson; at least four of them are now in prison and another four are in mental institutions. Full details about Lynn's anti-arson program can be found in the December 1975 issue of *Fire Command!*

The National Fire Academy of the National Fire Prevention and Control Administration hosted a "Leadership Seminar for developing a Coordinated Attack on Arson" on January 13–15, 1976. The objective of this seminar was to utilize the efforts of many concerned groups in developing programs to combat arson. Representatives from the fire investigation, law enforcement, criminal justice, insurance, and financial communities attended the seminar. After the January seminar, attendees returned to their organizations to review the results of the meeting and evaluate and consolidate position papers for development of a national action plan for a public and private sector attack on the arson problem.

The State of Ohio has opened a special laboratory for analysis of arson evidence and is training fire fighters in arson recognition.

The International Association of Chiefs of Police was sufficiently concerned about incendiary fires to form an Arson Committee.

The International Association of Arson Investigators (IAAI) adopted a resolution in April, 1975, "insisting that the Crime of Arson be included as a Class One crime in the FBI Uniform Crime Reporting System. As part of that resolution, the IAAI said it believed the insurance industry should: 1) reestablish a central national loss information data system accessible to all accredited fire and law-enforcement agencies and the insurance industry; 2) reinstate an all-industry supported national investigative organization to work with public agencies engaged in the investigation of incendiary and suspicious fires; 3) continue to encourage more careful and selective underwriting practices relating to moral and physical risks to reduce the profit gained by fraudulently motivated fires; and 4) continue to resist fraudulent claims.

The Detroit-based Criminal Justice Institute has designed an eight-hour course for fire fighters on their responsibilities at the scene of an arson incident, and a 40-hour course for those conducting the actual arson investigation.

Finally, there has been an increase in the attention the media has given to the arson problem. For example, on December 18, 1975, Boston's WBZ–TV presented a special documentary on arson. NFPA President Charles Morgan was one of those who were interviewed during the program.

All this activity is really just the beginning. But it's a beginning long overdue, in the eyes of the fire protection world. And, if the activity works, perhaps the arson picture can be erased from the "Fire Problem" montage.

WHAT IS ARSON?

Although the terms are often used interchangeably, there is a difference between incendiary fires and arson.

According to Webster's Dictionary, the term "incendiary" refers to the deliberate burning of property. Arson, according to Webster's, is the malicious or fraudulent burning of property.

All arson fires, in the sense that they are deliberately set, can be called incendiary. However, since arson involves malicious or fraudulent intent, not all incendiary fires can be called arson.

Arson, generally, is considered a legal term and refers to the crime of maliciously or fraudulent intent, not all incendiary fires can be called arson.

Suspicious fires, according to the Fourth Edition of *Fire Department Terminology* (NFPA Publication No. FSD–3A), are those for which exact cause has not been determined, but which, due to unusual circumstances, may have been of incendiary origin.

[From Journal of Commerce Nov. 6, 1975]

CPCU'S WARNED OF RISING ARSON FREQUENCY THROUGHOUT THE US

An executive in the insurance industry has warned that the crime of arson seems to be on a dramatic upswing throughout the nation and described "widespread indifference" to the problem as a "national disgrace."

Walter D. Swift, vice president of the American Insurance Association's Property Claim Services, is scheduled to make his remarks today before the Minneapolis Chapter of the Chartered Property and Casualty Underwriters. The Journal of Commerce has received some of the highlights of Mr. Swift's speech in advance.

Mr. Swift has charged that too much attention is being given the problem on official and public levels.

As a result, increasing fires motivated by fraud and social unrest "have created an escalating arson epidemic in recent years." Mr. Swift told the Minneapolis chapter of Chartered Property and Casualty Underwriters.

Mr. Swift called for the establishment of national all-insurance industry arson detection and prevention organizations to attack the problem head-on and exert needed pressures in the social, civic and legislative arenas.

SEEN GREATEST ILL

"In my opinion," said Mr. Swift, "arson is one of the greatest problems confronting the property insurance business today."

Mr. Swift said that in 1974 there were 21 per cent more incendiary fires and 75 per cent more losses from such fires than in the preceding year. He said that while this upswing was of dramatic proportions, incendiarism has been steadily increasing for more than 10 years.

He said the three million fires in 1974 resulted in almost $4 billion in damages.

"At least three out of 10 of those fires, causing over $1 billion damage, are believed to have been incendiary in origin," he said. "Even worse, fires caused 11,600 deaths and well over 123,000 injuries.

"The less spectular habitational fires must not be treated lightly. They represent 71 per cent of the fires, 34 per cent of loss and majority of fire-related deaths."

In addition, he said, 1974 witnessed a dramatic upurge in builders' risk fires. He cited an estimate by the National Association of School Security Directors putting fire losses at $109 million, up $10 million from 1973.

Mr. Swift said that some of the factors that have helped worsen the arson picture include a disinclination by the public to think of it as a crime, lack of public outcry against it, and a low level of investigation and prosecution stemming from the belief that arson is "an isolated, low visability occurrence with only two persons really interested in the contest—the policyholder and the insurer, and limited chance of conviction."

Mr. Swift said indifference to the crime of arson and inattention to its detection by civil authorities will be difficult to overcome.

"We need to get the point across that municipalities and states have moral and legal obligations to detect, prevent and punish those responsible for incendiary fires," he said.

"Implicit with this is the need to expand facilities where needed and to develop meaningful educational programs. We would suggest consideration of a national fire investigator's school with varying types of courses designed to accommodate needs of adjusters, fire marshals, private investigators and others directly concerned."

He said, however, that the greatest challenge is to impress the public with the gravity of the situation.

"They must understand that incendiary fires result in a staggering loss of irretrievable national resources and, more tragically, they result in an alarming number of personal injuries and deaths each year," he said.

"People must understand," said Mr. Swift, "that it is they who are paying for crime through increased insurance rates, costs of maintaining police, fire departments and the courts. They must be made aware of their responsibility to see that justice prevails and that those committing crimes be held accountable."

ECONOMIC INFLUENCE

He said insurance statistics reveal that fire losses increase during periods of economic stress, the increase being due to deliberately set fires by people in financial trouble. He said such troubles can arise when a merchant has a large inventory and little cash, costs are escalating and sales are decreasing, and when individuals have large home mortgages and are otherwise in debt.

Other motivations include efforts to conceal evidence of a crime; jealousy; revenge; thrill; riot, vandalism and malicious mischief; and terrorism.

Mr. Swift emphasized that agents are the first line of defense in preventing loss through thorough and careful underwriting and engineering evaluation. Back-up team members are safety and loss prevention engineers of insurance companies whose job it is to identify and eliminate fire hazards, and adjusters who should be aware of factors that could alert them to the possibility of incendiarism.

"It is significant," he said, "that most adjusters have been trained during a period of prosperity with no real awareness of arson."

Mr. Swift said a major factor aggravating the problem of arson investigation is that, historically, police and firemen have been at odds over responsibility.

"Police seem to have the opinion that all fire relates to firemen and this includes arson," he said. "Firemen say they are not trained to investigate criminal matters and that this responsibility belongs to the police."

Meanwhile, said Mr. Swift, State Fire Marshals and others have been unable to cope effectively with the avalanche of incendiarism related to the present recession. It may take days or even weeks before an investigation begins.

He added: "It is ironic that Fair Access to Insurance Requirement Plans (FAIR Plans) should be compelled to provide a market for the slumlords or opportunists who purchase derelict properties, insure them for several times the purchase price, and conveniently have fires.

"To compound the felony, outmoded valued policy laws foreclose compromise. Insurance company investigations of suspicious fires are sometimes frustrated by time requirements of Unfair Claim Practices Acts and pressure from insurance commissioners in response to complaints.

"There is also the anomaly of the well-intentioned Fair Credit Reporting Act interfering with underwriting evaluations. Adjust..

ers and investigators must carefully guard against 'libel and slander' suits."

"I have little doubt," Mr. Swift continued, "that as the obsolete tort reparations system winds down, the Plaintiff's Bar will increasingly interest itself in punitive damage actions designed to force payment of fire claims. Counter planning seems indicated."

Mr. Swift suggested that prolonged prosperity from the early 1940's until recently "lulled a great segment of the insurance industry into a false sense of arson security." As a consequence, he noted, the Fraud and Arson Bureau of the Association began to lose financial support and was disbanded in 1970.

"Its demise took with it the only national industry supported organization of trained investigators dedicated to detection and investigation of suspicious fires," he said. "Concurrently, the Loss Information Service, a national fire loss data bank, was abandoned."

Referring to what he described as "an increasing awareness" of the need for a national all-industry arson organization, Mr. Swift said:

"It occurs to us that to be successful, such a venture would require full financial and other support by companies writing a substantial percentage of national fire insurance business.

"An appropriate fire loss data bank and other support programs have been envisoned and researched. It would be our hope that existing organizations with similar orientation such as the Insurance Crime Prevention Institute (ICPI) would find it possible to accommodate such need. If existing institutions are not in a position to consider these responsibilities, the industry will have to evaluate other alternatives."

[From the Wall Street Journal, May 24, 1976]

SPREADING FIRES: AN EPIDEMIC OF ARSON AFFLICTS MANY CITIES; RECESSION IS A FACTOR—SOME FAILING FIRMS FIND IT AN EASY OUT; RACKETEERS IN REPAIR WORK PROSPER; WHY THE SLUMS ARE BURNING

(By Douglas Martin)

Growing numbers of Americans, faced with a burdensome financial problem, have come to the same nefarious solution: burn it.

"It's very simple," says a man in Detroit who should know. Acknowledged by police to be one of the most efficient arsonists in Detroit ("the very best," he contends) until he was recently convicted, he states that he can set a disastrous fire in 15 minutes, leave no evidence and even phone the fire department if the client doesn't want a complete burn. "I can set a fire where it's impossible to detect the source," the arsonist boasts, "and I'll be on the other side of town before it starts."

Although this arsonist is no longer available for hire, plenty of others are, authorities say. And this one professional's experiences underline some stark realities that make arson one of the country's most serious and widespread crime problems: Arson is lucrative (he earned up to $20,000 annually by setting fires, it's easy (high school chemistry taught him how) and it's tough to prove (although he set over two dozen fires, he never was linked to one by clues at the scene; instead, he was turned in by someone who had hired him).

EPIDEMIC PROPORTIONS

Indeed, property losses from arson are surging. The Insurance Information Institute estimates they exceeded $1.4 billion in 1975, up from $1.2 billion in 1974 and $845 million in 1973. Some estimates, moreover, range as high as $12 billion. In Houston, where an astounding 50% of all fire losses may be caused by arson, "it's reached epidemic proportions," Fire Marshal Alcus Greer says.

And although arson is believed to kill 1,000 people a year (including some 45 firemen) and has reduced to charred rubble whole city blocks in decaying areas like New York City's South Bronx, fire officials complain that many law-enforcement authorities still consider arson a "white-collar crime" no more serious than embezzlement. They further complain that arson isn't even included on the Federal Bureau of Investigation's list of major crimes, partly because of the job difficulty of pinpointing which fires resulted from arson and which didn't.

"At a $100,000 fire, you may find one arson investigator," a Georgia insurance official says. "With a $10,000 bank robbery, you'll have local police, state police and the FBI falling all over each other."

The economic slump helped fuel the arson epidemic. With business failures last year up more than 15% from 1974, many besieged entrepreneurs preferred an insurance fire to slowly drowning in red ink, observers say. If a business fails, inventory and building go for bargain prices—if a buyer can be found at all. But after an insurance fire, both go for replacement cost. "It an easy, low-risk way to make a lot of money," concedes David Lucht, deputy administrator of the National Fire Prevention and Control Administration, a federal agency.

A DRESS SHOP BURNS

A relatively typical such entrepreneur—except for her conviction last July—was Lois Thompson, owner of Jamie Lo Fashions, a dress shop in Cleveland, Tenn. Mrs. Thompson owed $5,345 to her landlord, $2,218 in state taxes and at least $59,089 to local banks. In addition, one bank officer testified at her trial that she had bounced three bad checks in the months preceding the October 1974 fire.

In the midst of her economic crisis, Mrs. Thompson had one thing going for her: insurance. She had $160,000 in property insurance, which she increased by $10,000 about a month before the fire. On the day of the blaze, which also damaged adjoining stores, she tried to raise her insurance coverage on accounts receivable to $30,000 from $12,000, but that maneuver failed; her premium check bounced.

A combination of circumstantial evidence—including the moving of much of the inventory to another location and the presence of gasoline at the site—led to Mrs. Thompson's conviction for procuring arson. She is appealing, however. Her lawyer says the government failed to prove its case.

Another rapidly expanding arson fraud is the fire set to exploit the repair bill. Consider the recent case involving Sanford Zack, a Detroit fire-repair contractor who pleaded no contest to a charge of preparation to burn a building. Detroit police had charged that Zack headed a ring—similar to several others in Detroit—that arranged fires in advance in exchange for homeowners' signatures on a fire-repair contract.

THE FIRE-REPAIR RACKET

Detroit investigators say the ring involved salesmen who got the homeowners' signatures, corrupt insurance adjusters who approved much higher settlements than necessary for proper repairs, and homeowners who usually were in dire financial trouble and agreed to the fires. The homeowners were paid up to several thousand dollars. Often the actual repairs were slipshod, thus increasing the profit margin of contractors like Zack, who did the repair work, investigators say. Professional torches allegedy did the burning, for about $1,000 a job.

In March, Zack was given five years' probation: he agreed to quit the fire-repair business and to cooperate with police in fingering corrupt insurance adjusters. But despite Zack's plea and the conviction of 26 other persons, arson by fire-repair concerns, continues in Detroit, investigators say.

Arson, also is used to eliminate business competition. Detroit, for instance, has experienced a rash of supermarket fires. 90% of which are believed to be arson, according to the Wayne County Organized Crime Task Force. Supermarket fires increased to 75 last year from 17 in 1973. Police attribute the surge to fierce competition, which induces some merchants to burn out competitors. Six indictments involving eight people have been handed up so far, and more are expected.

In urban slums, some owners of deteriorating buildings that collect no rents and literally can't be given away resort to arson to recoup their financial losses through insurance settlements. And some insurance-minded landlords, rather than hiring arsonists, bank on the possibility that fires will be set by welfare-supported tenants. "Landlords know that they can stack a building with welfare people, and it will self-destruct in a couple of years," a Bronx law-enforcement aide says.

GOVERNMENT INDUCEMENTS

For arson is an attractive money-making ploy for people on welfare, too. New York welfare recipients, following an apartment fire can get up to $2,000 to move, buy new furniture and find a new place to live. They also can get relocated to better housing. Such government-financed inducements have created "an extensive fire problem," says Donald Forster, a New York arson investigator. Mario Merola, Bronx district attorney says one welfare recipient had eight such fires.

In addition, many tenement fires are set by building strippers seeking copper tubing, electrical wiring and plumbing fixtures, authorities say. The culprits either set fires to drive out tenants and then strip the buildings, or strip and then burn the buildings to cover their tracks.

AMATEURS SUCCEED, TOO

Done by experts, arson is almost impossible to prove. Some arsonists, for example, mix in ordinary envelopes difficult-to-detect chemicals that flare up long after the arsonist has left the scene. And other arsonists allegedly travel from city to city to start fires for hire. "A guy can fly to Houston, set a fire and be out in less than three hours," Mr. Greer, the Houston fire marshal says.

Moreover, prosecutors have trouble convicting even amateur arsonists who leave gasoline traces—detectable even after a fire by sophisticated "sniffers"—and easily recognizable burn patterns. "About the only way to convict one is to catch him running out of the building with his clothes on fire," says Patrick Henry of the Insurance Crime Prevention Institute. Indeed, according to a study sponsored by the Law Enforcement Assistance Administration, less than 1% of incendiary fires result in convictions.

Another problem is that the time required to connect a suspect with a proven arson fire often stretches into years. For instance, a series of Denver fires set by building trades unions against non-union employers didn't result in convictions until 1975, despite the fact that the first of more than 40 fires was lit in 1968. Over that period, the fires—in unoccupied condominiums and apartments—did at least $6 million of damage.

And finally, many arson squads are understaffed. Some financial pinched cities are even reducing their arson forces. Detroit, for example, is proposing to shrink its squad to 14 persons from 20. Moreover, the insurance industry in 1970 disbanded its nationwide team of about 100 fire investigators after some insurers dropped out of the venture: Walter D. Swift, vice president of the American Insurance Association thinks the disbanding "was one of the factors" that led to the upsurge in arson. Mr. Swift and other insurance officials add, however, that the industry is more concerned about arson and individual companies are investigatings fires more carefully than ever before.

[From U.S. News and World Report, May 12, 1975]

BEHIND ALARMING RISE IN FIRES FOR PROFIT—

Arson suddenly has become the fastest growing—and one of the most costly—crimes in this country.

Alarmed officials believe this mounting wave of deliberately set fires is being fueled, at least in part, by the economic recession. Fires for profit helped boost the total of known arson cases last year above 100,000, at a cost exceeding 350 million dollars. This year will see an even higher toll.

As insurance officials describe it, property owners in fast-growing numbers are burning down their own buildings—or hiring professional arsonists—to collect enough fire insurance to bail themselves out of financial trouble.

James L. Smith, an arson investigator in Lexington, Ky., put it this way:

"As the economy goes down, the number of fraud fires is going up fast."

The number of fires classified as arson more than tripled between 1964 and 1973, grew by about 12 per cent last year and has jumped another 12 per cent or more thus far in 1975. Authorites say many fires officially listed as of "unknown origin" actually are caused by arson.

As stores and factories are destroyed, the number of jobs lost is counted high in the thousands.

Like spontaneous combustion, the jump in arson cases has appeared suddenly in all parts of the country, in both large and small cities, coast to coast.

MAJOR CASES

As recent examples—

In Shelton, Conn., a fire-bombing described as one of the biggest arson cases in the annals of the Federal Bureau of Investigation destroyed a 10-million-dollar rubber-products plant in March. On April 24, charges of arson and conspiracy were lodged against the plant's owner and nine other men.

In Omaha, Fire Capt. Robert W. Rockwell reported a 28 per cent increase in the number of suspicious fires since the first of this year—with a rash of burnings of small stores, restaurants, night clubs and taverns.

In Tampa, fire investigators are looking into a series of suspicious fires that have destroyed at least a dozen night spots.

In New York, one elaborate fire-for-profit ring was uncovered—organized by two elderly ladies who netted millions of insurance dollars.

In Detroit, arson investigators are looking into what they call the most complicated arson-fraud ring yet, involving a network of building contractors, adjusters, real-estate interests and cooperating businessmen.

In Colorado, a big increase in the number of fires in condominiums is reported, and blamed by insurance men on a serious recession in the construction industry there.

In Newark, a recent major increase in the number of vacant buildings downtown was followed by a 500 per cent surge in the number of building fires.

In St. Louis, the number of arson cases jumped by 17 per cent last year, and Fire Capt. Daniel Austin reports that "the whole picture here is looking more and more economy-related."

And in Chicago, an investigation is under way into the case of a landlord who purchased some 600 buildings in urban-renewal areas, with a rash of fires then erupting in more than half of them.

HARD TO DETECT

In most cases, arson is difficult to detect and hard to prove in court. The conviction rate in recent years has been only about 1 per cent of those charged with arson. And only 5 per cent of suspected arson cases even reached court. As a result, insurance companies until now have been reluctant to pursue lengthy and expensive legal attacks on suspected arsonists.

There are signs that this attitude may be changing, with the big increase this year in the number of fires. According to the National Fire Protection Association, in an average day—whether by arson or by accident—there are serious fires in: 139 industrial plants; 215 stores, offices or restaurants; 215 apartment buildings; 33 schools, and 1,500 homes. The toll in lives, the NFPA reports, is about 33 persons per day. The dollar value of property destroyed by fire, according to the Insurance Services Office, rose 21 per cent last year to 3.2 billions and is still rising.

Profit, of course, is only one of many motives behind the thousands of fires that are deliberately set. Investigators say that a wide variety of psychological quirks may lead to arson—things like revenge, pyromania, boredom, hate, insanity, even a search for "kicks." However, the fastest-growing category of arson appears to be that motivated by a desperate desire for money—either from insurance or some indirect gain such as a rebuilding contract.

As Robert E. May, executive secretary of the International Association of Arson Investigators, puts it:

"Fraud arson is really our biggest concern today. A lot of businessmen aren't able to face financial failure. They can't admit it to anyone, so they take the easiest available way out—they burn and sell out to the insurance company."

First crime. A typical case is described by Patrick Collins, an arson investigator addressing an IAAI meeting at Lincoln, Nebr., in late April:

"Very often today, a businessman who has been a law-abiding citizen all his life will commit his first crime by burning down his store.

"This fellow may set the fire himself after thinking about it for several months. He hopes it will solve all his problems, by simply collecting on the insurance he already carries."

An arson plotter need not set the fire himself. He can contract with a professional arsonist who will do the job for a percentage of the insurance take, Mr. Collins explains.

There is evidence that organized crime as well as the hard-pressed businessman is responsible for much of the incerase in the rate of arson. As Mr. Collins tells it—

A criminal syndicate will buy a vacated store, office building or factory cheaply. The new owners may bring in a legitimate businessman to start a "front" business and justify higher insurance coverage for the building. Or the structure may be bought and sold among several members of the syndicate, raising the building's apparent value each time and hiking the insurance coverage. Then a professional arsonist—known as a "torch"—is hired to burn the building down, and the syndicate collects the insurance.

In a growing number of cases, the investigators were told, arson syndicates now include crooked insurance adjusters, real-estate interests, building-repair firms, corrupt public officials and friendly businessmen.

The central figure in both types of fraud arson is the "torch," nowadays the aristocrat of the criminal world, willing to set fires for a fee anywhere in the country. "Torches" are reported to be in great demand and are often so skilled that there is little or no real chance of their being caught.

Their rewards are often spectacular. According to Bruce Potts, arson investigator for an insurance alliance in Atlanta, an experienced "torch" with a good reputation in the underworld can earn about $300,000 a year, tax-free, by doing only four or five jobs a year, "if he guarantees his work and takes a percentage rather than a flat fee."

The easy accessibility of such professional fire setters to the economically pressed businessman or home-owner at this time makes the temptation that much greater. It also makes arson "the easiest crime," as some criminologists see it.

"PUT OUT YOUR NAME"

In Norfolk, Va., for example, Fire Department Capt. Sam S. Cobb, Jr., says: "You just put out your name and your problem in the right places and you're certain to be approached in a short time.

"Often, you'll be consulted first by an insurance representative with criminal connections. He will probably review your insurance coverage and recommend an increase in your policy. Then he may send a torch to do the job."

And if you want to set your own fire but are not sure how to do it without getting caught, Captain Cobb says, "organized crime also will provide you with a do-it-yourself arson kit."

As of now, few cities have adequate arson-investigation squads, trained to detect deliberately set fires. Such detection is said to take years of experience in dealing with fires and locating the elusive evidence of arson. Some metropolitan areas, notably Detroit, are putting a lot of effort into creating squads of such skilled antiarsonists.

But in suburban and rural areas, where there has been an especially big upsurge in suspicious fires this year, the chances of detection are minimal.

Just who is responsible for combatting the growing incidence of arson is still unclear in many communities. Firemen often are too busy or unwilling to engage in investigations of suspicious fires. And police departments rarely have the skills needed to track down arsonists. Co-operation between the two also is frequently lacking.

Until recent months, there has been no Federal Government agency charged with combatting fires.

A new National Fire Prevention and Control Administration is only just being formed, within the U.S. Department of Commerce.

What is happening now appears to be a repeat on a larger scale of an upsurge in the rate of arson a few years back, when a business setback hit part of the economy. One insurance official says:

"For example, when the electronics business went haywire in the late '60s, we had an astounding number of vendors and subcontractors, who were working for electronics companies, whose plants burned to the ground."

TWO CHOICES

Another concerned investigator sums it up in the current issue of the *Journal of Insurance:*

"For many a businessman, it boils down now to having two choices. He can go into bankruptcy, or he can have a fire. He feels he has to do something.

"You run into all kinds of people setting fires or having them set. You find the chronic shady operator, but you also find the businessman who takes the Boy Scouts out on his week-ends, who suddenly gets pressed."

Whatever the cause, the trend is up sharply at this time in the number of deliberately set fires and even more in the losses caused by them—with no leveling off yet in sight.

By Mr. WILLIAMS (for himself and Mr. JAVITS):

S. 1883. A bill to amend the National Labor Relations Act to strengthen the remedies and expedite the procedures under such act; to the Committee on Human Resources.

THE LABOR REFORM ACT OF 1977

Mr. WILLIAMS. Mr. President, yesterday President Carter transmitted to the Congress his recommendations for reform of the National Labor Relations Act. Over the past month Senator JAVITS, Congressman THOMPSON and I have worked closely with the White House and Secretary of Labor Marshall to develop a legislative proposal which will bring the speed and effectiveness to the administration of the National Labor Relations Act without which the right of American workers to form, join and assist labor organizations cannot be assured.

The Labor Reform Act of 1977, which I will introduce today, reflects the consensus we reached. It represents both my views and those of the administration on this important issue of public policy.

It has been 18 years since the Congress reexamined the operation of our national labor relations policy. Since the passage of the Wagner Act in 1935, Congress has twice enacted fundamental revisions of the policy embodied in that act—first in 1947 and again in 1959. These amendments were designed to regulate collective bargaining and to make adjustments in the relationship between unions and employees. But in neither instance was the debate focused on the administration of the act as it affects the ability of workers to organize and bargain collectively. In fact, since 1935 the Congress has never looked at the NLRA from the perspective of the unorganized worker who desires to be represented by a labor organization. I am convinced that just such an examination is long overdue.

The Labor Management Relations Act asserts that it is the policy of the United States to encourage the practice of collective bargaining by protecting the exercise by workers of full freedom of association in selecting representatives for the purpose of negotiating the terms and conditions governing their employment relationships.

Any civilized society must develop legal mechanisms which guarantee its various social and economic groups the opportunity to obtain a measure of economic and political power over their lives. For working people in America the mechanism we have provided is collective bargaining. Through the National Labor Relations Act we have created a system of industrial democracy that extends to the workplace the basic principles of our political democracy. Just as representative government assures the legitimacy of our laws, so the NLRA legitimates the working rules stated in collective bargaining agreements.

This system is unique because its beneficial results are not accomplished through the intervention of a bureaucracy in Washington which dictates the proper arrangements between employers and employees. Rather, these benefits are secured by enhancing the ability of working men and women to participate directly in determining those arrangements. The value which workers have gained from the operation of our system of free collective bargaining can hardly be overstated. Under it millions of workers represented by unions have improved their working conditions, raised their standard of living and gained a sense of security and individual freedom.

Beyond its benefit to workers, our system of collective bargaining has immeasurably benefited the American people generally. A strong, effective democratic trade union movement is synonymous with the development of a modern economy and political democracy. But it may take different forms. And one need only look at the state of worker-employer relations in Britain or France, in Italy or in Argentina to realize that we in the United States enjoy and daily reap benefits from an effective, stable, and essentially strife-free labor relations system which is unmatched anywhere in the world.

But labor relations in America involves much more than the relationships which exist between unions and management in major industries which are well organized. There are millions of workers today, and there may be many more in the future, who have not and may not have the opportunity to gain that measure of economic and political power over their lives which, until recently, our national labor policy has provided. If that need is not met, the desire for it will not abate but will arise in one form or another, probably bringing with it more direct Government intervention.

For despite the overall success of the Labor Act in giving workers the opportunity to gain a measure of financial security and a sense of individual freedom, it has proven ineffective and impotent in the face of adamant employer resistance to self-organization. For the antiunion employer, the procedures of the National Labor Relations Act have become a legalized mechanism suppressing workers' desire to organize.

The economic and legal resources commanded by the unorganized are minimal. The employer who wishes to avoid unionization, on the other hand, possesses substantial resources, both economic and legal. Economic strength has always been at his command. His legal resources are a more recent phenomenon, having developed gradually through case law and through manipulation of the legal process. Over the years the law, both substantively and procedurally, has grown to favor the employer bent on avoiding unionization. As a few employers proved successful in preventing legitimate organizing drives from taking root, more and more employers have taken up their methods to defeat workers' attempts to exercise their rights. Moreover, some employers have not been satisfied with simply making use of their already substantial advantages under the law, but have adopted a policy of flagrantly violating their obligations under it.

Indeed, a small but growing number of employers have found the act so hospitable to antiunion tactics that they have taken to almost totally ignoring the law. The now well-known case of the J. P. Stevens Co. is the leading example. That company was found to have "interfered, restrained, and coerced its employees in the exercise of their rights under the act flagrantly, cynically and unlawfully." In 15 cases, the NLRB has concluded that J. P. Stevens has violated the law. The Court of Appeals has sustained the Labor Board on eight different occasions. Three times the Supreme Court has refused to review company appeals, and on five different occasions the Labor Board has gone to the Court of Appeals to adjudicate Stevens in contempt of court. But the lesson is that these flagrant violations pay. There have been 11 elections at J. P. Stevens. Six have been set aside because of company unfair labor practices. In lieu of obedience to Federal law, the company has chosen to pay out almost $1.3 million to approximately 300 unlawfully discharged workers, apparently concluding that this amount would be less than the first round wage increase for its employees.

Company and union officials alike have long lists of legal grievances requiring legislative redress. Each side argues that the balance has shifted in favor of the other. I am certain that we will, in time, address these issues. But this bill is not the vehicle for that work, because the most pressing problems—those which require immediate attention—are the problems of unorganized workers. This bill is designed for and addressed exclusively to their needs.

The Labor Reform Act of 1977 embodies several procedural and remedial changes to the National Labor Relations Act which are designed to correct two major problems that have arisen under the current act: First, delays in the processing of both election petitions and unfair labor practice cases, and second, the inadequacy of the remedies which the National Labor Relations Board may invoke against violators of the law, particularly when violations occur during the critical period before a collective bargaining relationship is first established.

The bill addresses these problems by: First, restructuring the operation of the Board to minimize delay in election and unfair labor practice proceedings without sacrificing the protections of due process; and second, creating more effective remedies which will become meaningful deterrents to violations of the law.

ELECTION AND CERTIFICATION PROCEDURES

Section 9(a) of the NLRA provides that a representative chosen or selected by a majority of the employees in a unit appropriate for bargaining shall be the exclusive representative of these employees. Section 9(c) of the act authorizes the NLRB to conduct secret ballot elections for workers who seek certification of a union to represent them in collective bargaining.

In order for the election to proceed, determinations must first be made on a number of preelection issues. The Board must decide whether or not it has jurisdiction over the employer. It must rule on the appropriateness of the unit in which the employees will be grouped and the eligibility of employees to be included in that unit. A formal hearing on these issues is not a prerequisite to bargaining. Most employers do not litigate them. The regional offices of the Board are instructed to seek consent election agreements. However, if the employer demands a hearing, contests the unit and

the eligibility of employees to vote, the median time to election is 75 days if the issues are resolved by the NLRB regional director. If the case is referred to the Board, the median jumps to 275 days. In some instances, hearings are requested in good faith to litigate substantial questions of law. But in many cases, employers demand hearings when there is no arguable question of law, hoping that the administrative process will buy time during which union majority support can be undermined.

This bill would substantially diminish the potential for abuse of the NLRB election process by setting up a new system for the conduct of elections without sacrificing the right of employers to fully litigate arguable questions of law.

Over the years the Board has, through case law, established a series of plainly appropriate groupings of employees of collective bargaining.

The Board has always had the power, under section 6 of the act, to issue rules respecting unit issues but has steadfastly refused to do so. Indeed, in its entire history, it has issued only two rules.

Section 3 of the bill requires that within 1 year of the act's effective date, the Board must exercise its authority under section 6 to promulgate rules, in accordance with the Administrative Procedure Act, establishing certain units as appropriate for collective bargaining, and to issue regulations designed to facilitate agreements on voter eligibility by spelling out criteria which will be used in making such determinations.

Fixed time limits for conducting elections is the second method to speed elections and reduce frivolous litigation.

Section 5 of the bill establishes four different time units for holding an election, depending on the extent of union support and the complexity of the issues involved.

Under present law, if a majority of the employees in an appropriate bargaining unit present evidence of their desire to be represented by a union, the employer need not bargain and the union must petition for an election with all the attendant delays. Under this bill, if a majority of a group of unrepresented employees petition for an election in a unit established as plainly appropriate by a Board rule, the Board will be required to conduct an election within 15 days. Upon receiving a petition, the regional office would examine the petition to determine whether the unit applied for was one deemed appropriate under a Board rule or a rule of decision in the applicable industry and make sure the group applied for was not presently represented.

If these questions were answered in the affirmative, within 7 days the Board would direct an election which would be held within 15 days. These time periods could be extended to 14 and 21 days in cases where the distance from the Board's regional office to the election or the number of the employees involved in the election makes it infeasible to meet the 15-day election requirement. Section 3 requires the Board to issue rules spelling out the circumstances which would permit such extensions of time.

If less than a majority of employees sign authorization cards but at least a 30-percent showing of interest is established, the Board will be required to order an election within 30 days and hold it within 45 days. The unit applied for may be one which has been established as presumptively appropriate by a Board rule or one which is not. In either case, if a consent agreement cannot be obtained, the Board may hold a hearing on unit questions or eligibility questions or both, but must hold the election within 45 days. The Board would then count the ballots and announce the results. In accordance with present Board procedure, the bill provides that an objecting party may file post-election objections within 5 days of the balloting.

If the challenged ballots are insufficient to affect the outcome of the election, the Board will certify the union as the representative of the employees. If there is an objection to the conduct of the election or if the challenged ballots constitute a number sufficient to affect the outcome of the election, the Board will move expeditiously to decide these issues and then, depending on their resolution, either issue a certification or dismiss the petition.

In cases which present unit and eligibility questions of exceptional novelty or complexity, for example those involving industries with no history of collective bargaining, the election may be conducted as much as 75 days after the petition is filed. If all issues are not resolved in that time, the Board will hold the election, count the ballots and then, if necessary, complete the processing of outstanding issues before issuing a final determination.

FAIR CAMPAIGN PROCEDURES

At present a substantial imbalance exists between the employer and the union in terms of their ability to get their respective messages across to the employees. The Supreme Court has said that under present law, unions are not entitled to use a medium of communication simply because an employer is using it. Thus, an employer can require employee attendance at meetings in the plant during working hours in order to communicate his views with respect to the union election. Neither the union nor employees who are union supporters have this right. Union adherents are usually limited to communicating during nonworking time in nonwork areas. Union organizers generally have no access to the plant whatsoever. Instead, they are limited to attempting to communicate with employees as they leave, or after they have left their place of work—at home or at the union hall.

In order to achieve this balance, section 6 of the bill directs the Board, after full hearing, to establish rules to insure that if an employer exercises his right to address workers on his premises on issues relating to the organizing campaign, employees will be given an opportunity to obtain information from the union, in an equivalent manner, subject to reasonable rules designed to assure continuity of production.

INJUNCTIONS IN DISCRIMINATORY DISCHARGE CASES

The cumbersome nature of present Board procedure provides the employer with an additional and extremely effective weapon to thwart organizing drives. The discriminatory discharge involves direct and indirect intimidation of employees and is probably the most effective method of destroying union support.

An employer who is bent on destroying a union organizing campaign will frequently discharge active union adherents prior to the conduct of the election. The intended effect is to intimidate the discharged employees' fellow workers and show that collective organization does not afford the protection promised. Too often the intended effect is achieved because of the time it takes to process a discharge case. If found guilty, the employer may then appeal to the court of appeals and thus buy an additional year or more. Ultimately the employee who is unlawfully discharged will be reinstated, but the point has been made that the union cannot effectively protect him.

Under section 10(1) of the act, the regional director must seek a preliminary injunction whenever a preliminary investigation indicates that there is probable cause that a union has engaged in violations of section 8(b)(4), secondary boycotts; section 8(e), hot cargo agreements; or 8(b)(7), recognition picketing. Section 10(1) injunctions are used regularly to give employers prompt relief from alleged union violations of the law, before the administrative process commences. Its purpose is to rapidly enjoin unfair labor practices which have a particularly deleterious effect on business operations.

My bill recognizes that certain unfair labor practices can have an equally detrimental effect on workers and unions. Section 10 amends section 10(1) to require the regional director to seek preliminary injunctions whenever he has reasonable cause to believe that an employee has been unlawfully discharged for union activity during a union's organizing efforts or prior to completion of negotiations on a first collective bargaining agreement.

This change would offer protection to employees during the critical organizing period when employees are most vulnerable to employer reprisals.

STREAMLINING PROCEDURES AND REDUCING DELAYS

If there is a single problem which has contributed most to the breakdown in enforcement of national labor policy, it has been the inability of the enforcing agency to provide expeditious protection of people's rights. An unfair labor practice charge filed with the Board in 1975 took a median time of 315 days for disposition. In 1976, it took 358 days and in the first quarter of 1977 it was up to 374 days.

It presently takes a median of 120 days for the Board to issue a final decision after its receipt of the decision of the administrative law judge, despite the fact

that many of these cases do not involve substantial questions of law. In fiscal 1975, 66 percent of the unfair labor practice charges filed against employers alleged unlawful discrimination in violation of section 8(a)(3). Most of these cases turn on their own facts and have little if any precedential value. It is clear that there are also other types of cases which do not require detailed Board attention.

Even so, these cases continue to be processed in the same manner as those which do require it. This poor allocation of limited resources would be unworthy of anything more than academic note were it not for the fact that grievous harm is done to litigants in some of these cases as a result.

In order to remedy this situation, section 2 of the bill requires that, within 90 days of enactment, the Board must adopt a procedure whereby, on motion of the prevailing party in an unfair labor practice case, a quorum of two members of a designated Board panel will be empowered to summarily affirm the decision of an administrative law judge in certain types of cases. The Board would retain discretion to select those types of cases to which this procedure will be applicable. The only requirement is that motions for summary affirmance must be presented to the designated panel within 30 days of the decision of the administrative law judge. If the panel declined to grant summary affirmance, the case would be held for further action in accordance with normal Board case handling methods.

I believe this change will minimize pretextual delays while leaving sufficient flexibility in the review process to insure that meritorious cases will receive full treatment on review.

The delay in processing is further complicated by a general increase in the number of cases, in part resulting from recent amendments to the act. In 1960 the Board handled 21,000 cases with 7,000 cases pending at year's end. In 1970 it handled 33,000 cases with 11,000 pending at year's end. And in 1976 it had 49,000 cases with 18,000 pending at year's end. In fiscal year 1976 the present five-member Board had a median number of 447 cases before it at any one time.

In most unfair labor practice cases the Board now delegates its authority to panels of three members. In order to reduce the time required for the Board to process what appears to be an ever-increasing workload, the Board must be able to decide more cases at any given time. This can best be achieved by increasing the Board from five to seven members. When combined with the establishment of the summary affirmance procedure, this would enable more panels to operate at any one time and should dramatically increase the Board's ability to examine and complete its review of cases and substantially cut down the median time presently required to move a case from complaint to Board order.

SELF-ENFORCING BOARD ORDERS

Another method of cutting down delays in the administrative process concerns the method of enforcing a Board order in the courts.

Unlike the orders of most Federal agencies, a decision or order of the Board is not self-executing. Rather, it merely describes the action which must be taken to remedy the unlawful conduct. The violator has a right to appeal the Board's decision to the court of appeals. Or he may sit back and wait for the Board to determine if he is in compliance—a process which often takes many months. If the Board determines the party's noncompliance, it must file a petition for enforcement. Because there are no fixed time limits for filing these petitions, long delays often occur before enforcement or review.

The bill would change this. Section 10(f) of the act would be amended to require any party aggrieved by a Board decision to file an appeal in the appropriate court of appeals within 30 days. If no petition for review was filed within that time, the Board could, by filing a petition for enforcement, obtain a final decree from the court without further delay.

EFFECTIVE REMEDIES

The Board's power to remedy unfair labor practices is the means by which it is to effectuate the act's fundamental purpose of protecting workers' rights of free association without fear of reprisal.

Enactment of the election and case processing procedures which I have previously discussed will mean little if we do not take the incentive out of both frivolous litigation and patently illegal activity by providing adequate sanctions for unlawful behavior.

DEBARMENT OF WILLFUL VIOLATORS OF LABOR BOARD ORDERS

In order to discourage employers from adopting a policy of willful violation of the law, the bill amends section 10(f) of the act to establish a new procedure whereby any person found by the Board to have willfully violated a cease and desist order which has become final, either through court enforcement or because no appeal has been taken, would be barred from participating in Federal contracts for 3 years. Presently, violation of such an order must be enforced through a contempt proceeding. This has proved unsatisfactory, primarily because of lengthy delays and the fact that the Courts of Appeals thoroughly dislike the de novo review which a contempt proceeding requires.

To remedy this, the bill provides a method to debar willful violators of Board orders from receiving Federal contracts. It creates an internal Board proceeding as an alternative to the contempt proceeding. Any allegation that a party is violating a final cease and desist order would be lodged with the General Counsel who, if convinced that a violation had been committed, could issue a complaint. The Board would then conduct a hearing to determine whether or not the order was being willfully violated. If so, the Board would certify the identity of the party to the Secretary of Labor. The Secretary would be required to inform the Comptroller General that such firm was barred from participating in Federal contracts for a 3-year period.

The section provides for certain exceptions if the Secretary determines: First, that the national interest requires that the company not be barred; or second, if, after a hearing, an agency of the Government certifies to the Secretary that the employer is the sole source of a particular material or service.

Debarment from participation in Federal contracts is neither novel nor draconian. Numerous Federal statutes, including the Davis-Bacon, Service Contract, Walsh-Healey and Fair Labor Standards Act, as well as Executive orders prohibiting race and sex discrimination, include comparable provisions. Most are not as narrowly drawn or designed for such limited use as the procedure which this bill would create. The Service Contract Act provides for 3-year debarment for even the most minor violations of a Government contract. Under Executive Order 11246, an employer may be debarred prior to any adjudication that the law is being violated. The provision in this bill is designed for limited use against a party who has been twice adjudicated to have violated the law under similar circumstances. I find debarment in such a case far preferable to a system which permits employers who continually violate our labor laws to have those violations blessed by the granting of millions of dollars in Federal contracts.

BACK PAY AWARDS IN DISCRIMINATORY DISCHARGE CASES

As I have said, one of the most pernicious practices used to undermine a union organizing drive is the discriminatory discharge of a union supporter.

The Board has the statutory power to remedy discharges by requiring that employers make employees whole for loss of earnings because of such discrimination for union activities. Under present law, back pay is limited to the amount an employee would have received had he continued to work. Substantial delay in calculating back pay may occur because a second hearing is required to determine if the employee's conduct since the discharge has mitigated the employer's liability. At this hearing the employer may attempt to demonstrate that the employee removed himself from the labor force, that he made no effort to seek employment, and a myriad of other points. As a result, back pay hearings are often of greater duration than the initial unfair labor practice case. Many, particularly those involving a large number of employees, go on for several years.

It is clear that the present system of compensating discriminatees is inadequate. The threat of back pay awards simply does not deter discharges—as is evidenced by the staggering number of discharges cases the Board processes each year. It does not adequately compensate the employee for the true loss he has incurred. It fails to recognize the gravity of the employer's conduct both with respect to its effect on the employee and the union's organizing drive. The hearing to establish mitigation further serves to encourage violation of the law.

In order to eliminate delay in back pay proceedings and recognize the gravity of the employer's conduct, my bill amends section 10(c) to provide that whenever the Board finds that an illegal discharge

has occurred during the course of a union's organizing effort or before the first contract is obtained, the affected employees would receive double back pay computed on the basis of the employee's wage rate in effect at the time of the discharge. The employer would not be able to show mitigation.

MAKE WHOLE REMEDIES FOR REFUSAL TO BARGAIN

According to present Board policy, when an employer refuses to bargain and litigates the issue of whether or not his action has violated section 8(a)(5) of the act, his employees are not entitled to wages and benefits lost in the interim if he is subsequently found to have violated the law. The Board and the courts have disagreed for some time over whether or not the Board has the power to make employees who for the economic loss suffered in this period.

The bill resolves this issue in the affirmative. It amends section 10(c) to establish a procedure whereby the Board may compensate employees for a delay in bargaining caused by an employer's refusal to bargain which occurs prior to the signing of a first collective bargaining agreement. The compensation would be calculated by the difference between the wages and fringes received at the time of the refusal to bargain and the wages and fringes received at the time the unfair labor practice was committed multiplied by the percentage change in wages and other benefits as stated in the BLS Quarterly Report on Major Collective Bargaining Settlements.

This method of calculating the obligation of the employer has several advantages. First, it provides a readily ascertainable measure of relief in cases of 8(a)(5) and 8(b)(3) violations during the initial contract. Second, it is predictable and swift and eliminates the need for a lengthy hearing to calculate liability, which in other areas, most notably discharge cases, has so often undermined the remedial purposes of the act.

GUARD EMPLOYEES

Section 9(b)(3) of the act requires that guard employees must be organized in units separate and apart from any other employees. A union may not be certified as the representative of guards if it admits to membership or is affiliated, directly or indirectly, with any union which admits to membership employees other than guards.

The intent of Congress in enacting this section was to insure that during strikes or labor unrest an employer would have available loyal plant protection employees who would enforce rules for the protection of both persons and property.

Section 4 of the bill amends section 9(b)(3) to allow a guard union to affiliate with a union which represents nonguard employees, provided that the affiliate does not represent nonguard employees at the same location. It also permits an affiliated nonguard local union to represent guards provided it does not represent nonguards at the same location. For example, an affiliated local union representing production workers at plant A could not represent guards at that plant but could do so at plant B if plant B's production workers were represented by a different international union. The proposal thus retains the current restriction against including within a single union local both guards and nonguards, but at the same time recognizes that the free choice of union membership is not inconsistent with a guard's exercise of his duties to an employer.

Mr. President, I believe the changes embodied in this bill will make it possible once again for the unorganized worker to exercise his right to gain representation. That right should not be dependent on the acquiescence of the employer. The present law can be made to work if the most glaring procedural and remedial deficiencies are corrected and enforcement made swift as well as just. If the preamble of the Wagner Act is to be anything but a hollow promise, I believe this bill must be enacted into law.

Mr. President, I now ask unanimous consent that the full text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1883

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) this Act may be cited as the "Labor Reform Act of 1977".

(b) Except as otherwise specifically provided, whenever in this Act an amendment or repeal is expressed in terms of an amendment to, or repeal of, a section or other provision, the reference shall be considered to be made to a section or other provision of the National Labor Relations Act.

SEC. 2. (a) Section 3 (a) of the National Labor Relations Act is amended to read as follows:

"SEC. 3. (a) The National Labor Relations Board (hereinafter called the 'Board') created by this Act prior to its amendment by the Labor Management Relations Act, 1947, and by the Labor Reform Act of 1977, is hereby continued as an agency of the United States, except that the Board shall consist of seven instead of five members, appointed by the President by and with the advice and consent of the Senate. Of the two additional members so provided for, one shall be appointed for a term of five years and the other for a term of six years. Their successors, and the successors of the other members, shall be appointed for terms of seven years each, excepting that any individual chosen to fill a vacancy shall be appointed only for the unexpired term of the member whom that individual shall succeed. The President shall designate one member to serve as Chairman of the Board. Any member of the Board may be removed by the President, upon notice and hearing, for neglect of duty or malfeasance in office, but for no other cause.".

(b)(1) The third sentence of Section 3(b) is amended by striking "three" and substituting "four".

(2) Section 3(b) is further amended by inserting after the third sentence the following new sentence: "The Board shall within 90 days after the date of enactment of the Labor Reform Act of 1977 establish a procedure, upon conditions stated in the rule, pursuant to which a quorum of a group designated pursuant to the first sentence of this subsection may, in appropriate cases, upon motion of the prevailing party in a decision of an Administrative Law Judge after a hearing under section 10(b), summarily affirm such decision. A motion and the response thereto shall be filed with the Board and presented to a quorum of a group designated pursuant to the first sentence hereof within 30 days after the decision of the Administrative Law Judge.".

SEC. 3. Section 6 is amended to read as follows:

"SEC. 6. (a) The Board is authorized to make, amend, and rescind (in the manner prescribed by subchapter II of chapter 5 of title 5, United States Code) such rules and regulations as may be necessary to carry out the provisions of this Act.

"(b)(1) The Board shall within twelve months after the date of enactment of the Labor Reform Act of 1977 issue regulations to implement the provisions of section 9(c)(6) including rules—

"(A) which shall, subject to reasonable conditions, including due regard for the needs of the employer to maintain the continuity of production, assure that if an employer or employer representative addresses the employees on its premises or during working time on issues relating to representation by a labor organization during a period of time that employees are seeking representation by a labor organization, the employees shall be assured an equal opportunity to obtain in an equivalent manner information concerning such issues from such labor organization;

"(B) For classes of cases in which either the distance from the Board's regional office to the election site or the number of employees involved in the election makes it infeasible to comply with the time limits stated in subsection (c)(6)(a) of Section 9, to extend to a maximum of 14 days the period for directing an election stated in that subsection, and to a maximum of 21 days the period for the holding of such an election stated in that subsection.

"(C) to facilitate agreements concerning the eligibility of voters; and

"(D) to govern the holding of elections in cases in which an appeal has not been decided prior to the date of the election.

"(2) The Board shall, to the fullest extent practicable, exercise its authority under subsection (a) of this section to promulgate rules declaring certain units to be appropriate for the purposes of collective bargaining.

"(3) A rule or regulation issued by the Board with respect to the subject matter set forth in paragraphs (1) or (2) of this subsection shall be judicially reviewable only in a proceeding under section 10 of this Act and only on the grounds that the Board prejudicially violated the requirements of subchapter II of chapter 5 of title 5, United States Code or that a rule or regulation of the Board is arbitrary or capricious, contrary to a specific prohibition of this Act, or of the Constitution. The failure of the Board to comply with the time requirements set forth in paragraph (1) of this subsection, or to institute a rule-making proceeding with respect to the subject matter set forth in paragraph (2) of this subsection, within a reasonable period of time after a request for such a rule-making procedure has been filed with the Board pursuant to section 553(e) of title 5, United States Code, to complete such a procedure within a reasonable period after its institution, may be reviewed at the behest of any aggrieved party only in the United States Court of Appeals for the District of Columbia Circuit. The United States Court of Appeals for the District of Columbia Circuit shall have jurisdiction to grant appropriate relief."

SEC. 4. Section 9(b)(3) is amended by striking ", or is affiliated directly or indirectly with an organization which admits to membership, employees other than guards." and substituting "non guard employees of the same employer at the same location, or if such organization is directly affiliated with any national or international

labor organization which represents nonguard employees of the same employer at the same location".

SEC. 5. Section 9(c) is amended by adding at the end thereof the following new paragraph:

"(6)(A) Notwithstanding any other provisions of section 9, whenever a petition shall have been filed, in accordance with such regulations as may be prescribed by the Board, by an employee or group of employees or any individual or labor organization acting in their behalf alleging that their employer declines to recognize their representative as the representative defined in subsection (a) in a unit appropriate for the purposes of collective bargaining under a rule established by the Board pursuant to section 6 or a decision in the applicable industry, that a majority of the employees in that unit have designated that individual or labor organization as their representative defined in subsection (a), and that no individual or labor organization is currently certified or recognized as the exclusive representative of any of the employees in the bargaining unit defined in the petition, the Board shall investigate such petition. If the Board finds that the unit there specified is a unit appropriate for the purposes of collective bargaining under a rule established by the Board pursuant to section 6 or a decision in the applicable industry, and if the Board has reasonable cause to believe that a question of representation affecting commerce exists and that the other conditions specified in this subsection have been met, the Board shall within seven days after the filing of the petition direct an election by secret ballot not more than 15 days after a petition is filed under this subparagraph and shall so notify the representative named in the petition and the employer.

"(B) In any proceeding under this subsection in which the Board directs an election by secret ballot, and which is not governed by subparagraph (A) of this paragraph, the Board shall direct the election on a date not more than 45 days after the filing of the petition and shall inform the representative named in the petition, the employer, and all other interested parties of the election date not less than 15 days prior to the election except that where the Board determines that the proceeding presents issues of exceptional novelty or complexity, the Board may direct the election on a date not more than 75 days after the filing of said petition.

"(C) After an election conducted pursuant to subparagraphs (A) or (B) of this paragraph is completed, the Board shall promptly serve the parties with a tally of the ballots.

"(D) (i) Any party to the election conducted pursuant to subparagraphs (A) and (B) of this paragraph may, within five days after such election, object to the election on the ground that conduct contrary to a rule relating to election declared by the Board pursuant to its authority under section 6 or conduct contrary to a rule of decision declared by the Board in a proceeding under section 10 did affect the result of the election.

"(ii) With regard to challenged ballots, the Board shall, where such ballots are sufficient in number to affect the outcome of the election, investigate the challenges and serve a report upon the parties on challenges.

"(iii) The Board shall move expeditiously to resolve any issues raised by the objections or regarding eligibility and to certify the results of the election, provided that an objection that an election was conducted under subparagraph (A) instead of subparagraph (B) shall not be a basis for setting the election aside.".

SEC. 6. Section 9(d) is amended by inserting immediately before the period at the end thereof a comma and the following: "except that no such certification shall be set aside unless the Board in issuing such certification prejudicially violated the procedural requirements of this Act or of subchapter II of chapter 5, United States Code, or acted arbitrarily or capriciously, or contrary to a specific prohibition of this Act or of the Constitution".

SEC. 7. The first sentence of subsection (10)(b) is amended to read as follows:

"(b) Whenever—

"(1) it is charged that any person has engaged in or is engaging in any such unfair labor practice, or

"(2) it is charged that any person has engaged in or is engaging in a willful violation of—

"(A) any final order of the Board entered pursuant to subsection (c) of this section and which is not and has not been the subject of a proceeding under subsection (e) or (f) of this section, or

"(B) any final order of a court of appeals of the United States entered in a proceeding under subsection (e) or (f) of this section, prohibiting interference with, restraint or coercion of employees in the exercise of the rights guranteed in section 7 or discrimination against employees to encourage or discourage membership in a labor organization, and that said violation occurred within three years of the entry of the order violated,

the Board, or any agent or agency designated by the Board for such purposes, is authorized to issue and cause to be served upon such person a complaint stating the charges. Such complaint shall contain a notice of hearing before the Board or member thereof, or before a designated agent or agency, at a place therein fixed, not less than five days after the serving of such complaint. No complaint shall be issued based upon any unfair labor practice or willful violation of a final order occurring more than six months prior to the filing of the charge with the Board and the service of a copy thereof upon the person against whom such charge is made, unless the person aggrieved thereby was prevented from filing such charge by reason of service in the armed forces, in which event the six-month period shall be computed from the day of his discharge.".

SEC. 8. Section 10(c) is amended by—

(1) inserting "(1)" after "(c)";

(2) striking out the fifth sentence of paragraph (1) (as redesignated by this section) and inserting in lieu thereof the following: "If upon the preponderance of the testimony taken the Board shall not be of the opinion that the person named in the complaint has engaged in or is engaging in any such unfair labor practice, or has willfully violated or is willfully violating a final order as specified in subsection (b) of this section, then the Board shall state its findings of fact and shall issue an order dismissing the said complaint.";

(3) by adding at the end thereof the following new paragraphs.

"(2) If upon the preponderance of testimony taken the Board shall be of the opinion that the allegation in the complaint that a person has willfully violated or is willfully violating a final order as specified in subsection (b) of this section has been sustained, then the Board shall state its findings of fact and shall issue and cause to be served on such person an order certifying the identification of that person to the Secretary of Labor. Notwithstanding any other law, unless the Secretary of Labor determines that because of unusual circumstances, the national interest requires otherwise, the Secretary shall certify the identity of such person to the Comptroller General. The Comptroller General shall distribute a list to all agencies of the United States containing the names of persons certified by the Secretary of Labor pursuant to this subsection. Notwithstanding any other law, no contracts shall be awarded to such person during the three-year period immediately following the date of the Secretary's certification, unless the agency of the United States concerned, after notice and opportunity for hearing to all interested parties, certifies to the Secretary of Labor that there is no other source for the material or services furnished by the person affected by the Board order.

"(3) In a case in which the Board determines that any person has engaged in an unfair labor practice within the meaning of subsection (a)(3) or (b)(2) of section 8 which deprives an employee of employment while employees in a bargaining unit which includes that employee are seeking representation by a labor organization or during the period after a labor organization has first been recognized as a representative defined in subsection (a) of section 9 in such unit until the first collective bargaining contract is entered into between the employer and the representative, the measure of backpay for the period until a valid offer of reinstatement is made shall be double the employee's wage rate at the time of the unfair labor practice. In a case in which the Board determines that an unlawful refusal to bargain prior to the entry into the first collective bargaining contract between the employer and the representative selected or designated by a majority of the employees in the bargaining unit has taken place, the Board may award to the employees in that unit compensation for the delay in bargaining caused by the unfair labor practice which shall be measured by the difference between (i) the wages and other benefits received by such employees during the period of delay, and (ii) the wages and fringe benefits such employees were receiving at the time of the unfair labor practice multiplied by the percentage change in wages and other benefits stated in the Bureau of Labor Statistics, Average Wage and Benefit Settlements, Quarterly Report of Major Collective Bargaining Settlements for the quarter in which the delay began. If the Secretary of Labor certifies to the Board that the Bureau has, subsequent to the effective date of the Labor Reform Act of 1977, instituted regular issuance of a statistical compilation of bargaining settlements which the Secretary determines would better effectuate the purposes of this subsection than the compilation specified herein, the Board shall, in administering this subsection use the compilation certified by the Secretary.".

SEC. 9. (a) The third sentence of subsection 10(e) is amended by inserting the following immediately before the period at the end thereof a comma and the following: "nor shall any objection be considered by the court unless a petition for review pursuant to subsection (f) of this section has been timely filed by the part stating the objection".

The first sentence of subsection 10 (f) is amended by

(1) inserting "within 30 days" after "by filing", and

(2) inserting before the period at the end thereof the following: "except that if a petition for review has been timely filed, any other party to that Board proceeding, aggrieved by the order, may, within 15 days of service on it of said petition, file a further petition for review.".

SEC. 10. The first sentence of section 10(1) is amended to read as follows:

"(1) Whenever it is charged that any person has engaged in an unfair labor practice within the meaning of—

"(1) subsection (a)(3) or (b)(2) of section 8 which deprives an employee of employment while employees in a bargaining unit which includes that employee are seek-

ing representation by a labor organization or during the period after a labor organization has first been recognized as a representative defined in subsection (a) of section 9 in such unit until the first collective bargaining contract is entered into between the employer and the representative, or

"(2) subsection 4 (A), (B), or (C) of section 8(b) or section 8(e) or section 8(b)(7), the preliminary investigation of such charge shall be made forthwith and given priority over all other cases except cases of like character in the office where it is filed or to which it is referred.".

SEC. 11. Section 10(m) is amended by inserting "under circumstances not subject to section 10(1)," after "section 8,".

SEC. 12. Except as otherwise specifically provided in this Act, the amendments made by this Act shall take effect 60 days after the date of enactment of this Act.

Mr. JAVITS. Mr. President, I join today with Senator WILLIAMS, chairman of the Committee on Human Resources, in introducing the Labor Reform Act of 1977. This bill has the endorsement of the President, as it reflects the message he delivered yesterday to the Congress concerning labor law reform. The bill represents a long overdue revision of our basic labor relations statute, a revision that is necessary if we are to maintain respectively the rights and protections already incorporated in the act as our national labor relations policy.

This bill is a moderate proposal, primarily addressing certain procedural and remedial problems that have arisen under the National Labor Relations Act. It does not atler the substantive rights of labor unions versus management, nor does it give one side or the other enhanced power at the bargaining table. Rather, this bill is designed simply to effectuate better the unchanged substance of our national labor relations policy first detailed when the Taft-Hartley Act was passed 30 years ago.

As such, the bill is not a final solution to all of the problems associated with collective bargaining in this country. There are many such substantive issues which in my judgment bear reexamination by the Congress. These range from the inconsistency in national labor policy permitted by section 14(b) of the act—which was the reason I voted against the Taft-Hartley Act as a Member of the House in 1947—to the many reforms necessary to rationalize and stabilize collective bargaining in the construction industry.

These issues must wait for another time, however, when further consensus can be reached as to their proper resolution. Today we have concluded that reform of the regulatory procedures and administrative remedies which implement and enforce the National Labor Relations Act is necessary to protect the collective bargaining rights agreed upon long ago by the Congress. This tightening of the mechanism of administration and enforcement is both long overdue and vital to the continued integrity of our collective bargaining system.

The Labor Reform Act of 1977 embodies several procedural and remedial changes to the National Labor Relations Act which are designed to correct two major problems have arisen under the current Act:

First, delays in the processing of both election petitions and unfair labor practice cases; and

Second, the inadequacy of the remedies which the National Labor Relations Board may invoke against violators of the law, particularly when violations occur during the critical period before a collective bargaining relationship is first established.

The bill addresses these problems by: First, restructuring the operation of the Board to minimize delay in election and unfair labor practice proceedings without sacrificing the protections of due process; and second, creating more effective remedies which will become meaningful deterrents to violations of the law.

If there is any one single problem that has contributed most to breakdowns in enforcement of national labor policy, it has been the inability of the enforcing agency to provide prompt and effective protection of the rights guaranteed by the act. The problem of delay has become especially serious as legal advocacy in labor relations has become more sophisticated and the case law more complex.

Under the law today, there are too many opportunities for lawyers to obtain delays both in election matters and in the enforcement of remedies against unfair labor practices. Because the National Labor Relations Board has not promulgated rules covering appropriate bargaining unit determinations, it must now make such determinations on a case-by-case basis before an election may be held. Employers and unions may gain substantial delays for further campaigning and possible unfair tactics simply by demanding hearings on such issues. These delays often jeopardize the fairness of the ensuing election and lead to charges of unfair labor practices during the campaign.

There is simply no justification for such delay in the holding of elections. Accordingly, the Labor Reform Act of 1977 would dramatically speed elections and eliminate many of the existing incentives for delay. Within 1 year of enactment, the Board would be required to exercise its existing authority under section 6 to promulgate rules establishing certain units of employees as presumptively appropriate for collective bargaining, and to issue rules designed to facilitate agreements on voter eligibility by spelling out criteria which would be employed in making such determinations.

These rules will eliminate the need for case by case unit determinations, and will thus enable most elections to proceed within rigid schedules without delays. Where issues of voter eligibility or other issues remain, the Board may continue to resolve those after the election is held if necessary.

The bill establishes three new categories of representation petitions and sets election deadlines for each. Where the Board has already established, by rule or decision in the applicable industry, the appropriate units involved, and where over 50 percent of the employees in the unit have signed authorization cards, the Board would be required to hold the election within 15 to 25 days of the application under section 9(c) of the act, the exact period depending upon the number of employees in the unit and the geographical accessibility of the unit employees to the Board's regional office. Thus, where a majority of employees have indicated they want the union to begin collective bargaining on their behalf, the election is to be held in the shortest possible time in order to effectuate their right to bargain and to avoid the possibility of industrial disruption inherent in an extended campaign period.

A second category of representation petitions is where the currently unrepresented employees are in a plainly appropriate unit, as established by rule or decision in the applicable industry, but where less than 50 percent, and more than 30 percent, of the employees in the proposed unit sign authorization cards. Such elections must be held within 45 days of the application.

The final new category includes representation petitions which would fall into the above categories, except that the Board makes a determination that the petition presents issues of exceptional novelty or complexity. For such extraordinary cases, the election must only be held within 75 days of the application.

These deadlines are dramatic speedups when compared to the current median times between application and the election, of 57 days for uncontested elections, 75 days for contested elections, and a shocking 275 days for petitions referred to the Board from the Regional Director for decision.

A related fair campaign provision assures that employees asked to vote for or against representation will not be subject to campaign communications from only one side of the issue when they are working on the employer's premises. The bill directs the Board to issue rules within one year to guarantee employees the right, where an employer uses its premises or working time to address them about the election, also to hear from the union in an equivalent manner. The application of this rule must be done with due regard for continuity of production.

This "equal time" requirement represents only basic fairness in any campaign where one side controls and utilizes primarily the means of effective communication to the voters. Without such a requirement, employees are not always able to obtain information necessary to their full freedom of choice regarding representation.

Since the time between the union's first organizational efforts and the entering into of the initial collective bargaining agreement is typically the most volatile and important period for concerted activity and bargaining in good faith, the protections of the act during this time must be made especially strong if statutory rights are to be respected.

Accordingly, the Labor Reform Act of 1977 contains three provisions designed to strengthen the remedial powers of the National Labor Relations Board during this critical period. Under current law, employers frequently have every financial incentive to discharge union ad-

herents and to refuse to bargain in good faith. This is because the Board is limited to remedial orders simply reinstating the employees discharged for engaging in protected activities under section 7 of the act often after the election or the contract issue is decided, or simply telling the employer to "go and sin no more" after his unlawful bargaining tactics have destroyed the collective bargaining relationship.

I believe that we cannot permit such incentives to break the law to remain unchanged. We need to enact remedies which will both truly restore the injured employees to the place they would have occupied but for the unfair labor practice, and which will effectively remove the existing incentives to engage in such practices.

The bill accomplishes these objectives in three steps: First, it requires the General Counsel of the NLRB to seek a temporary court injunction under section 10(1) of the act immediately reinstating employees unlawfully discharged during the precontract period, pending the Board's own hearing; second, it establishes a double backpay remedy for the employee discharged during that same period; and third, it permits the Board to issue "make whole" orders in refusals to bargain for first contracts, cases awarding objectively determined damages to employees where an employer's refusal to bargain in good faith for an initial collective bargaining agreement results in economic losses to the employees when compared to their position had there been no violation.

These three remedial reforms remove profit motives associated with the most serious violations of the act. The quickly obtained court injunction under section 10(1) should restore those employees unfairly discriminated against to their jobs in the most expeditious manner possible. Speedy reinstatement is vital to the protection of rights under the act, for it not only relieves the hardship associated with loss of employment, but it also demonstrates to other employees that the law can react swiftly to violations of protected rights. Combined with the speedy court injunctive relief, the award of double backpay to the discharged employee is not designed to become anything more than an approximate equivalent of the true losses associated with an unfair discharge. The bill is designed to keep the backpay period as brief as humanly possible, so that in real terms the backpay awards should be significantly smaller than they average under current procedures.

I believe this combination affords both employers and employees greater justice than is now available to them under the act, and it does this while minimizing the disruption to all parties that is an inevitable consequence of a prolonged period of unemployment. The backpay provision does not provide for mitigation by the employee, since the unemployment period is not designed to be long enough to permit finding another job. This feature has the related benefit of permitting the Board to utilize the backpay remedy without getting involved in a lengthy investigation and hearing to determine the extent of the employee's efforts to mitigate lost wages.

The "make whole" remedy for refusals to bargain in good faith for an initial collective bargaining contract is recognized by the Board itself as a necessary tool in effectuating the remedial purposes of the act. But in *Ex-Cell-O Corp.* (185 NLRB 107, 1970), the Board concluded that additional legislative authority was necessary before it could issue make whole orders for refusals to bargain. This bill would grant the Board the remedial power that it needs, but only for those especially serious violations associated with bargaining for a first contract.

Although previously similar proposals have been attacked as permitting the Board to engage in too much speculation in computing the amount of the make whole damages, the bill we introduce today permits no such speculation. Instead, the bill establishes an objective, highly accurate statistical index for make whole awards. The Secretary of Labor has informed us that the Quarterly Report of Major Collective Bargaining Settlements, published by the Bureau of Labor Statistics, is the quickest and most accurate index of gains that can be expected through collective bargaining. Of course, the committee will be interested in its hearings on this bill to explore the exact details involved in this and other possible reports, for it is possible that other objective measures would better serve to index such awards. But I believe that whatever the details, the concept of an objective index for such make whole remedies is a real solution to the criticisms of earlier proposals, and a solution which both labor and management should feel is fair.

Two important procedural reforms in the bill are designed to eliminate delays in unfair labor practice cases. First, the Board is required within 90 days to establish through its rulemaking authority a procedure for summary affirmance within 30 days of an administrative law judge's decision and order, by a quorum of a three-member Board panel.

The summary affirmance procedure is designed to permit the Board to dispose quickly of those routine unfair labor practice cases that present primarily issues of fact or credibility that the administrative law judge is in the best position to evaluate. This procedure would, of course, still permit a party to seek judicial review of the Board's final order, but it would relieve the Board of the burden of reviewing every case appealed to it on a de novo basis. The current system of a two-tier de novo decisionmaking structure is simply not an efficient use of administrative resources nor is it required in light of the relatively low rate of Board reversals of administrative law judge's orders.

The bill requires that a motion by the prevailing party below for summary affirmance, and the opponent's response, be presented to a two-member quorum of Board members within 30 days. This is intended to permit the Board to make a decision on the basis of the motion, the opposition, and the supporting briefs almost immediately upon presentation. This compares to the current 120-day median time elapsed at the Board between appeal and final decision. Such summary affirmance procedures could greatly reduce the ever-growing caseload pressure on the Board, and free it to give greater attention to rulemaking and to significant decisions on questions of law.

Second, the bill shortens the delay between a final Board order and judicial review of it in the court of appeals when a party contests the Board's decision. In all cases under the bill, the party seeking judicial review would have 30 days after the Board's decision in which to file for such review with the clerk of the appropriate court of appeals. If no petition for review has been timely filed, the Board is directed to have its order automatically enforced by the appropriate court, as in any default proceeding.

Although the most significant delays in the enforcement of contested Board orders occur while the case is under consideration by the courts of appeal, there is currently a period of unnecessary delay while the Board decides whether to seek court enforcement of its order due to noncompliance. Under the bill's provision for "self-enforcing" orders, this latter period is reduced to 30 days. It is also designed to relieve the Board of the burden of determining whether to seek enforcement when a violator delays full compliance, and to put pressure on such violators either to comply with or to contest a Board order within a month of the Board's decision. Again, the overriding policy is the elimination of as much delay as possible consistent with maintenance of due process.

A final new remedial power addresses the persistent problem of flagrant violators who do not comply even when all means of judicial review are exhausted. The Board's current contempt proceedings have been severely hampered by several factors, including the reluctance of the courts of appeal to engage in the required de novo fact-finding hearings, the lack of any pool of magistrates or hearing officers familiar with the NLRA, and the higher standard of proof required for contempt as compared to the underlying violation. For these reasons, there is a real danger today that violators are being encouraged to try to get away with noncompliance in the knowledge that the Board faces a difficult and lengthy road in contempt proceedings.

In response to these concerns, the bill follows the example of the Service Contract Act and provides for a 3-year debarment from Government contracts for those who willfully violate a final order of the Board. The bill thus creates an internal Board procedure that could serve as an alternative to contempt proceedings. An allegation that a party is violating a final cease and desist order would be reviewed by the General Counsel, who could issue a complaint specifying a willful violation of an order less than 3 years old. After a hearing on the issue of willful violation, the Board could make the required finding and then certify the identity of the party to the Secretary of Labor. The Secretary would be required to inform the Comptroller General that such firm was barred from participation in Federal contracts

for a 3-year period. The bill provides for exceptions where the Secretary determines the national interest precludes debarment or where a Government agency certifies to the Secretary that the firm is the sole source of a particular material or service.

This debarment provision simply insures that parties doing business with the U.S. Government are not labor law scofflaws. Those who profit from public business opportunities must be made to obey public law in doing so. It would be unconscionable indeed if our Government were to continue to give business to firms who may have obtained it by willfully violating the rights of employees. This bill would merely incorporate this fundamental principle into the administration of the National Labor Relations Act, as it is already incorporated in several other of our laws regulating labor practices.

The bill also would increase the size of the National Labor Relations Board from its present membership of five members to a total of seven, and would lengthen their terms from the present 5 years to 7 as well. The committee's hearings will fully consider the potential impact of the other reforms proposed in the bill on the Board's workload. Although the Board has been subject to ever-increasing caseloads, it is not clear at this time whether an increase in the size of the Board will be necessary to handle the work, given the other proposed reforms which are also designed in part to facilitate case-handling. If the Board were expanded to seven, more panels could meet simultaneously to decide cases, since the present provision for three-member panels would remain.

Finally, the bill corrects the outdated restriction, contained in section 9(b)(3) of the act, on the affiliation of organized guard employees. Such employees today are not permitted to be represented by labor organizations affiliated with groups such as the AFL–CIO. Whatever the concerns as to potential conflicts in loyalties which prompted this and other restrictions on guards, the prohibition on affiliation with other unions has no basis today and has seriously impeded the efforts of these employees to bargain collectively. The bill retains all of the current restrictions on guards except for this one affiliation limitation, so that there remains more than adequate protections against conflicts in loyalty.

Mr. President, the Labor Reform Act of 1977 is nothing more than an attempt to make the present law work. It corrects the most glaring procedural and remedial deficiencies under the National Labor Relations Act. It does not change the rules, but it does embody vitally necessary administrative reforms.

The responsible employer has no need to feel threatened by this bill. Only persons who seek to evade their responsibilities through delay and through bad faith will be affected by this bill. Everyone has the right to due process, but not the right to frustrate the purposes of the act through interminable delay and evasion. I firmly believe that due process can and must be made consistent with the effective enforcement of our Nation's basic labor law.

Now is the time for the Congress to insure that our national labor policy is working fairly and effectively. This bill is designed to do just that, and I urge its prompt enactment.

By Mr. RIEGLE (for himself and Mr. CRANSTON):

S. 1884. A bill to amend the National Labor Relations Act to clarify its coverage of health professionals; to the Committee on Human Resources.

Mr. RIEGLE. Mr. President, I rise today to introduce, on behalf of myself and Senator CRANSTON, legislation to include certain residents, interns, and other trainees in professional medical training programs within the scope of the professional employee definition of the National Labor Relations Act. The purpose of this bill is to recognize that such interns and residents are employees as well as professionals seeking to extend their knowledge in their chosen fields—a concept that should be self-evident in view of the notorious workloads of such doctors in many American hospitals.

This simple, one-paragraph bill clarifies the intent of Congress in the 1974 amendments to the NLRA, at which time the long hours and low wages of hospital housestaffs were cited as reasons to pass the health-care amendments to that act. At that time, Senator CRANSTON, who joins me in introducing this bill today, noted in this Chamber that interns and residents were notoriously underpaid. He went on to state that—

> [a]ccording to the Physicians National Housestaff Association, the average housestaff officer—intern, resident, or fellow—works 70 to 100 hours per week and earns $10,000 per year.

Yet, despite this clear legislative intent, the National Labor Relations Board ruled in the *Cedars-Sinai Medical Center* case, 223 NLRB 57 (1976), that housestaff doctors were "students," and therefore outside the scope of the 1974 amendments to the NLRA.

Mr. President, the time is ripe to revise and improve our national labor policy. President Carter's forthcoming proposals for amending the NLRA will, I hope, respond to the faults and abuses that have developed on both sides of the labor-management issue. But let us not overlook, in revising that law, the choice we made in 1974 with respect to hospital employees—the choice this bill would reestablish as the law of the land by reversing the Cedars-Sinai decision of the NLRB.

The strength of our economic system is due in no small part to the development of peaceful, constructive means of resolving employment conflicts. The evidence in the health-care field foreshadows the worth of this collective approach for hospital housestaff as well. For instance, the three major hospitals in Los Angeles County recently reached a settlement—under California law, which permits bargaining in public hospitals—with that county's Joint Council of Interns and Residents. According to the Los Angeles Times of June 15, 1977, that settlement included an agreement by the county to fund a $1 million patient care fund used primarily to buy emergency medical supplies and equipment. More than $2 million more will be paid into the fund over the next 2 years. Examples such as this illustrate both the professionalism of organized residents and interns and the potential for improved patient care from passage of this bill.

The 60,000 intern and resident physicians in the Nation's hospitals are more than simply students; if they were not, our health care would suffer dramatically. The American Medical Association recognized this vital fact when it recently endorsed, for the second time, restoration of bargaining rights to such doctors. The dozen Representatives who have sponsored H.R. 2222, the companion bill in the House, have also borne witness to the congressional intent to recognize the professional characteristics of hospital housestaff.

With respect to H.R. 2222, I should like to point out that Representative FRANK THOMPSON, who introduced the bill and then conducted hearings on it in his Subcommittee on Labor-Management Relations, has worked tirelessly to insure its passage. His prime cosponsor, Representative BILL FORD of my home State of Michigan, has joined actively in support, refuting charges that the bill would lead to labor unrest. "When nonprofit hospital employees were included under the NLRA, people feared it would give them automatic license to strike," Representative FORD told the Physicians National Housestaff Association's national convention this spring. "That just isn't the case. The number of strikes in the hospital sector has dropped."

At a time we in the Congress and across the country are concerned about the quality of American health care, this bill is a much-needed step. At a time when we are considering how best to improve our national labor policy, this bill is an appropriate means of restating our belief in the constructive potential of collective bargaining. So I am delighted to join with the Senator from California in seeking to reestablish our intent to assure housestaff full bargaining rights.

By Mr. McINTYRE:

S. 1885. A bill for the relief of Lewis and Saunders, Incorporated; to the Committee on the Judiciary.

Mr. McINTYRE. Mr. President, I introduce for appropriate reference a bill similar to that which I introduced last year, for the relief of Lewis and Saunders, Inc., of Laconia, N.H.

I would like to make some brief comments regarding the purpose of this legislation.

Lewis and Saunders, Inc., is a very fine, small business engaged in the precision bending, coiling, welding and other fabrication of metal tubing.

This company has performed work for companies throughout the country and it has done much work which has gone into our defense structure.

Lewis and Saunders had a subcontract with Murdock Machine and Engineering Co. of Utah. This contract was to provide supplies for the U.S. Navy. After carrying out its responsibility under this contract Lewis and Saunders found that Murdock had gone bankrupt and left this

small business holding a $91,914.27 commitment from Murdock.

I contacted the Small Business Administration, the Senate Select Committee on Small Business, the Navy Department and others. No relief for Lewis and Saunders is available through the Small Business Emergency Relief Act or other procedures. I believe this is unfair to a small business attempting to do its part in our defense effort. I believe it is not right that Lewis and Saunders should suffer because the prime contractor has failed.

I realize that $91,000 does not seem a large amount of money but to one of our Nation's small businesses this can be the difference between profit and loss. We have had enough losses to our small businesses. We must begin to put a stop to it.

I urge early, and I hope serious consideration can be given this bill.

By Mr. CURTIS:

S. 1886. A bill to amend title IV of the Social Security Act to make necessary changes in the amount of earned income to be disregarded under the State plan for aid and services to needy families with children; and

S. 1887. A bill to amend title IV of the Social Security Act to reverse the computation of earnings disregards and work-related expenses under the AFDC program; to the Committee on Finance.

Mr. CURTIS. Mr. President, I am today introducing two measures which I believe will be most effective in improving and strengthening current practices under the aid to families with dependent children—AFDC—program. Both deal with the so-called "$30½" earnings disregard under current law, and both make changes which have been urged for some time to bring a greater measure of fairness to our welfare programs and to what we ask of those who must work for a living.

Under current law, there is no gross income ceiling in the AFDC program. Initially placed in the law as a work incentive as part of the Social Security Amendments of 1967, the disregard of the first $30 plus one-third of the remainder has had a "boomerang" effect—so that, instead of persons working their way off welfare at a faster rate, persons stay on welfare at higher and higher income levels for longer periods of time. Examples have been reported from all over the country:

In Kern County, Calif., a county welfare employee earned almost $10.000 per year and still received welfare benefits, bringing her total income to almost $17,000.

In Milwaukee County, Wis., more than 600 persons earning from $7,200 to $12,000 a year remained on the welfare rolls.

According to HEW samplings, in 1973 a total of 37.625 families received AFDC benefits while at the same time earning a monthly income about $500.

In Los Angeles County, Calif., a recent survey in the AFDC program found that there were over 1.600 persons making $600 per month or more. 39 percent of the gross earnings of working AFDC–FG recipients in 1975 were disregarded there under the "$30⅓" regulations, amounting to a disregard of $3.7 million per month of recipient wages. The net reduction of AFDC–FG grants there due to the deductible earned income of working recipients was, in 1975, less than $1 million per month—even though the total gross earnings of recipients approached $8 million. Upon implementation of the "$30⅓" regulation the caseload there began to increase by an additional 1,100 cases per month.

In Green County, Pa., a family with income of $21,000 per year received almost $8,400 more in welfare payments.

One California county survey on AFDC showed 95 AFDC families with earned income ranging from $500 per month to $1,344 per month; a more expanded 5-county survey revealed 84 percent of AFDC recipients with outside incomes earning from $401 per month to $1,344 per month.

Similar examples have been reported from jurisdictions all over the country. The time has come for the Congress to put a stop to the fact that high-income persons can continue to receive welfare payments; it is the truly needy of this country who suffer when limited resources are drained off by persons who can take—and, in fact, are taking—care of themselves. We must remember, as well, that with welfare eligibility comes complete medicaid eligibility, and the steps that I am proposing today would have a dramatic and long-sought effect upon curbing the rising costs of public medical care in this country.

The recommendations which I am including in the first bill I am introducing today, therefore, would do several things:

In place of the "$30⅓" excessive earnings disregard, the measure would exempt the first $60 of earned income for individuals who are employed at least 40 hours per week, or at least 35 hours per week and earning at least $92 per week.

For other individuals, the first $30 of earned income would be disregarded.

In each case, an additional exemption would be provided of up to $300 of additional earnings, and one-fifth of any further earnings in excess of $300.

Also, in each case, reasonable and necessary child care actually paid would be deductible, subject to limit by regulation; the States would have the option of setting a maximum for child care expense, and the disregard would be limited to 80 percent of the cost of care for a child under 15—to operate in conjunction with the 20 percent tax credit for child care costs under current law.

There would be a limit of 4 consecutive months for the purposes of the disregard.

An overall gross income ceiling would be established of 150 percent of the applicable State's needs standard.

The first four of these provisions were favorably reported by the Finance Committee in 1973, as a part of its deliberations on H.R. 3153, and were adopted by the Senate. The remaining two make long overdue corrections in defects in the current law.

Finally, Mr. President and Members, the second bill I am introducing today is a measure which also would make a technical correction in the interface between the earnings disregard and work-related expenses deductions. At the time of the 1967 amendments, work-related expenses were deducted *first*, and then the "$30⅓," which is as it should be.

In the late 1968, however, by administrative action, the sequence was reversed, so that the "$30⅓" is now deducted first. This has the clear result of deducting one-third of the work-related expenses twice. The second bill which I am introducing today restores the original, correct order of computation.

I am hopeful that the Senate will act expeditiously to make these significant improvements in the operation of the AFDC program, and I am confident they will be a measurable improvement in the method in which we allocate our scarce public assistance resources.

I ask unanimous consent that there be printed in the RECORD, in its entirety, a communication which I received from the Northeast Nebraska County Welfare Directors Association, which represents 22 counties, urging modification of the "$30⅓" rule to provide equity for the working taxpayer.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NORTHEAST NEBRASKA COUNTY
WELFARE DIRECTORS ASSOCIATION,
June 28, 1977.

CARL CURTIS,
Dirksen Building,
Washington, D.C.

DEAR SENATOR: At a recent meeting of the Northeast Nebraska County Welfare Directors Association it was agreed we should contact you concerning our personal concern for the taxpayers dollar in regard to the inequities of the Aid to Dependent Children payments.

We feel the 30⅓ disregard given to the ADC recipients is unfair to the taxpayer. Many mothers, who are not on assistance, work and support their children with no disregard or incentive other than common decency. It is our opinion recipients of ADC should be encouraged or required to work but all income should be considered against their needs.

We also recommend that cort rules be enforced that the absent father be imprisoned if he fails to make the court ordered child support payments.

We urge your help in encouraging divorce lawyers to consider the requirements of the absent father to be liable for all medical and educational needs of his children.

We would appreciate reconsideration of including the needs of an unborn child in the ADC grant. It is our opinion if these payments were not considered perhaps it could discourage illegitimate children.

Any consideration given to these requests will be greatly appreciated.

Northeast Nebraska is comprised of 22 counties that our association represents.

Sincerely,

VERNA CHAMBERLAIN,
President, Northeast Nebraska County Welfare Directors Association.

Aid to Dependent Children family: father-employed, daughter-normal, son-retarded, son-retarded.

Aid to Disabled family: mother-incapacitated (mentally).

Father's gross earnings	$746.06
Earnings disregard 33⅓	269.00
Withholding	88.45
Work related expenses:	
Mileage	64.50
Mandatory retirement	17.58
Total disregard	439.53
Net earnings	306.53
Basic requirements for 4 member family	330.00
Less net earnings	306.53
ADC payment	23.47
AD payment	101.80
Total gross income	871.33

Plus: Complete medical for the family, food stamp bonus of $28.00, free school lunch, disregarded earnings of daughter under Neighborhood Youth Corps, also eligible for Social Service.

The family's gross income is more than the gross income of any county official in this particular county.

By Mr. BELLMON:

S. 1888. A bill to amend title IV of the Social Security Act to allow States to provide community work and training programs under State plans for aid and services to needy families with children; to the Committee on Finance.

Mr. BELLMON. Mr. President, the Senate Finance Committee is currently holding hearings on H.R. 7200, a bill passed by the House of Representatives on June 14, 1977. This bill—known as the Public Assistance Amendments of 1977—would change several parts of the Social Security Act dealing with the aid to families with dependent children—AFDC—program, the supplemental security income—SSI—program, the title XX social services program, and child welfare services programs.

Mr. President, several of our colleagues who serve on the Senate Finance Committee appear to agree that we should do all we can to improve our current public assistance programs while we and the other body debate the President's welfare reform proposals and other possibilities for comprehensive reshaping of our public welfare systems.

I, for one, feel very strongly that we should examine and improve, through amendments, the AFDC, the SSI, and the social services and child welfare programs—just as we on the Agriculture Committee recently examined the food stamp program and recommended important amendments which were accepted by the Senate as part of S. 275, the omnibus farm bill. We should not delay needed changes while we wait for "welfare reform". We have only to look at the history of the family assistance program debate early in this decade. After a long struggle within the Congress and between the Congress and the Nixon administration, "welfare reform" went onto the back burner and the existing programs remained in force.

We owe it to those people dependent on these programs, and to the State and local people who administer them, to be continually vigilant for ways we can change the law to make these programs work better.

To this end, I am today offering a bill which would provide States with increased flexibility to develop and implement community work and training programs as part of their AFDC programs. Mr. President, my specific proposal is that we reinstate and amend section 409 of the Social Security Act which has remained in the law, but has been suspended since the advent of the work incentive—WIN—program in 1968.

Mr. President, my bill would enable States to supplement efforts being made through WIN, the CETA programs, and otherwise to help employable AFDC recipients obtain job skills and work experience and thereby assist them to become supporting. In addition, my bill would permit States to utilize the time and talents of employable AFDC recipients to support the provision of needed public services.

Mr. President, I will now summarize the provisions of this bill:

First. Section 409 of the Social Security Act, community work and training, would be reinstated effective January 1, 1978, thereby giving States an option to include a community work and training component in their AFDC program.

Second. The following changes would be made to section 409:

The community work and training activities would be conducted on a "beyond WIN" basis. This is any recipient participating in a WIN training, work experience, or public service assignment would be exempt, as would those enrolled in a CETA program or actually working on a regular job for 16 hours or more a week.

States would be freed from prevailing wage standards, but would be required to assure that no AFDC recipient was required to work more hours than would equate to the Federal minimum wage, given the size of the AFDC grant to the particular family.

A limit of 24 hours per week in assigned work plus up to 8 hours in training would be established. This would enable recipients to search for regular jobs and provide them some time for dealing with other personal needs.

Persons who are exempt from WIN registration requirements under current law would also be exempt from community work and training assignments.

A limit of 3 years would be established for an individual to participate in community work and training. This limitation was included in the work experience program operated in the mid-1960's under title V of the Economic Opportunity Act. This will preclude States from keeping people in the program on a long-term basis, and thus will facilitate the developmental purposes of the program.

States which operate such programs would receive 90-percent Federal matching for the administrative costs involved. This would be consistent with the WIN matching rate.

States could make the program mandatory, or could operate it on a voluntary basis. If the State chose the mandatory approach, any AFDC recipient who refused to accept a work training assignment would be excluded in the future calculations of his/her family's AFDC grant.

Mr. President, I believe these are amendments which deserve most serious consideration by the Senate Finance Committee. There is great interest in several States in developing programs of the type I am proposing to authorize. I ask unanimous consent to have printed in the RECORD an article from the July 18, 1977 issue of U.S. News & World Report. This article discusses State activities and interests in the areas addressed by this bill.

Mr. President, I want no part of any program which would exploit AFDC recipients or expose them to "slave labor" conditions. I saw the title V work experience program, to which I alluded earlier, operate successfully in Oklahoma when I was Governor. The bill I offer today would authorize States to have programs quite similar to those conducted under title V. This would provide an important added option to States for improving public welfare programs while the welfare reform debate is conducted.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHEN STATES TELL PEOPLE THEY MUST WORK FOR WELFARE

The idea that able-bodied people should be required to work for their welfare money is spreading rapidly across the U.S.

One such "workfare" program attracting nationwide attention is operating smoothly in Utah.

So successful is the Utah plan in moving people off relief rolls that half a dozen other States are taking a look at it as a possible model for programs of their own. Some believe it might even be useful to the Carter Administration in its search for national welfare reforms.

Besides Utah, at least 16 States have stiffened their work requirements or added new work incentives in the last two years. A number of other States and many cities have some kind of program aimed at putting relief recipients to work. And the Federal Government's Work Incentive Program—known as WIN—is steadily stepping up its pace in finding jobs for welfare recipients.

On the job, on the dole. The Utah plan is unique in several respects. It is sterner and goes further than most other programs. It is mandatory. And it doesn't just train people for future jobs. It actually puts them to work while they are still drawing welfare payments.

In most places, such work requirements apply only to people on programs financed by State or local funds, such as "general assistance" or "direct relief."

Utah's plan applies to those who receive Aid to Families with Dependent Children (AFDC), a huge, nationwide program that draws heavily upon federal funds. Utah officials say theirs was the first work requirement approved by the Department of Health, Education and Welfare for application to AFDC.

"Utah is the first State where people earn their welfare grants," claims the program's co-ordinator, Usher T. West.

Officially, Utah's method is called a work-experience and training program. But its training is not the usual type done in classrooms. Trainees learn to work by actually working. If private employment cannot be found for them, they are put to work for public agencies, doing jobs that are needed by State or local governments. They serve as teachers' aides in their neighborhood schools or plant trees in public parks, for example. They work three days a week but remain on the welfare rolls until they find regular jobs.

Only ill, aged or disabled persons or mothers with children under 6 years of age are exempted. All others are told to take one of

the jobs offered to them or lose all or at least a part of their welfare payments.

Those who participate in the program are helped by the State to find jobs in private industry. Many are doing so.

In one six-month period, from July through December of last year, 782 people were assigned to the work program. Of that total, 311 were removed because they did not perform as required. But 11 people were hired by the sponsors who gave them their training jobs, and 218 found other kinds of employment. In addition, 109 mothers found enough work to reduce the amount of welfare funds needed to support their families.

"FEELING GREAT"

A 32-year-old mother of two children was hired recently as a full-time office worker in Salt Lake City's assistance-payments administration, the same office that handed her welfare checks for 13 years before she took job training for two years. During the instruction period, she says, "even though I was getting welfare I felt I was working for it." And now, she adds, "With my new job I am barely making ends meet. But I feel great because I am making it on my own."

Utah officials point out that communities as well as individuals benefit from the program. Some agencies, such as private nonprofit organizations that are constantly short of funds, report that the services of welfare recruits have been invaluable.

One self-help agency in Salt Lake City, for instance, had the funds to buy insulation for the homes of elderly poor people, but lacked money to hire workers to install it. Welfare trainees have been assigned to the job. Another self-help group put trainees to work repairing the homes of elderly Salt Lake City residents.

A question of legality. Some critics charge that Utah's job-training effort is nothing more than a thinly disguised public-works program that uses underpaid welfare recipients in place of regular employes.

Legal-services lawyer Lucy Billings says she is considering filing a court suit against the program on the ground that it violates federal regulations that people cannot be required to work for their welfare payments.

It took Utah three years to get its program approved by the U.S. Department of Health, Education and Welfare. For 18 months, HEW withheld federal contributions to Utah's program for Aid to Families with Dependent Children. It cost the State almost a million dollars to make the AFDC payments entirely from State funds. But many Utah people feel that it was well worth the cost.

Utah officials concede that their program might not work so well in other parts of the country, especially in big cities where population is denser and welfare rolls are much larger. Of Utah's nearly 1.2 million residents, only 39,000 are getting money grants of aid. Also, it is suggested, labor unions in more-industrialized States might oppose welfare people being given jobs that might be sought by union members.

But in the view of Robert W. Hatch, a field director for the Utah assistance-payments administration, public acceptance of the idea that welfare recipients should work for their money is spreading throughout the nation. Says Hatch: "I think that in time, putting welfare clients to work will become a common practice."

In fact, a trend in that direction is already apparent.

Oklahoma has a 2-year-old work-experience program that was passed by the legislature at the urging of Governor David Boren. It requires that anyone 18 or older in a family receiving Aid to Families with Dependent Children must visit the local employment office and sign up for a job that's available.

In 1975, there were 2,300 persons participating in the Oklahoma program. Many worked in State institutions, hospitals or in county offices for $5 a day to offset expenses, plus their regular AFDC checks.

"They are usually placed in jobs where they can easily be trained and hopefully be picked up by the business community," says a State spokesman. Last year, more than 700 persons were placed in permanent positions outside the government.

The risk of rejecting work. The Texas legislature recently passed legislation to supplement the Federal Government's Work Incentive Program. Welfare recipients must register for work, and if they reject a job without a good reason, their benefits may be cut off after an administrative review.

North Carolina's legislature this year passed a law requiring welfare recipients to register for work.

As the law's sponsor, State Senator E. Lawrence Davis of Winston-Salem, explains it: A family head who fails to register is taken off the rolls. But aid to his or her children will continue as "protective payments" made through some other person or perhaps an agency, such as a church. Since the law did not take effect until July 1, it's too soon to tell how effective it will be.

A part-time work force. In the State of New York, all employable persons receiving general welfare-assistance payments have, since May 1, been required to work three days a week in a local-government agency if jobs are available.

There are about 60,000 such persons and State Social Services Commissioner Philip Toia says: "We're hoping to develop jobs within local-government agencies for at least 30,000 of those employables within the next three months. We're hoping that, when faced with working three days a week, many will go out and get a full-time job."

One problem is that four fifths of the employables covered by the program are in New York City, where in the last two years thousands of public employes have been laid off in the city's effort to cope with a financial crisis. "I anticipate some complaints from the municipal workers' union," says Assistant Welfare Commissioner Irwin Brooks. However, according to a *New York Daily News* poll published May 23, about 87 per cent of residents in the New York metropolitan area approve of the new workfare program.

Work-for-welfare bills similar to New York's are pending in several States, including Connecticut and New Jersey.

Massachusetts is one of the States studying the Utah plan of mandatory work for heads of AFDC families. Since 1975, Massachusetts has barred all employable persons from direct relief or general-assistance rolls. The State of Rhode Island followed suit last September, cutting its relief case load by more than 20 per cent.

Million-dollar savings. Bridgeport, Conn., started last year a plan requiring employable people receiving welfare to work one or two days a week, depending on the amount of their aid. About 300 persons out of a case load of 1,330 are now working. If they fail to work for a period of two weeks, their benefits are automatically terminated.

Result: Bridgeport's case load has been cut 45 per cent in a year's time, with a million-dollar reduction in the city's welfare budget.

Milwaukee County, Wis., has a locally run pay-for-work program requiring all able-bodied welfare applicants to take specially created jobs in municipal or county departments. They are paid $2 an hour for a 32-hour workweek.

One experiment being watched closely is a "supported work" program run by the Manpower Demonstration Research Corporation, a nonprofit, tax-exempt organization set up with the support of the Ford Foundation and five Federal Government agencies—principally the Department of Labor.

It has 15 projects in 13 States that provide jobs, mostly with public or nonprofit agencies, for more than 2,000 marginally employable people, including AFDC mothers. Instead of welfare checks, they get paychecks at minimum-wage rates.

A mixture of welfare funds and grants is used to finance the program. The workers will be helped to find permanent jobs in private industry once they have developed the necessary skills.

Many towns and some States have found that the administration of work-for-aid programs is too costly to justify the small numbers put to work. But the search for practicable systems goes on—and widens.

In the words of Fritz Kramer, a manpower specialist with the Labor Department: "A number of States are exploring ways to provide jobs in either the public or the private sector to get people off the welfare rolls."

By Mr. LUGAR:

S. 1889. A bill to terminate the authorization of the navigation study and survey of the Wabash River, Ind.; to the Committee on Environment and Public Works.

Mr. LUGAR. Mr. President, the legislation I am introducing today would terminate the authorization of the navigation study and survey of the Wabash River in Indiana.

In recent weeks, an enormous amount of public debate has surrounded the scores of water projects under study or construction by the Army Corps of Engineers. And this debate has been beneficial, because it has shed light on the inordinate expense and, frequently, the obsolescence of many of these projects.

The Senate recently adopted as part of the Water Resources Development Act a bill which I introduced earlier to deauthorize further study, planning, property acquisition, construction or other activity on the Lafayette Dam/Wildcat Creek Reservoir and the Big Pine Dam and Reservoir in Indiana. This vote struck a double blow for environmental preservation and fiscal responsibility. The rising costs of those projects, coupled with potential damage to the environment, far exceeded any foreseeable benefits that might have come from these programs.

Mr. President, a similar argument can legitimately be made in opposing the so-called Wabash Canal.

This project is today more than a century and a half old. Arguments for its construction, perhaps once valid, are no longer defensible by any standards, yet requests for funding and further study still linger. A companion bill, H.R. 6164 is being sponsored by Representatives SHARP, CORNWELL, FITHIAN, HAMILTON, JACOBS, and QUAYLE, of Indiana, and Representative SIMON of Illinois. I am hopeful that this cooperative effort will put an end to this ill-fated project once and for all.

To provide comprehensive background on this issue, I call my colleagues' attention to an article by Richard S. Simons entitled "The Great Canal Boondoggle," published in the June 12 issue of the Indianapolis Star's Sunday magazine. This carefully researched piece catalogs the amazing recuperative powers of the Wabash Canal idea—and the accumu-

lated drain on taxpayer dollars which can result from a failure to terminate projects of this type.

The "sun must set" for good on the Wabash Canal, and the bill I am introducing today is intended to do just that.

Mr. President, I ask unanimous consent that my bill—and Mr. Simons' article—be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 1889

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, that the navigation study and survey by the Secretary of the Army, acting through the Chief of Engineers, of the Wabash River, Indiana, is not authorized after the date of enactment of this Act.

THE GREAT CANAL BOONDOGGLE—HOW FOR YEARS PLANNERS HAVE DUG INTO THE TAXPAYER'S POCKET WITHOUT EVER DIGGING AN INDIANA WATERWAY

(By Richard S. Simons)

Nearly 150 years ago, Indiana fulfilled a longtime dream by digging a navigation canal between Toledo, Ohio, on Lake Erie and Evansville on the Ohio River. Within a surprisingly short time, however, it collapsed financially and physically, bankrupted the state and dissolved into a useless chain of stagnant pools and ditches.

Despite this unhappy reality, certain Hoosiers have enjoyed a canal dream that recurs with the regularity of a summer TV rerun. Since the project has surfaced regularly since about 1800, it is, without doubt, one of America's longest-running political pork barrel acts. It would be comic if it didn't reach so deeply into the taxpayers' pockets.

The current dream again would link the Ohio and Lake Erie by canal.

For the first 50 years, the canal dream was resurrected in Indiana spasmodically. But during the last century, it has been a study in perpetual monetary motion.

The ink scarcely dries on one rejection report before Congress appropriates more funds for yet another study. Sometimes, due to news leaks, Congress dips anew into the pork barrel before the report is made public on the last study, and rejection.

The Army Corps of Engineers, which six times has vetoed the idea of a canal as unfeasible, spent about $1 million on the current study. The first several surveys combined only cost about a half-million.

Clearly the cost of determining that a canal in Indiana is not economically feasible has continually gone up. But so has the estimated cost of building this unfeasible canal.

The first proposal for a canal in 1828 was priced at $65,000 and rejected as too costly. Now the estimated tab is as high as $5 billion, depending on who is doing the talking.

Representative Philip Sharp (D-10th District) has introduced a measure to cut off further funds. Five other Hoosier representatives are co-sponsors.

But, on the basis of past history, it would appear folly to think the canal log-rolling will cease. Proponents continue to contend it would be a boon to coal and grain shippers and would attract new industry, overlooking rail and highway facilities that already parallel proposed canal routes.

Backers include the Wabash Valley Association and its governmental offspring, the Wabash Valley Interstate Commission, although the commission has been stripped of nearly all power.

Opposing the canal are the Coalition on American Rivers, private transportation companies, the Izaak Walton League, some labor unions, numerous Audubon Societies and a variety of local civic groups. Even the Corps of Engineers, which rarely has been known to favor nature, has maintained its objections for at least 75 years.

Nevertheless there has been a century of canal promotional efforts, economic studies, engineering surveys and congressional appropriations.

The main dream is repeating the entire Cross-Wabash project, the one which was built once and failed. When it was in operation, it was the longest canal in North America. The smaller dream is merely to improve the lower Wabash River.

Other versions of these two dreams have been proposed. Sometimes a branch is suggested off the main canal from Lafayette to Lake Michigan. Others would attack a branch near Cayuga and follow the Vermillion, Iroquois and Kankakee rivers toward Chicago.

Another version suggests going from Lake Erie to Fort Wayne, then across northern Indiana to Lake Michigan.

The goal of improving the lower Wabash calls for creation of a river-canal system from the Ohio River up to Mt. Carmel, Ill., or maybe as far north as Terre Haute. This version usually is proposed in times of stress and suggests that this shipping route then could be put in a holding pattern until a more favorable canal-building climate permitted realization of the entire canal dream.

The historical backdrop for the entire idea is one of disaster. The original canal resulted in bankruptcy for the state. The uncompleted canal was turned over to creditors. Because of this, Indiana shortly thereafter constitutionally prohibited bonded debt for the state, creating the pay-as-you-go policy which is supposed to still be in effect.

French fur traders, portaging their pirogues over the Wabash route, originated the canal idea during the 18th Century. Settlers who followed took up the cry as early as 1800. Eighteen years passed, however, before Congress financed a survey. Recommendation: A six-mile canal.

The idea languished, however, for 10 years until Congress ordered a second survey. This time the idea grew to channel improvement downstream from Logansport at an estimated cost of $65,000.

Again, nothing came of it, partly because President Andrew Jackson vetoed a Wabash Valley navigation bill in 1834. "Too extravagant," he snorted.

But by the 1830s, Hoosiers had incurable canal fever. The 1836 legislature passed the Mammoth Internal Improvement Act, which provided for numerous canals, railroads and turnpikes. The Wabash and Erie Canal was to be the star of the show and despite occasional protests that the onrushing railroads were the wave of the future, digging began. An ecstatic buoyancy seized the public.

But three years later the bubble burst. The state went bankrupt. Workmen laid down their picks and spades and walked off the job. All construction halted.

Creditors took possession and, completed the canal to Lafayette in 1843. Ten years later, it reached Evansville.

But inadequate traffic never reached projections and continual massive vandalism complicated by lesser natural disasters closed the canal below Terre Haute within seven years. Fourteen years later, the entire route was abandoned as a through waterway and no further effort was made to operate it. The subsequent state constitution which prohibited bonded debt showed the Hoosiers had learned a lesson, but, as future events showed, not permanently.

Meanwhile, other efforts were made to navigate the unwilling Wabash. A private firm, Wabash Navigation Company, completed a dam and locks near Mt. Carmel, Ill., in 1849. It cost $70,000. Unable to make a go of it, the firm sold out to the Federal government for a 10th its original investment. In 1872, Congress funded a plan to rebuild the dam and clear the river for navigation. The price tag expanded geometrically, as it has done with each subsequent Wabash Navigation Company's expenditure.

Meanwhile, back at the canal, in 1880, Congress look another look and ordered a survey between Toledo and Lafayette costing $15,000. The verdict: A canal would cost $25,000,000—up $24,935,000 from the projected cost in 1828. Even the Federal government thought twice and abandoned the idea.

During ensuing years, channel improvements were completed on the lower river, pressure mounted for a canal to connect Lakes Erie and Michigan via Fort Wayne and Congress once more looked into another Toledo-Evansville canal.

Came 1885 and Congress appropriated funds to rebuild the Grand Rapids lock and dam in the Wabash near Mt. Carmel. But things moved slowly. It required nine years to do the job, but after only eight years of use, Congress discontinued the funds which it had authorized in 1870. Too little traffic, the lawmakers said.

Twenty-three years later, Congress got around to repealing the law that authorized the funding. But the move was academic. Nearly a quarter century of neglect had reduced the dam to the point of no return.

In 1902 Congress halted all funding for navigational improvements but also appropriated $5,000 to re-survey the Wabash below Vincennes, and then for good measure threw in a survey upstream to Perrysville in Vermillion County. Estimated cost up to Vincennes: $3,045,000 or nearly four times the cost of the 1872 improvement.

Further pressure resulted in a public hearing at Vincennes. In 1904, the Board of Engineers for Rivers and Harbors sidestepped a firm decision by calling the project "premature."

Four years later, the Wabash canal project languishing, Congress took a new tack. It considered building a canal to connect Lakes Erie and Michigan via Fort Wayne and earmarked $50,000 for a survey.

But the river route still kicked feebly. In 1909, Congress authorized yet another survey below Mt. Carmel, Ill., and a year later flew in the face of the engineers who rejected it by ordering a new study all the way upstream to Terre Haute. When results were tabulated, four years later, estimated cost was $7,900,000, well over double the Vincennes project esimate eight year earlier.

By 1911, results were in from the Great Lakes-Fort Wayne canal survey. Cost: $43,000,000. Verdict: Not economically feasible.

Evidently sensing the bad news but not waiting for the official report, canal supporters joined ranks behind the 1911 Rivers and Harbors Act, which sent surveyors swarming over northern Indiana at a $50,000 cost to determine which of nine routes would be most practical for the canal which already had been rejected in concept.

Despite repeated official rejections, canal frenzy began to build as it had during the 1830s. Numerous canal associations organized and issued rosy predictions. Fort Wayne activists foresaw ships steaming through their city within five years. A new survey was urged. By this time its cost had jumped to $250,000.

The urgency of World War I temporarily sidetracked canal projects but by the early '20s, they were back in full bloom. A prominent Indianapolis businessman in 1925 publicly recommended that the frequently rejected canal be re-routed through the capitol city. He predicted that nearly all ocean-going ships could call at Indianapolis, which would become the Midwest's leading shipping center. Steel mills, cotton, wool and rubber factories, shipyards and airplane factories would swarm in and the city would grow to

a population of 1,000,000. An additional 100,000 transient workers also would be needed, he declared.

Such unbounded dreams brought the canal projects back in full force and in 1927 Congress instructed the Army Corps of Engineers to undertake a major resurvey. Six years and thousands of dollars later the verdict came in: Cost was unjustifiable. The Wabash portion would cost $110,000,000 and there would be "no considerable commerce" unless the canal would be extended to Toledo. This would run the price tag up to $160,000,000.

The river is not so located for trunk traffic, the report stated, and local traffic would not justify the expense. Reservoirs would not effect any substantial reduction in Mississippi River floods.

Again in 1946, the Army Engineers rejected a canal project; in 1957, the Indiana Senate requested yet another Great Lakes canal survey, and in 1967, the Corps reported that an Ohio River-Terre Haute improvement was not economically feasible. This was no news. The corps had reached the same conclusion about Indiana waterways in 1902, 1909, 1911, 1933 and 1946.

But canal enthusiasts pretended not to have heard. Only a year after the latest rejection, the merry-go-round began to move again. Four years and numerous public hearings later, the Corps declared the estimated $86,000,000 cost of a lower Wabash improvement was unjustified.

After a short three-year breather, however, the United States Senate proposed $135,000 to take another look at the rejected canal and the House proposed a $40,000 survey of the lower river. Estimated canal costs now had exploded to $243.5 million.

In addition to the cost of digging the canal and preparing it for navigation, there is the nagging problem of finding enough water to keep it full. Hydrologists doubt that the area's rivers can provide the depth necessary for floating barges. Opponents are closing in on expansion of the system of Upper Wabash reservoirs, which some say are being constructed with a canal in mind.

Incredible as it may seem, one proposal has been to bring the water from Alaska through a feeder system that would stretch two-thirds the width of the continent. The proposed Alaskan Ramparts Dam there would flood an area larger than the state of New Jersey.

With the Cross-Wabash Canal effectively blocked for the moment, attention turned to a short river/canal system through the lower 42 miles of the Wabash Valley. Estimated cost to the taxpayer would be $387 to $390 million, up from $86 million four years earlier and $243.5 million the previous year.

The Indiana General Assembly, evidently disenchanted, sliced the Wabash Valley Interstate commission's annual appropriation from $36,000 to a token $1. The Corps now has placed a $1 billion construction price on the Cross-Wabash Canal, although the Izaak Walton League, one of the most vociferous opponents, says the entire canal package will cost nearer $5 billion.

Meanwhile, as word leaked out that the Corps' latest report will reject the project for the 12th time, plans pushed forward for a repeat survey of the lower Wabash and the Indiana Committee for the Humanities awarded $5,812 to a Ball State University professor to study related effects.

Old canal dreams, it seems, never die.

By Mr. WILLIAMS:

S. 1890. A bill to extend commuter rail passenger services operated by the Consolidated Rail Corporation, to provide for the adequate insurance of risks incurred in the operation of such services, and for other purposes; to the Committee on Commerce, Science, and Transportation.

THE COMMUTER RAIL PASSENGER SERVICE CONTINUATION ACT OF 1977

Mr. WILLIAMS. Mr. President, today I am introducing a bill to improve ConRail's commuter rail program.

ConRail currently operates most of the commuter service that was previously provided by the bankrupt railroads in the Northeast.

Under the Regional Rail Reorganization Act of 1973, ConRail was required to honor the bankrupt railroads' long-term commuter contracts with State and local authorities. Services now being operated by ConRail under these preconveyance contracts include former Penn Central services in New York and Connecticut and former Erie Lackawanna services in New Jersey. ConRail's obligation to continue these services after the expiration of the contracts is, however, unclear.

This bill would require ConRail to continue such services as long as a State or local authority provides a subsidy adequate to cover the cost of the service.

Commuter services that were not covered by long-term contracts, including most of the services in Pennsylvania and New Jersey, were preserved under the Railroad Revitalization and Regulatory Reform Act of 1976. This act required ConRail to continue all services that were being provided by the bankrupt carriers at the time of conveyance. State and local authorities were in turn required to subsidize the service. The level of subsidy was determined according to standards developed by the Rail Services Planning Office.

Since the conveyance of rail properties to ConRail, however, State and local authorities have wanted to modify the routings or increase the frequency of some services, or to extend service to additional lines. Unfortunately, under present law, there is no provision for ConRail to operate these services.

The bill I am introducing would require ConRail to provide modified or additional services if adequate compensation is provided by State or local authorities.

I believe these provisions will help to assure both continuity and flexibility in commuter rail service.

Another problem that has arisen in ConRail's commuter service operations is that of catastrophic liability insurance.

Subsidies provided to ConRail by State and local authorities for the operation of commuter service include the costs of insuring ConRail against losses due to accidents. However, ConRail has been unable to obtain insurance for certain losses—those below $2 million and those over $50 million per occurrence. Some States, on the other hand, are prohibited by law from guaranteeing the payment of unpredictable losses.

To resolve this dilemma, this bill would permit the U.S. Railway Association to reimburse ConRail or the State or local subsidizer for any uninsurable losses of up to $50 million. The Rail Services Planning Office would have to certify that ConRail has sought in good faith and failed to obtain insurance before ConRail could be reimbursed for any accident losses.

The third issue this bill addresses involves maintenance projects on commuter lines.

Federal assistance is currently being provided for rehabilitation projects to correct conditions of deferred maintenance on commuter lines. Such assistance will be available for a 2½-year transitional period following conveyance to ConRail, with the Federal contribution decreasing each year. The Urban Mass Transportation Administration, which administers this assistance, has contended that the Federal share of the cost of a deferred maintenance project is determined by the date of completion of the project. But many of the projects will take several months to complete. A project could be started during a period of 90 percent Federal assistance and not completed until the Federal share dropped to 50 percent.

Under this bill, the Federal share would be determined by the date of initiation of a project. This is comparable to an amendment to the rail freight assistance program proposed by the distinguished chairman of the Surface Transportation Subcommittee, Senator LONG.

Mr. President, I ask unanimous consent that the bill be printed at this point in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1890

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, that this Act may be cited as the "Commuter Rail Passenger Service Continuation Act of 1977."

SEC. 101. FINDINGS AND PURPOSES.

(a) The Congress finds and declares that—

(1) Essential rail commuter passenger services in the midwest and northeast region are provided by the Consolidated Rail Corporation.

(2) It is the policy of Congress that the corporation, which must also provide essential rail freight services in the region, continue to provide and extend commuter passenger services where a state or regional or local authority provides adequate financial assistance.

(3) Certain states and regional and local authorities which are otherwise able to provide this assistance cannot provide assurances that the costs of catastrophic losses not presently identifiable or insurable will be subsidized if and when these costs occur.

(4) Federal action is required to insure that the Corporation is able to extend new commuter services where adequate subsidies are available and to protect the Corporation, states and regional and local authorities from catastrophic losses for which insurance is unavailable from private insurance carriers.

(b) It is therefore declared to be the purpose of Congress in this Act to amend the Regional Rail Reorganization Act of 1973 to permit the extension of commuter services where an adequate subsidy is available and to provide for the adequate insurance of risks incurred by the Corporation, the states and regional and local authorities in the provision of rail commuter passenger services not insurable by private insurance carriers.

SEC. 201. EXTENSION OF COMMUTER SERVICES.

(a) Section 304(e)(4) of the Regional Rail Reorganization Act of 1973 is amended:

(1) By adding "or" to the end of subparagraph "B" and

(2) By adding a new subparagraph "C" as follows:

"(C) Offers a rail service continuation payment, pursuant to subsection (c)(A)(2) of this section and regulations issued by the Office pursuant to Section 205(d)(5) of this Act, for the operation of rail passenger service provided under an agreement or lease pursuant to Section 303(b)(2) of this title or subsection (c)(2)(B) of this section where such offer is made for the continuation of the service beyond the period required by such agreement or lease."

(b) Section 304(e) of the Regional Rail Reorganization Act of 1973 (45 U.S.C. 744 (e)) is amended by adding the following new subparagraph:

"(7) If a State (or a local or regional transportation authority) in the Region offers to provide payment for the provision of additional rail passenger service (as hereinafter defined), the Corporation shall undertake to provide such service pursuant to this subsection. An offer to provide payment for the provision of additional rail passenger service shall be made in accordance with subsection (c)(2)(A) of this section and under regulations issued by the Office pursuant to section 205(d)(5) of this Act, and shall be designed to avoid any additional costs to the Corporation arising from the construction or modification of capital facilities. The State (or local or regional transportation authority) shall demonstrate that it has acquired, leased, or otherwise obtained access to all rail properties other than those designated for conveyance to the National Railroad Passenger Corporation pursuant to section 206 (c)(1)(C) and 206(c)(1)(D) of this Act and to the Corporation pursuant to section 303 (b)(1) of this title necessary to provide the additional rail passenger service.

As used in this subsection, additional rail passenger service shall mean rail passenger service (other than rail passenger service provided pursuant to the provisions of paragraphs (2) and (4) of this subsection) including, but not limited to, extended or expanded service and modified routings, which is to be provided over rail properties conveyed to the Corporation pursuant to Section 303 (b)(1) of this title, rail properties conveyed to the National Railroad Passenger Corporation pursuant to this Act or over any other rail properties to which a State (or local or regional transportation authority) has obtained access. Any provision of this subparagraph to the contrary notwithstanding, the Corporation shall not be required to operate additional rail passenger service over rail properties leased from or owned or leased by a profitable railroad in the Region."

SEC. 301. CATASTROPHIC LOSS INDEMNIFICATION.

(a) Section 304(e) of the Regional Rail Reorganization Act of 1973 (45 U.S.C. 744 (e)) is amended by adding the following new paragraph:

"(8) If the Director of the Rail Services Planning Office finds (i) that the Corporation or a State (or a local or regional transportation authority) as a result of the operation of rail passenger service required to be operated pursuant to this subsection, has incurred liabilities for damage to persons or property which are not underwritten by private insurance carriers, and (ii) that the Corporation or the State (or local or regional transportation authority) has, prior to incurring such liabilities, exercised due diligence in attempting to secure such insurance, the Corporation or the State (or local or regional transportation authority) shall be entitled to reimbursement pursuant to section 211 (j) of this Act in an amount required for full payment of such liabilities.

(b) Section 211 of the Regional Rail Reorganization Act of 1975 (45 U.S.C. 741) is amended:

(1) By inserting in subsection (a) thereof, following the phrase "as it shall prescribe,", the words "to indemnify the Corporation or a State (or a local or regional transportation authority) for rail passenger casualty losses as provided in section 304(e)(8) of this Act;"; and

(2) By adding the following new subsection:

"(j) The Association is authorized upon being notified in writing of a finding of the Director of the Rail Service Planning Office pursuant to section 304(e)(8) of this Act and of a claim for casualty loss indemnification by the Corporation or a State (or a local or regional transportation authority) for such losses in amounts not to exceed for any one casualty occurrence $50,000,000 in excess of privately underwritten losses in accordance with procedures established by the Association."

(c) Section 210(b) of the Regional Rail Reorganization Act of 1975 (45 U.S.C. 74(b)) is amended:

(1) By striking the number "395,000,000" and inserting in lieu thereof the number "495,000,000;"

(2) By striking the word "and" in paragraph (1) thereof; by striking the period at the end of paragraph (2) thereof and by inserting ": and" in lieu thereof; and

(3) By adding the following new paragraph:

"(3) to indemnify liabilities incurred by the Corporation or a State (or a local or regional transportation authority) in the manner prescribed in section 304(e) of this Act."

SEC. 401. Section 304(e)(5)(C) of the Regional Rail Reorganization Act of 1973 is amended by adding a new sentence at the end thereof as follows:

"The date of initiation of any such program to correct deferred maintenance shall establish the assistance period from which the reimbursement to which States or local public bodies or agencies thereof shall be provided."

By Mr. BELLMON:

S. 1891. A bill to amend title IV of the Social Security Act to require that dependent children of unemployed fathers be eligible for assistance under the aid to families with dependent children program, and to provide 100 percent Federal funding for such aid; to the Committee on Finance.

Mr. BELLMON. Mr. President, the question of "Welfare Reform" will soon be one of the major issues before Congress. The President has said he will send to the Congress in early August, a comprehensive proposal for restructuring public assistance programs. Each day's newspapers carry new rumors about the content of the administration's proposal. I look forward to the President's proposals.

There are many problems in our present programs. I am pleased that we are probably going to reform the food stamp program this year. I believe the changes the Senate has adopted as part of the omnibus farm bill (S. 275), will help that program to respond more sensitively to the needs of low-income families, while improving the administrative aspects of the program and helping assure that fraud and error are minimized.

Mr. President, I hope no one expects a comprehensive reshaping of the whole array of public assistance programs to come quickly or easily. The President and the Secretary of Health, Education, and Welfare have found that preparing a "Welfare Reform" proposal is considerly more difficult than the President assumed when he was making promises during last year's campaign. The Congress, which must mold a majority position out of the combined perspectives of 535 Members, is likely to have an even more difficult and time-consuming effort than is the administration in reaching a final position on "Welfare Reform."

While we are studying and debating the President's proposals and other ideas for major redesign of public assistance programs, we ought to do all we can to improve our present programs. Our colleagues on the Senate Finance Committee recognize this need and they are currently holding hearings on a number of proposed public assistance amendments. Some of these amendments have already been endorsed by the House; others are being addressed by the Finance Committee although they are not included in the House-passed bill (H.R. 7200, passed by the House of Representatives on June 14, 1977).

Mr. President, I hope the bill I now offer will receive early and positive consideration by the Finance Committee and then by this body. This bill would respond to one of the most telling criticisms of the aid to families with dependent children—AFDC—program. I refer to the charge that the program is antifamily in that, in nearly half the States, a family cannot qualify for assistance if it includes an employable male. This means that those men who have no other means of supporting their families may have no choice other than to desert their families so that the family can qualify for AFDC.

Mr. President, this is not the kind of public policy we should have in the United States of America. I am aware of some of the concerns that led to this provision in our current law. But experience with the unemployed fathers portion of AFDC in the 26 States—and the District of Columbia—which have the program has shown that it remains a small, but important component of the overall AFDC program. Currently, there are only about 150,000 families nationally in the unemployed fathers programs out of about 3½ million families receiving AFDC.

Estimates my staff have received informally from HEW indicate it would cost the Federal Government about $160 million per year to pick up the full cost of the AFDC—unemployed fathers—AFDC–UF—program in those States which do not now have it. It would obviously be unfair for the Federal Government to pay the full cost of the program only in those 24 States. Therefore, this bill provides that 100 percent of the costs of benefits to AFDC–UF families in the 50 States and the District of Columbia be assumed by the Federal Government, effective in fiscal year 1979.

Mr. President, this proposal would provide about $300 million in fiscal relief to those 26 States—plus the District of Columbia—which already have the AFDC–UF fathers program. And, it would correct a major deficiency in the AFDC program in the other 24 States. I believe the total cost of this bill—about $460 million—is justified by the significant movement it would bring toward a better public welfare system in this Na-

tion, and by the fiscal relief it would provide to some of our States which are experiencing the most strain from the welfare costs they must pay.

I ask unanimous consent to have printed in the RECORD a preliminary table obtained from HEW. This table shows the estimated benefits of this bill by State. The first column of figures are the total estimated Federal costs per year after adoption of the changes I propose. The second column of figures shows the cost of the AFDC–UF program in those States which are now operating it.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

NET COSTS TO FEDERAL GOVERNMENT AND SAVINGS TO STATES FROM MANDATING AND FEDERALIZING THE AFDC–UF PROGRAM (1978)

	AFDC–UF dollars, additional 1978 net Federal costs of mandating and federalizing UF[1]	AFDC–UF dollars, State savings 1978 from mandating and federalizing UF[2]

By Mr. THURMOND:

S. 1892. A bill to authorize and direct the Secretary of Agriculture and the Secretary of the Interior to quitclaim retained rights to certain land in Orangeburg County, S.C., to the State superintendent of education of the State of South Carolina; to the Committee on Agriculture, Nutrition, and Forestry.

Mr. THURMOND. Mr. President, I am today introducing legislation which would turn over all rights of certain property in Orangeburg County, S.C., to the State superintendent of education of the State of South Carolina. Specifically, this legislation would authorize the Secretaries of the Departments of Agriculture and Interior to convey the reversionary interests of the U.S. Government in an 18.10-acre tract of land located in Orangeburg County to the State superintendent of education.

As I understand it, this property was originally secured by the State department of education to be used as a camp by a group known as the New Homemakers of South Carolina for educational and recreational purposes. The 1945 transfer provided that the U.S. Government would maintain a 61.9-percent reversionary interest in the surface and mineral rights. In the event the property should ever cease to be used for the intended recreational and educational purpose the ownership would revert back to the Government.

It is my understanding that this property is no longer being used for the purposes for which it was acquired. However, the South Carolina Association of Future Homemakers of America, which took in the New Homemakers student organization after complete integration of the public schools, would like to acquire full title to this land. This cannot be accomplished without the State superintendent of education having full title to the property which would then have authority to dispose of the property.

Mr. President, the New Homemakers group made substantial investment in improving this property when it was used as a camp. Additionally, three adjoining tracts of land, comprising a total of 8.31 acres, were purchased by the Homemakers group to provide additional needed space.

Members of student organizations and home economics teachers actively used the camp from 1945 through 1970. They maintained and expanded the facilities and equipment through dues, local moneymaking projects, and personal contributions of time and money. I think it is evident that the Future Homemakers organization has made substantial investments in this 18.1-acre tract of land and in neighboring property owned entirely by the association.

I have been advised that the Government's interest cannot be released administratively. Therefore, Congress must enact special authorizing legislation in order for the Secretary of Agriculture and the Secretary of the Interior to relinquish the Federal Government's reversionary interest in the property to the State superintendent of education.

There are numerous precedents for this type of legislation in unique circumstances such as these. To cite one example from my home State, I would point out that Public Law 93–457 authorizes the Secretaries of Agriculture and Interior to convey a quitclaim deed to the Lee County, S.C., Board of Education, releasing the U.S. Government's reversionary interests in certain tracts of land. I believe the situation with respect to this property in Orangeburg County is very similar.

Mr. President, from reports I have received, the property is in a state of disrepair, because it is not currently used. The rundown appearance of the camp is of concern to members of the community, and they would like for it to be cleaned up. However, since no one has full title to the property, it is difficult to get anyone to take the time and spend the money necessary to fix up the property.

Therefore, Mr. President, I feel that it is in the best interest of the public to give full title to this property to the State

superintendent of education, who can then negotiate an appropriate settlement for the property. I hope that this legislation can be promptly approved by Congress.

Mr. President, I ask unanimous consent that a brief history of this tract of land be included in the RECORD at the conclusion of my remarks. This information further explains the background and need for this legislation. I also ask unanimous consent that this bill be printed in the RECORD following the exhibit and referred to the appropriate committee for prompt consideration.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 1892

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of Agriculture and the Secretary of the Interior are authorized and directed to execute and deliver to the State superintendent of education of the State of South Carolina, his successors and assigns, a quitclaim deed conveying and releasing unto the said State superintendent of education of the State of South Carolina, his successors and assigns, all right, title, and interest of the United States of America in and to a certain tract of land, situated in Orangeburg County, South Carolina, conveyed by the United States to the State superintendent of education of the State of South Carolina, by a deed dated December 9, 1945, and recorded on May 17, 1946, in the land records of the office of the clerk of court for Orangeburg County, South Carolina, in deed book 124, page 471.

BRIEF HISTORY OF NEW HOMEMAKERS CAMP, ORANGEBURG, S.C.

On December 6, 1945, a tract of land consisting of 18.10 acres was secured from the Farm Security Administration and deeded to James H. Hope, State Superintendent of Education. The land was secured through the State Superintendent of Education for $600 paid by the New Homemakers of South Carolina, an organization for Negro students in high school home economics.

The land described in the deeds as a tract of land of the Orangeburg Farms Project of Farm Security Administration was secured for a camp to be used for educational and recreational purposes by the New Homemakers of South Carolina.

The advisory committee of the association authorized the Exectuive Secretary to borrow $3,000 to move and rebuild buildings on the campgrounds, from camp 42 near Vance, South Carolina.

Three additional tracts of land indicated on the plat as tracts 2–3–4 were purchased by the organization to provide additional needed space. These three tracts of land comprising a total of 8.31 acres surround the tract secured from the Farm Security Administration. The camp was operated for use by members of the organization through 1970. From 1945 through 1970 members of the organization and home economics teachers maintained and expanded the facilities and equipment through dues, local money-making projects and personal contributions of time and money.

The organization of New Homemakers of South Carolina ceased to exist after complete integration of schools and students became members of the national and state organization of Future Homemakers of America. Other camping facilities in the state under the supervision of the FHA were used by these students for their camping program and this property was no longer needed for this purpose.

The organization of the South Carolina Association of Future Homemakers of America desires to secure a clear deed to this property with the privilege of using the property to recover some of the investment made by the organization, make the adjoining property owned by the organization useful, and to use any benefits from the property for all members of the Association.

By Mr. KENNEDY (for himself, Mr. SCHWEIKER, Mr. JAVITS, and Mr. PELL):

S. 1893. A bill to amend the Public Health Service Act to establish the President's Commission for the Protection of Human Subjects of Biomedical and Behavioral Research, and for other purposes; to the Committee on Human Resources.

Mr. KENNEDY. Mr. President, I rise on behalf of myself and Senators JAVITS, SCHWEIKER, and PELL to reintroduce the President's Commission for the Protection of Human Subjects of Biomedical and Behavioral Research Act, which reestablishes the National Commission for the Protection of Human Subjects of Biomedical and Behavioral Research as a Presidential Commission, broadens its jurisdiction, and expands the composition of its membership. Similar legislation passed the Senate last year, but was not acted upon in the House of Representatives.

Mr. President, this Nation was shocked several years ago by the revelations of unethical research and unethical medical practice carried out in programs sponsored by Department of Health, Education, and Welfare funds. In Tuskeegee, Ala., black men were enrolled in a syphilis study and were denied treatment for this dread disease for over 30 years, long after the time that syphilis became an easily treated disease. In Montgomery, Ala., Alice and Minnie Relph, two teenage girls, one of whom was retarded, were sterilized without their parent's knowledge or consent. In Mississippi, experimental phychosurgical techniques were carried out without proper experimental designs and without fully informed consent.

During the Health Subcommittee's investigations of these matters. Dr. Bernard Barber, the distinguished sociologist from Barnard University in New York City, presented the results of his national survey of biomedical research programs which raised profound ethical questions about all kinds of research in all kinds of settings.

The committee was shocked to see the extent of the use of approved drugs for unapproved purposes. DES was widely used as a morning-after contraceptive across the Nation, especially on college campuses, without proper informed consent. In fact, it became clear that in the United States, in spite of a strict drug regulatory system, drugs are frequently used for new purposes. Sometimes, these purposes turn out to be legitimate and approval subsequently follows. Oftentimes, these uses are not legitimate, approval never follows, and patients have no recourse except after they are injured. In the State of Tennessee, the experimental drug Depo-Provera was in widespread and common use in the family planning clinics throughout that State as an injectable contraceptive. No informed consent accompanied the use of this experimental drug. Indeed, the drug was used at the Arlington School and Hospital for the Mentally Retarded. Again, there was no informed consent.

The subcommittee also heard of the use of medical devices which were developed in isolation, without careful scientific scrutiny, and which did grievous harm to many patients.

The common thread of all of these stories was the absence of informed consent, the absence of adequate protection for the patient. In all cases, the doctor or the researcher was able to operate without the checks and balances which have since been accepted as an integral part of the biomedical and behavioral research process.

The Congress responded to these outrageous abuses by enacting the National Research Act of 1974, which established the National Commission for the Protection of Human Subjects of Biomedical and Behavioral Research. Because the hearings had focused on abuses in the Department of Health, Education, and Welfare, and because it was believed that most of the violations occurred in programs under the purview of that agency, and because focusing on that agency alone was in itself a mammouth job, the Commission's jurisdiction was limited to the programs of HEW. As structured, the Commission, which has been in existence for 10 months, reviews the policies for the protection of human subjects in HEW. It specifically was charged with focusing on fetal research, psychosurgery, research on children, prisoners, and the mentally retarded, as well as the overall protection system for human subjects. It is charged with making recommendations in all of these areas. The Secretary of HEW, though not bound to follow the recommendations, must, if he chooses to disagree with the Commission, publish the reasons for his disagreement in the Federal Register so that all interested parties including the Congress will know and will have an opportunity to take corrective action if warranted. It also assures that the entire process will be a public and open one.

In establishing this Commission, the Congress clearly stated that the highly emotional issues involved in human experimentation required careful, scholarly study by a group of persons with a wide range of backgrounds. It was hoped that this interdisciplinary approach would focus the best minds in the country on the ethical dilemmas raised by human experimentation. I believe the first report of that Commission, the report to the Secretary on fetal research, illustrated the value and importance of the National Commission.

Mr. President, one of the responsibilities for the National Commission is to recommend to the Congress a mechanism for the expansion of its jurisdiction so as to cover all programs of biomedical and behavioral research which are conducted under Government funds regard-

less of which Federal agency administers those grants or contracts. I believe, however, that it is no longer necessary or desirable to wait for the Commission to make that recommendation. The revelations of the past months concerning biomedical and behavioral research abuses in the Department of Defense and the CIA underscore the urgent need to expand the National Commission's jurisdiction and to expand it now. The abuses that have been uncovered in the research programs of the Defense Department and the CIA are of a magnitude every bit as frightening, every bit as outrageous, and every bit as incompatible with the spirit of biomedical and behavioral research in this country, and warrant immediate action.

The full extent of abuses is still not known. The Defense Department itself is unable to recount to the Health Subcommittee the full extent of biomedical and research activities or the conditions under which they are carried out. We do know that research involving LSD was carried out on human subjects without their knowledge or consent. We do know that research was carried out without proper medical supervision. We do know that treatment for unexpected side effects was delayed because of the inadequate medical care. We do know that at least one death and several suicide attempts resulted from these research efforts. We do know that the LSD research experiment continued up until 1973, long after the initial hearings on human experimentation were being done by the Senate and long after the standards for the conduct of biomedical and behavioral research had altered in this country.

We also learned in these hearings that the unethical research carried out by the Defense Department usually bore a secret label. Although the Defense Department had policies enunciating high principles for the ethical conduct of biomedical and behavioral research, the abuses uncovered at the Senate hearings involved a complete departure from these principles. Experimentation boards designed to review all human subject research were bypassed by the Edgewood Arsenal in Maryland. The director of that arsenal claims never to have been instructed to send his protocols there. He also claims to have obtained informed consent from all of his patients, yet was able to furnish only a standard informed consent sheet—the same sheet was used for every single research project carried out there.

Now, Mr. President, we learn of new revelations from the CIA—revelations which make it clear that the human experimentation carried out by that agency is in violation of accepted ethical and moral standards, extended far beyond what we previously believed. Even now the extent of these research abuses is unknown.

Mr. President, the measure that I am introducing on behalf of myself and Senators JAVITS, SCHWEIKER, and PELL takes the long-needed step of assuring the people of this country that all research, no matter where it is conducted or by whom, if it is funded with Government money, will come under the purview of the President's Commission for the Protection of Human Subjects of Biomedical and Behavioral Research. The Commission will have its membership expanded to include the Secretaries of HEW and the Department of Defense, the Director of the CIA, and the Administrator of the Veterans' Administration as well as four Members from the House of Representatives and four Members from the Senate. The majority of members will still be non-Government employees. Current members of the National Commission will be expected to serve out the remainder of their terms. The purpose for the expansion of the membership is both to upgrade the importance and impact of the work of the Commission as well as to provide a mechanism whereby top secret research can be reviewed by those members of the Commission who have such clearance.

Mr. President, this Nation has always had a biomedical and behavioral research program second to none. The Commission gives this Nation a policy for the protection of human subjects of research second to none. It makes no sense to limit its jurisdiction. It makes no sense to have the Commission dissolved in 2 years to be replaced by a permanent advisory committee with the same responsibilities. The Nation needs a permanent Commission. This Nation needs a permanent Commission with the authority to standardize all biomedical and behavioral research conducted under Government funds. This legislation accomplishes this goal.

The Senate has seen fit to enact this measure before. It must enact it again. The time is right. The authority for the existing commission expires in December. Its track record is evident for all to see. It has earned a reputation for responsible, effective work in very difficult and controversial areas. We can look at its record with pride and look to the expansion of its responsibilities with optimism. Only after this legislation is enacted can we assure our constituents that the U.S. policy for the protection of human subjects of biomedical and behavioral research is second to none.

Mr. President, I ask unanimous consent that the full text of this legislation be printed in the RECORD at the conclusion of my remarks.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1893

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "President's Commission for the Protection of Human Subjects of Biomedical and Behavioral Research Act of 1977".

AMENDMENT TO THE PUBLIC HEALTH SERVICE ACT

SEC. 2. The Public Health Service Act is amended by adding after title XVII the following new title:

"TITLE XVIII PRESIDENT'S COMMISSION FOR THE PROTECTION OF HUMAN SUBJECTS OF BIOMEDICAL AND BEHAVIORAL RESEARCH

"ESTABLISHMENT OF COMMISSION

"SEC. 1801. (a)(1) There is established a Commission to be known as the President's Commission for the Protection of Human Subjects of Biomedical and Behavioral Research (hereinafter in this part referred to as the 'Commission').

"(b) The Commission shall be composed of eleven members appointed by the President by and with the advice and consent of the Senate. The President shall appoint—

"(1) five (and not more than five) members of the Commission from individuals—

"(A) who are or have been engaged in biomedical or behavioral research involving human subjects, and

"(B) who are especially qualified to serve on the Commission by virtue of their training, experience, or background; and

"(2) six members of the Commission from individuals—

"(A) who are not and have never been engaged in biomedical or behavioral research involving human subjects, and

"(B) who are distinguished in the fields of medicine, law ethics, theology, the biological, physical, behavioral and social sciences, philosophy, humanities, health administration, government, and public affairs.

"(c) No individual who is a full-time employee of the United States may be appointed as a member of the Commission.

"(d) Prior to the appointment of an individual as a member of the Commission under subsection (b), each such individual shall receive all agency and department security clearances necessary to assure such individual's access, as a member of the Commission, to information (as defined in section).

"(e) Until such time as the President acts to appoint members of the Commission under subsection (b), those members of the National Commission for the Protection of Human Subjects of Biomedical and Behavioral Research, who are serving upon the date of enactment of the Act, are deemed members of the Commission; Provided, That no classified information be made available to such members through a request of the Commission until appropriate security clearances be obtained by such members.

"(f) The term of office of each member of the Commission shall be four years; except that—

"(1) the terms of office of members first taking office shall begin on the date of appointment and shall expire, as designated by the President at the time of their appointment, four at the end of two years, four at the end of three years, and three at the end of four years;

"(2) * * * prior to the expiration of the term for which his predecessor was appointed shall be appointed for the remainder of such term; and

"(3) a member whose term has expired may serve until his Successor has been appointed.

"(g)(1) The members of the Commission shall elect a Chairman and one Vice Chairman from among themselves. Either the Chairman or Vice Chairman may be a scientist; however both shall not be scientists.

"(2) Seven members of the Commission shall constitute a quorum for business, but a lesser number may conduct hearings.

"(3) The Commission shall meet at the call of the Chairman or at the call of a majority of its members.

"(4) No individual may be appointed to serve as a member of the Commission, if such individual has served for two terms of four years each.

"(5) A vacancy on the Commission shall not affect the authority or activities of the Commission.

"(h) Members of the Commission shall receive compensation at a rate to be fixed by the Commission, but not exceeding for any day (including traveltime) the daily equivalent of the effective rate for GS–18 of the General Schedule while engaged in the actual performance of the duties vested in the

Commission, and shall be reimbursed for travel, subsistence, and other necessary expenses incurred in the performance of such duties.

"(i) The Secretary of Health, Education, and Welfare, the Secretary of Defense, the Director of Central Intelligence, the Director of the Office of Science and Technology Policy (established under the Presidential Science and Technology Advisory Organization Act of 1976), the Administrator of Veterans' Affairs, and the Director of the National Science Foundation shall each designate an individual to serve as a nonvoting, ex-officio advisor to the Commission.

"(j) The Commission may secure directly from any department or agency information necessary to enable it to carry out its duties. Upon the written request of the Chairman of the Commission, or eight members thereof, each department or agency shall furnish all information requested by the Commission which is necessary to enable the Commission to carry out its duties.

"DUTIES AND FUNCTIONS OF THE COMMISSION

"GENERAL

"SEC. 1802. (a)(1)(A) The Commission shall conduct a comprehensive investigation and study to identify the basic ethical principles which should underlie the conduct of biomedical and behavioral research involving human subjects.

"(B) In carrying out the provisions of subparagraph (A), the Commission shall consider at least the following:

"(i) The boundaries between biomedical or behavioral research involving human subjects and the accepted and routine practice of medicine;

"(ii) The role of assessment of risk-benefit criteria in the determination of the appropriateness of research involving human subjects;

"(iii) Appropriate guidelines for the selection of human subjects for participation in biomedical and behavioral research;

"(iv) Appropriate mechanisms to assure the full exercise of the rights and full protection of the interests of human subjects of biomedical and behavioral research;

"(v) The nature and definition of informed consent in various settings;

"(vi) The principles identified and developed by the National Commission for the Protection of Human Subjects of Biomedical and Behavioral Research; and

"(vii) All relevant work of the National Commission for the Protection of Human Subjects of Biomedical and Behavioral Research.

"(2) The Commission shall develop comprehensive and uniform policies, procedures and guidelines which should be followed in biomedical and behavioral research involving human subjects to assure that it is conducted in accordance with principles identified by the Commission under subsection (a)(1)(A) and concerning any other matter pertaining to the full exercise of the rights and full protection of the interests of human subjects of such research.

"(3) The Commission shall advise, consult with, and make recommendations to any department or agency concerning such administrative or other action as may be appropriate or necessary to apply the policies, procedures and guidelines developed under paragraph (2) to biomedical and behavioral research conducted, funded or regulated under programs administered by such departments or agencies, and concerning any other matter pertaining to the full exercise of the rights and full protection of the interests of human subjects of biomedical and behavioral research.

"(4) The Commission shall, from time to time, monitor the implementation of those policies, procedures and guidelines recommended by the Commission under paragraph (3).

"(b)(1) The Commission shall investigate and study biomedical and behavioral research conducted, supported or regulated under programs administered by any department or agency and involving children, prisoners, military personnel, and the institutionalized mentally infirm to determine—

"(A) The nature of the consent obtained from such persons or their legal representatives before such persons were involved in such research;

"(B) The adequacy of the information given them respecting the nature and purpose of the research, procedures to be used, risks and discomforts, anticipated benefits from the research, and other matters necessary for informed consent; and

"(C) The competence and the freedom of the persons to make a choice for or against involvement in such research.

* * * * *

ments if any for informed consent for participation in biomedical and behavioral research involving children, prisoners, military personnel and the institutionalized mentally infirm.

"(3) The Commission shall advise, consult with, and make recommendations to any department or agency concerning such administrative or other action as may be appropriate or necessary to assure that biomedical and behavioral research conducted, funded or regulated under programs administered by such department or agency meet the special requirements for informed consent, if any, identified by the Commission under paragraph (2).

"(c)(1) The Commission shall conduct an investigation and study of the scope, nature and extent of personal injuries to and deaths of individuals which were proximately caused * * * behavioral research program. Such study shall include recommendations for a method of compensation for such injuries and deaths.

"(2) Upon completion of the study, the Commission shall simultaneously submit copies of a report on such study to the appropriate departments or agencies and to the appropriate committees of Congress.

"(d)(1)(A) The Commission shall develop comprehensive and uniform policies, procedures and guidelines consistent with this part which should be followed by each department or agency in establishing, implementing, certifying and monitoring Human Investigation Review Boards in those entities which receive funds from or which are regulated by each such department or agency.

"(B) In carrying out the provisions of subparagraph (A), the Commission shall include among other matters, comprehensive and uniform policies, procedures and guidelines concerning—

"(i) The establishment, operation and functions of the Protocol Review Subcommittee and the Subject Advisory Subcommittee required under subsection (c) of section ;

"(ii) The nature and extent of public participation in the decisionmaking process of the Human Investigation Review Boards and Subcommittees;

"(iii) The inclusion of the public in meetings of such Boards and Subcommittees;

(iv) The requirement for public hearings by such Boards and Subcommittees; and

"(v) The requirement of public disclosure of decisions of such Boards and Subcommittees and the nature and scope of such disclosure.

"(2) The Commission shall advise, consult with, and make recommendations to any department or agency for such administrative or other action as may be appropriate or necessary to establish, implement, certify and monitor Human Investigation Review Boards in entities which receive funds from which are regulated by such departments or agencies.

"(3) Once a department or agency has required the establishment of Human Investigation Review Boards in those entities which receive funds from or which are regulated by such department or agency, the Commission shall, from time to time, monitor such department's or agency's policies, procedures, guidelines and other administrative actions.

"(f) The Commission shall continually review the ethical, social, and legal implications of all biomedical and behavioral research involving human subjects conducted, funded or regulated by any department or agency, and shall make appropriate recommendations to any such department or agency, for the protection of human subjects of such research.

"(g)(1) The Commission shall compile a complete list and record of decisions of Human Investigation Review Boards and shall annually publish reports of important decisions and distribute such reports to the public.

"(2) The Commission shall ensure communication among Human Investigation Review Boards as it determines necessary to permit such Boards to be informed about the activities, standards and decisions of such Boards.

"SPECIAL STUDY

"SEC. 1803. (a) The Commission shall undertake a comprehensive study of the ethical, social and legal implications of advances in biomedical and behavioral research technology. Such study shall include

"(1) an analysis and evaluation of scientific and technological advances in past, present and projected biomedical and behavioral research and services;

"(2) an analysis and evaluation of the implications of such advances, both for individuals and for society;

"(3) an analysis and evaluation of laws and moral and ethical principles governing the use of technology in medical practice;

"(4) an analysis and evaluation of public understanding of and attitudes toward such implications and laws and principles; and

* * * * *

public policy of such findings as are made by the Commission with respect to advances in biomedical and behavioral research and technology and public attitudes toward such advances. "(b)(1) The Commission shall simultaneously submit copies of a report on such study to the appropriate departments or agencies and to the appropriate committees of Congress.

"(2) The Commission may, if it deems it appropriate, include in such report recommendations to such departments or agencies and to Congress.

"DELIVERY OF HEALTH SERVICES

"SEC. 1804. (a)(1) The Commission shall identify the basic ethical principles which should underlie the delivery of health services to persons.

"(2) In carrying out the provisions of paragraph (1), the Commission shall—

"(A) study those basic ethical principles identified in subsection (a)(1)(A) of section 1802 for the purpose of determining their application to the delivery of health services to persons;

"(B) conduct a comprehensive investigation and study to identify those basic ethical principles which—

"(i) should underlie the delivery of health services to persons; and

"(ii) were either not identified under subsection (a)(1)(A) of section 1802 or if identified under such subsection were determined by the Commission to be inapplicable to the delivery of health services to persons.

"(b) The Commission shall develop comprehensive and uniform policies, procedures, and guidelines which should be followed in the delivery of health services to persons

to assure that such services are performed in accordance with principles identified by the Commission under subsection (a) and concerning any other matter pertaining to the full exercise of the rights and full protection of the interests of persons receiving health services.

"(c) The Commission shall advise, consult with, and make recommendations to any department or agency the Commission deems appropriate concerning such administrative or other action as may be appropriate or necessary to apply the policies, procedures, and guidelines developed under subsection (b) to the delivery of health services to persons and concerning any other matter pertaining to the full exercise of the rights and full protection of the interests of such persons.

"(d) The Commission shall, from time to time, monitor the implementation of those policies, procedures and guidelines recommended by the Commission under subsection (c) and adopted by departments or agencies.

"HUMAN INVESTIGATION REVIEW BOARDS

"ESTABLISHMENT AND OPERATION

"SEC. 1805. (a) Each department or agency shall, in consultation with the Commission—

"(1) develop policies, procedures and guidelines for the establishment and operation of Human Investigation Review Boards in entities which receive funds from or which are regulated by such department or agency;

"(2) require the establishment and operation of a Human Investigation Review Board by each such entity;

"(3) take such administrative or other action as may be necessary or appropriate to require the establishment and effective operation of a Human Investigation Review Board by each such entity.

"(b)(1) The members of each Human Investigation Review Board shall be appointed by the chief executive officer of the entity in accordance with policies, procedures, guidelines and regulations established by a department or agency.

"(2) No member of a Human Investigation Review Board shall be involved in either the initial or continuing review of an activity in which he has a conflict of interest as defined by the Commission, except to provide such information as may be requested by such Human Investigation Review Boards.

"(c) Each Human Investigation Review Board shall establish two subcommittees as follows:

"(1) a Protocol Review Subcommittee, which shall be responsible for approving, disapproving, or offering suggestions and modifications of protocols for experimental procedures;

"(2) a Subject Advisory Subcommittee, which shall be primarily concerned with the protection of the rights and interests of subjects of biomedical and behavioral research, and shall assure that human subjects are as well informed about the nature of the research as is reasonably possible.

"(d) Notwithstanding any other provision of law, no entity shall be required to establish more than one Human Investigation Review Board.

"(e) In a case where the policies, procedures, or guidelines of more than one department or agency conflict and a Human Investigation Review Board or an entity cannot resolve the application of such conflicting policies, procedures or guidelines, the Commission shall decide the resolution of such conflict.

"CERTIFICATION

"SEC. 1806. (a) Each department or agency which funds or regulates an entity with respect to biomedical and behavioral research involving human subjects shall certify that the Human Investigation Review Board of such entity is in conformity with the requirements of subsection B.

"(b) No human Investigation Review Board shall be certified by a department or agency unless such department or agency is satisfied that—

"(1) the entity has established a Human Investigation Review Board in such manner as is required by this title and by such department or agency;

"(2) the Human Investigation Review Board will operate in a manner so as to assure the full exercise of the rights and full protection of the interests of subjects of biomedical and behavioral research consistent with the ethical and moral principles identified by the Commission, pursuant to section 1801.

"DUTIES OF THE HUMAN INVESTIGATION REVIEW BOARDS

"SEC. 1807. It shall be the duty of each Human Investigation Review Board, established under section 1805, to—

"(a) establish policies for the review of research sponsored in whole or part by federal funds or required by federal regulation, consistent with the policies, procedures and guidelines of appropriate departments or agencies;

"(b) assume full responsibility to ensure that biomedical and behavioral research involving human subjects is carried out under the safest possible conditions and with the fully informed consent of the subject (or his family) in a manner fully consistent with the policies, procedures and guidelines of appropriate departments or agencies;

"(c) seek the consultative services of the Commission on any decision, or for the provision of information needed to arrive at a decision; and

"(d) initiate, if appropriate, the referral of particular decisions to the Commission in accordance with regulations promulgated by the Commission.

"MONITORING AND INSPECTION

"SEC. 1808. (a) A department or agency which has certified the Human Investigation Review Board of an entity shall, from time to time, monitor the operation and activities of—

"(1) such Board, and

"(2) such entity,

to determine whether the operation and activities of such Board and entity are in compliance with this title, and the policies, procedures, guidelines and regulations of such department or agency.

"(b)(1) A department or agency which has certified the Human Investigation Review Board of an entity shall, from time to time, inspect such entity to determine whether it is in compliance with this title, and the policies, procedures, guidelines and regulations of such department or agency.

"(2) In the case of an entity inspected pursuant to this section, the inspection shall extend to all tangible things therein, including records, files, papers, documents, processes, controls, and facilities, which such department or agency finds relevant or material to whether such entity is in compliance with this title, and the policies, procedures, guidelines, and regulations of such department or agency.

"(c) The monitoring and inspection authority of any department or agency, pursuant to this section, shall be limited to those operations, activities and tangible things which relate to research funded, in whole or in part, by or required pursuant to a regulation of such department or agency.

"RECORDKEEPING REQUIREMENTS

"SEC. 1809. If an entity has established a Human Investigation Review Board and such Board has been certified by a department or agency, such entity shall—

"(a) establish and maintain such records, make such reports, and provide such information as any such department or agency shall by regulation or order require to determine whether such entity is in compliance with this title, and the policies, procedures, guidelines and regulations of such department or agency; and

"(b) make such records, files, papers, documents, processes and controls which such department or agency finds material or relevant to whether such entity is in compliance with this title, and the policies, procedures, guidelines, and regulations of such department or agency available to such department or agency, or any of its duly authorized representatives for examination, copying, or mechanical reproduction on or off the premises of such entity upon the reasonable request therefor.

"(c)(1) A department or agency shall not disclose any information reported to or otherwise obtained by it pursuant to this title which concerns any information which contains or relates to a trade secret or other matter referred to in section 1905 of title 18 of the United States Code.

"(2) The Commission, each department or agency and each entity which is required to establish and maintain records, make reports, and provide information pursuant to this title shall in securing and maintaining any record of individually identifiable personal data (hereinafter in this subsection referred to as 'personal data') for purposes of this title—

"(A) inform any individual who is asked to supply personal data whether he is legally required, or may refuse, to supply such data and inform him of any specific consequences, known to the Commission, department or agency, or entity, as the case may be, of providing or not providing such data;

"(B) upon request, inform any individual if he is the subject of personal data secured or maintained by the Commission, department or agency, or entity, as the case may be, and make the data available to him in a form comprehensible to him;

"(C) assure that no use is made of personal data which is not within the purposes of this title unless an informed consent has been obtained from the individual who is the subject of such data; and

"(D) upon request, inform any individual of the use being made of personnel data respecting such individual and of the identity of the individuals and entities which will use the data and their relationship to the Commission, department or agency, or entity.

"(3) Any entity which maintains a record of personal data and which receives a request from the Commission or a department or agency for such data for purposes of this title shall not transfer any such data to the Commission or a department or agency unless the individual whose personal data is to be so transferred gives an informed consent for such transfer.

"(4) Notwithstanding any other provision of law, personal data collected or maintained by the Commission or a department or agency, pursuant to this title, may not be made available or disclosed by the Commission or a department or agency to any person or entity other than the individual who is the subject of such data. Such personal data may not be required to be disclosed by any Federal, State, or local civil, criminal, administrative, legislative or other proceeding.

"(d) Any person who unlawfully discloses the contents of any record, file, paper, document, process or control shall upon conviction be fined not more than $500 in the case of a first offense, and not more than $5,000 in the case of each subsequent offense.

"(e) The recordkeeping requirements established by any department or agency shall be limited to those operations and activities which relate to research funded by or required pursuant to a regulation of such department or agency.

"INTERIM PROVISIONS

"SEC. 1810. (a) Until such time as a Human Investigation Review Board has been certified by a department or agency, each department or agency shall determine with respect to biomedical and behavioral research conducted, supported or required by regulation under programs administered by each such department or agency that—

"(1) the rights of human subjects of such research are fully exercised;

"(2) the interests of human subjects of such research are fully protected;

"(3) the risks to a human subject of such research are outweighed by the potential benefits to him or by the importance of the knowledge to be gained from such research;

"(4) informed consent is given by each human subject in accordance with the provisions of this section.

"(b) For purposes of this section only, the term 'informed consent' shall mean the consent of a person, or his legal representative, so situated as to be able to exercise free power of choice without the intervention of any element of force, fraud, deceit, duress, or other form of constraint or coercion. Such consent shall be evidenced by a individualized written document signed by such person, or his legal representative. The information to be given to the subject and recorded with such written document shall include the following basic elements:

"(1) a fair explanation of the procedures to be followed, including an identification of any which are experimental;

"(2) a description of any attendance discomforts and risks reasonably to be expected;

"(3) a fair explanation of the likely results should the experimental procedure fail;

"(4) a description of any benefits reasonably to be expected;

"(5) a disclosure of any appropriate alternative procedures that might be advantageous for the subject;

"(6) an offer to answer any inquiries concerning the procedures; and

"(7) any other matter which a department or agency deems appropriate for the full exercise of the rights and full protection of the interests of human subjects of biomedical and behavioral research.

"In addition, the written document executed by such person, or his legal representative, shall include no exculpatory language through which the subject is made to waive, or to appear to waive, any of his legal rights, or to release the institution or its agents from liability for negligence. Any organization which initiates, directs, or engages in programs of research, development, or demonstration which require informed consent shall keep a permanent record of such consent and the information provided the subject and develop appropriate documentation and reporting procedures as an essential administrative function.

"ADMINISTRATION PROVISIONS

"SEC. 1811. (a) The Commission may for the purpose of carrying out its duties hold such hearings, sit and act at such times and places, take such testimony, and receive such evidence as the Commission deems advisable.

"(b)(1) The Commission may appoint and compensate, at a rate not to exceed the annual rate of basic pay in effect for grade GS–18 of the General Schedule, an executive director, without regard to the provisions of title 5, United States Code, governing appointments in the competitive service, and the provisions of chapter 51 and subchapter III of chapter 53 of such title, relating to classification and General Schedule pay rates, who shall administer full-time the daily activities of the Commission.

"(2) The Commission may appoint and fix the compensation of such personnel as it deems advisable, without regard to the provisions of title 5, United States Code, governing appointments in the competitive service, and the provisions of chapter 51 and subchapter III of chapter 53 of such title, relating to classification and General Schedule pay rates.

"(3) The Commission may procure, in accordance with the provisions of section 3109 of title 5, United States Code, the temporary or intermittent services of experts or consultants. Persons so employed shall receive compensation at a rate to be fixed by the Commission, but not exceeding for any day (including traveltime) the daily equivalent of the effective rate for Grade GS–18 of the General Schedule. While away from his home or regular place of business in the performance of services for the Commission, any such person may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5703(b) of title 5, United States Code, for persons in the Government service employed intermittently.

"(c)(1) Except as provided in paragraph (2), the Commission may publish and disseminate to the public such reports, information, recommendations, and other material relating to its functions, activities, and studies as it deems appropriate.

"(2) The Commission shall not disclose any information reported to or otherwise obtained by it in carrying out its functions which (1) identifies any individual who has been the subject of an activity studied or investigated by the Commission, (2) concerns any information which contains or relates to a trade secret or other matter referred to in section 1905 of title 18, United States Code, or (3) is properly classified for any purpose by a federal agency.

"(d) Within sixty days of the receipt of any recommendation made by the Commission under this part, the appropriate department or agency shall publish it in the Federal Register and provide opportunity for interested persons to submit written data, views, and arguments with respect to such recommendation. The appropriate department or agency shall (1) determine whether the administrative or other action proposed by such recommendation is appropriate to assure the protection of human subjects of biomedical and behavioral research conducted, supported or required by regulation under programs administered by it, and (2) if it determines that such action is not so appropriate, publish in the Federal Register such determination together with an adequate statement of the reasons for its determination. If the appropriate department or agency determines that administrative action recommended by the Commission should be undertaken by it, it shall undertake such action as expeditiously as is feasible.

"(e) The Commission may make grants and enter into contracts for the purpose of undertaking any required investigation or study, for the development of required policies, procedures and guidelines and for monitoring compliance with this title and the policies, procedures, guidelines and regulations of a department or agency.

"(f) The Commission shall determine the priority and order of those duties and functions required to be performed under this title.

"(g)(1) Upon a determination by the Commission that sufficient information already exists concerning an area of investigation and study required to be conducted under this title, the Commission may decide that such investigation and study need not be conducted. In such a case, the Commission shall utilize already existing information as the basis for identifying those principles and developing those policies, procedures and guidelines required under this title.

"(2) Unless the Commission has determined that an investigation and study required under this title need not be conducted pursuant to paragraph (1), each investigation and study shall be completed within three years from the date of enactment of the President's Commission for the Protection of Human Subjects of Biomedical and Behavioral Research Act of 1977.

"(h)(1) Pursuant to any activity relating to its duties and functions under this title, the Commission may subpoena witnesses, compel the attendance and testimony of witnesses, and require the production of any records and information, including records, files, papers, documents, processes and controls and other tangible things, which the Commission finds relevant or material to its duties and functions. The attendance of witnesses and the production of records may be required from any place in any State or in any territory or other place subject to the jurisdiction of the United States at any designated place of hearing; except that a witness shall not be required to appear at any hearing any more than 500 miles distant from the place where he was served with a subpoena. Witnesses summoned under this section shall be paid the same fees and mileage that are paid witnesses in the courts of the United States.

"(2) A subpoena issued under this section may be served by any person designated in the subpoena to serve it. Service upon a natural person may be made by personal delivery of the subpoena to him. Service may be made upon a domestic or foreign corporation or upon a partnership or other unincorporated association which is subject to suit under a common name, by delivering the subpoena to an officer, to a managing or general agent, or to any other agent authorized by appointment or by law to receive service of process. The affidavit of the person serving the subpoena entered on a true copy thereof by the person serving it shall be proof of service.

"(3) In the case of contumacy by or refusal to obey a subpoena issued to any person, the Commission may invoke the aid of any court of the United States within the jurisdiction of which the activity is carried on or of which the subpoenaed person is an inhabitant, or in which he carries on business or may be found, to compel compliance with the subpoena. The Court may issue an order requiring the subpoenaed person to appear before the Commission to produce records, if so ordered, or to give testimony touching the matter under consideration. Any failure to obey the order of the court may be punished by the court as a contempt thereof. All process in any such case may be served in any judicial district in which such person may be found.

"(i) On November 1 of each year, each department or agency shall each submit a report simultaneously to the President and to the appropriate committees of Congress. Each such report shall include with respect to the previous fiscal year—

"(1) a complete list and description of all recommendations made to such department or agency by the Commission;

"(2) a description of what action such department or agency took with respect to each such recommendation;

"(3) in those situations where such department or agency accepted a recommendation, a description of the policies, procedures, guidelines, regulations, and other administrative actions were taken by such department or agency to implement such recommendation;

"(4) in those situations where such department or agency failed to accept, in whole or in part, a recommendation, a description of the reasons for such failure; a description of policies, procedures, guidelines, regulations, and other administrative actions were followed in lieu of such recommendation; and what were the results.

"(j) Section 14 of the Federal Advisory

Committee Act shall not apply with respect to the Commission.

"PENALTIES

"SEC. 1812. (a) No entity may receive any federal funds from a department or agency, for the conduct of biomedical or behavioral research unless such entity has established a Human Investigation Review Board which has been certified by such department or agency.

"(b) No entity may receive a federal approval by a department or agency of a program, patent, product or study which requires the conduct of biomedical or behavioral research unless such entity has established a Human Investigation Review Board which has been certified by such department or agency.

"DEFINITIONS

"SEC. 1813. (a) As used in this title the term—

"(1) "Commission" means the President's Commission for the Protection of Human Subjects of Biomedical and Behavioral Research.

"(2) "President" means the President of the United States.

"(3) "Department or Agency" means each authority of the Government of the United States, whether or not it is within or subject to review by another agency, but does not include—

"(A) the Congress;

"(B) the courts of the United States;

"(C) the governments of the territories or possessions of the United States; and

"(D) the government of the District of Columbia.

"(4) "entity" includes an individual, partnership, corporation, association, or public or private organization but does not include a department or agency which conducts biomedical or behavioral research solely through grants or contracts.

"(5) "information" includes any information which is classified or deemed to be classified for any purpose (including national security) by an agency or department.

"(6) "health services" means those health services which are supported or financed by federal funds.

"(7) "regulated" and "required pursuant to a regulation" means any biomedical or behavioral research involving human subjects which is required to be conducted pursuant to a regulation of a department or agency as a condition precedent to an approval by such department or agency of a program, patent, substance, product, or study.

"(b) As used in subsection (b) of section 1802 the term—

"(1) 'children' means individuals who have not attained the legal age of consent to participate in research as determined under the applicable law of the jurisdiction in which the research is to be conducted.

"(2) 'prisoners' means individuals involuntarily confined in correctional institutions or facilities as defined in section 601 of the Omnibus Crime Control and Safe Streets Act of 1968 (54 U.S.C. 3781).

"(3) "institutionalized mentally infirm' includes individuals who are mentally ill, mentally retarded, emotionally disturbed, psychotic, or senile, or who have other impairments of a similar nature and who reside as patients in an institution.

"(4) the term 'military personnel' means individuals who are active and inactive members of the United States Armed Forces and employees and agents of the Central Intelligence Agency.

MISCELLANEOUS

SEC. 3. (a) Part A of title II of the National Research Act (42 U.S.C. 2891) is repealed.

(b) Sections 211 and 213 of the National Research Act are repealed.

(c) Subsections (f) of section 217 of the Public Health Service Act (42 U.S.C. 218(f)) is repealed.

EFFECTIVE DATE

SEC. 4. This Act and the amendments made by this Act shall take effect on October 1, 1977, except that the provisions of section 1812 shall not take effect until April 1, 1978.

Mr. JAVITS. Mr. President, for the past several years this country has been hearing numerous accounts of human participation in military and CIA drug research experiments. Such accounts demonstrate the need for the bill Senators KENNEDY, SCHWEIKER, and I join in introducing today.

It is alleged that much of the military personnel research and experimentation is done under the auspices of HEW research guidelines. Yet, the Congress, over the past year, has heard evidence which raises serious questions regarding how, if at all, such guidelines are implemented.

I am convinced that Congress has a responsibility to assure meaningful legal controls of all federally supported research activities involving human subjects.

The bill we introduce today builds upon the foundation created in Public Law 93-348—which is based on legislation Senator KENNEDY and I authored. It established a Commission to conduct a comprehensive investigation and study to identify the basic ethical principles which should underlie the conduct of biomedical and behavioral research involving human subjects. The Commission was also required to develop guidelines which should be followed in such research to assure that it is conducted in accordance with ethical principles. However, the law is limited to HEW-funded research activities.

To achieve responsible control of all federally supported research activity involving human subjects, this bill would:

First, Transfer the present established in law, time limited HEW National Commission for the Protection of Human Subjects of Biomedical and Behavioral Research into a Presidential Commission.

Second. Broaden Commission membership to include along with HEW Secretary, the following: DOD Secretary; CIA Director; VA Administrator; and eight Members of Congress, equally divided between House and Senate.

Third. Authorize qualified public members to be appointed by the President with Senate advice and consent, for varying terms; however, until such time as the President makes such appointment recommendations for Senate advice and consent, the existing public members continue to serve on Commission.

Fourth. Broaden scope of Commission activities re experimentation issues to include all federally funded biomedical and behavioral research programs.

Fifth. Authorize nonappointed members—as provided in "Second" above—to serve as a select committee within the Commission. It would obtain Commission requested data respecting federally funded biomedical and behavioral research programs, which is alleged to be classified, and necessary for the Commission to carry out its duties under the act. Then the Select Committee would determine—by majority vote—whether such information should be made available to the Commission. The standard they would apply is whether the failure to provide such information could have an adverse impact upon the protection of human subjects at risk in research without regard to the alleged sensitive nature of the classified information.

Sixth. Transfer all present Commission authority to the newly established Commission and modify, as appropriate, to whom Commission recommendations respecting research apply.

Although medical experimentation on human beings is as old as recorded history—the ancient Persians experimented on condemned criminals—the increase in human subject research, coupled with the desire to apply new knowledge quickly, make it prudent for the Congress to act now to provide additional statutory protection for the rights of individuals who participate in research.

It may be necessary for reasons of national security to authorize special consideration for research involving military personnel—and this bill provides for that contingency. However, civilized society cannot tolerate callous disregard of human rights for any purpose—and the bill achieves that goal.

Mr. SCHWEIKER. Mr. President, last weekend articles describing the extent of human drug experimentation by the Central Intelligence Agency were again in the news. I have followed these continuing revelations with great interest, as a former member of the Senate Select Committee on Intelligence Activities and as the ranking Republican member of the Senate Subcommittee on Health and Scientific Research.

I am pleased that more information about this program is becoming available to the public, but at the same time I am deeply disturbed by the pattern of disregard for the basic rights of human subjects of research which is illustrated by these disclosures. Although the particular CIA drug testing program which was the subject of this weekend's news reports ended years ago, I believe legislation like that Senators KENNEDY, JAVITS, and I are introducing today is clearly needed if we are to guard against future abuses.

During hearings before the Senate Health Subcommittee last session, we explored the human experimentation activities of the Department of Defense and the CIA. We learned of secret experiments with LSD and other hallucinogenic drugs conducted on military personnel with virtually no medical supervision or followup and little adherence to established ethical principles. Earlier this session, the subcommittee held another set of hearings focusing on Department of Defense biological warfare testing activities, which in the past had exposed countless Americans to potentially disease-producing organisms by releasing live bacteria into the open air over populated areas.

It is my understanding that the material recently discovered further detailing the CIA's drug-related activities still does not provide a complete picture of the agency's program, but it does point

to additional cases of drugs being tested on American citizens without their knowledge; research on surreptitious means of administering drugs; and the use of drug addicts, alcoholics, and advanced cancer patients as subjects. In addition, there is a possibility that improper payments were made. I commend Senator KENNEDY for his decision to schedule prompt Health Subcommittee hearings on this new information, to complete the hearing record of our subcommittee.

The bill we introduce today is similar to legislation passed by the Senate on a voice vote last Congress. It establishes the President's Commission for the Protection of Human Subjects of Biomedical and Behavioral Research, and transfers the functions, powers, and duties of the National Commission for the Protection of Human Subjects of Biomedical and Behavioral Research to the new Commission. The Commission shall be responsible for the review of all federally funded biomedical and behavioral research programs.

Mr. President, in the area of human experimentation, we can allow nothing short of the highest ethical standards. My work on the Select Committee on Intelligence Activities, together with my experience on the Health Subcommittee, convinces me this bill is a necessary step to guarantee the safety of all Americans.

By Mr. FORD (for himself and Mr. PEARSON) (by request):

S. 1895. A bill to amend the Natural Gas Pipeline Safety Act of 1968 to authorize appropriations for fiscal year 1979; to the Committee on Commerce, Science, and Transportation.

Mr. FORD. Mr. President, I introduce today, at the request of the Department of Transportation, and on behalf of myself and my colleague, Mr. PEARSON, a bill to amend the Natural Gas Pipeline Safety Act of 1968 to authorize appropriations for fiscal year 1979.

I ask unanimous consent that the text of the bill and the letter of transmittal be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 1895

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Section 15 of the Natural Gas Pipeline Safety Act of 1968 is amended:

(1) in subsection (a) thereof, by striking out "and" after "1977," and by inserting after "1978," the following: "and such sums as are necessary for the fiscal year ending September 30, 1979,"; and

(2) in subsection (b) thereof, by striking out "and" after "1977," and by inserting after "1978" the following: ", and such sums as are necessary for the fiscal year ending September 30, 1979".

THE SECRETARY OF TRANSPORTATION,
Washington, D.C., June 3, 1977.

HON. WALTER F. MONDALE,
President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: There is transmitted herewith a proposed bill, "To amend the Natural Gas Pipeline Safety Act of 1968 to authorize appropriations for fiscal year 1979."

The proposed bill would amend the Natural Gas Pipeline Safety Act of 1968 to authorize appropriations for the pipeline safety program for fiscal year 1979. The authorization for Federal grants-in-aid to the States would be stated separately from the authorization for administration of the program.

The proposed legislation will not serve to impact adversely the environment nor will it have an inflationary impact on the economy.

The Office of Management and Budget has advised that the Administration has no objection to the transmission of this proposed legislation to the Congress.

Sincerely,

BROCK ADAMS.

By Mr. FORD (for himself and Mr. PEARSON) (by request):

S. 1896. A bill to amend the Hazardous Materials Transportation Act to authorize appropriations for fiscal year 1979; to the Committee on Commerce, Science, and Transportation.

Mr. FORD. Mr. President, I introduce today, at the request of the Department of Transportation, and on behalf of myself and my colleague, Mr. PEARSON, a bill to amend the Hazardous Materials Transportation Act to authorize appropriations for fiscal year 1979.

I ask unanimous consent that the text of the bill and the letter of transmittal be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 1896

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Section 115 of the Hazardous Materials Transportation Act (49 U.S.C. 1812) is amended by: (1) striking out "and" after September 30, "1976,", (2) striking the comma after "1977", and (3) inserting after "1978" the following: ", and such sums as are necessary for the fiscal year ending September 30, 1979".

THE SECRETARY OF TRANSPORTATION,
Washington, D.C., June 3, 1977.

HON. WALTER F. MONDALE,
President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: There is transmitted herewith a proposed bill, "To amend the Hazardous Materials Transportation Act to authorize appropriations for fiscal year 1979."

The proposed bill would amend the Hazardous Materials Transportation Act to authorize appropriations for the Department of Transportation's Materials Transportation Bureau to carry out the functions assigned to it with respect to the transportation of hazardous materials under the Hazardous Materials Transportation Act and various other statutes and for the Secretary for other activities carried out pursuant to this Act.

The proposed legislation will not serve to impact adversely the environment nor will it have an inflationary impact on the economy.

The Office of Management and Budget has advised that the Administration has no objection to the transmission of this proposed legislation to the Congress.

Sincerely,

BROCK ADAMS.

By Mr. INOUYE (for himself and Mr. MATSUNAGA):

S.J. Res. 72. A joint resolution authorizing the President to proclaim annually a week during the first 10 days of May as "Pacific/Asian American Heritage Week"; to the Committee on the Judiciary.

Mr. INOUYE. Mr. President, Senator MATSUNAGA and I today introduce a Senate Joint Resolution that would authorize the President to annually issue a proclamation designating a week in early May as "Pacific/Asian American Heritage Week."

The intent of this measure, consistent with previous resolutions passed by the Congress addressed to our Nation's Spanish-speaking and black Americans, is to set aside a specific time of year for the recognition of the more than 1.4 million Pacific/Asian Americans and their distinguished contributions to America's rich cultural heritage and modern development.

We may all find assurance in the great strides which our country has taken in the area of civil rights and simple awareness of the traditions of other cultural groups. Much, however, still needs to be done to engender a lasting respect for the ethnic differences found in the United States.

Many years ago the State of Texas ran a population survey to determine the racial composition of its population. With only three categories provided in the questionnaire, the tens of thousands of Pacific/Asian Americans living in cities like Houston, Dallas, and San Antonio were advised by Texas officials to check the box marked "white."

Some of you may recall the days during World War II when Life magazine and other national publications ran pictures of a Chinese man and a Japanese man side by side with lines drawn to their facial and body features and short descriptions of their differences. The message to the readers was: Be able to tell the difference between your friend and your enemy.

To this day the rich Polynesian heritage of the Native Hawaiian people, and the contributions they and other Pacific/Asian Americans have made in all aspects of American life are all but unknown outside of the immediate area.

These are just a few of the many examples illustrating my belief that the Pacific/Asian American community is, perhaps, among the least understood minority groups in this country. Therefore, I feel it is especially important that a week be set aside to assess the many contributions which Pacific/Asian Americans have made.

With increasing frequency Americans throughout the country are learning about the dramatic histories of their immigrant past, and are beginning to realize that genuine assimilation and true understanding amongst all the ethnic groups of our Nation cannot come about without a deeper sense of appreciation for their differences. A future of lasting internal cooperation and good will in the United States must start with a greater knowledge of the valuable backgrounds of each fellow American.

If we love our country, all of us must do our utmost to insure that the ethnic identities within it are kept intact, and, just as importantly, that we are able to grow as a nation from an awareness of them. Our differing backgrounds and past contributions are rich resources which every American brings to his fellow citizen today. They are to be treas-

ured, shared, learned from, and built upon. Accordingly, our task now is to eradicate the false stereotypes and images. the misunderstandings which linger still today, and to replace these with an awareness of the true worth of each contributing cultural group.

Toward this end, I urge my colleagues to join Senator MATSUNAGA and me in sponsorship of this resolution and support for its passage. I am pleased to inform this body that this measure is supported actively by the National Coalition for a Pacific/Asian American Heritage Proclamation, a broad-based group of Pacific island and Asian American associations across the country.

Mr. President, I request unanimous consent that the text of this resolution be printed in the RECORD.

There being no objection, the joint resolution was ordered to be printed in the RECORD, as follows:

S.J. RES. 72

Resolved by the Senate and House of Representatives of the Untied States of America in Congress assembled, The President shall hereby be authorized and requested to issue annually a proclamation designating a week during the first 10 days of May as "Pacific/Asian American Heritage Week" and calling upon the people of the United States, especially the educational community to observe such week with appropraite ceremonies and activities.

Mr. MATSUNAGA. Mr. President, today I am pleased to introduce with my colleague, Senator DANIEL K. INOUYE, a joint resolution to commemorate the contributions of Pacific/Asian Americans to the United States. A similar resolution was introduced in the House by Representative NORMAN MINETA and Representative FRANK HORTON on June 30, 1977.

Numerically, Pacific/Asian Americans do not constitute a significant minority in the United States. However, their enormous contributions to this Nation's growth and progress are of a magnitude far greater than their numbers would seem to indicate. This is true in many fields, but it is particularly noticeable in the sciences and in the arts where Pacific/Asian Americans have made major strides to benefit all Americans.

There is a need for all Americans to appreciate the significance and the relevance of Pacific/Asian American experience to the mainstream of America's culturally pluralistic past and present. Through their labor, Pacific/Asian Americans have aided in the building of the Nation's transcontinental rail system and in the growth of farming and agriculture. Numerous contributions of Pacific/Asian Americans have been made in the food and fashion industries as well. Technical skills and knowledge have advanced education and the sciences. In 1957, Chinese Americans Chem Ning Yang and Tsung Dao Lee received international recognition as recipients of the Nobel physics prize for their work in disproving the law of conservation of parity. More recently, in 1976 Samuel C. C. Ting, from the Massachusetts Institute of Technology, was the Pulitizer prize winner in physics. Thomas Noguchi is a nationally known figure in forensic medicine. Dr. C. H. Li, with the Albert and Mary Lasker Foundation in New York, has contributed significantly to medical research and medical journalism in the field of biochemistry.

Military achievements by Pacific/Asian Americans can also be cited. The World War II exploits and the record of the 100th Infantry Battalion and the 442d Regimental combat team, consisting of Japanese-Americans, is now legendary. Together they constitute the most highly decorated unit in the military history of the United States.

Artistic accomplishments by Pacific/Asian Americans are also reflected in literature, theater, music, and other forms of the fine arts. Noted for their artistry and craftsmanship are architects Minoru Yamasaki and I. M. Pei, designers of Washington's L'Enfant Plaza. Expanding the esthetic world of watercolor paintings is artist Don Kingman. Innovation in motion picture cinematography can be attributed to the talents of James Wong Howe. In literature, author Michi Weglyn has received international acclaim for "Years of Infamy: The Untold Story of America's Concentration Camps."

The true greatness of the United States lies in its multi-ethnic character. The mosaic pattern of people of all races—each distinct, but joined as Americans—distinguishes the United States from all other nations, and continues to make America the most sought after destination for all migrants.

The Congress of the United States recognizes the need to know and to understand more about the diverse cultures represented by Americans. This recognition is reflected in the following statement regarding the ethnic heritage study provided for in the Education Amendments of 1972:

A greater understanding of the contributions of one's own heritage and those of one's fellow citizens can contribute to a more harmonious, patriotic, and committed populace.

There is a resurgence of ethnic and cultural pride, especially among minority groups. Particularly noteworthy is the gathering of major national Pacific/Asian American organizations, such as the Organization of Chinese Americans, the Japanese American Citizens League, and the Asian/Pacific American Federal Employees Coalition, which comprise the ad hoc National Coalition for a Pacific/Asian American Heritage Proclamation. The Pacific/Asian American Heritage Proclamation, chaired by Ms. Jeanie F. Jew, has focused exclusively on the contributions and historical significance of Pacific/Asian Americans.

The Congress and various administrations have over the years recognized the contributions of individual ethnic groups to the development of America since its founding. Legislation has been adopted to commemorate National Hispanic Heritage Week and the executive branch has designated February as Black History Month.

I believe it is equally important that a week be designated to pay tribute to those Pacific/Asian Americans who have offered valuable contributions to the social, scientific, economic, cultural, and political development of our Nation.

In order that the past and present achievements of this important segment of the American population may be duly recognized in a manner befitting their contributions, I am pleased to introduce this joint resolution with my senior Senator from Hawaii. I strongly urge its early adoption.

By Mr. BARTLETT:

S.J. Res. 73. A joint resolution proposing an amendment to the Constitution of the United States to establish maximum age limits for certain officers of the Government; to the Committee on the Judiciary.

Mr. BARTLETT. Mr. President, I have today introduced for consideration by the Senate a proposal to amend the Constitution which would establish a mandatory retirement age for members of the Federal judiciary.

I have introduced and supported such a proposal in previous Congresses. I continue to believe that this constitutional amendment would offer substantial advantages in assuring that only judges of the highest possible caliber continue to serve on the Federal bench.

If adopted, this constitutional amendment would do the following: First, it would prohibit appointment to the Federal bench of any person who has attained the age of 70 years. Second, the amendment would require all judges to retire at the age of 70, except those judges who are now serving and have not acquired their full retirement benefits. These judges in the latter category would be allowed to continue their service until their judicial retirement rights had vested.

Mr. President, the purpose and value of this proposed amendment are obvious. We see on an almost daily basis examples of the tremendous power and authority that Federal judges wield in dealing with virtually all sorts of problems. It just makes no sense to allow persons with that sort of authority and responsibility to continue their duties at a time when they may not be fully capable, either physically or mentally.

Far too often, judges, being devoted to their jobs, far outstay the time when they can judiciously perform their duties.

Business and Government have already recognized the good judgment of a reasonable retirement age. In 1966, the Congress passed legislation requiring civil service employees to retire at age 70. In most instances American businesses require retirement by age 65.

The need for mandatory retirement of judges exceeds that of most other professions. While I would readily admit that there have occasionally been outstanding judges who continue to function admirably and well long past the age of 70, I think we would all agree that we should not just assume that only exceptional judges will remain on the bench after age 70. Federal district judges, because of their lifetime tenure, are virtually unremovable for any offense short of commission of a crime.

There exist numerous cases of judges who, though well qualified when

younger, continue to serve and handle important cases even though advancing age has brought on senility or actual incompetence. This measure, if passed, would reduce the likelihood of such incompetence occurring due to advancing age.

Support for a proposal such as that which I have introduced today is widespread. In particular I would call the attention of the Senate to a resolution passed by the Western Conference of Attorneys General in August of 1976. Although the specific action called for by the conference was slightly different than the proposal I have made today, the thrust of it was essentially the same. The resolution called on Congress to—

Enact such a bill so that all Federal district court judges over the age of seventy shall be retired to senior judge status unless they have served less than ten years in which case they shall so retire as an active Federal district court judge upon serving that period of time.

Resolutions expressing similar sentiments were passed in 1976 by the National Association of Attorneys General. The United States Judicial Conference has made a similar recommendation.

Mr. President, if passed my amendment would do a great deal to restore the public's flagging confidence in its judicial officers. I therefore urge that the Senate give its serious consideration to this proposed constitutional amendment.

By Mr. BARTLETT:

S.J. Res. 74. A joint resolution proposing an amendment to the Constitution of the United States provided for the reconfirmation by popular vote of certain Federal judges; to the Committee on the Judiciary.

Mr. BARTLETT. Mr. President, I have today introduced Senate Joint Resolution 74 a proposed constitutional amendment to require reconfirmation of Federal judges every 8 years by a vote of the people. I have previously introduced such an amendment, and believe its provisions to be more pertinent and desirable than ever before.

One of the most perplexing problems facing the American people has been the dilemma of how to deal with the occasional judge who fails to meet the high standards we properly expect from our Federal judges. The remedy of impeachment exists, of course, but is constitutionally reserved for only those extreme circumstances where some high crime or misdemeanor has been committed by the judge. Such a procedure is therefore inappropriate for dealing with inviduals who are just bad judges—those who lack the necessary skill in legal scholarship, those whose demeanor or temperament are not suited to the bench. And those who are just plain lazy.

While seeking a means to deal with the occasionally bad judge, we must be mindful of the need for a certain amount of independence in the judiciary. We strive to be a Government of laws; not of men, but that cannot be achieved if judges are required in practice to cater to every whim of public opinion.

Mr. President, I believe that the constitutional amendment which I have proposed achieves the proper balance between these competing interests. It provides that each Federal district judge would go before the voters of his judicial district every 8 years for a reconfirmation vote. If the voters approved his continuation in office, the judge would retain his or her office. If the voters did not approve, the President and Congress would select a replacement in accordance with our established constitutional procedures.

This procedure parallels the process we in Oklahoma have used in the appointment and retention of appellate judges in the State courts. The procedure has worked well in Oklahoma. To my knowledge, no judge has been turned out of office yet by the voters, a fact which strongly suggests that the independence of the judiciary will not be adversely or unfairly affected by this sort of proposal. But more importantly, this procedure has made available to the people of Oklahoma a process for dealing with bad judges that stops short of impeachment.

Mr. President, this constitutional amendment, if adopted, would do much to redress some of the excesses and abuses that occasionally mar our judicial system. It would serve as a reminder to all judges that, while their task is to impartially apply the law, the source of their authority is, ultimately, the people. I believe that this constitutional amendment will help us achieve a more capable and outstanding Federal judiciary. I strongly urge its adoption by the Congress, so that the ratification process may begin.

ADDITIONAL STATEMENTS

CHOLESTEROL, DIET, AND HEART DISEASE

Mr. McGOVERN. Mr. President, I was quite pleased to find in the Washington Post's Outlook section of Sunday the 17th, a full page nutrition article on "Cholesterol, Diet and Heart Disease." I found this article by Dr. William Knaus, an internist on the faculty of George Washington University Medical Center, to be excellent in describing in lay terms the cholesterol story, and some of the controversy which has arisen in researching the cholesterol hypothesis.

I noted also yesterday that the Washington Post printed the following correction concerning that article:

Because of an editing error, an article on cholesterol and heart disease in Sunday's Outlook section erroneously stated that publication and distribution of the Senate Nutrition Committee report "Dietary Goals for the United States" has been ordered halted. In fact, the committee's report has not been retracted and is available through the Government Printing Office.

Since heart disease is the Nation's No. 1 killer, and is of interest to my colleagues and all Americans, I ask unanimous consent that the aforementioned article and three related articles be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

CHOLESTEROL, DIET AND HEART DISEASE

By William A. Knaus

"The science of life," wrote the 19th Century French physiologist Claude Bernard, "is a superb and dazzlingly lighted hall which may be reached only by passing through a long and ghastly kitchen."

In the United States of the 20th Century we are, as Bernard predicted, spending a lot of time in the kitchen, trying to determine what in our diet may be killing us. This search has followed some unique paths: Charcoaled steaks were once believed to cause cancer and the suggestion that saccharin does the same has sent dieters, scientists and politicians into a frantic scramble for data to support or refute the association.

Through all these years of controversy, new discoveries, warnings and public skepticism, however, one theory has been steadily increasing in popularity and, as announced last week by the National Institutes of Health (NIH), has produced major changes in the American diet. The villain is cholesterol, and the theory that a diet loaded with saturated fats and cholesterol increases the risk of heart disease has encouraged many persons to cut in half their intake of cholesterol-rich foods. The result is a 5-to-10 per cent drop in our average cholesterol level over the last 10 years.

This dramatic change in diet is the result of intense publicity by private interest groups, especially the American Heart Association, combined with growing pressure from food companies which now offer a wide variety of cholesterol-free food.

These findings also raise the question of what role the federal government should assume in regard to dietary cholesterol, for the NIH survey demonstrated that the dietary change is not uniform. The drop in cholesterol is largely confined to the well-educated, higher-income portion of our population, the same group currently thought to be the major benefactor of a progressive decline in the proportions of the coronary heart disease epidemic.

In 1976, the death rate from coronary heart disease fell below 200 deaths per 100,000 population—its lowest level in 35 years. But heart disease, formerly "an affliction of the wealthy," is becoming relatively more common within the poorer segments of our population.

To date, Washington has taken a cautious attitude toward this problem. The first official condemnation of cholesterol by any branch of the federal government didn't occur until last January, when the Senate Select Committee on Nutrition included the recommendation that our daily intake of cholesterol be reduced to 300 mg (about 1¼ eggs) as one of its six "Dietary Goals of the United States." One reason behind this government reluctance, which also could have major implications for future public health decisions, can be seen in the reactions to the committee's report.

On March 24, in special hearings called by the Nutrition Committee chairman, Sen. George McGovern, and attended by an unusually large and powerful group of senators including committee members Kennedy, Dole, Percy and Schweiker, an angry group of representatives from the nation's beef producers and feeders criticized "Dietary Goals of the United States"—especially the one concerning cholesterol—as based on insufficient evidence and potentially harmful to their industry.

In April, the American Medical Association issued a statement saying it was "inappropriate to recommend radical dietary changes" and suggested that the committee's recommendation that low cholesterol dietary instruction be instituted in all public schools not be adopted.

The Government Printing Office has been instructed to stop publication and distribu-

tion of "Dietary Goals for the United States," and the committee has reopened the already lengthy hearing record with testimony scheduled for July 26 from the AMA and the American Egg Board.

What eventually happens to the committees' six dietary goals—which, in addition to recommending limits on the amount of cholesterol and saturated fat eaten, suggest cutbacks in the daily consumption of salt and sugar—will provide a unique picture of the balancing of public health, economic and political considerations.

It also will be a barometer of exactly how much scientific information is needed before a branch of the federal government will voluntarily endorse preventive measures affecting large portions of the population. For, unlike saccharin, whose continued use is potentially harmful to an estimated 400 persons per year—the number of bladder cancer cases believed caused by saccharin—coronary heart disease is still this nation's most common cause of death, with 647,000 victims recorded in 1976. And, unlike the one or two studies relating saccharin to cancer, there is extensive and detailed scientific information with which to judge the current status of the cholesterol controversy.

Persons who believe excess cholesterol is hurting us point to dozens of epidemiologic or population surveys that establish a direct statistical association between the level of blood cholesterol and the death rate from coronary heart disease.

Since the original study in 1916 performed by a Dutch physician, C. D. DeLangen, practicing in Java, population surveys have been done in such diverse places as Framingham, Mass., Chicago, Tel Aviv and Johannesburg. From these surveys a monotonous and frightening pattern emerges.

People who eat large amounts of meat, butter and saturated fat have higher levels of cholesterol than people who don't and the higher a person's cholesterol level the greater the risk he or she will develop heart disease.

Further, persons with familial hypercholesterolemia, a rare genetic disease whose unfortunate victims have extremely high levels of blood cholesterol because their cells lack cholesterol receptors, usually die before age 20 of heart disease. In one case, a heart attack occurred in a 1½-year-old South African girl.

The milder form of this same genetic deficiency, where each cell has only half the normal number of cholesterol receptors, is one of the most common genetic or inherited diseases in this country, affecting 1 out of every 500 Americans. These persons also develop heart attacks, usually in their mid 30s and 40s, and account for a large number of persons with early or "premature" death from coronary heart disease.

Still, statistical associations and the behavior of a genetic disorder do not provide proof that cholesterol causes heart disease and certainly don't account for the size of the problem in this country.

CAUSING ATHEROSCLEROSIS

Atherosclerosis is the pathologic or disease process responsible for heart attacks and other coronary heart problems. The name is derived, in part, from the Greek word *athera*, meaning gruel. It refers to the thick, sticky, yellow substance that oozes out of arteries affected by atherosclerosis when cut at autopsy. This yellow gruel is pure cholesterol.

Our coronary arteries, five pencil-sized tubes beginning at the base of our aorta, the main artery of the body, and supplying our heart muscle with blood, are believed to be so frequently affected by atherosclerosis because of their strategic location.

Each coronary artery begins its path at sharp right angles to the main flow of blood pumping out of the heart. This bend makes the initial stream of blood flowing into the artery rough and turbulent, like water gushing out of an open fire hydrant. The harsh stream of blood pounding on the delicate inner lining of the coronary artery 60 times each minute will occasionally cause a tear in its surface. And, once this tear occurs, it's believed that cholesterol finds its way into the arteries' wall.

Then, like a fallen tree in rapidly flowing water, this collection of cholesterol attracts passing cells and other debris that make up an atherosclerotic plaque. The plaque grows and can eventually block an artery, producing a heart attack.

Therefore, accepting this theory of injury followed by cholesterol collection, there appears to be two ways to prevent atherosclerosis and thereby reduce heart disease. One is to reduce the chance of injury to the artery. The best way currently known to reduce turbulence and injury is to control abnormally high blood pressure. The other approach is to lower the level of cholesterol.

The amount of cholesterol in our blood is a delicate balance depending on four factors: what we eat, how much our cells use, how much is broken down and excreted in the stool and how much our body makes. Seventy-five percent of our cholesterol is made in our liver and, to date, we have no control over it. But through diet and, occasionally, drugs, we can change the other factors.

Much of our current knowledge describing the way cholesterol is metabolized comes from the results of meticulous work performed in the laboratory of E. H. Ahrens, Jr., professor of medicine at Rockefeller University.

"The main reason working with cholesterol is so difficult," Ahrens explains, "is because it stays in the body for such a long time."

Two months after giving a patient a test dose of cholesterol, half of it is still present. To complete a project, Ahrens and his colleagues have to study their subjects for three months, checking their bowel movements for cholesterol loss.

From such experiments we know that dietary cholesterol cannot be absorbed alone into our intestinal wall. It must first be combined with bile, proteins and other fats into a small transferrable package called a micelle. The formation of micelles depends on the amount of fat in our diets and, using this pickup system, a person will absorb from 30 to 80 per cent of the cholesterol eaten. Where in this range each of us falls and what happens to our cholesterol levels as a result of our diet is a very individual matter.

TRANSPORTING FATS

Once absorbed, cholesterol, along with other fats and proteins, is combined into a tiny milky white droplet called a chylomicron for its passage from our intestine to our bloodstream. Following an especially fatty meal, thousands of these chylomicrons shower our bloodstream like drops of milkly oil poured into water. But the cholesterol contained in chylomicrons does not contribute to the slow, gradual growth of the underlying atherosclerotic plaque. Chylomicrons stay in our bloodstream but a few hours following a meal. The body has a separate system to carry out the day-to-day transport of fats, proteins and cholesterol. Like a fleet of trucks, this internal transport system is classified by weight.

There are the light pickups known as very low-density lipoproteins (LDL) which, along with their other freight, carry cholesterol manufactured in our liver to other parts of the body. Then there are the heavier low-density lipoproteins which move cholesterol from cell to cell and serve as the keys to unlock the cell's cholesterol receptors. Finally, there are the garbage trucks, high density lipoproteins (HDL) which pick up excess cholesterol and return it to the intestine where it is disposed of.

The cholesterol traveling with the LDL is the portion that gets trapped inside arteries. Therefore, the amount of a person's total cholesterol contained in the LDL carrier is of crucial importance in the development of atherosclerosis. LDL cholesterol can be decreased by a diet high in polyunsaturated fats.

Likewise, the higher levels of HDL found in marathon runners and premenopausal women are thought to protect these groups by clearing cholesterol out of their systems more efficiently. The exact meaning of the HDL cholesterol transport vehicle still needs to be fully explained but, for once, a high level of something appears to be good.

Therefore, as viewed from the limited perspective of our internal anatomy, it appears our current faith in the cholesterol theory is well founded. We know cholesterol is the main substance found inside atherosclerotic plaques. We know our bodies need far lower levels of cholesterol than most of us have. We have shown that, although there are large individual differences, many of us can reduce the amount of cholesterol in our bloodstream by changing our diet. And, finally, there is early but encouraging evidence that exercise, by increasing the amount of HDL, may decrease the risk of heart disease by changing the form in which cholesterol is transported.

The only thing left to prove is that, by lowering cholesterol, you save lives.

In the past four years, three separate studies using clofibrate, a cholesterol-lowering drug, have tried to prove this. The studies involved 5,106 men and women, each of whom had suffered at least one heart attack. All three studies had failed to show any difference in the number of new heart attacks or deaths.

Despite these negative results, cholesterol-lowering drug sales reached $38 million last year with Atromid-S (the brand name for clofibrate) accounting for $27 million. Clofibrate has recently been critized by Ralph Nader's Health Research Group for causing gallstones, although this has long been recognized as a complication of its cholesterol-lowering effect.

Of greater importance than clofibrate's potential toxicity, however, is the question of why all those studies failed to show any benefit. Is the drug worthless? Some scientists believe the failures are not drug-related but because we've given cholesterol too much importance. Like many of the experimental animals used in cholesterol testing, rabbits don't normally eat the stuff. When it's forced into their stomach, however, they can absorb four times more of it per pound than humans. They are literally drowning in cholesterol.

Most researchers still believe that the relationship of cholesterol to heart disease is too strong not to test it more thoroughly before discarding it. They attribute the failure of the clofibrate studies to the fact that cholesterol was only slightly reduced (generally from 5 to 10 per cent) and that the patients were too old and had already developed heart disease.

Through a group of 12 cholesterol research clinics, one located at George Washington University, and at a cost of $100 million, the National Heart, Lung, and Blood Institute (NHLBI) of the National Institutes of Health hopes to determine whether further lowering of cholesterol in a younger population will help. In this study, 3,800 men between the ages of 30 and 59 who have never had heart disease but whose cholesterol levels put them in the upper 5 per cent of the U.S. population (a level above 265 mg with most of it in the LDL form) will be placed on a low-cholesterol, high-polyunsaturated diet.

In addition, half the 3,800 will be given another drug, choleystramine, which interferes with the formation of micelles and thereby reduces the amount of dietary cholesterol absorbed. All the men will be followed for five years and, if the study's goal of a

25 per cent reduction in blood cholesterol is achieved with enough of the participants, it will be the most vigorous test of the cholesterol hypothesis to date.

OTHER FACTORS

The results of this Lipid Research Clinic study will not be available for a number of years, definitely not in time to influence the committee's decision this summer. Most researchers, however, are not waiting for these results. A recent survey of 182 scientists around the world found that 92 per cent of them had already changed to a low-cholesterol diet.

The just released NIH survey found that, over the past 10 years, the average amount of cholesterol Americans eat dropped from 800 mg to 400 mg and the ratio to saturated to unsaturated fat has decreased from 3:1 to 1:1, the American Heart Association's recommended level. Another study has discovered a simultaneous drop in the average level of cholesterol in our blood from 226 mg to 221 mg.

But does this drop in cholesterol levels and the change in our diet account for the gradual but persistent decline in our death rate from coronary heart disease?

"No way to tell," Dr. Robert Levy, director of the NHLBI, admits. "In addition to the dietary changes, we also know that middle-aged white males, the ones most often affected by coronary disease, are smoking 25 per cent less and exercising more than they did 10 years ago. It could be any one or all these factors," the NIH official concludes, "or none of them."

Despite this uncertainty, Dr. Levy does observe that the greatest decrease in the coronary death rate has occurred within the affluent portion of our population, the same fraction that is thought to be most closely observing the dietary and exercise recommendations. Nevertheless, despite all this encouraging evidence, don't expect the NIH to join the Senate Nutrition Committee in an official condemnation of cholesterol.

"The scientific jury is still out on the cholesterol question," says Dr. Levy, "and the public has already been placed in the middle too often by scientists supporting one theory or the other.

"No, this time the choice should be up to the individual, not the government."

Dr. Levy is not scheduled to testify at the Senate hearings this month; he presented testimony on the cholesterol issue last year. Indeed, the committee heard extensive scientific evidence pro and con on the cholesterol question before it published its dietary goals.

Despite scientific caution, the guidelines finally were issued, according to a nutrition committee staff member, "because the American people need this type of dietary information to offset the tremendous influence of food advertising and pricing practices. Without this report, the consumer has nowhere to turn for help. We're just trying to balance the situation."

In light of the NIH findings, a better balance in regard to individual dietary information appears needed. Nevertheless, since its January report, the committee has had no response from other branches of the federal government, while the staff and members of the committee, which is scheduled to go out of existence on Dec. 31, have spent their time listening to the disquieting voices of industries at risk if further dietary change occurs.

Among those scheduled to testify on July 26 is G. C. Bookey, vice president of the American Egg Board, an organization established in 1974 under the Egg Research and Consumer Information Act. Last year, the board spent $5 million advertising its product, "the incredible edible egg," attempting to reverse what has been a steady decline in the number of eggs eaten in this country since 1950. The egg board also supports research to support preliminary findings demonstrating that a diet high in eggs does not automatically increase the level of cholesterol in a person's blood.

The reception accorded Bookey, if it is anything like that given last March to Wray Finney, president of the American National Cattlemen's Association, will be friendly. In his opening remarks to that hearing, Sen. McGovern acknowledged that 75 per cent of his state's agricultural income results from the sale of live animals. In response, he and other committee members were told that the beef industry is having a difficult time. Although beef consumption per capita is up, the nationwide prices are at or below their cost of production and, since domestic consumption accounts for 90 per cent of all meat sales, any decrease in consumer demand would be damaging.

But judged from the other perspective, the stakes are also high. There are 4 million persons in the United States today affected by coronary heart disease. Their total medical bill is estimated to be $40 billion per year.

A recent survey of a school district in Massachusetts discovered that 13 per cent of the children had higher than average cholesterol levels. Considering what we now know about cholesterol, at least some of these children could have their levels lowered by an appropriate diet and, if the cholesterol heart disease association is later demonstrated to be true, perhaps spared the effects of heart disease as adults.

WHAT CHOLESTEROL DOES

(By William A. Knaus)

Cholesterol is a tasteless, odorless, fatty alcohol which we can't live without. Its natural waxlike hardness enables it to function as our internal chemical skeleton. Every cell in our body needs cholesterol to maintain its shape; without it, we would be like jellyfish, our form changed at the slightest touch.

Cholesterol's contribution to growth and reproduction is illustrated by what happens when rats are deprived of it early in life: The animals fail to develop a complete nervous system and become deficient in their sex hormones—two functions dependent on adequate amounts of cholesterol. This early dependence is one reason some scientists warn that too severe a reduction in cholesterol during childhood could be dangerous. Mother's milk, after all, is loaded with the stuff.

Dependence on dietary cholesterol, however, is short-lived. When we're a few months old, every cell is capable of making its own supply. Within each cell is a factory able to manufacture cholesterol from simple materials. These factories seldom operate, since all our cells' demand for cholesterol is easily obtained from the supply circulating in our bloodstream.

Until recently, we didn't understand how this internal system worked. But thanks to the work of Drs. Michael Brown and Joseph Goldstein of the University of Texas Medical School, we now know that on each cell's surface are thousands of tiny cholesterol receptors, like locks on a door. Cholesterol can enter a cell only if it comes bearing the appropriate key, in its case a certain kind of protein, and only if the cell wants it. The more receptors a cell has the more rapidly it can accept cholesterol from the passing blood.

Brown and Goldstein also discovered that, depending on the blood cholesterol level, a normal cell can increase the number of its receptors from 7,000 to about 15,000. Because of this ability to attract cholesterol under varying conditions, the Texas researchers estimate that we really need only about a fifth of the circulating cholesterol most of us have.

[From the Washington Post, July 14, 1977]

HEART DEATH RATE, CHOLESTEROL LEVELS SHOW DECLINES

(By Victor Cohn)

The average American's cholesterol level has dropped 5 to 10 per cent since the early 1960s and this may have helped cause a sharp drop in deaths from heart and blood vessel diseases, officials of the National Heart, Lung and Blood Institute said yesterday.

Cholesterol is a fatty, waxy substance that tends to clog arteries and cause heart and blood vessel ailments. In the last 30 years there has been a vast amount of publicity about the dangers of overeating high fat and high cholesterol foods, and there have been profound changes in the average American diet.

"What we think we are seeing now are the effects of great changes in the lifestyles of men and women who have been reading and listening." Dr. Robert I. Levy, director of the heart institute, said in an interview.

"We can't prove or be sure yet that diet and other changes—like 25 per cent less smoking among middle-aged men—have contributed to the dramatic decrease we are seeing in cardiovascular deaths," he said.

"But it's looking very much as though this is the case, and this is very encouraging."

Levy said that "there is no doubt today" that a high blood cholesterol level is "a major risk factor" for heart disease although it may take several years to prove beyond doubt whether lowering cholesterol levels can reduce heart attack deaths.

Also important, he said, has been a national campaign against high blood pressure that began in 1972. Persons with high blood pressure have a high incidence of strokes and heart attacks.

Since 1972, screening campaigns have found early, previously unnoted high blood pressure in 8 million persons. There has been a 50 per cent increase in patients under treatment, with most of them now on drugs or diets to keep their blood pressure down.

Health officials first began noticing the drop in heart and stroke deaths about two years ago. In 1973 in the United States there were 1,062,000 deaths from heart and blood vessel disorders. Last year, with a larger and older population, there were 975,000 such deaths. On a per capita basis, there were 15 per cent fewer such deaths than in 1960, Levy said.

He called the drop in the average adult's cholesterol level a surprise that has been noted only in recent months with analysis of data on 70,000 persons under observation at 12 lipid (blood fat) research clinics launched in 1971 and 1972 by the heart institute, which is part of the National Institutes of Health in Bethesda.

Levy and colleagues told a news conference that the cholesterol drop may be largely confined to persons with higher education and higher paying jobs. Men and women of higher status tend to have lower cholesterol levels than other Americans, except for low-pay workers who perform heavy exercise. Many doctors say exercise may also reduce cholesterol and cut heart attack risk.

The figures on the cholesterol decline are also based so far only on observation of whites. The lipid clinics are just starting to analyze their early data and aren't ready yet to report on the 10 per cent of their patients who are black.

[From the Lancet, April 23, 1977]

DIETARY GOALS

An important document has just been published by the U.S. Senate Select Committee on Nutrition and Human Needs.[1] The chairman, Senator George McGovern, expresses his conviction that "the eating patterns of this century represent as critical a

Footnotes at end of article.

public health concern as any now before us. We must acknowledge and recognize that the public is confused about what to eat to maximize health . . . We have an obligation to provide practical guides to the individual consumer as well as set national dietary goals. . . . Such an effort is long over-due". The committee sets out six dietary goals, based on scientific testimony and recent reports, including fifteen sets of guidelines, mostly about prevention of coronary heart-disease, from expert and official bodies.

Goal one is to increase carbohydrate consumption to between 55% and 60% of the energy (caloric) intake. The committee shows its professionalism by starting with what should be increased, to compensate for the reductions entailed by the other five goals. Present total carbohydrate consumption in the U.S.A., as in Britain, is 46% of dietary energy, about half in the form of sugar. The increase should be in the form of complex carbohydrates or starchy foods such as vegetables, fruits, and whole grains that also contain many other nutrients including dietary fibre. A day's allowance of protein from whole-grain cereals, legumes, and nuts costs less than the equivalent amount from most types of meat. This first goal will surprise those (one hopes few of them are medical people) who still imagine that starchy foods are unhealthy or that bread and potatoes are especially fattening.

Goal two is to reduce fat consumption from over 40% down to 30% of energy intake. This goal is in the same direction as official British advice [2] but goes further. 30% of fat is rather less than was available in Britain during the 1939–45 war but more than the content in traditional Mediterranean cookery. Fats are the most concentrated source of energy in the diet and so favour obesity. Many fats provide empty calories—they are not associated with the mixture of micronutrients found with complex carbohydrates. There are, in addition, epidemiological associations of breast and colon cancer with fat intake, unsaturated as well as saturated.

The next two goals concern the nature of the dietary fats. Goal three is that saturated fats should be reduced to 10% of total calories and balanced with around 10% monounsaturated and 10% polyunsaturated fats. For comparison the present British diet [4] is 21% saturated, 16% monounsaturated, and 4% polyunsaturated fats (total 41% of energy intake). The reasons for reducing saturated and increasing polyunsaturated fats are well enough known.[6 7] The fourth goal is reduction of dietary cholesterol to about 300 mg a day because it too tends to increase plasma-cholesterol—though seemingly more in some individuals than in others. One egg contains some 250 mg of cholesterol in the yolk, but servings of liver and kidney can provide more.

The fifth goal is to reduce refined sugar to 15% of dietary energy from the present estimated 24% in the U.S.A. Refined sugar in Britain contributes about 20% of total calories.[4] While most experts believe that no clear links have been established between sucrose and heart-disease, refined sugars provide empty calories and are associated with dental caries. A major source of refined sugar is soft drinks; in the U.S.A. their consumption has doubled in the past 15 years and the report suggests they should be much reduced or even eliminated from the diet.

The sixth goal is reduction of salt intake to approximately 3 g a day. Present consumption in the U.S.A. is 6–18 g, but the physiological requirement probably averages only 0.5 g a day. Sodium intake is more and more determined by food processors rather than by the individual. This extensive addition of salt to our foods disturbs the natural balance with potassium and may well favour the development of essential hypertension.

Looking at the foods which can be used to achieve these six nutritional goals, the report shows that highly processed foods are the most likely to be high in saturated fat and sugar or salt. In addition they very likely contain unnecessary additives such as colouring. Soft drinks account for more of the artificial colour intake in children than any other type of food or drink. For school and institutional catering, unprocessed foods, cooked on the premises, have sociological and economic as well as nutritional advantages over convenience foods.

Nutrition education of the public is poor. The seven (or four) basic food groups are out of date; they were not designed to meet current nutritional problems. Television is said to be the primary source of information for the American public today, but the advertisements for food and drink are unbalanced towards alcoholic beverages, confectionery, and highly processed foods while fresh fruit, vegetables, fish, and nuts get hardly any time. A similar picture can be seen in Britain.[9] Food labelling should show not only the essential nutrients but also the percentage and type of fats and of sugar, the amount of cholesterol and of salt, and the caloric content. The new U.S. goals are similar to Scandinavian recommendations on a healthy diet, published in 1968 [10] and subsequently incorporated in the Swedish Diet and Exercise programme and in the proposed Norweigian nutrition and food policy.[11] The American goals will welcomed by people who have thought seriously about the diet of modern Western man. Their major blind-spot is to ignore alcohol consumption, which is increasing fast along with its pernicious effects.[12]

EXPERTS LINK HEART DISEASE AND DIET

A sampling of medical scientists from 22 countries produced similar opinions about some aspects of dietary relationships with coronary heart disease.

Kaare Reidar Norum, MD, chairman, Nutrition Research Institute, University of Oslo, Norway, sent a questionnaire last December to 214 men and women around the world who are engaged in lipid, lipoprotein, atherosclerosis, and nutrition research.

Dr. Norum selected the recipients himself. He agrees that his was not a random sample, but notes (in the March 10 issue of The Journal of the Norwegian Medical Association) that these are "persons having been actively engaged in atherosclerosis problems in recent years." By mid-February, 85 percent of the addressees had responded. These are the results (translated by a staff member of the U.S. Library of Congress):

Is there a connection between diet and development of coronary heart disease? Yes 99.4 percent. No 0.6 percent.

Is there a connection between diet and plasma lipoprotein concentration? Yes 98.9 percent. No. 1.2 percent.

Is there a connection between plasma cholesterol concentration and development of coronary heart disease? Yes 98.9 percent. No 1.2 percent.

Is there a connection between plasma triglyceride concentration and development of coronary heart disease? Yes 77.9 percent. No 22.1 percent.

Is your knowledge of diet and coronary heart disease sufficient for recommending a moderate change in the diet of the population of our society? Yes 91.9 percent. No 8.1 percent.

Is your diet affected by your knowledge? Yes 92.4 percent. No 7.6 percent.

Should one or another form of mass examination be made to detect "high-risk persons"? Yes 82.6 percent. No 17.4 percent.

Do you know your own serum lipid values? Yes 87.6 percent. No 12.4 percent.

Do you smoke? Yes 14.8 percent. No. 85.2 percent.

Dr. Norum told the U.S. Senate Select Committee on Nutrition that about half the respondents are from the United States.

Those researchers who considered their knowledge sufficient to recommend diet changes were given nine choices of dietary advice and asked to set priorities. Fewer calories, less fat, and less cholesterol in the diet got high priority from most. There was disagreement on the importance of recommending more polyunsaturated fat in the diet.

A statement from the office of Sen. Edward M. Kennedy (D-Mass), chairman of the Subcommittee on Health and Scientific Research, quoted Dr. Norum as saying in a telephone interview with the Nutrition Committee staff that "the survey was conducted in response to meat industry arguments that there is considerable disagreement on the relationship of diet to heart disease.

"In November 1975, the Norwegian Ministry of Agriculture issued a report to that nation's parliament outlining nutritional guidelines for food policy and recommending, among other things, limiting meat consumption as part of an effort to limit total fat and saturated fat intake."

REPEAL THE EARNING TEST

Mr. GOLDWATER. Mr. President, it was my pleasure to appear this morning before the House Subcommittee on Social Security of the Ways and Means Committee to urge the complete repeal of the earnings limitation on social security benefits at age 65.

Mr. President, it is shocking that our law, as it now stands, openly discriminates against more than 11 million citizens age 65 to 72. If persons of this age wish to continue working beyond age 65, they must pay what is in effect a tax of 50 percent. They lose $1 of benefits for every $2 of earnings above $3,000.

This penalty against our older citizens is totally unjustified. It robs older workers of benefits that are rightly theirs due

to the payroll taxes which they and their employers have been making over their working lifetimes.

The earnings test also deprives the economy of the skills and production of millions of older citizens who want to work, are capable of working, and have pulled out of the labor force for no reason other than a desire to get their social security checks.

Mr. President, there has been a lot of hogwash spread about the supposed cost of repealing the earnings test, but this argument is unproven and unfounded. The truth is that most workers who would benefit from a repeal of the test would not cost the social security system a penny. These older persons are already drawing the maximum benefits by staying home; but if the lid on earnings is repealed, they will rejoin the employment force.

These workers will pay additional social security taxes once they resume work, but the system will not be paying out to them any more than it presently is. Also, many workers will pay additional Federal income taxes to the Treasury and their output will benefit the gross national product.

In other words, it is my conviction that repeal of the earnings ceiling will virtually finance itself. It definitely will cost less than half of the amount defenders of the earnings test bandy about.

Mr. President, my conclusions are based upon new and independent data that is becoming available thanks to the original research being done by economists outside of the Social Security Administration. I provided a list of several of these independent economists to the House subcommittee this morning with the request that they invite these or similar expert witnesses to testify specifically on the subject of the earnings limitation. This new research information is an invaluable source of objective and factual data which has never before been available to Congress, and I am hopeful that committees on both sides of Capitol Hill will choose to draw on it.

Mr. President, in order that I may share with my colleagues the complete analysis of why I believe repeal of the earnings test will almost be self-financed, I ask unanimous consent that my testimony before the House Subcommittee be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR BARRY GOLDWATER OF ARIZONA BEFORE THE HOUSE SUBCOMMITTEE ON SOCIAL SECURITY JULY 19, 1977 REMOVING THE EARNINGS TEST

Mr. Chairman, I propose the complete repeal of the earnings test of Social Security at age 65. I am joined in this proposal by 33 other Senators who are cosponsoring a Senate bill I have introduced to do just that.

Mr. Chairman, our law openly sanctions discrimination against more than 11 million citizens age 65 to 72. If persons in this age category wish to continue working, they must pay a discriminatory tax of 50%! They lose one dollar of benefits for every two dollars of earnings on all income earned over $3,000, until their benefits are withheld entirely.

This penalty is in addition to any federal, State, county or city income taxes workers 65 and under 72 must pay on their earnings, and it is on top of Social Security taxes that will be collected from the same workers regardless of age.

Older workers are doubly discriminated against. Not only are they the target of a steep tax levy, but our Social Security law discriminates between those individuals who have earned income and those with non-wage income. It is only the work who *must* continue working because he can't afford to retire who bears the brunt of the earning ceiling. Workers who are well off and have been able to build up a nestegg of stocks, bonds or other savings can get unlimited income from these investments and still draw their full Social Security checks.

There are many reasons why the retirement test should be eliminated. One is the great physical and mental harm older persons suffer when they are forced to retire sooner than they are ready. The American Medical Association has confirmed this injury to the health of older persons.

Another reason for ending the earnings ceiling is the drain it puts on the national economy due to the loss of skills and output of older persons who retire in order to collect their social security checks.

Then there is the obvious financial need that many older persons have to receive their social security income, while still continuing to work.

To these arguments, we can add one that is made by older persons who say these benefits belong to them at age 65 since they have been paying social security taxes all of their working lives. These workers also know they have been receiving lower wages on account of the matching Social Security "contributions" made by their employer.

Our former colleague in Congress, the late Paul H. Douglas, stripped the earnings limitation of its false pretenses in 1939, when he was a noted college professor and economist. He wrote, in an authoritative book on Social Security, that by requiring workers to give up gainful employment, the earnings limitation "is in reality, attaching a condition upon insurance which they have themselves bought."

Now, I know we hear the objection that repeal would cost too much. For example, the Social Security Administration puts the cost of my proposal at $2.9 billion.

But the Social Security Administration has never told me, even though I have requested it, the amount of additional Social Security taxes that will be collected as a result of the higher earnings produced from eliminating the earnings test.

Nor do any of the cost estimates include the additional income taxes that will be paid by individuals who rejoin the labor force or increase their earnings, once the income test is eliminated.

Also, no government analysis has ever considered the value of the increased output of goods and services that would be injected into the nation's economy by repeal of the test.

Based on studies made by independent economists, I am convinced the first two tax offsets alone will exceed $1 billion in revenues to the United States.

Let me explain where these offsets will come from. The answer is quite simple if we will just keep in mind three basic categories of persons who are covered by social security.

According to the Social Security Administration, there were two million persons, age 65 to 72, who were employed in 1975 but had no benefits withheld because of the earnings test. Second, there were another 1.4 million persons who received reduced or no benefits in 1975 due to the retirement test. Third, there were 7.9 million persons age 65 to 72 who were not employed at all.

Now, I am convinced that a substantial number of the two million older persons, who were employed, but had no benefits withheld, *deliberately limited* their earnings so that they could receive the full amount of their Social Security checks. It is no coincidence that about one fourth of these workers are clustered at or a few hundred dollars below the ceiling.

In fact, the government's own studies prove "that a substantial number of beneficiaries subject to the test limited their earnings to the annual exempt amount and thus got their full benefits for the year." This finding appears in an official 1968 report by the Secretary of HEW.

What we must recognize about this group—about half a million persons—is that their working for higher wages would not result in any added cost to the system. They are already receiving the full amount of their benefits.

They would, however, pay additional payroll and income taxes and boost the Gross National Product.

Next, there is the large group of almost 8 million persons with no earnings. Professors Kaplan and Weber, two economists, believe government studies of the earnings test completely overlook millions of persons in this retired group who do not have a choice of working part time. They are people who can either work full time or not at all.

Under current law, Professors Kaplan and Weber argue, their extra income is so heavily taxed by the reduction in their Social Security benefits that they stay out of the labor force entirely. But if the retirement test is eliminated, they will return to work with no additional cost to the system. They are already receiving the maximum benefits.

How many of this group would return? Hard evidence suggests that from a quarter to one-half of them would return to work if the earnings limitation were repealed. This would produce tremendous new revenues for the system.

The HEW report mentioned above admits "that the annual exempt amount has a significant effect on incentives to work." Just how great is this impact? According to a recent study by Professor Boskin of Stanford University, the earnings test is the major reason persons retire at age 65. In fact, he writes:

"A reduction of the implicit tax on earnings from one-half to one-third cuts the annual probability of retirement *in half* for typical workers."

Professor Boskin's study uses data from a five year natural survey of thousands of persons aged 61 through 70, and his conclusions appear to have great validity. But even if we take the government's own statistics, they will prove my case.

For example, a 1968 Social Security Administration survey of men who stopped working altogether concluded that only 16% of retired men aged 65 actually wanted to retire. Specific illness or disability caused but 14% of men this age to retire. Even counting the answers of men who said work had become too tiring or that they couldn't keep up anymore, only 23% of all men age 65 left their jobs due to health.

Compulsory retirement policies were another reason, being mentioned by 36% of men age 65 as the reason they left work. But a worker who is retired by one employer can often shift to another or become self-employed.

However, accepting these statistics at face value, there still remains at least a quarter of the 8 million retired persons age 65 to 72 who had no health problems, no compulsory retirement problems and did not want to retire.

Studies, such as the one by Professor Boskin, provide strong evidence that most of these persons gave up their jobs because of the earnings test.

In conclusion, Mr. Chairman, I believe the earnings limitation is holding down the eco-

nomic condition of at least four million older persons. The majority of these persons could return to the labor force with no additional cost to the system since they are already drawing the maximum benefits.

They would pay additional Social Security and income taxes, and their employers would provide matching payroll taxes. These revenues would offset most of the cost of repealing the earnings limitation for the smallest group of affected workers, those who now lose all or part of their benefits due to the income ceiling.

APPROVE SURFACE MINING ACT NOW

Mr. JACKSON. Mr. President, tomorrow the Senate will be able to end its 7-year struggle to enact a Federal law regulating surface coal mining by approving the conference report on H.R. 2, the Surface Mining Control and Reclamation Act of 1977.

Approval of this legislation is long overdue. Development of coal is the key to meeting our energy needs for the rest of this century. One of the major inhibiting factors to coal development in all regions of the country—east and west—is the failure to establish Federal surface mining standards. Our coal industry must know what the ground rules are to plan their investments and proceed with mining. The conference report on H.R. 2 strikes an appropriate balance between the need to develop our coal resources and protect our land and water. It is flexible enough to be applicable to the mountains of Appalachia, the fertile agricultural areas of the Midwest and the arid, fragile areas in the West. It recognizes the interest of individual States by giving them the principal responsibility for regulation within their borders.

Mr. President, I am aware that three of my colleagues are concerned about the fact that the conference report contains the language passed by the House of Representatives with respect to the situation where certain private individuals own the surface of land overlying Federal coal. This language is identical to that reported by the Committee on Energy and Natural Resources in S. 7. The Senate debated this so-called "surface owner consent" issue extensively. On May 19, an amendment to change this language was defeated by a 67 to 25 vote. However, on May 20, the Senate reversed itself and adopted a similar amendment, which I cosponsored, by a vote of 44 to 32. It is obvious that opinions on the surface owner issue are closely divided. It is equally obvious that while the Senate receded on this issue, the Senate prevailed on many other issues.

As I have already indicated, the end result is a good bill which is urgently needed. I strongly believe that the conference report should be adopted by the Senate, and I urge all Senators to vote for it.

SENATOR DOLE'S SPEECH TO THE ZIONIST ORGANIZATION OF AMERICA'S 80TH CONVENTION

Mr. JAVITS. Mr. President, on July 7, 1977, Senator BOB DOLE of Kansas, was a principal speaker at the 80th convention of the Zionist Organization of America, held in Jerusalem. Senator DOLE has earned a reputation as one of the staunchest friends of U.S.-Israel relations in the U.S. Senate. We have been joined together in many struggles concerning Israel's security and national integrity in the Congress and within the Republican Party.

The text of Senator DOLE's speech to the 80th ZOA convention shows very clearly and dramatically how he has captured quite vividly both the deep aspiration for peace in Israel, as well as the security concerns which shape Israel's posture—at the time of Prime Minister Begin's historic visit to the United States—with the prospect of a resumption of the Geneva Mideast peace conference a strong possibility later this year.

Mr. President, I was in Israel and other Mideast countries myself just a few days before Senator DOLE's arrival to address the ZOA convention. I can attest to the esteem and affection with which he is regarded by the people of Israel. I can also attest to the seriousness of his observations, and his articulation of them, of the hopes and concerns of Israel's people at this critical juncture in history.

For this reason, Mr. President, I ask unanimous consent that the text of Senator DOLE's speech be printed in the RECORD so as to be available for all our colleagues.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

PREPARED TEXT OF SPEECH PRESENTED BY SENATOR BOB DOLE

I am honored to address this 80th Congress of the Zionist Organization of America. It is a pleasure to be with you all again, I see many familiar faces here. I am especially grateful for the reception given me. I get more applause and fewer votes from my Jewish friends than any other politician in America. The distance between Israel, 1977, and Switzerland, 1897, is not significant in terms of miles. But in terms of the time and energy, of the hopes and frustration, of the grief and the monumental achievement between that First Congress and this one today, the distance is greater than words can tell.

PEACE ENDANGERED, PEACE DESIRED

Today, the journey is still not complete. In spite of the green valleys and the crops on the hills of Latrun, in spite of the industry and the universities, in spite of the creation of a democratic oasis, the redemption of the holy places, in spite of it all, the journey is not over. The peace prophesied by Isaiah for all the world, is most endangered here, even as the hope of its achievement remains most fervent here. Hebrew is a strange tongue. In most of the languages of the world, the most common, the most necessary verb is the infinitive "to be." In the language of Israel—the language of the Jews, "to be" exists only in the past tense and in the future. For the present, it is simply understood.

So, for two thousand years, has the ultimate realization of the most cherished hopes of the Jewish people been understood. That a reborn Israel was to be, was understood. That Jews would one day live and work and worship freely in the city of David was to be—it was understood.

That peace will crown and sanctify this achievement is also something that will be. That, too, is understood. But how it shall be defies and surpasses our understanding.

CHANGE AND CONTINUITY

Today there is concern in Israel, and among the American Jewish community, about the U.S. position toward Israel in its relations with the Arab states and the Palestinians. This is understandable. We meet at a time of change. We have a new Administration in America. We have a new Administration in Israel. Both promise to explore and pursue courses of action affecting Israel in ways that differ from their predecessors. But while there may be changes in procedure, there can be continuity in goals.

I have spoken to Prime Minister Begin, and to former Prime Minister Rabin, and to the Leader of the Labor Party, Shimon Peres. All share the same goal of a safe, secure and lasting peace for Israel. This includes and requires sensible, secure, defensible borders.

I believe these are goals which President Carter shares. Israel and America may differ on how to reach those goals. But friends can differ and still be friends. Allies can differ and still support each other fully and forcefully. We can also differ in America about the proper way to achieve those goals. But the proper place to express those differences is in America, and I can assure you that whenever necessary, this will be done. What is most important is not the differences between allies. But those between adversaries: between Israel and the Arabs. Today we are testing the strength and the dimensions of those differences to see if they can be compromised far enough to negotiate a peace. This is still unclear.

When one party to a dispute says, as Egypt's foreign minister did recently, that they will not negotiate a resolution of the dispute unless their objectives are agreed to in advance, it is difficult to see where an opportunity for a settlement exists, or even that any basis for real negotiation exists. I think it is more, it is more common to find negotiation producing an agreement than to find agreement producing a negotiation.

SADAT AND FAHMI

But Mr. Sadat has said he is anxious to negotiate. So perhaps Mr. Sadat does not always listen to his foreign minister, and great good may come of that. I understand Mr. Fahmi recently said the Jews should go back where they came from. I hope you don't all take his advice, but for those who do I trust the new Minister of Immigration and Absorption is prepared to handle the influx.

We may be witnessing the most radical reversal in Egyptian policy since the Exodus.

For the first time since her rebirth, Israel is in a position to negotiate from strength. It is natural that she wishes to be patient and deliberate about it. It is understandable that her friends should want to offer her advice about it, and we can understand the great interest in what she considers negotiable, since that is for Israel and only Israel to decide.

WHAT DO THE ARABS HAVE TO NEGOTIATE?

What is missing from serious public discussion, however, is any real consideration of what the Arabs should bring to the table. What they are publicly committed to in an agreement is to recognize Israel's right to exist, and to make peace with Israel. Those are desirable goals, but they are somewhat less specific and consequential than what they are asking of Israel, and asking to have committed in advance.

As desirable as they are, I would suggest that they are hardly indispensbale in the short term, which is why Israel can afford to be patient and deliberate, and should be.

RECOGNITION, RECONCILIATION

On recognition, as I understand it, the Arab position is that they will acknowledge Israel's right to exist, in return for which Israel must give up some of the means of preserving her existence. Israel does exist. Whether the Arabs acknowledge that is problematical. Her right to exist is recognized in international law confirmed by history, and reinforced by the same Lockean logic which guided and informed those men and

women who founded and built the United States of America. So for the Arabs to say they will recognize Israel's right to exist is hardly a dramatic concession. When they are able to speak of reconciliation along with recognition, that will be a more serious signal.

The other condition is peace. That, too, is desirable. But it is worth noting that in the present circumstances, a peace of sorts already exists. In the past year, no Israeli solider has died in hostile action.

This is a peace enforced by the strength of Israeli arms and equally important, by the strength of Israel's military position—which means having control of the Golan Heights, the Sinai, and the West Bank.

So the question is: which situation is better calculated to maintain peace—an Israel which is in a strong defensive position, or an Israel which is in a weak defensive position? I've been out of the Army for thirty years and I don't remember much, but Ezer Weizman tells me it's better to be in a strong defensive position.

A SLOW, STRUCTURED APPROACH TO PEACE

I do not suggest that an enforced peace is better than a negotiated peace. But the history of assassination and coup de'etat' by which governments and government policies change in the Arab states gives little confidence that the agreements made by one government will be binding on its successors.

Further, it gives little confidence that an agreement will not trigger a radical upheaval aimed at eliminating of the agreement, as well as those who made it.

Therefore, a negotiated peace will almost certainly have to be one structured in such a way as to give the Arabs the opportunity to demonstrate that it can and will be kept. And this may take time. So the question will be whether the Arabs want to spend time to get an agreement on mutually acceptable terms, or to spend more lives to try to force an agreement on their own terms. I hope neither the parties to the dispute, nor their allies, will become anxious if a peace which the Arabs have taken thirty years to talk about, should take time to negotiate and a longer time to implement.

The great fallacy in the popular evaluation of the Middle East is that Israel's agreement to withdraw to the pre-1967 borders would lead to peace, and this would result in the stabilization of the Middle East.

1967 BORDERS NOT SACRED

This baffles me. For one thing, the inescapable truth is that the pre-1967 borders led not to peace, but to war. With the constant cry about the 1967 borders, it is hard to understand why their desirability was not recognized before the six-day war instead of after.

In the months and weeks leading up to the six-day war, the Jordan Valley was being shelled continually from the Golan Heights. Efforts were made to divert the Jordan River and deny Israel water. The call for a "people's war" against Israel was constant, and growing louder by the day. The Egyptian army was concentrated in the Sinai. At Nasser's insistence the U.N. emergency force in the Sinai was withdrawn. The Straits of Tiran were closed. A pact of war was established, and armies were massed along the 1967 borders. Reasonable men could not doubt that the intent was to violate these borders.

Prudent men could not help but react.

1967 BORDERS ARE 1948 ARMISTICE LINES

So one must ask what is the magic in the borders that makes them so desirable in 1977, and made them so undesirable in 1967? The simple answer is that the Arabs expected to push those borders in, to "push the Jews into the sea." as the saying went—and instead the Jews, in defending themselves, pushed the borders out. If that is not the answer, then we have to ask why the Arabs should have fought two wars just to obtain what they already had in peace. It should be remembered, however, that the so-called pre-1967 borders are not borders at all under any acceptable interpretation of international law. Rather they are the Armistice lines drawn where the efforts by five Arab armies to destroy the State of Israel were finally halted in 1948.

Jordan's representative to the United Nations put the point very well on May 31, 1967 in the Security Council, when he said: "There is an Armistice Agreement. The Agreement did not fix boundaries, it fixed the demarcation line. The Agreement did not pass judgment on rights—political, military or otherwise, thus I know of no boundary: I know of a situation frozen by an Armistice Agreement."

This position was being put forth to defend and justify in advance the intended violation of the Armistice Agreement. Today the Arab states insist that Israel return to borders which, ten years ago, the same states said had no standing.

This is a circumstance which justified caution on Israel's part. But it may also justify optimism about the long-term possibility of arriving at fixed, mutually acceptable borders. In order to find borders sanctioned internationally, it is necessary to go all the way back to 1922. After Britain severed Transjordan, what remained for a Jewish homeland included the West Bank, Jerusalem, and the Gaza. That is a legal argument. There are historical arguments. Some are compelling. All are interesting. Some favor one side, some favor the other.

WEST BANK LIBERATED, NOT OCCUPIED, TERRITORY

The difficulty of sorting out competing claims is reflected in a long-standing U.S. policy cliche which says "We will not defend Israel's conquests." Even-handedness ought to require, therefore, that we do not defend Arab conquests, and I trust we will not—not in the Gaza strip, and most especially not in the West Bank.

The Arab nations rejected the partition recommendation in 1947, went to war in 1948, and Jordan conquered the West Bank. Her only claim to that territory is by conquest. In 1967, Israel took back the lands provided as a Jewish homeland in the League of Nation Mandate for Palestine of 1922, and recognized by a U.S. Congressional Resolution of September 21, 1922. Therefore, I fully concur with Prime Minister Begin's characterization of the West Bank as liberated territory and not occupied territory.

If Israel wishes to relinquish all or part of the West Bank by negotiation, that is her right. It is not her obligation. Let us not defend Israel's conquests.

But let us also not defend Arab conquests.

THE PALESTINIAN QUESTION

Now we have the Palestinian question. It has been suggested that a Palestinian homeland be provided, preferably in conjunction with Jordan.

There is nothing in the history of the Jordanian-Palestinian relationship to suggest that a Palestinian homeland might be established in conjunction with Jordan. The territory most frequently suggested for a Palestinian state is the West Bank. Jordan held the West Bank for nineteen years, and did not establish a Palestinian state there. From the assassination of Abdullah through almost weekly demonstrations and shootings on the West Bank, through September of 1970 to the assassination of Wasfi Tell in Cairo, and on and on, the history of that relationship is not one that would justify hope for the success of a Palestinian homeland in conjunction with Jordan.

ARAB JEWISH REFUGEES

But if such a homeland can be established in conjunction with Jordan, that is something which Jordan must work out with the Palestinians, and with her other Arab neighbors. It becomes an Arab question which has no relationship to negotiations with Israel. Israel has already done more than any Arab state, with the exception of Jordan herself, to help the Palestinians and make a home for them. That fact is too often ignored.

Israel has also assimilated Jewish refugees from Arab lands, and nowhere in the discussion of refugees is the difficult situation being discussed.

When the problems of the Palestinians are raised in Geneva, I hope we will insist that the problems—and the legitimate rights of dispossessed Arab Jews are represented equally.

They have no propaganda, and they don't throw bombs and commit terrorism, but their problems are as great as those of the Arab Palestinians, and their numbers are as great.

It is time to recognize that the Palestinian problem will not be resolved until it becomes a humanitarian concern rather than a political opportunity for Arab governments, and for bandits like Yasser Arafat and George Habash.

JERUSALEM NON-NEGOTIABLE

Finally, there is Jerusalem. Historically and legally it is a Jewish city. Spiritually, it is the home of three of the worlds' great religions. Under the never-implemented partition recommendation, Jerusalem was to be an international city. Christian, Moslem and Jew were to have access to their holy places within the old city. But the city was taken by the invading armies in the war of independence, and for Christians and Moslems there was access, but to the Jews there was none.

The hotel was in Arab hands. Jewish holy places were desecrated. And those who once called for internationalization were silent. The city that ought to have been a symbol of unity among ranking became one more symbol of the divisions in the Middle East. King Faisal used to say that he wanted to worship at the Dome of the Rock before he died, but he would not do so while the city was in Jewish hands. It is worth noting, however, that he would not worship there during the nineteen years that Jerusalem was in Jordanian hands, either.

Today, the City of David is open to all. For the first time, it has the chance to stand as a unifying symbol, as well as the vibrant, dynamic city that it is. All religions are respected here. All holy places are protected here. There are those who object—not because it is open, but because it is open under the Jews. It is difficult to build arguments about justice on those grounds. Those who love their holy places more than they cherish their hatreds will have no difficulty going to Jerusalem regardless of who holds it. Those who do not, are perhaps not ready for Jerusalem.

And in the search for a solution to the dilemma which Israel's first President called "a conflict of right with right', whatever else may be negotiable, the capital of Israel clearly is not.

ISRAEL, VITAL TO U.S. SELF-INTEREST

Israel and America are bound by ties of affection and respect, by history, culture, and common tradition. But in the hard logic of international relations, the most important bond between nations is self-interest.

A short time ago, the government of Israel changed hands. It was done peacefully. The man who was unsuccessful in his bid for the leadership is still alive and well. The nation is divided in its politics, as is the United States, it is united in its purposes as is the United States. There has been a smooth, dignified transition.

This is an unusual event in this part of the world. It is an unusual event in any part of the world today. Freedom and democracy are on the defensive all around the world, but we believe they will survive and prevail.

The success of Israel serves to justify and strengthen that belief. Perhaps a people who can grow oranges in the desert can also help freedom and democracy to grow in the Middle East. In any event, she can help to defend it wherever it exists. I think it is fair to say that Israel needs America. But I think it is also fair to say that America needs Israel. And we know it.

Whatever the temporary growing pains which may result from our Administrations getting to know each other, we can be confident that these represent a further growing together, and not growing apart.

Eighty years ago, in a gambling casino in Switzerland, the miracle of modern Israel began. It began with an ancient dream stated in the language of modern politics. It began with a flag and a song: Hatikvah (The Hope). That flag flies free in a democratic nation, the hope has become a reality, and the possibility of miracles has been demonstrated anew. With that possibility fresh in our minds, we may hope for another miracle—for the peace which comes not by imposition, but by understanding and reconciliation, for the peace that comes with healing in its wings, and without the seeds of future conflict.

We must work for it as we can, and pray for it as we may: trusting in the words of David: "As the mountains are round about Jerusalem, so the Lord is round about his people from henceforth even forever . . . and, peace shall be upon Israel."

Thank you. Shalom.

THE W. C. MAYS BRIDGE

Mr. HOLLINGS. Mr. President, a bridge recently dedicated near Fair Play, S.C., bears the name "W. C. Mays Bridge." Dr. William C. Mays is known and admired throughout our State of South Carolina. For 60 years, from 1912 to 1972, Dr. Mays devoted his life to improving the health of generations of South Carolinians. He was a country doctor who acknowledged no obstacles when he set out to visit his far-flung patients. The ideals of the country doctor, and the energy with which he implemented them, are perhaps the most inspiring chapter in the saga of American medicine. And I know of no one who did more to live those ideals than Dr. Mays.

So it is with great pride that many of Dr. Mays' friends and admirers turned out for the dedication of the bridge, which is located very close to the spot where Dr. Mays was born. The transportation network in that part of the State is a far cry now from what it was when the good doctor braved all in healing the area's sick. His job would perhaps be easier now, at least from the perspective of travel. But that bridge is symbolic as well as tangible, for it reminds us how William Clayton Mays was himself a bridge for thousands and thousands of people, how he was the vital link between good health on the one hand, or illness and death on the other.

Mr. President, the Anderson Independent published a news story on the bridge dedication, and I ask unanimous consent that this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW BRIDGE DEDICATED TO "COUNTRY DOCTOR"

(By Jerry Alexander)

FAIR PLAY.—A new bridge at I–85 and Scenic Highway 11 was dedicated Saturday in honor of a country doctor who, for 60 years, healed the sick in parts of Oconee and Anderson counties.

The $1 million bridge and interchange will bear the name "W. C. Mays Bridge" in remembrance of 91-year-old William Clayton Mays, M.D.

It is located about two miles south of Fair Play near the hillside where Dr. Mays was born July 11, 1886.

A crowd of about 150 persons was on hand for the 11:30 a.m. ceremony at the north end of the gleaming concrete span. The granite marker bearing Dr. Mays' name and other inscriptions will be placed there permanently after the area is landscaped, officials said.

Dr. Mays practiced medicine in Oconee and Anderson counties from 1912 until 1972. During that time he also had patients from Georgia, also.

Fellow physician Dr. Hugh Wells of Seneca said Dr. Mays has left his footprints in the clay hills of Oconee for present and future generations to follow.

He told of the gentle, white-haired doctor's early practice, including travel over muddy, rough roads to deliver a total of 3,000 babies in his career. In those days of horses and buggies, Dr. Mays always kept two horses on hand. One had to be always fresh and ready to go at all times.

Later he used a model T Ford to get around to the farms of his patients. Those were the days of the house call and Dr. Mays traveled literally thousands of miles per year.

Dr. Mays was married in 1913 to the late Kate Harris of Oconee County and they had seven children.

Almost all the doctor's descendants were on hand to help him observe the occasion Saturday. They gathered around the marker with him for photographs and previously, two of his sons who are Oconee physicians, Harry and Lane, walked arm in arm with him to the podium.

There Dr. Mays thanked all who had turned out and said he hoped he has lived up to the remarks made about him during the ceremony.

Two of his granddaughters, Nancy Lane Graham and Julie Sammeth unveiled the marker.

Presiding was Rep. Bob McLellan of Seneca. Sen. Herbert D. Morgan of Seneca welcomed guests, and speakers were Furman L. Fendley, vice chairman, S.C. State Highway and Public Transportation Commission; H. Carl Blackwell; Rep. Cecil Sandifer; the Rev. Roger Estridge, Dr. Mays' pastor at Beaverdam Baptist Church in Fair Play, gave the invocation and prayer of dedication.

SKEPTICS TAKE NOTE

Mr. BARTLETT. Mr. President, a recent editorial published in the Daily Oklahoman, a major Oklahoma City newspaper, quite vividly depicts the present national energy dilemma. I feel the editorial, entitled "Skeptics Take Note," would be of interest and benefit to my colleagues, and ask unanimous consent that it be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Daily Oklahoman, June 24, 1977]

SKEPTICS TAKE NOTICE

May crude oil imports into the United States exceeded 6.7 million barrels per day, marking the fifth consecutive month in which crude oil imports surpassed the 6 million barrel per day level. Estimated total imports comprised 46 per cent of the total supply in May, as compared to 38 per cent in 1976.

Domestic wells in this country produced 8 million barrels per day in May 1977, compared to 8.2 million barrels per day in May 1976.

Petroleum products, as distinct from crude oil, imports during the month of May were up 14.9 per cent above the same period a year ago. Total product imports so far this year, up to June 1, are up 20 per cent above the comparable 1976 level.

Motor gasoline demand for the first five months of 1977 in the United States alone is up 3.3 per cent above the 1976 requirement, and for May the demand was up 4.7 per cent.

These are some of the figures in the most recent report of the American Petroleum Institute, and they tell a lot about why there is a continuing crisis in our supply of basic fuels.

The domestic production continues to drop, and the search for new supplies not only grows more costly but the capital with which to develop new sources of supply is being drained off by exorbitant taxes on the sale of petroleum products, from the wellhead to the service station pump. The demand continues to rise, and the extent of our dependence on imports rises accordingly.

It is small wonder, then, that those who have ample supplies to sell on the world market are taking advantage of the demand situation by holding prices high. Nor is it surprising that some of them, at least, use their hold on our energy supply to exert pressure on our national policies.

The skeptics who insist that there is no real shortage of oil or gas, or that the producers are deliberately holding supplies off the market in order to wait for higher prices, might ponder the figures above. The market is there waiting for our own producers to supply it, and the producers want to meet its demands. But they cannot produce oil by waving a magic wand. It takes months, sometimes years, to decide where to drill, to put together the leases and the equipment and the drilling teams to complete a well that may or may not be a producer. It also takes prodigious accumulation of capital to pay for the whole show. When it is found and brought to the surface, it must still be transported to suitable refineries, which may or may not exist, through pipelines that may or may not be ready, or even planned.

The whole complex system is a wonderful one, and it has survived depressions and earthquakes and fire and floods, but it may not survive political interference by demagogues and bureaucrats blissfully ignorant of its most basic components.

The skeptics to the contrary, there is a shortage of oil ready to process into the products we demand, and there is no great reservoir ready to be shipped to market at the turn of a tap. But the doomsayers are equally wrong when they say there is nothing that could be done about it, and there are no more supplies to be located and produced.

The system that has given us the abundance we have known for so long will still meet our needs if the political monkeywrenches can be kept out of the machinery.

SO MUCH MORE TO BE DONE FOR HUMAN RIGHTS

Mr. PROXMIRE. Mr. President, we often wonder whether human rights protests have any effect. Do they actually make some headway toward ending or reducing oppression? Or are they merely an exercise in ineffectual oratory?

One might argue that human rights protests produce only limited results, but there can be no question that they do produce results. Just recently, a series of protests concerning the disappearance of

approximately 1,500 persons in Chile has resulted in the retreat of that government from its adamant denial of involvement in, or knowledge of, those "disappearances." Tom Wicker, in a June 24 article in the New York Times, described the protests and the resulting changes in the official Chilean position regarding missing persons.

Wicker's article is most important as an indication of the great deal more that could be done to protect human rights. If protests such as those described in Wicker's article can produce small gains for persecuted individuals, how much more could be accomplished if this nation came out in support of basic human rights.

Is it feasible for this nation to commit itself to support fundamental human rights? Is there an issue defined narrowly enough to make our support meaningful?

The answer to both these questions is a resounding yes. The Genocide Convention, now under consideration by the Senate Foreign Relations Committee, provides a vehicle for this body to oppose a crime that is clearly defined—and one which is clearly one of the most reprehensible atrocities known to man.

I ask my colleagues to study Mr. Wicker's description of the effect on the Chilean Government of several demonstrations, a handful of protestors, and a few statements of support. And I ask my colleagues to consider how much greater would be the impact of human rights protests such as these with the support of this body.

Mr. President, I ask unanimous consent that Mr. Wicker's article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A SMALL GAIN IN CHILE

(By Tom Wicker)

Twenty-six hunger strikers have forced Gen. Augusto Pinochet, the iron ruler of Chile, to give a little ground—but not much—on the question of the approximately 1,500 persons who have "disappeared" in Chile.

The Pinochet regime has been blandly disclaiming any knowledge of the whereabouts or fate of these "disappeared prisoners," as they are referred to by Amnesty International and other human rights organizations. But on June 14, 24 women and two men, all relatives of disappeared prisoners, entered the headquarters of the Economic Commission for Latin America in the United Nations building in Santiago, and began a hunger strike.

In a remarkably nonideological document, the demonstrators made three demands on General Pinochet:

That the cases of the missing persons "should be cleared up once and for all."

That an international commission of Chileans and other nationals be set up to investigate and report on the "disappeared prisoner" situation and other human rights violations in Chile.

That no reprisals be carried out against the hunger strikers.

These demands were submitted along with exhaustive lists of the "disappeared prisoners," compiled by the Catholic Church in Chile, with the assistance of what the strikers called "thousands of world figures, men of culture, lawyers, trade-union leaders, etc."

On June 23, after intervention by the United Nations, a White House statement of concern, and supporting demonstrations in Paris, Mexico, San Francisco, Norway and elsewhere, the strike came to an end after small concessions had been wrung from General Pinochet by U.N. negotiators.

The general agreed to provide information about the missing relatives of the 26 hunger strikers, and promised not to retaliate against the 26 themselves. No one had really expected him to agree to the second demand—for an investigative commission—since he has never been willing to allow even the U.N. Human Rights Commission or its representatives to come to Chile to look into the human rights situation there.

The agreement leaves more than 1,400 "disappeared prisoners" not only unaccounted for but not even officially acknowledged. And of course, the Pinochet regime may yet say of the relatives of the 26 what it has usually said in the past—only that they were neither exiled nor jailed but simply left the country for reasons unknown.

Even so, the mere acknowledgement that the regime could provide some sort of information about the relatives of the 26 strikers was a limited admission of responsibility for—or at least knowledge of—their disappearances. And by extension, this admission tends—at least in the eyes of anti-Pinochet forces in exile—to acknowledge the whole list of "disappeared prisoners."

The hunger strike also produced a deeper involvement of the United Nations in conditions in Chile and in the human rights problem generally. Both because the strikers were occupying U.N. quarters in Santiago and because of a General Assembly resolution of last November, which condemned the practice of arresting political prisoners and making them "disappear," the U.N. had little choice but to intervene.

Enrique Iglesias, the director of E.C.L.A., acted as chief negotiator, on the instructions of Secretary General Kurt Waldheim. The U.N.'s chief legal officer, Erik Suy, also was involved. Mr. Waldheim apparently met with the Chilean representative to the U.N.

But these are minor gains indeed compared to the continuing repression and misery of the great Chilean people. Inflation and unemployment, though claimed by the regime to have been eased, continue at extraordinarily high levels; the "disappeared prisoner" technique appears to have replaced less subtle forms of political detention; and as recently as February, a special five-member U.N. working group reported to the Human Rights Commission that the Pinochet regime continued to torture as "a regular practice" those unfortunates it did detain.

The hunger strike and its outcome, however, suggest at least some sensitivity on the part of General Pinochet to world opinion about his violations of human rights. Therefore, President Carter might consider making the Pinochet regime the focus of an American human rights policy—while firmly refusing new agricultural loans to Chile that are now being considered in the State Department.

REHABILITATION AND GOVERNMENT ACTION

Mr. HUMPHREY. Mr. President, during the July 4 recess, frequently and incorrectly referred to as a "vacation," I had an opportunity to participate in a number of public events in Minnesota.

Invariably, these intervals back home permit a spirited and useful exchange of information and opinion with my constituents.

I particularly enjoyed the opportunity to address a workshop sponsored by Mankato State University for vocational rehabilitation counselors.

My hosts had invited me to discuss legislative and human rights issues in the area of rehabilitation, and especially how to influence and enforce the law.

I would like to share with my colleagues my comments on that occasion, because I believe they are relevant to legislative issues and policy decisions which will face Congress with increasing frequency and urgency as the handicapped of this Nation actively seek the fulfillment of promised rights.

Mr. President, I ask unanimous consent that my remarks be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

POWER, POLITICS AND CURRENT ISSUES IN REHABILITATION

"My hand trembles, but my heart does not." Stephen Hopkins reportedly said of his signature on the Declaration of Independence.

Historians do not agree whether this founding father suffered from cerebral palsy.

But that sentiment stands as a remarkable expression of mixed strengths and weaknesses of every human being.

Recall Franklin D. Roosevelt.

Would you categorize that great leader by his affliction?

Whether his politics inspires or alienates you, he represents achievement, strength and leadership.

There is no shortage of inspiring examples of persons who overcame handicaps, sometimes in a spectacular manner.

The current issue is the extent to which public policy can and should help make this opportunity widely available to all disabled persons. Regardless of their individual situation.

Had Franklin D. Roosevelt been seeking the most ordinary employment, he might well have encountered discouraging physical, architectural and psychological barriers.

This suggests something of the arbitrary nature of the prejudice that confronts any oppressed and labeled group.

Discrimination is clever and pervasive. Perhaps its most essential characteristic is that it defines which personal strengths will be assigned social value and importance.

Because each human being is a mixture of skill and ineptness, strength and weakness, aptitudes and interests, it is surprising how long it has taken to change public policy toward those whose disabilities have barred them from the mainstream of American society.

The focus used to be to treat weakness and often, involuntarily, to perpetuate dependence. A new horizon is opening to the possibility and the desirability of programs that emphasize and build on strengths.

I am proud and honored to speak to a group whose professional purpose is to create a more just and compassionate society, and to help the "Lost Minority" of the physically and mentally handicapped to assume a meaningful, satisfying and productive role in this Nation's economic and cultural life.

I suspect that many of you chose this career because of a basic optimism about the resilience and potential of human beings, and the divine spark shared by even the most seriously afflicted.

My purpose today will be to describe very briefly how I view the present climate of concern for the handicapped and some of the progress that has been made.

I also will suggest how we can expand and consolidate that progress.

It has become a truism that the 1970's is the decade of the handicapped, just as the 1960's was the decade of civil rights.

I understand that the 1980's has been preempted as the decade of older Americans, and that will suit me just fine. I will be coming of age just in time to be in step with the crowd.

The 94th Congress enacted major legislation in the areas of developmental disabilities, education of the handicapped, vocational rehabilitation and mental health.

As you know, the Developmental Disabilities Act provides support to State efforts to plan, coordinate and implement programs for developmentally disabled.

To qualify for aid, States must submit plans for both deinstitutionalization and institutional reform.

Another very significant feature of this legislation is the inclusion of a Bill of Rights which asserts the right of the mentally retarded to appropriate treatment and services. And it backs up those rights with the demand that a specific system be devised to protect and advocate these rights.

Another legislative step, with revolutionary potential, was passage of the Education for All Handicapped Children Act. Under this law, in order to be eligible for federal aid, a state must provide a free and appropriate public education for all handicapped children by September, 1980. And priority attention must be given to the most severely handicapped.

For the less severely handicapped who are able to learn work skills, and even become self-supporting and contributing members of the community, the Rehabilitation Act of 1973, as amended, provides important support for training programs. But this law also mandates priority attention for those with the most severe handicaps.

One measure of the impact of this law is the increasing number of severely disabled being served in this nation's rehabilitation programs, including sheltered workshops. In the past, these people had little hope of achieving the sense of purpose, satisfaction and self-respect that comes with successfully performing a useful and productive task.

Many of the severely handicapped cannot hope to earn a decent wage based on productivity alone. I have introduced a proposal to provide wage supplements that will reward the efforts of long-term workers in sheltered workshops with a living wage. I sincerely hope that Congress will enact this measure.

Last week we succeeded in passing an enormous Labor-Health, Education and Welfare appropriations bill. The most controversial and divisive provisions of this bill were widely publicized. But little emphasis was placed on the tremendous financial commitment expressed in the bill to programs of health and education that help to prevent crippling disease, to restore health, to rehabilitate the disabled, and to provide the education and services that enable the handicapped to assume a proud and productive role in our national life.

I could list dozens of initiatives, but I am sure you do not want an oral bibliography. There are exciting new efforts to help the handicapped achieve independent living, to coordinate the programs that serve them and to make transportation both financially and physically accessible.

These efforts are paralleled by developments in our state legislatures. That is an important area of government an effort that should not be overlooked.

In our federal system, states traditionally and ideally serve as the laboratory for reform legislation. This is true of Minnesota, which has been a leader and model in medical group practice, in catastrophic and no-fault insurance, in election-day registration, in support for crippled children, and in many social welfare programs.

I have listed some of our recent legislative achievements and concerns.

But perhaps most symbolic of this new social sensitivity and personal activism are the recently signed so-called 504 Regulations.

As all of you here know, these regulations stem from a brief provision in the Rehabilitation Act of 1973.

Section 504 says:

"No otherwise qualified handicapped individual in the United States . . . shall, solely by reason of his handicap, be excluded from participation in, or be denied the benefits of, or be subjected to discrimination under any program or activity receiving federal financial assistance . . ."

That is a beautifully simple and direct statement. It expresses a sound principle few could oppose.

I have become aware, just as Secretary Califano did when he threaded past those wheelchairs blocking his anterooms, that the landmark importance of that statement resides in the recognition the disabled have given it as their Declaration of Independence.

They—not just their spokesmen—are determined to give its promise substance and reality.

In fact, developments regarding Section 504 offer insight into the process of self-government which not always is as scientific and carefully calculated as one might think. If it were more calculated, it certainly would be less democratic.

I will not deny that many of us who insisted that this provision be included in the Rehabilitation Act, had not considered every implication or consequence: For example, What constitutes discrimination? Who suffers from it? How can you enforce nondiscrimination? What is the meaning of equal access to building and programs? Who should pay the costs involved? How is disability to be defined?

Despite unanswered questions, sometimes it is a sufficient beginning to do what is right, and to assume that we will find the strength and wisdom to handle the resulting problems and challenges as they arise. If you don't have that faith, you wouldn't be much of a legislator.

Law in this country is dynamic. This is not the first law in which the U.S. Congress has expressed its intent and convictions, and then turned to the people and to much-maligned bureaucrats to help flush out the meaning, and to determine its application.

Nor is that always necessarily bad. When we have a Congress full of expert regulation writers we will have a focus far too narrow to accommodate the bursting vitality and diversity of America's culture, values and aspirations.

Two Administrations failed to come to grips with the issues of cost, and the goals of equality mandated by that brief 504 paragraph. Secretary Califano, too, was taken aback momentarily by the implication of the implementing regulations.

But the existence of the law had a powerful and pervasive influence in the four years that the general public, the specialists serving the handicapped, the disabled themselves and their lobbyists, testified and negotiated, interpreted and compromised, and finally hammered out the definitions and criteria to give this section reality.

Section 504 gave immediacy to a goal that otherwise might have remained in the realm of theory.

It helped to define the goals and focus the efforts of the persons affected.

It generated a national awareness of the problems of the handicapped, and a new questioning of the goals, principles and adequacy of current policy.

It fostered a sensitivity to the problems of the handicapped, and a realization of the hopes and feelings each of us shares with those less fortunate.

Most important, it forced action.

Lawmaking should capture the current of public sentiment and opinion, and help to mold and guide them.

It is a dynamic, reciprocal process. But it also is an imperfect and imprecise art. Measured by rigid standards, some might consider even the Bill of Rights sophomoric, because it still gives rise to conflicting claims as we strive to determine just which rights are covered, and how they ought to be respected and protected and, by extension, what kind of a society we want.

That is my message today. I can summarize it in a few brief phrases:

The national climate is receptive to a new and more humane approach to rehabilitation.

Opportunities for progress already are written in dozens of statutes and regulations. Know them. Use them. Test them.

Zero in on chapter and verse. Define limited and specific goals, and then focus your efforts on their realization.

Build a wide base of public support.

Your legislators respond. And they respond best to demands for justice and national priorities that are widely held and accepted.

Thank you.

THE ECONOMIC DEVELOPMENT ADMINISTRATION'S ALLOCATION OF FUNDS IN RHODE ISLAND

Mr. PELL. Mr. President, more than 2 months ago, the President signed into law the authorization and Appropriation Acts providing funds for the Public Works Employment Act designed to stimulate the economy through the construction of public facilities by State and local governments. From the viewpoint of local and community planning, this program has become a fiasco.

Approval of that program was greeted enthusiastically by local government officials in Rhode Island who planned and worked to qualify for funds to meet high priority needs for their cities and towns.

Unfortunately, Mr. President, the allocation of funds within the State of Rhode Island by the Economic Development Administration has become an administrative travesty.

The initial Rhode Island planning targets established by EDA on June 9 contained gross errors that were quickly acknowledged as such by EDA. All Rhode Island communities were put on notice that their planning target allocations were subject to change.

On Friday, July 15, EDA announced what were described as the final, corrected planning targets for Rhode Island communities. Yesterday, Monday, July 18, EDA acknowledged that this final, corrected allocation also has serious errors which must be corrected.

The result of these errors has been agonizing uncertainty for local government officials in the State of Rhode Island. Town officials have been officially informed of substantial allocations of up to $3.5 million on one day, and then, just as those officials plunged into construction planning to meet EDA deadlines, they have been informed that their allocations have been reduced to zero.

Because correction of these errors affects the allocations for other communities, planning for the Public Works Em-

ployment Act program in the State of Rhode Island has been thrown into chaos.

I realize that the Congress assigned to EDA a very difficult administrative chore in requiring a speedy, accurate, and just allocation and distribution of $4 billion in public works funds in a short period of time. I know that EDA personnel have worked long hours to meet this challenge.

The fact remains that as far as the allocations within the State of Rhode Island are concerned, the program has been badly botched. Recurring, very sizable errcrs have produced not only uncertainty, but a growing distrust of the allocation process by local government officials.

Confidence in the fairness and equity of the allocation process has been seriously undermined.

The Economic Development Administration is well aware that there are serious problems in the allocation of funds within the State of Rhode Island. It is time, indeed it is long past time, that EDA resolved those allocation problems finally, accurately, and equitably.

It is time that EDA explained the allocation process clearly so that every government official in Rhode Island can know with confidence whether his city or town has been given fair treatment.

Until this is done, the intent of the Congress, to combat unemployment and provide jobs through the construction of needed public facilities, will be frustrated.

COMPUTER-RELATED CRIMES

Mr. RIBICOFF. Mr. President, Brandt Allen, D.B.A., is a professor at the Colgate Darden Graduate School of Business Administration at the University of Virginia, Charlottesville. He is a member of the Financial Executives Institute, the American Accounting Association, and the Society for Management Information Systems, and is the author of several articles on computer fraud.

In the May 1977 issue of the Journal of Accountancy, Professor Allen has published a comprehensive article on the nature, types, and scope of computer-related crime. Professor Allen also proposed recommendations for detecting and preventing computer-related crime.

The Senate Governmental Affairs Committee recently completed a year-long investigation of computer-related crimes, their prevention, detection, and prosecution, in Federal programs and private industry.

The investigation led to the issuance of a committee staff report, "Computer Security in Federal Programs," dated February 2, 1977.

In addition, with the cosponsorship of Senators JOHN L. MCCLELLAN of Arkansas, CHARLES H. PERCY of Illinois, HENRY M. JACKSON of Washington, LEE METCALF of Montana, EDWARD M. KENNEDY of Massachusetts, STROM THURMOND of South Carolina, ROBERT P. GRIFFIN of Michigan, PETE V. DOMENICI of New Mexico, H. JOHN HEINZ III of Pennsylvania, and JACOB K. JAVITS of New York, I introduced on June 27, 1977, the Federal Computer Systems Protection Act of 1977.

This measure, S. 1766, is to amend title 18, United States Code, to make a crime the use for fraudulent or other illegal purposes, of any computer owned or operated by the United States, certain financial institutions, and entities affecting interstate commerce.

The legislation, which was referred to the Judiciary Committee, would impose heavy prison terms and stiff fines for electronic burglars who use computers and computer technology to steal or manipulate information, financial instruments, and other property.

Many of the issues raised in the Senate Governmental Affairs Committee inquiry are discussed in Professor Allen's article, "The Biggest Computer Frauds: Lessons for CPA's."

Professor Allen's article is well documented and is written in a manner which persons not expert in the computer field can understand.

Mr. President, I ask unanimous consent that Professor Allen's article, and supporting charts, from the May 1977 issue of the Journal of Accountancy be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

THE BIGGEST COMPUTER FRAUDS: LESSONS FOR CPA'S

(By Brandt Allen)

Today no one argues that computers are "fraud-proof" as some did a decade ago, but there is still much disagreement as to what comprises computer fraud, where it begins and how to prevent it. As a result, the activities of accountants and auditors as they relate to computers and computer security systems often lack direction and focus. Because of the increased incidence of computer frauds, auditors can no longer consider them of concern only to law enforcement agencies. Now the entire accounting profession must be alerted to the proliferation of these crimes and must understand how to recognize them and how to inform management of ways to prevent them.

This article analyzes most of the publicly documented computer fraud cases detected to date (see Appendix, page 62) with special emphasis on the major ones. The latter include those that were long running, were difficult to detect, produced large losses and are representative of frequently detected schemes. Through analysis, it has been possible to determine the major control lapses that seem to invite such schemes. Through analysis, we're also able to speculate about the major undetected computer frauds and where they may turn up.

This analysis focuses on 150 major cases that have been publicized, excluding many others where the data was skimpy. For purposes of this article, computer fraud is defined as any defalcation or embezzlement accomplished by tampering with computer programs, data files, operations, equipment or media, and resulting in losses sustained by the organization whose computer system was manipulated. In most instances, this would encompass all activities in the computer department as well as those departments that directly enter or prepare computer input. Excluded are thefts of computerized information, use of computer time for personal gain, alteration of computer records for nonfinancial gain and schemes where the employer was not the victim. These excluded schemes cover instances where the records of credit bureaus, license agencies and property registers were altered to defraud credit grantors and others dependent on these records. Also eliminated are unusual cases like Equity Funding or Computer Payroll and Accounting Services, Inc., where the service bureau owner absconded with the payroll funds of his client companies.

PREVENTION NECESSARY

As will be seen from the analyses of the computer fraud cases subsequently described in this article, such fraud can often be prevented by a tight system of internal control. Later analyses of these cases will show that certain areas of internal control are weak and in need of improvement. As a result, the CPA should give special attention to the following areas:

1. Transaction controls. The most important area for improvement seems to lie in tightening controls over the generation and flow of input transactions. In all the big cases, perpetrators were able to add bogus transactions or to alter others. Computer users need to perfect means to ensure that all transactions are subject to controls and that the controls are tight. Obvious problem areas, such as adjusting entries and error corrections, should be designed to be controlled by persons other than those responsible for the entries.

2. Rigorous audits. Auditors must give increased attention to the causes of inventory losses. It seems clear that many of the disbursement and inventory frauds were conducted in an environment of large, continuing inventory losses. It appears that the growing crime problem has established the expectation of inventory shrink in many organizations. Inaventory frauds or disbursement frauds flourish in this climate; not only does it reduce the organization's diligence but it also tends to foster fraud ideas. Where losses run to the hundreds of thousands or even millions of dollars per year, additional inventory controls and investigations are warranted and can probably be cost justified.

3. Improved responsibility reporting. The most effective internal control for the big cases seems to be improved management reporting systems to alert others to possible fraudulent transactions. Buyers should receive recapitulations of orders placed, received, paid and canceled by time period, by vendor and by type of item. Adjustments and corrections should be highlighted in special management reports. All expense entries should be reported to authorizing management in sufficient detail and clarity to enable the executives to spot unauthorized charges.

4. Program controls. In a well-run computer department, neither programs judged to be critical nor those that access critical programs or data collections are accepted for use in the computer center until they have been subject to independent verification. Once so accepted and approved, they are placed in secure file storage and are available for use only according to schedule. And any time, internal audit can verify that the current program version being used is the one approved for use. All program changes must go through the same sequence.

5. File controls. Every computer user must have a file librarian responsible for the security of all critical program and data files. No files should be released to computer operations except as scheduled. Monitors are necessary to ensure that files are used according to the approved schedule and that all deviations are investigated.

6. Place EDP house in order. Even today many computer centers are run on a crisis basis with few controls, poorly designed systems and unaudited and unauditable software. In too many organizations, edit tests and input controls are relaxed when backlogs grow. Program patches are made in desperation with no review or control. In such an environment it would not be surprising to find computer fraud, and such was the situation in the cases in this study. In

one case, the data files and programing systems were in such bad shape that direct file changes were made repeatedly in order to correct errors. This made it easy for the dishonest employee to make certain other "corrections" to effect his scheme without arousing suspicion. In my opinion, the auditor who discovers a chaotic, poorly controlled data center in his review of internal control is in trouble. He can hardly proceed without additional, and sometimes exhaustive, verification, but it is in just such situations that the additional review is so difficult to perform. The auditor can do a great service for his client and for himself by working to reduce the "management by crisis" conditions found in many computer rooms.

TYPE OF SCHEME

The 150 cases were first sorted into categories by type of scheme and victim organization. In examining Figure 1, page 54, we observe that accounting and inventory control fraud involves average losses of $1.3 million, the largest in the corporate category. Schemes based on fraudulent payments account for almost 40 percent of the cases involving corporations. Fraudulent payments to creditors average $324,000 while fraudulent payments to corporate employees average a $139,000 loss per case. Fraudulent payments in corporations are made to employees (payroll), to other individuals (usually pension or insurance claims) or to creditors or suppliers (disbursements). Losses average well over $100,000 per case. Disbursement frauds are the most costly, primarily because they are more difficult to detect and thus continue longer. Disbursement frauds also are more complex and can be understood and planned by only a few in the company, usually members of management.

In banks and savings institutions, the payment frauds are, with one exception, manipulations of withdrawals. Ordinarily, these involve attempts to withdraw funds from inactive or dormant accounts or efforts to prevent the processing of a check by rendering the MICR (magnetic ink character recognition) codes unreadable. By their very nature, these schemes usually are detected quickly by auditing procedures or internal controls. In one typical case, however, where check processing was blocked on a customer account resulting in a $6.8 million loss, a bank officer was in collusion with an officer of the client company and was in a position to hide the discrepancy in the reconciliation of the bank's account with the regional Federal Reserve Bank.

Frauds shown as payments to other individuals for state and local governmental agencies were for welfare payments, unemployment insurance and job corps programs.

In summary, in most types of organizations automated systems that pay money from the organization to suppliers, employees and others are the most troublesome.

All the cases in the accounting/inventory control category shown in Figure 1 are based on changes made in accounting and subsidiary records without an immediate change in physical assets or cash payout. Several of the corporate cases had the same pattern: inventory clerks or managers entered fraudulent transactions into computerized inventory systems; this, in effect, deleted items from inventory or assigned responsibility for the items to someone or someplace else. Then items would be stolen, bringing the physical count into line with inventory records. In the bank and savings and loan cases, various schemes were employed. The simplest schemes were thefts from inactive accounts accomplished by transferring funds to accounts of the perpetrators. Several other cases involved crediting perpetrators' accounts while charging the offset to various expense and adjustment accounts. In one case, service charges to customers were overbilled, with the overage flowing into the programer's account.

In cases involving the manipulation of incoming funds, the number of cases and size of losses for corporations were less significant. There are several reasons for this. Most corporations can and do exercise tight control over customer remittances; the process is more easily audited. Payments to a firm are generally made by check and are not easily cashed. Manipulations of receivables or deposits, the so-called "lapping schemes," require constant attention and manipulation of accounts. These schemes are also risky; the stolen amount is always hidden in the accounts, awaiting detection. In only two cases was there a potential for large losses.

FIGURE 1.—AVERAGE LOSSES IN COMPUTER FRAUDS

[In thousands of dollars]

Type of fraud	Corporation	Bank/savings and loan	State and local government	Federal Government
Payments to employees	$139(4/8)	$3(1/1)	$14(3/4)	$33(22/29)
Payments to other individuals	133(2/4)		487(6/9)	
Payments to creditors	324(5/5)	[1] 252(8/12)		56(25/30)
Accounting/inventory control	1,300(10/10)	195(10/12)	[2] (—/1)	
Collections/deposits	43(2/6)	157(8/9)		
Billings	6(2/6)			
Miscellaneous	[2] (—/2)		[2] (—/2)	
Average loss totals	621(25/41)	192(27/34)	329(9/16)	45(47/59)

[1] 1 case of $6,800,000 deleted from figures to avoid distortion.
[2] Amount of loss unknown.

Note: The average loss figure is based upon x cases out of y total cases in that category where (x/y) is shown just to the right of the average. Losses in some cases were unavailable or were eliminated for other reasons.

FIGURE 2.—THE VICTIMS OF COMPUTER FRAUDS

Method of computer manipulation	Corporation	Bank/savings and loan	State and local government	Federal Government
Transactions added	16	9	9	48
Transactions altered	8	12		
Transactions deleted	3	4		
File changes	5	3	5	
Program changes	6	8		
Improper operation	4		1	
Miscellaneous, unknown	4	1	1	11
Totals	46	37	16	59

Note: Case totals do not add up to 150 because some are classified in more than 1 category.

In each instance, the perpetrators had discovered how to permanently eliminate the receivables from the accounts through unauthorized adjustment of entries. In certain corporate receivables frauds, the billings were manipulated—and reduced—before the basic sales transactions were recorded in the accounts.

The analysis revealed a significant number of deposit frauds in banks, which yielded much higher average losses. The basic scheme is really the same as that for receivables collection in a corporation: deposits intended for one account are pocketed or credited to another; then the former is made good later by diverting another deposit intended for still another account. Also in this category are check-kiting schemes where deposit tickets or records were altered so that uncleared deposits could be immediately withdrawn.

It's probably misleading to draw any conclusions from the fact that corporations had the largest average fraud losses per case, because only the major cases are publicized. No doubt there were many smaller detected computer frauds in corporations that were simply settled by dismissal; it's the bigger cases that are brought to court and thus reported. Banks, on the other hand, probably report a much higher percentage of their fraud cases because they're federally regulated, insured and required to report their losses. As in corporations, possible computer frauds in state and local governments appear to be underreported and the losses understated.

METHODS OF COMPUTER MANIPULATION

Figure 2, this page, and Figure 3, page 56, illustrate how the computer system was manipulated. Several things are clear from these tabulations. Manipulation of transactions is by far the most frequent method: adding unauthorized transactions, such as phony purchase orders and warehouse receipts in the case of disbursement frauds; altering transactions, such as posting deposits or payments on account to some other account; or not processing a transaction at all, such as payments on long term certifications of deposit. Sometimes a combination of methods is used, as in the cases of pension fraud where a termination triggered by a death notice is not processed (transaction deleted) and then an address change (unauthorized transaction added) is used to channel the payments to the schemer.

Schemes involving direct charges to matter files by the use of utility programs or direct terminal entry via file maintenance were found less frequently. In several cases, transactions had to be added or altered in order to accomplish the file change. I classified these schemes as file changes if a one-time, unauthorized transaction resulted in a recurring fraudulent activity, such as the misappropriated pension payments. If an unauthorized transaction had to be added each time a fraudulent activity was triggered, this was classified as a transaction, even though the effect of the transaction was to change a master file.

Direct manipulation of master files can be difficult to prevent because of the difficulty of establishing file maintenance and change controls:

In one case, a programer/systems analyst used his ability to make direct changes to master files to change the price on items he

was purchasing just before the billing run; later he'd return the price to its correct condition. In another, a programer transferred funds from inactive accounts to his own and his associates by using a utility program and by carefully making all switches within a file control block. The change was made between the end of one quarter and the beginning of another, further compounding the auditor's decision problem.

FIGURE 3.—THE SCHEMES USED IN COMPUTER FRAUDS

Method of computer manipulation	Payments to employees and other individuals	Accounting/inventory control/disbursements	Billings/collections/deposits	Miscellaneous
Transactions added or altered	40	40	17	----
Transactions deleted	2	3	2	----
File changes	6	3	1	2
Program changes	2	7	5	----
Improper operation	4	1	----	----
Miscellaneous, unknown	2	11	2	2
Totals	56	69	27	4

Note: Totals do not add up to 150 because some cases are classified in more than 1 category.

Computer frauds caused by program changes or patches have been discovered in only a few cases. This method has been used to hide overdrafts on checking accounts, to accumulate fractional cents on interest calculations, to skip over accounts at billing time in order to inflate service charges and to mispost accounting transactions fraudulently. Computer users appear to be particularly vulnerable to program patches, as can be seen in the following recent case:

A programer at a large savings and loan association attempted what could have been the perfect computer fraud. At this institution, the on line teller terminals accessed only a temporary customer file during the day; after all tellers had balanced out, the day's transactions were posted to the permanent files and the temporary file was then refreshed for the following day's business. This two-file system was used for security reasons and is the preferred approach for advanced, on line systems. The programer had patched the program so that any withdrawals against his personal account, when posted to the permanent file, would be actually charged to an inactive account. On the following day he would remove his withdrawal slip from the documents sent to the computer center from the branches and substitute one drawing on the inactive account. With the program patch removed, it would have been impossible for auditors to discover the perpetrator. Fortunately, the scheme never got off the ground; the programer erred in keying the inactive account number on his first effort. He was caught the next day.

Frauds caused by improper computer operation were almost always payroll frauds, where extra checks were printed or where unauthorized use of computer terminals was employed to enter fraudulent payroll data, thus leading to excessive payments.

UNDETECTED COMPUTER FRAUDS

One cannot help inferring that a significant amount of fraud and embezzlement goes undetected. Since so many cases are uncovered only by chance or because the perpetrator simply gives up or makes a stupid mistake, one may well conclude that most fraud goes undetected. I believe this is true for computer fraud as well. Furthermore, it's possible to determine the most likely undetected cases simply by applying the pattern of non-computer-related frauds to computer users. Other cases appear probable, considering the buying, selling, employment or functional activities of various types of organizations.

First, it should be clear that a large number of undetected computer frauds simply follow the patterns found in these detected cases. Thus, there is much undetected corporate inventory and disbursements fraud, much undetected welfare fraud in federal, state and local government agencies and many undetected funds transfers in banking institutions. Theft from inactive accounts in savings institutions is a good case in point. This scheme was the most frequently reported in this analysis, and yet many more probably go undetected. Officers of such institutions depend heavily on the computer to block attempted withdrawals from dormant accounts, yet this control can easily be circumvented by the computer thief. Long running dormant account thefts can easily be masked by blocking or diverting quarterly statements and then sending adjusted statements in their places. Beyond this, my guesses as to undetected schemes are the following:

1. *Pension frauds.* There were a couple of cases in this study where pension payments were discovered being made in the names of deceased individuals. But the number of pensioners in this country, the number of pension-paying organizations and the ease of the scheme suggest that computerized pension fraud in the United States is a hidden problem of major significance. There are probably thousands of deceased pensioners on computer files whose monthly checks are being diverted to white collar criminals.

2. Inventory and disbursement frauds in state and local governments. Disbursement and inventory frauds were found to be big problems for automated systems in corporations and federal government agencies; the same must be true for state and local governments, but no cases of this type were found in my collection. It seems clear that they weren't included because they haven't been detected, perhaps because auditing of these agencies is not as thorough. When you consider the number of state and local governments in existence, the amount of purchasing they do and the size of their inventories, this must be considered another hidden problem.

3. Insurance claims fraud. From the cases to date it might be concluded that there is no computer-related fraud in insurance companies. This can't be so. The nature of the business in this industry is money collecting, investing and paying; there are many individual accounts, many transactions, a high degree of automation, the dollar magnitude is high and much of the industry depends primarily on good faith—such as medical insurance claims processing. Few industries have such a high potential for computer fraud and so few detected cases to date.

4. Corporate billing frauds. While there were a few detected cases of this type in my collection, the total was surprisingly small considering the vast amount of billing activity in the corporate sphere. The large number of employees who have access to billing transactions and the case of manipulation suggest that much fraud here goes undetected, particularly that effected by deleting, blocking or altering transactions.

5. Federal government program frauds. If the results of this survey can be believed, there have been no dishonest computer programers in the federal government. This hardly seems possible. Considering the potential for abuse in such agencies as the Department of Health, Education and Welfare, the Department of Defense, the Internal Revenue Service and the Agriculture Department and in programs such as revenue sharing, it may be concluded that a significant number of payment frauds generated by unauthorized program patches go undetected in the federal government.

6. Loan frauds in commercial banks. Commercial banks, as opposed to savings institutions, also appear surprisingly clean in the survey. For many reasons, the chances of operating successful funds transfers are lower for demand accounts than for savings accounts, but the opportunities for loan frauds are greater in commercial banks. It seems impossible that computer-assisted loan frauds are not a giant problem for commercial banks. My guess is that many are out there waiting to be detected.

PERPETRATOR'S JOB POSITIONS

Some of the most interesting observations to be made from computer fraud cases come from looking at the job positions of the perpetrators. As shown in Figure 4, this page, there was much collusion, particularly in those cases initiated by data entry personnel. Line 1 of Figure 4 should be read as follows: There were 15 cases involving data entry personnel; 4 of these acted alone; 5 colluded with 1 other employee, 1 colluded with 2 others and 3 with more than 2 employees; 1 colluded with a nonemployee and 5 colluded with at least 3 nonemployees; the average loss per case for those 4 employees working alone was $8,000 and it was $727,000 per case for all cases in this category.

The distinction between data entry/terminal operators and clerk/tellers is essentially that the latter category deals directly with customers, suppliers and others; the former do not.

FIGURE 4.—AVERAGE LOSS, JOB POSITION OF PERPETRATOR, INDIVIDUALS INVOLVED

Job position of primary perpetrator	Total	Prepetrator alone	Inside 1	Inside 2	Inside >2	Outside 1	Outside 2	Outside >2	Average loss (thousands) Alone	Average loss (thousands) Total
1. Data entry/terminal operator	15	4	5	1	3	1	----	5	$8	$727
2. Clerk/teller	16	11	3	1	1	2	----	1	37	58
3. Programer	15	10	4	1	----	3	----	1	20	53
4. Officer/manager	21	18	----	3	----	----	----	1	274	314
5. Computer operator	9	5	----	2	1	----	1	1	33	37
6. Other staff	5	4	----	1	----	----	----	----	48	92
7. Computer operator	5	3	----	----	----	----	----	----	----	696
8. Unknown	3	----	----	----	----	----	----	----	----	2,400

Note: All but 4 of the Federal Government cases were excluded because of missing information in those case descriptions.

The higher the rank or position of the perpetrator, the less likely is one to find collusion; thus, managers were found to work alone much more often than keypunchers or teller operators. Perhaps this is because the higher the rank, the broader the job responsibilities and the greater the knowledge of company operations and controls. Thus, there is less need to collude for purposes of gathering knowledge or to effect frauds via transaction generation, etc. Also, the higher the rank, the greater the loss. For example, officers and managers, working alone, stole $274,000 on the average, whereas other staff took $48,000 and clerk/tellers $37,000.

Something of a surprise was the fact that the computer specialists were caught taking much less when working alone than were nonspecialists; operators took $33,000, programers averaged $20,000 and data entry personnel only $8,000. It seems that ordinary managers and clerks have learned to use the computer to steal much more readily than have the computer specialists.

The anomaly of the $727,000 average loss per fraud perpetrated by data entry personnel and cohorts is explained by the nature of the cases here. Several were large welfare frauds, one with over $2.5 million of fraudulent payments to bogus recipients, and several others were large inventory frauds. The cases in this category come as close to being "organized crime" situations as any observed in this project. The majority of deceptions by "unknown" perpetrators or outsiders were inventory frauds; one of these apparently involved organized crime.

The perpetrator was considered an "outsider" if he is unknown and could have conducted the scheme without specialized knowledge or access.

For example, an unknown person or group stole over $2 million from New York banks by depositing bogus checks designed so they could never clear the bank's computer. The checks were printed as if they were drawn on a New York bank, but with a California bank's MICR encoding. The checks were ping-ponging back and forth between New York and California well after the normal clearance time; by then, the funds had been withdrawn.

Comparison of the perpetrator's job position with the method used to manipulate the computer system confirms that the majority of the schemes involve employee actions very similar to those of his job position: data entry personnel and tellers manipulated transactions and programers manipulated programs as shown in Figure 5, this page. Management, staff and computer operators engaged in several types of schemes, but the majority involved tampering with input transactions.

Comparison of perpetrator's job position and type of scheme yielded little pattern in the data. All types of employees operated payroll, disbursement and accounting/inventory frauds. About all that can be said from the analysis was that just about anyone could be involved in a fraud scheme.

Figure 6, page 60, suggests differing degrees of control in different types of organizations. Corporate computer frauds were perpetrated by all types of employees from officers to keypunchers. In banks and savings and loan associations, the primary fraud position was one of management; branch managers and teller supervisors were frequently responsible for the crimes. In state and local governments, the primary job position involved data entry; here again, most of these cases were welfare frauds where bogus recipients or payments were simply added to the transaction flow at the time of computer input.

AN OUNCE OF PREVENTION

Many of the fraud cases cited here could have been prevented by a revision of the company's organizational structure. Employees should be given positions that do not conflict or overlap with the responsibilities of others in the organization. And all employees should be consistently observed and reviewed to prevent opportunities to commit fraud.

Separation of responsibility. Perhaps half the fraud cases summarized in this article would have been impossible had separation of responsibility in data processing been practiced and enforced. In many of these cases, employees who had no responsibility for transactions were still able to generate, tamper with or delete them. Separation of responsibility in a computer environment means separation of the following functions:

1. Input data generation.
2. Input control.
3. Computer operation.
4. Programing and maintenance.
5. Output control.
6. Data, program file control (librarian).

FIGURE 5.—JOB POSITION OF PERPETRATOR, METHOD OF MANIPULATION

Job position	Transactions added	Transactions altered	Transactions deleted	File changes	Program changes	Improper operation	Miscellaneous unknown
1. Data entry/terminal operator	9	4		1			1
2. Clerk/teller	9	6		1			
3. Programer					14		1
4. Officer/manager	8	4	3	1	3	1	1
5. Computer operator	1	4		1		3	
6. Other staff	1		1	1			2
7. Outsider (nonemployee)	3	1					1
8. Unknown		1		2			

Note: All but 4 of the Federal Government cases were excluded because of missing information in those case descriptions.

It is essential that programers not have access to input transactions, real data or program files and that they not operate the computer. Computer operators must not be able to change programs or gain access to data files except according to job scheduling, and they should not be able to enter or change input data. In keeping with time-honored auditing principles, certain responsibilities should be kept separate and controls or checks are necessary to make sure that data is not manipulated as it is generated and processed.

Employee surveillance. Bankers have always tried to monitor the financial situations of their employees—and for good reason. All computer users should realize that all data center employees and particularly those managers and staff who work with the data center should be closely supervised. All systems where employees or associates have personal accounts (banks, insurance companies, brokerage houses, etc.) should be given special attention.

THE BIGGEST DETECTED COMPUTER FRAUDS

From the 150 computer fraud cases included in this survey, 15 were selected and are listed in Figure 7, page 61, as "the biggest." These cases all involved schemes that ran for more than a year, were operated by employees of the victim organization and are typical of the schemes discovered to date. Excluded from this list are half a dozen cases each with losses greater than $1 million. They were not included because they ran less than a year, the victim was not the employer or the fraud methodology was atypical.

The most important observation to be made from these cases is that they are common. None are creatures of the computer; they have all been tried before. Four of the cases were disbursement frauds where bogus vendors, together with the supporting details, were set up and paid. Four cases were of the "fund transfers through the accounts" type, all in financial institutions where the perpetrator's and his accomplices' accounts appeared as liabilities; the others were of different types. Thus, in terms of scheme type, the biggest computer frauds are all old wine in new bottles. The technology may be random access and hexadecimal, but the scheme itself should be as familiar to the auditor as debits and credits.

A surprise is the variety of the job positions of the perpetrators; it appears that big frauds can be conducted from almost any job position but the higher the position of responsibility, the greater the prospects for fraud. The one job position conspicuously absent from the big cases was that of computer programer. Perhaps these people are not as dangerous as had been feared; but it's also possible that the reverse is true. This is a good illustration of the problem of working from detected cases—we have no way of correcting for sample bias. In this situation, we know nothing about currently successful embezzlers. One thing that the perpetrators throughout the biggest cases have in common is that each had a thorough understanding of the functional operation of the computer system. Of the 15 cases, 1 involved a man who had designed and installed the computer system, 4 were conducted by managers of computer departments and all others were frequent users of the system.

One big surprise in this tabulation was that all but one of the cases were effected by manipulation of transactions, mostly by unauthorized transactions being added to the input stream. Another was the paucity of cases detected by ordinary audit—1 case out of 15. Most were uncovered by suspicious associates and employees of related parties, such as banks. Again, this is probably misleading. No doubt many schemes were detected by internal audit or external review or were thwarted by internal controls and were never publicized. Thus, long running schemes must necessarily have escaped ordinary audit.

FIGURE 6.—JOB POSITION OF PERPETRATOR, TYPE OF VICTIM

Job position	Corporation	Bank/savings and loan	State and local government	Federal Government	Tota
1. Data entry/terminal operator	6	2	6	1	15
2. Clerk/teller	6	4	3	3	16
3. Programer	7	7	1		15
4. Officer/manager	7	12	2		21
5. Computer operator	3	5	1		9
6. Other staff	4		1		5
7. Outsider (nonemployee)	2	3			5
8. Unknown	2	1			3

Note: All but 4 of the Federal Government cases were excluded because of missing information in those case descriptions.

FIGURE 7.—LONG RUNNING COMPUTER FRAUDS

Case and summary	Amount (thousands)	Time frame (years)	Type of scheme	Computer manipulator	Fraudulent debit	Job position of primary perpetrator	Number of perpetrators inside/outside	Means of detection
1. Accountant at west coast department store set up phony vendors, purchase and vouchers.	$100	1.3	Disbursements	Unauthorized transactions added.	Inventory	Accountant	1/–	Suspicious bank employee.
2. Claims reviewer at insurance company prepared false claims payable to friends in a manner that would be paid automatically by the computer.	128	4	Fraudulent claims paid.	do	Expense	Claims clerk	1/22	Error made by greedy associate.
3. Clerk at storage facility entered false information to computerized inventory system to mask theft of inventory. Shipments then made without billing.	4,000	6	Inventory/billing	Input transactions altered.	Inventory	Computer terminal operator.	1/13	Physical inventory shortage detected in audit.
4. Warehouse employees manipulated computerized inventory system through unauthorized terminal entries to mask inventory thefts.	200	1.5	Inventory	Unauthorized terminal entries.	None (inventory records changed as to location).	Warehouse employee(s).	(1)	Suspicious wife of store manager.
5. Accountant at metal fabricating company padded payroll, thereby extracting funds for own use.	100	3	Payroll	Unknown	Expense	Accountant	1/–	IRS investigation.
6. Officer of London bank stole funds from inactive customer accounts.	290	5	Account transfers	Unauthorized addition and alteration of transactions.	Customer accounts (liability).	Computer liaison officer.	1/–	Unknown.
7. Bank employee misused on line banking system to perpetrate large lapping fraud including unrecorded transactions, altered transactions and unauthorized account transfers.	1,400	3	Lapping	Transactions altered, added and withheld.	do	Teller supervisor	1/–	Gambling activities uncovered by police raid.
8. Manufacturing company manager who had designed and installed automated accounting system used it to steal.	1,000	2	Disbursements (also billings fraud)	Transactions altered (also unauthorized transactions).	Inventory (also expense).	Operations manager	1/1	Suspicious associate.
9. Customer representatives of large public utility, together with outside associate, erased customer receivables using computer error correction codes; received kickback from customer.	[2] 25	2	Accounts receivable—collections.	Unauthorized transactions.	Expense (adiusting entry).	Customer service representative.	2/1	Suspicious bank employee together with expanded type of scheme.
10. Clerk in department store established phony purchases and vouchers paid to friend's company.	120	3	Disbursements	do	Inventory	Accounts clerk	1/1	Suspicious associate.
11. Organized crime ring operated check-kiting fraud between two banks using computer room employees who altered deposit memos to record check deposits as available for immediate withdrawal.	900	4	Kiting (float fraud)	Transactions altered	Timing	VP-computer systems (also assistant branch manager).	2/3	Bank messenger failed to deliver checks on time.
12. Accountant at large wholesaler established phony vendors through computerized accounting system that he operated.	1,000	4	Disbursements	Unauthorized transactions.	Inventory	Controller	1/–	Gave up.
13. Officer of brokerage house misappropriated company funds through computer system that he controlled.	277	3	Account transfers	do	Revenue account (interest earned).	VP-computer system	1/–	Unknown.
14. Partner at brokerage house transferred funds from firm's accounts to his own.	81	3	do	do	Expense (via adjusting entry).	Partner-head of computer system.	1/–	Do.
15. Director of publishing subsidiary manipulated computer system to add false sales and block recording of accounts payable—all to improve operating results thereby securing a position on board of directors.	11,500	(3)	Padded sales (also unrecorded expense).	Program alterations (also file changes).	Receivables	Director of subsidiary.	5/–	Do.

[1] Several.
[2] Probable losses much greater.
[3] Several years.

Auditors should be particularly interested in the conclusions about the biggest computer frauds drawn from the column labeled "fraudulent debit." In every accounting-based fraud, a trace or "footprint" of the fraudulent transaction is left in the accounts. In almost every case, it is the debit that should be the focus of internal control or the base of fraud detection. For example, disbursement frauds result in bogus debits to inventory or, in some cases, expense accounts; payroll debits are to expense accounts; and theft from dormant or inactive accounts in banks include fraudulent debits to customer accounts. The key to long running frauds is in the identification of unauthorized debit entries. In the 15 biggest cases, these entries form a definite pattern: 6 were to inventory or receivables, 3 were to expense, 2 were adjusting entries to revenue and 2 were to customer accounts (liabilities). Two involved schemes other than manipulation of accounting entries. These cases became big because these debits were such that detection by management was seriously impaired: inventory shortages were probably considered part of normal shrink, expenses were to those accounts where additional charges wouldn't be easily spotted (payroll, claims expense in an insurance company, interest expense at brokerage houses or revenue adjustments that appeared to be correcting entries). In reviewing automated accounting systems, the auditor would do well to establish a clear idea of the debit entries most likely to be fraudulently used.

CONCLUSION

The first time I assembled a set of computer fraud cases, I was struck by the incompetency of most of the embezzlers who had been discovered.[1] Since the computer provided such a high degree of fraud potential, I wrote at that time, "I can't help wondering what the really clever people are doing" with the computer. I still wonder; I think the biggest computer frauds are still to be revealed.

APPENDIX

Five sources were used to collect cases for this article:

1. Annual reports, magazine articles and newspaper clippings.

[1] Brandt Allen, "Computer Fraud," *Financial Executive*, May 1971, p. 38.

2. Case files of the Stanford Research Institute. Donn B. Parker of the SRI allowed me to examine his case files, which have been established, in part, through research sponsored by the National Science Foundation.

3. Case files of the U.S. General Accounting Office. These cases are described in *Computer-Related Crimes in Federal Programs*, GAO Report FGMSD-76-27, April 27, 1976. Walter Anderson of the GAO's Financial and General Management Studies Division provided further details of these cases short of identifying the agencies and individuals involved.

4. Case files of the Federal Bureau of Investigation. Summaries of closed cases with individual and institutional identification removed were obtained from the FBI.

5. My own files from previous research and consulting projects.

While I am indebted to these organizations and individuals for their cases and assistance, I alone am responsible for the summaries, analyses and speculations contained in this article.

INITIATIVE CONSTITUTIONAL AMENDMENT

Mr. ABOUREZK. Mr. President, on July 11 of this year, Senator HATFIELD and I introduced Senate Joint Resolution 67, a joint resolution proposing a constitutional amendment to allow the use of the initiative process at the national level.

Though 23 States have successfully used the initiative for many years, the idea of a national initiative is fresh and warrants explanation. To make information on the initiative process available across the country, I am working with Initiative America, an organization with representatives in more than half the States. Initiative America has prepared a series of questions and answers which clarify some of the issues involved.

I ask unanimous consent that the question and answer document prepared by Initiative America be printed in the RECORD.

There being no objection, the document was ordered to be printed in the RECORD, as follows:

QUESTIONS AND ANSWERS ON THE NATIONAL INITIATIVE CONSTITUTIONAL AMENDMENT

Q. What is the Initiative Process?

A. The Initiative is the process by which citizens can propose and enact laws independently of the legislative body. Laws are placed on the ballot after citizens collect a required number of signatures. A majority affirmative vote enacts the measure into law, a majority negative vote rejects the measure.

Q. What is a National Initiative?

A. A National Initiative process enables citizens to petition to place federal laws on the national Congressional election ballot every two years. Though not now available federally, a proposed constitutional amendment to provide for a National Initiative was just introduced into the U.S. Senate.

Q. Where is the Initiative now available? When was it established?

A. The right of Initiative is authorized by the constitutions of 23 states: Alaska, Arizona, Arkansas, California, Colorado, Florida, Illinois, Idaho, Maine, Massachusetts, Missouri, Montana, Michigan, Nebraska, Neveda, Ohio, Oklahoma, Oregon, North Dakota, South Dakota, Utah, Washington, and Wyoming.

In addition, the Initiative is presently available in hundreds of municipalities around the country.

Use of the Initiative began in the United States around the turn of the Century, after South Dakota became the first state to adopt the process in 1898. Other states followed South Dakota's lead, with 18 additional states authorizing Initiative in the following 20 years. The origins of Initiative procedures date back to the "plebiscitums" of the ancient Roman Republic, whereby the question of repealing or enacting laws over the opposition of the Senate could be put to a vote of the "plebes"—the enfranchised commoners. Initiative procedures were really pioneered in Switzerland in the years 1831–1891, however, when various forms of the Initiative came into use. Their use is continued on a national basis in the present Swiss Constitution.

Q. Does a National Initiative really require amending the U.S. Constitution?

A. Portions of the existing Constitution lay the foundation for a National Initiative process, but a separate amendment is necessary to provide a specific procedure by which citizens can use this right. The first amendment states that the people have the right to petition the government for redress of grievances, for instance, but the first amendment does not provide a procedure to practically implement this right.

Q. Exactly how will a National Initiative work?

A. Citizens would be allowed a maximum of 18 months to collect signatures of registered voters equal in number to 3 percent of those voting for the office of President at the last Presidential election. Of this total figure, a distribution requirement of at least 3 percent in each of 10 states would apply. The total signature requirement, based on the 1976 Presidential election (81.5 million voting) would equal 2.45 million valid, legal signatures. Signatures would be certified within 90 days for their sufficiency by the U.S. Attorney General, and then placed on the next national Congressional election occurring at least 120 days after certification is completed. Initiative proposals could appear every two years at Congressional or Presidential elections.

Q. How does this process work in conjunction with our representative system of government?

A. The Initiative is an integral part of our representative system of government. It is a complement to the present system, because it helps it to operate more accountably and openly. Initiative is simply another check and balance in our political system, except, instead of one branch of government being a check against another, the Initiative is a final check against the institutions to which the people have delegated authority.

Initiative is accepted as another democratic means by which citizens can express themselves. The Initiative has survived the test of nearly 60 years of use in 20 states across the United States. Initiative drives provide feedback to legislators about how the people feel on different issues. Additionally, many Initiatives prompt a public discussion about pertient issues which would otherwise go unaddressed. By providing another communication link with our elected officials, initiatives bring more citizens into the mainstream of public affairs and bring greater responsiveness on the part of the legislative body.

Any tool such as the Initiative which improves consultation between government and the people is a tool which enhances the effectiveness and openess of our democracy.

Q. Won't the ballot eventually become very complicated by dozens and dozens of issues?

A. The history of state-level use does not indicate that such frequent use of the Initiative has ever occurred. There are built-in safeguards to insure that the Initiative is used for issues with substantial public interest and support. The signature requirement is stiff enough to prohibit most drives from gaining the legal number of signatures to qualify for the ballot in the first place.

Q. What will prevent the process from being controlled by special interests? Is the Initiative really a citizens tool?

A. Special interests already enjoy an unequal voice in the legislative process through full-time lobbying of the legislature. The Initiative is proposed as a people's check for those times that the legislature is unresponsive to public needs.

The Initiative process has several unique features which make it an effective citizens tool, enabling the people to be heard even when normal legislative channels fail. Initiative gives people the power to get a fair hearing on an issue which concerns them. If there are enough citizens willing to sign petitions to put a question to a public vote, then that issue, at the very least, will be fully debated and addressed in a public way. Even if the issue is lost at the polls, the increased public awareness and education may go a long way toward resolving a question left unaddressed by the legislature.

The Initiative is also a very open process which invites scrutiny by the public, the media, and by community leaders. If special interests use or attempt to unduly influence the Initiative process, the community is aware of it. It is not easy to work behind closed doors when an issue is on the ballot. Of course, appropriate disclosure and other campaign requirements are useful complements to the Initiative process.

State level Initiative use has demonstrated that a measure qualified and campaigned for by a private, special interest group cannot succeed at the polls without the active support of community and political leaders.

Q. The Initiative has worked for decades at a state and local level. Will it work equally well at a national level?

A. Initiative will work every bit as effectively at a national level. Early opponents of this process argued that it could not work effectively at a state level, because of the complexity of the issues it could be used to address, the lack of understanding citizens were said to have of complicated state budgets, and the like. However, the best test of the Initiative has come in the state of California, a state with 10 percent of our nation's population and a $14 billion budget. Even with California's traditionally complex social problems, the Initiative has performed well. There is no reason to believe that Initiative will not work equally effectively when applied to national issues.

Q. Why a 3 percent requirement for signature gathering?

A. The signature gathering requirement must be substantial enough so as to discourage frivolous, unsupported drives, yet not so difficult as to preclude use of the process by volunteer, grass-roots efforts. Any percentage over 3 percent would require an effort so large that only well-financed or already formally-organized interest groups could use the Initiative.

The total signature gathering requirement of 3 percent of those voting for the office of President at the last Presidential election equals 2.45 million legal, valid signatures of registered voters, based on voter turnout of 81.5 million in 1976.

Any signature gathering drive must take into consideration an invalidation rate (for non-legal signatures) of anywhere from 33 to 50 percent. The practical goal for a National Initiative signature drive would likely be between four and five million. Anyone who has gathered legal signatures surely realizes the magnitude of such an effort.

Q. Are there safeguards preventing one region of the country from dominating the use of the Initiative?

A. Yes. The proposed amendment requires that, of the total signatures collected, there

must be a minimum distribution of signatures equal to 3 percent in each of 10 states. This requirement insures that at least 10 states be covered extensively by the drive.

The other safeguard regional domination of the National Initiative is the total signature gathering requirement. This is large enough that no one region of the country could practically collect the full number of signatures, without going to many other states for help. Even by meeting the three percent requirement in the 12 largest states, approximately one million additional signatures would be required to satisfy the 3 percent nationwide requirement. Any National Initiative drive will virtually require organized campaigns in half the states.

Q. Can the people be trusted with a National Initiative process, or will they begin to pass frivolous, unsound laws?

A. We trust the people to elect representatives, who, in turn make our laws; we must therefore trust the people to make law directly on issues which concern them.

The use of the Initiative in the states has not produced the wholesale enactment of unsound or frivolous laws by the people. Instead, it has proven that people use this process with restraint, in moderation. Initiative measures still constitute but a tiny fraction of the laws considered annually by the legislative body.

Any laws passed by Initiative has the further safeguard of having to be upheld by the courts.

In addition, although a controversial measure may reach the ballot, it will generally fail without widespread backing by community leaders. Unreasonably or poorly drafted laws tend to fail at the polls as well, because they are identified publicly as such early in the campaign.

Q. Doesn't the Initiative bypass and therefore lose the benefit of deliberative bodies?

A. Again, the Initiative is not intended to duplicate or replace completely the legislative process. It is used for issues of considerable public concern, and only for those which have not been resolved in the legislature adequately.

An Initiative does not preclude a legislature from holding hearings on the issue, and it in fact encourages considerably more discussion, usually involving a much larger segment of the public, than does the usual legislative process.

It is also a fair statement that Initiative sponsors will have a difficult time placing a measure on a national ballot which has not already received serious consideration by members of Congress.

Q. What types of issues will National Initiative be used for? Will it be used primarily by liberal, conservative or other political interest groups?

A. A National Initiative could be used by any individual or group which has sufficient support to mount a campaign. Whatever the issue, it must have substantial backing if it is to reach the ballot or be voted into law.

State level Initiatives have included liberal and conservative issues alike, yet the Initiative remains neither a liberal nor conservative tool—it is a democratic process.

Some state level Initiative issues include: property tax limitations, shoreline development, political reform, the death penalty, pornographic materials, returnable deposits on beverage containers, removing sales tax from food and drugs.

Q. How can Congress change a law enacted by National Initiative?

A. During the two years immediately following the adoption of a measure passed by Initiative, the Congress can, by two-thirds vote of members of both Houses, amend or repeal the law. After two years, a majority vote by Congress is necessary to amend or repeal an initiated law, just as with any other law passed by Congress. A law passed by two-thirds vote to amend or repeal an Initiative must be signed or vetoed by the President just as with any other law.

Q. Is National Initiative a very major change in our US Constitution?

A. Yes, it is a major change, but there is a historical basis for the right of National Initiative in our U.S. Constitution. Several Constitutional amendments have in some way sought to extend voting rights—the 15th to Black Americans; the 17th—to provide for the direct election of Senators; the 19th—to women; the 23rd—to the residents of the District of Columbia; the 24th—to prohibit the use of the poll tax; and the 26th—to those 18 years or older.

This proposed amendment would extend to the people the right to vote on proposed laws of national importance. It is a further step in this evolutionary process toward more meaningful citizen participation in the affairs of our government.

Therefore, the roots of a National Initiative already exist in the present provisions of our Constitution. This amendment is intended to provide the practical procedure whereby citizens can actualize their first amendment right to "petition the government for redress of grievances."

Q. What is the procedure for amending the Constitution to provide for a National Initiative?

A. A Constitutional amendment for National Initiative will require the same procedure as any other Constitutional amendment: First, the Congress must pass a joint resolution by a two-thirds vote of each House. Then, three-fourths of the states must ratify the amendment.

ON FAMILY PLANNING FUNDS

Mr. BROOKE. Mr. President, 3 weeks ago the Senate Subcommittee on Labor-HEW Appropriations, on which I serve, accepted my motion to appropriate $140 million in fiscal year 1978 for title X family planning services, training and information and education. At that time I stated:

> It is estimated that the recommendation will support an additional 600,000 persons in need of family planning services, particularly low-income women and teenagers . . .

The House, however, has provided only $123.7 million for title X family planning services, training, and information and education, a sum of $16.3 million less than that of the Senate and a figure which would provide approximately 300,000 less persons with family planning services than would the Senate bill.

The Senate-House conference committee on the 1978 Labor-HEW appropriations bill meets today to resolve differences in funding levels between the Senate and House bills. I strongly urge my colleagues who are conferees to insist upon the $140 million for title X voted by the Senate.

The Senate, House, and administration are all rightfully striving to provide alternatives to abortion and there is no more effective alternative than adequate family planning services. I find it tragic, for example, that in my own State of Massachusetts about 41 percent of the hospitals reporting abortion services did not have an identified family planning program on their premises.

The need for family planning services is urgent. Millions of low-income women in our country are not being served due to lack of funds and educational effort. In particular, the need for family planning services among teenagers of all income levels has reached almost epidemic proportions.

We need only look in more detail at the need for increased appropriations for family planning services project grants to understand why the higher Senate level of funding must be upheld.

In 1970 the Congress added title X to the Public Health Service Act by passing the Family Planning Services and Population Act. The passage of title X was in response to the fact that only 800,000 low-income women out of 5.4 million in the United States needing subsidized family planning services were receiving them from all known organized programs in public and private agencies. The passage of title X program signalled the beginning of a major Federal campaign to provide low-income families with the same access to modern fertility control which higher income couples already enjoyed.

Yet, now 7 years later, the need of low-income women, their number further swelled by the combined effects of unemployment and inflation, is still unmet. Of the 10 million low-income women in the United States in need of subsidized family planning services, about 3.5 million, or one-third, are presently not being served.

In addition, there is an urgent new need. For there are now approximately 2 million sexually active teenage women of all income groups who do not obtain family planning services from clinics or private physicians. And as a result, there are approximately 1 million teenage pregnancies each year, with 270,000 resulting in abortions, 210,000 resulting in out-of-wedlock births, and 100,000 resulting in hasty and unstable marriages.

In my own State of Massachusetts, the citizens of which have been in the forefront of providing family planning services, there were still an estimated 75,000 low and marginal-income women in need of subsidized family planning services in 1975, the last year for which there are reliable figures. About 29 percent of these women were teenagers. In addition, about 40,000 teenage women of higher income levels were also in need of services.

About 84 percent of the expenditures in Massachusetts for family planning services came from Federal funds and only 16 percent from State and local funds. Federal project grants under title X of the Public Health Services Act, the program whose funds we are now considering, compromised the majority of these funds, about $2.3 million out of $3.5 million.

Thus it is clear not only that the need for family planning services is great but also that the greater Federal effort promised with the enactment of title X will be required if family planning services are to be provided to all those women in my State and your State who need them.

That promise is, as of yet, still unfilled. In fiscal year 1972, the first full fiscal year of operation of the title X program, Congress appropriated $45.4 million, a sum providing services for nearly 1 million women. It was estimated

at that time that approximately $726 million would have to be appropriated incrementally over the next 5 year period for the title X project grants to reach the more than 5 million women in need of services.

However, only about $450 million of this $726 million has been appropriated. When the Federal Government consolidated the family planning services program of OEO and HEW into title X in 1973, the second year of title X operations, the administration requested $140 million for the costs of consolidation and the growth of the program. But President Nixon then vetoed the 1973 Labor-HEW appropriations bill and impounded the additional $32 million provided under the continuing resolution for the title X family planning services project grant program. As a result, funds for the project were frozen at the $100.6 million level, an amount sufficient primarily for funding already existing programs. Funds remained at this level for the next 4 fiscal years, and progress in the program was obviously greatly hampered. Furthermore, the backlog of low-income women needing services was compounded as the economy worsened and more and more women entered the rolls of the unemployed and the low income.

Not until last year in fiscal year 1977 did the Senate Labor-HEW Subcommittee on Appropriations insist on increasing the funding level for title X family planning services project grants to $113.5 million. Unfortunately, even then this increase in funds was largely absorbed by the 10–12-percent annual increase in cost of living that this program, along with other health programs, had experienced during the 4-year freeze on their expenditure level.

However, even during the 6-year period when title X family planning services endured level funding at a time of high inflation, title X achieved significant results. For, to date more than 4 million patients have been served by the program. And these patients were among the most economically wanting in our Nation. In 1975, more than half of all clinic patients had incomes below the poverty level; 89 percent were below twice the poverty level and one in six were on welfare and/or eligible for medicaid.

More than 4,500 clinics came to be involved in the provision of services, with health departments serving the largest number of patients, accounting for about 42 percent of the total caseload. Planned parenthood affiliates served 25 percent of the patients, and hospitals and all other agencies each served about one-sixth of the patient load. In these clinics, patients are offered the full range of family planning methods currently available, including natural family planning and the Billings ovulation method.

In addition to providing birth control services, the family planning services system of health departments, planned parenthood affiliates, hospitals, and other agencies have proved to be the most successful system for the provision of preventive health services to low- and marginal-income women ever instituted by HEW. Altogether, millions of pap smears for cervical cancer and breast examinations for cancer have been conducted. Patients have also received initial physical examinations from a physician, necessary laboratory work to detect the presence for diabetes, sickle-cell anemia, venereal disease, tests for hypertension and for other contraindications to the use of the most modern family planning methods, and diagnosis and treatment of infertility problems. In 1975 alone, more than 3 million women received pap smears, pelvic and breast examinations, VD tests and blood pressure checks in family planning clinics.

As a result of this Federal family planning legislation, rural families in Kansas and North Carolina, young couples struggling to make ends meet in Florida or California, the working poor in Massachusetts or in South Dakota, and young women throughout the country have learned through personal experience that national policy commitments can be translated into sensitive, effective help. For services are provided on a voluntary basis and in a nondiscriminatory manner. No patients are turned away on the basis of marital status or income or age. And this is important because increasingly the program is serving younger persons, many of whom are seeking to prevent a first pregnancy. The proportion of patients below age 20 rose from an estimated one-fifth of the total caseload served by all programs in 1969 to about 30 percent of all patients served in fiscal year 1975. Seventy percent of these patients had never borne a child.

However, as I stated earlier, the 1.14 million youngsters who received services from all organized family planning programs in the United States are the exception, not the rule. Teenagers becoming parents before they become adults is a serious, and escalating, social, economic and health problem. Adolescents in the United States have rates of childbearing that are among the world's highest. Indeed, incredibly, adolescent fertility is higher in the United States than in many less-developed nations such as the Philippines, Tunisia, and East Malaysia where health services are more scarce.

Part of this can be attributed to an increase in early sexual activity. About half of the unmarried women aged 19 are now sexually active; about one-quarter of unmarried women aged 15. Among the predominantly white middle class teens in one Midwestern city, the proportion who are sexually active nearly doubled between 1971 and 1973. At the same time birthrates for older adolescents declined, fertility did not decline among younger adolescents aged 14–17. Among girls younger than 14, birthrates actually rose slightly. Five-sixths of the infants born to these girls 14 and younger are born out-of-wedlock; one-third of all those infants born to 14–19 year olds are born out-of-wedlock. Altogether, more than half of all out-of-wedlock births in the United States are to teenagers.

What really makes these figures tragic is that teenagers' responses to national studies show that nearly two-thirds of all adolescent pregnancies and one-half of births are not intended. Of the 30,000 pregnancies and 12,500 births to girls 14 and younger, the percentage that is intended is unknown, but the number is probably very small.

Such unintended teenage pregnancies are also tragic when viewed in terms of the serious adverse effects on the mother and infant's health, educational and employment opportunities, income, mental stability and family size. For teenagers are much more likely to lose their babies soon after birth than women who give birth in their twenties. And the younger the teenage mother, the more likely that her baby will die. About 6 percent of first babies born to girls under age 15 die in their first year—a rate 2.4 time higher than that for babies born to women giving birth in their early twenties. Furthermore, babies born to teenagers are much more likely to be premature and of low birth weight than infants born to mothers in their twenties. Sixteen percent of babies born to mothers under 15 are of low birth weight, 2.2 times that of the proportion of babies born to 20–24 year olds. And low birth weight is not only a major cause of infant mortality but also of many childhood illnesses and birth injuries, such as neurological defects which may involve lifelong mental retardation.

Not only is the infant of a teenage mother at greater risk of death, defect, and illness than the infant born to a mother in her twenties, but the teenage mother herself is more likely to die or suffer illness or injury. The death rate from complications of pregnancy, birth and delivery is 60 percent higher for women who become pregnant before they are 15. The difference by age is especially striking for some causes of maternal mortality: Mothers aged 15–19 are twice as likely to die from hemorrhage and miscarriage, and 1.5 times more likely to die from toxemia; while mothers under 15 are 3.5 times more likely to die from toxemia.

In addition to the special health problems of maternal and infant mortality and morbidity associated with teenage childbearing, the teenage mother is likely also to face problem of education and employment attainment directly related to her early entrance into parenthood. Teenage mothers, especially those under age 18, are likely to begin childbearing without having had the opportunity to acquire the necessary skills to compete successfully for jobs and income with their contemporaries who postponed having a child until their early twenties. Eight out of 10 women who first become mothers at age 17 or younger never complete high school. And pregnancy is the reason most often cited by female teenage dropouts for this school discontinuation.

Furthermore, teenage mothers are less likely to work and more likely to be on welfare than mothers who first gave birth in their twenties. Thus, one New York City study of mothers of first-borns showed that 91 percent of women who first had babies at ages 15–17 had neither full- or part-time employment. This represents 1.4 times the proportion unemployed of those who first gave birth at ages 20–24. And 72 percent of mothers who first gave birth at ages 15–17 were receiving welfare. This represents 4.6 times the proportion of those who gave

birth at ages 20–24, while 41 percent of those who gave birth at 18 or 19 were on welfare—2.6 times the proportion of mothers who began childbearing in their early 20s.

Our society can and must help young women avoid these problems of health, education, and employment. We cannot afford to have the teenage women of our country being trapped in poverty, ignorance, and despair. For most teenage women and for our society, the principal issue is prevention; the majority of adolescents do not want to become pregnant or to have infants while in their teens.

The answer to this problem of unwanted teenage pregnancy lies largely in the provision of at least two types of services that can help young people avoid such pregnancies.

First, it is important that schools, churches, and the media and parents provide realistic sex education about birth control and about facilities where teenagers may obtain the assistance they need.

Second, health institutions must make available to teenagers modern, effective fertility control services without high cost.

In response to these very urgent family planning needs, President Carter in his revised budget for fiscal year 1978 proposed a package of increases particularly designed to provide services, with the exception of abortion, to young teenage women. Secretary of HEW Califano calls this package of services "alternatives to abortion" and it includes the following:

First, a $14 million increase for the community health centers program designed to "extend comprehensive services including family planning, health education, counseling, and outreach, with emphasis on reaching sexually active teenagers.";

Second, a $5 million increase for the National Institute for Child Health and Human Development—NICHD—to "develop better understanding of the physiological mechanisms involved in reproduction and normal prenatal development;

Third, a $2 million increase for the Bureau of Health Education of the Center for Communicable Disease Control for sex education research and demonstration and development and dissemination of information materials, together with a $2 million restoration of funds for the Bureau cutback by the Ford proposals;

Fourth, a $2 million increase for HEW's Office of Human Development for foster care and adoption research; and

Fifth, a $10 million increase for title X family planning project grants, with particular attention to teenage services.

The total amount for the entire administration package is $35 million. I welcome this proposal as an important gesture, demonstrating that, even in the early days of the administration, specific attention is being given to the problem of unwanted pregnancy and childbearing. This could indeed represent an important first step towards regaining the momentum of the family planning program which has been hampered since 1973.

However, the administration proposals are seriously inadequate.

The $14 million increase which the administration asked, and we granted, for the budget of the community health centers program would be earmarked, according to the budget plans, for family planning with emphasis on reaching sexually active teenagers. However, HEW internal documents indicate that these funds will also finance prenatal care and maternity care services. Therefore, it is unlikely that enough of this increase would be left to have much impact on the expansion of family planning services.

In addition, the funds for community health centers have not been substantially increased during recent years. The $14 million increase represents only a 6.5 percent increase over the program's current budget of $215 mililon, hardly enough to offset inflation for the year. Therefore, it is not realistic to expect that the community health centers would initiate new or expand existing family planning activities at the expense of other essential current health services to patients.

Two other proposals in the "alternatives to abortion" package are also inadequate. While a proposal to fund "research and demonstration projects related to sex education as well as the development and dissemination of information materials" is welcome, the Federal Government has not been very aggressive in its approach to this subject, and the $2 million allocated cannot begin to meet the need and stimulate sufficient activity around the country.

Likewise the $2 million for foster care and adoption research is also a minimal effort and represents, until only a few days ago, the administration's opposition to successful congressional proposals to supplement the costs of adoptions and care for "hard-to-place" children.

And most importantly, the major administration initiative requesting a $10 million increase in title X funds, the most successful family planning program particularly for teenagers, represents only a 10-percent increase over this year's funding level. This contrasts with the 13-percent increase for family planning funds which Congress passed for fiscal year 1977. A 10-percent increase would be sufficient to offset inflation but it would be clearly insufficient to provide services to "an estimated 278,000 low-income or teenage individuals" who, according to the HEW budget papers "will benefit as a result of these additional funds."

Therefore, the size of the entire "alternatives to abortion" budget proposal is unrealistic.

That is why I strongly urge that at least $140 million, the amount of the Senate bill, be appropriated for title X family planning service project grants, training and information and education programs.

This level of funding is still not adequate to provide family planning services for all who need them. But it does represent a more substantial effort toward fulfilling the promise Congress made when it enacted title X to provide family planning services to all low-income women than the level of the budget request or the House bill. And it does represent a true commitment to providing alternatives to abortion. To refuse less than the $140 million recommended by the Senate will raise cynical doubts about our real commitment to providing such alternatives.

SEABED ARMS CONTROL TREATY REVIEW CONFERENCE

Mr. PELL. Mr. President, as chairman of the Foreign Relations Subcommittee on Arms Control, Oceans and International Environment, I wish to draw the attention of my colleagues to a very important arms control conference which was held in Geneva, Switzerland, from June 20 to July 1, 1977. It was the first review conference of the Seabed Arms Control Treaty which came into force in May 1972.

That treaty—known officially as the Treaty on the Prohibition of the Emplacement of Nuclear Weapons and Other Weapons of Mass Destruction on the Seabed and the Ocean Floor and in the Subsoil Thereof—is of particular satisfaction to me as it came about, in part at least, as a result of Senate Resolution 186 which I introduced in 1967 proposing a treaty governing the uses of ocean space.

The purpose of the review conference was to review the operation of the treaty during the 5 years since its entry into force, in terms of both its specific provisions and of its broader purposes and objectives as set out in the treaty's preamble. The treaty is specifically designed to prohibit placing nuclear weapons and other weapons of mass destruction on the seabed and the ocean floor and in the subsoil thereof. The treaty's broader objective, however, is to prevent the emergence of an arms race on the seabed.

I am pleased to report that both the specific and the broad objectives of the treaty have been achieved during the period under review. At the conclusion of the review conference, a final declaration was issued setting forth the findings of the participants.

Mr. President, I ask unanimous consent that the full text of that declaration as well as the text of the Seabed Arms Control Treaty be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

THE FINAL DECLARATION OF THE SEABEDS ARMS CONTROL TREATY REVIEW CONFERENCE

PREAMBLE

The States Party to the Treaty on the Prohibition of the Emplacement of Nuclear Weapons and Other Weapons of Mass Destruction on the Sea-bed and the Ocean Floor and in the Subsoil Thereof who met in Geneva in June 1977 in accordance with the provisions of Article VII to review the operation of the Treaty with a view to assuring that the purposes of the preamble and the provisions of the Treaty are being realized:

Recognizing the continuing importance of the Treaty and its objectives,

Affirming their belief that universal adherence to the Treaty would enhance international peace and security,

Recognizing that an arms race in nuclear weapons or any other types of weapons of mass destruction on the sea-bed would present a grave threat to international security,

Recognizing also the importance of continuing negotiations concerning further measures in the field of disarmament for the prevention of an arms race on the seabed, the ocean floor and the subsoil thereof,

Considering that the continuation of the trend towards a relaxation of tension in international relations provides a favorable climate in which more significant progress can be made towards the cessation of the arms race,

Reaffirming their conviction that the Treaty constitutes a step towards the exclusion of the sea-bed, the ocean floor and the subsoil thereof from the arms race,

Emphasizing the common interest of mankind in the progress of the exploration and use of the sea-bed and the ocean floor for peaceful purposes,

Recognizing that the natural resources of the seabed and ocean floor beyond the limits of national jurisdiction will have an increasing role in assuring the economic progress of States, particularly of developing countries, and recalling in this connection the resolution UNGA 2749 (XXV),

Appealing to States to refrain from any action which might lead to the extension of the arms race to the seabed and ocean floor, and might impede the exploration and exploitation by States of the natural resources of the seabed and ocean floor for their economic development,

Affirming that no measures which may be decided upon in the context of international negotiations on the law of the sea will affect the rights and obligations assumed by the States parties under this Treaty,

Declare as follows,

PURPOSES

The States Party to the Treaty reaffirm their strong common interest in avoiding an arms race on the seabed in nuclear weapons or any other types of weapons of mass destruction. They reaffirm their strong support for the Treaty, their continued dedication to its principles and objectives and their commitment to implement effectively its provisions.

ARTICLE I

The review undertaken by the Conference confirms that the obligations assumed under Article I of the Treaty have been faithfully observed by the States Parties. The Conference is convinced that the continued observance of this article remains essential to the objective which all parties share of avoiding an arms race in nuclear weapons or any other type of weapons of mass destruction on the seabed.

ARTICLE II

The Conference reaffirms its support for the provisions of Article II which define the zone covered by the treaty.

ARTICLE III

The Conference notes with satisfaction that no State Party has found it necessary to invoke the provisions of Article III, paragraphs 2, 3, 4, and 5 dealing with international complaints and verification procedures. The Conference considers that the provisions for consultation and cooperation contained in paragraphs 2, 3, and 5 include the right of interested States Parties to agree to resort to various international consultative procedures, such as ad hoc consultative groups of experts and other procedures.

The Conference reaffirms in the framework of Article III and Article IV that nothing in the verification provisions of this Treaty should be interpreted as affecting or limiting, and notes with satisfaction that nothing in these provisions has been identified as affecting or limiting, the rights of States Parties recognized under international law and consistent with their obligations under the Treaty, including the freedom of the high seas and the rights of coastal states.

The Conference reaffirms that States Parties should exercise their rights under Article III with due regard for the sovereign rights of coastal states as recognized under international law.

ARTICLE IV

The Conference notes the importance of Article IV which provides that nothing in this Treaty shall be interpreted as supporting or prejudicing the position of any State Party with respect to existing international conventions, including the 1958 Convention on the Territorial Sea and Contiguous Zone, or with respect to rights or claims which such State Party may assert, or with respect to recognition or non-recognition of rights or claims asserted by any other State, related to waters off its coast, including, inter alia, territorial seas and contiguous zones, or to the seabed and the ocean floor, including continental shelves. The Conference also noted that obligations assumed by State Parties to the Treaty arising from other international instruments continue to apply. Without prejudice to any possible outcome of international negotiations on the law of the sea, the Conference agrees that the zone covered by the Treaty reflects the right balance between the need to prevent an arms race in nuclear weapons and any other types of weapons of mass destruction on the seabed and the rights of States to control verification activities close to their own coasts.

ARTICLE V

The Conference affirms the commitment undertaken in Article V to continue negotiations in good faith concerning further measures in the field of disarmament for the prevention of an arms race on the seabed, the ocean floor and the subsoil thereof. To this end, the Conference requests that the Conference of the Committee on Disarmament in consultation with the States Parties to the Treaty, taking into account the proposals made during this Conference and any relevant technological developments, proceed promptly with consideration of further measures in the field of disarmament for the prevention of an arms race on the seabed, the ocean floor and the subsoil thereof.

ARTICLE VI

The Conference notes that over the five years of the operation of the Treaty no State Party proposed any amendments to this Treaty according to the procedure laid down in this Article.

ARTICLE VII

The Conference notes with satisfaction the spirit of cooperation in which the Review Conference was held.

The Conference takes note of the fact that no information has been presented to it indicating that major technological developments have taken place since 1972 which affect the operation of the Treaty. The Conference, nevertheless, recognizes the need to keep such developments under continuing review and invites the CCD, in consultation with States Parties to the Treaty, to consider establishing an ad hoc expert group under its auspices for this purpose. Such a group might facilitate the implementation of the purposes stated in the section dealing with Article V. It might also contribute to the orderly preparation of the next Review Conference.

In order further to facilitate dissemination of information relevant to the Treaty to States for their assessment, the Conference invites the Secretary-General of the United Nations to collect such information from officially available sources and publish it in the United Nations Yearbook on Disarmament.

The Conference, recognizing the importance of the review mechanism provided in Article VII, decides that a further Review Conference should be held in Geneva in 1982 unless a majority of the States Parties indicate to the depositaries that they wish it to be postponed. In any case a further Review Conference shall be convened not later than 1984.

The next Conference shall determine in accordance with the views of a majority of those States Parties attending whether and when an additional Review Conference shall be convened.

ARTICLE VIII

The Conference notes with satisfaction that no State Party has exercised its rights to withdraw from the Treaty under Article VIII.

ARTICLE IX

The Conference reaffirms its conviction that nothing in the Treaty affects the obligations assumed by States Party to the Treaty under international instruments establishing zones free from nuclear weapons.

ARTICLE X

The Conference stresses that the five years that have elapsed since the date of entry of the Treaty into force have demonstrated its effectiveness. At the same time the Conference notes with concern that the Treaty has not yet achieved universal acceptance. Therefore the Conference calls upon the States that have not yet become parties, particularly those possessing nuclear weapons or any other types of weapons of mass destruction, to do so at the earliest possible date. Such adherence would be a significant contribution to international confidence.

TREATY ON THE PROHIBITION OF THE EMPLACEMENT OF NUCLEAR WEAPONS AND OTHER WEAPONS OF MASS DESTRUCTION ON THE SEABED AND THE OCEAN FLOOR AND IN THE SUBSOIL THEREOF

The States Parties to this Treaty,

Recognizing the common interest of mankind in the progress of the exploration and use of the seabed and the ocean floor for peaceful purposes,

Considering that the prevention of a nuclear arms race on the seabed and the ocean floor serves the interests of maintaining world peace, reduces international tensions and strengthens friendly relations among States,

Convinced that this Treaty constitutes a step towards the exclusion of the seabed, the ocean floor and the subsoil thereof from the arms race,

Convinced that this Treaty constitutes a step towards a treaty on general and complete disarmament under strict and effective international control, and determined to continue negotiations to this end,

Convinced that this Treaty will further the purposes and principles of the Charter of the United Nations, in a manner consistent with the principles of international law and without infringing the freedoms of the high seas.

Have agreed as follows:

ARTICLE I

1. The States Parties to this Treaty undertake not to emplant or emplace on the seabed and the ocean floor and in the subsoil thereof beyond the outer limit of a seabed zone, as defined in article II, any nuclear weapons or any other types of weapons of mass destruction as well as structures, launching installations or any other facilities specifically designed for storing, testing or using such weapons.

2. The undertakings of paragraph 1 of this article shall also apply to the seabed zone referred to in the same paragraph, except that within such seabed zone, they shall not apply either to the coastal State or to the seabed beneath its territorial waters.

3. The States Parties to this Treaty undertake not to assist, encourage or induce any State to carry out activities referred to in paragraph 1 of this article and not to participate in any other way in such actions.

ARTICLE II

For the purpose of this Treaty, the outer limit of the seabed zone referred to in article I shall be coterminous with the twelve-mile outer limit of the zone referred to in part II of the Convention on the Territorial Sea and the Contiguous Zone, signed at Geneva on April 29, 1958, and shall be measured in accordance with the provisions of part I, section II, of that Convention and in accordance with international law.

ARTICLE III

1. In order to promote the objectives of and insure compliance with the provisions of this Treaty, each State Party to the Treaty shall have the right to verify through observation the activities of other States Parties to the Treaty on the seabed and the ocean floor and in the subsoil thereof beyond the zone referred to in article I, provided that observation does not interfere with such activities.

2. If after such observation reasonable doubts remain concerning the fulfillment of the obligations assumed under the Treaty, the State Party having such doubts and the State Party that is responsible for the activities giving rise to the doubts shall consult with a view to removing the doubts. If the doubts persist, the State Party having such doubts shall notify the other States Parties, and the Parties concerned shall cooperate on such further procedures for verification as may be agreed, including appropriate inspection of objects, structures, installations or other facilities that reasonably may be expected to be of a kind described in article I. The Parties in the region of the activities, including any coastal State, and any other Party so requesting, shall be entitled to participate in such consultation and cooperation. After completion of the further procedures for verification, an appropriate report shall be circulated to other Parties by the Party that initiated such procedures.

3. If the State responsible for the activities giving rise to the reasonable doubts is not identifiable by observation to the object, structure, installation or other facility, the State Party having such doubts shall notify and make appropriate inquiries of States Parties in the region of the activities and of any other State Party. If it is ascertained through these inquiries that a particular State Party is responsible for the activities, that State Party shall consult and cooperate with other Parties as provided in paragraph 2 of this article. If the identity of the State responsible for the activities cannot be ascertained through these inquiries, then further verification procedures, including inspection, may be undertaken by the inquiring State Party, which shall invite the participation of the Parties in the region of the activities, including any coastal State, and of any other Party desiring to cooperate.

4. If consultation and cooperation pursuant to paragraphs 2 and 3 of this article have not removed the doubts concerning the activities and there remains a serious question concerning fulfillment of the obligations assumed under this Treaty, a State Party may, in accordance with the provisions of the Charter of the United Nations, refer the matter to the Security Council, which may take action in accordance with the Charter.

5. Verification pursuant to this article may be undertaken by any State Party using its own means, or with the full or partial assistance of any other State Party, or through appropriate international procedures within the framework of the United Nations and in accordance with its Charter.

6. Verification activities pursuant to this Treaty shall not interfere with activities of other States Parties and shall be conducted with due regard for rights recognized under international law, including the freedoms of the high seas and the rights of coastal States with respect to the exploration and exploitation of their continental shelves.

ARTICLE IV

Nothing in this Treaty shall be interpreted as supporting or prejudicing the position of any State Party with respect to existing international conventions, including the 1958 Convention on the Territorial Sea and the Contiguous Zone, or with respect to rights or claims which such State Party may assert, or with respect to recognition or nonrecognition of rights or claims asserted by any other State, related to waters off its coasts, including, *inter alia*, territorial seas and contiguous zones, or to the seabed and the ocean floor, including continental shelves.

ARTICLE V

The Parties to this Treaty undertake to continue negotiations in good faith concerning further measures in the field of disarmament for the prevention of an arms race on the seabed, the ocean floor and the subsoil thereof.

ARTICLE VI

Any State Party may propose amendments to this Treaty. Amendments shall enter into force for each State Party accepting the amendments upon their acceptance by a majority of the States Parties to the Treaty and, thereafter, for each remaining State Party on the date of acceptance by it.

ARTICLE VII

Five years after the entry into force of this Treaty, a conference of Parties to the Treaty shall be held at Geneva, Switzerland, in order to review the operation of this Treaty with a view to assuring that the purposes of the preamble and the provisions of the Treaty are being realized. Such review shall take into account any relevant technological developments. The review conference shall determine, in accordance with the views of a majority of those Parties attending, whether and when an additional review conference shall be convened.

ARTICLE VIII

Each State Party to this Treaty shall in exercising its national sovereignty have the right to withdraw from this Treaty if it decides that extraordinary events related to the subject matter of this Treaty have jeopardized the supreme interests of its country. It shall give notice of such withdrawal to all other States Parties to the Treaty and to the United Nations Security Council three months in advance. Such notice shall include a statement of the extraordinary events it considers to have jeopardized its supreme interests.

ARTICLE IX

The provisions of this Treaty shall in no way affect the obligations assumed by States Parties to the Treaty under international instruments establishing zones free from nuclear weapons.

ARTICLE X

1. This Treaty shall be open for signature to all States. Any State which does not sign the Treaty before its entry into force in accordance with paragraph 3 of this article may accede to it at any time.

2. This Treaty shall be subject to ratification by signatory States. Instruments of ratification and of accession shall be deposited with the Governments of the United States of America, the United Kingdom of Great Britain and Northern Ireland, and the Union of Soviet Socialist Republics, which are hereby designated the Depositary Governments.

3. This Treaty shall enter into force after the deposit of instruments of ratification by twenty-two Governments, including the Governments designated as Depositary Governments of this Treaty.

4. For States whose instruments of ratification or accession are deposited after the entry into force of this Treaty, it shall enter into force on the date of the deposit of their instruments of ratification or accession.

5. The Depositary Governments shall promptly inform the Governments of all signatory and acceding States of the date of each signature, of the date of deposit of each instrument of ratification or of accession, of the date of the entry into force of this Treaty, and of the receipt of other notices.

6. This Treaty shall be registered by the Depositary Governments pursuant to Article 102 of the Charter of the United Nations.

ARTICLE XI

This Treaty, the English, Russian, French, Spanish and Chinese texts of which are equally authentic, shall be deposited in the archives of the Depositary Governments. Duly certified copies of this Treaty shall be transmitted by the Depositary Governments to the Governments of the States signatory and acceding thereto.

IN WITNESS WHEREOF the undersigned, being duly authorized thereto, have signed this Treaty.

Done in triplicate, at the cities of Washington, London and Moscow, this eleventh day of February, one thousand nine hundred seventy-one.

IN NEW HAMPSHIRE'S WOODS

Mr. DURKIN. Mr. President, I was delighted to see that as far away as London, the beauty and tranquillity of the New Hampshire forests are well known. A recent issue of the Economist, the respected British journal, included an article about Peterborough, N.H., and its silent pine woods that attract 200 artists, composers, writers, and painters each summer.

As the article noted, Peterborough's MacDowell Colony has served the needs of artists since 1908. The Colony not only offers each visiting artist a studio of his own, but a precious opportunity to work without interruption or noise, away from telephone, television, and office.

Only professionals are accepted into the artist colony, although fame is not a requirement. The MacDowell Colony has but two rules: No one may enter another studio uninvited nor may one ask another how his work is progressing. The colony's only purpose is to enable a serious artist to enjoy one of our Nation's most inspirational environments. The New Hampshire forests, after all, inspired Thorton Wilder's Pulitzer-prize-winner-play, "Our Town."

Included among the MacDowell Colony's visitors have been James Baldwin, Leonard Bernstein, Max Frankel, and Alec Waugh. Additionally, Peterborough's tranquillity is enjoyed by thousands of less renown artists who merely seek a temporary escape to a quiet, less hurried lifestyle to nuture their creative talents.

Mr. President, because I know many of my colleagues are interested in this unique New Hampshire community, I ask unanimous consent that the Economist be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN NEW HAMPSHIRE'S WOODS

"Whose woods these are I think I know," said Robert Frost about a snowy evening in New Hampshire. This summer folk in Peterborough will be in no uncertainty about

whose are the 400 acres of woods in their midst: 200 artists, composers, writers and painters come to work in the silence of the pine forests each year, mostly in the summer. The MacDowell Colony, with an annual budget of $355,000, is one of the town's main employers, as well as the source of its best-known product—artistic creation. In fact, Peterborough itself, a sleepy New Hampshire town about two hours northwest of Boston, inspired Thornton Wilder's Pultizer-prize-winning play, "Our Town."

Each visiting artist has a studio in a cabin which is out of earshot of any other. Silence is golden, and expensive. The colony was founded by the American composer Edward MacDowell who found on his Peterborough farm what he felt were the ideal conditions for creativity. When he died in 1908 at the age of 46, his widow devoted the rest of her life—and it was a long one—to build and endow the colony in his name. A pianist, she gave concerts which would end with a plea for funds. Across America she encouraged good ladies who would never see New England, let alone a creative artist, to form MacDowell Clubs to raise money. She herself donated her farm and land and had as a financial base the fund of money set up in her husband's name by J. Pierpoint Morgan.

Today the MacDowell endowment covers only a third of the colony's running costs; another third comes from the National Endowment for the Humanities and the rest is scraped together each year by spirited fund-raising. Those artists who can afford it are now asked to pay $10 a day. Yet the colony runs a deficit and how it will survive if costs rise much more is hard to see. Lavish federal funds are unlikely to be forthcoming for a community which could easily pass for a very progressive summer camp.

Only professionals are accepted. But fame is no requirement, nor poverty—nor is any evidence of finished work. The colony has two main rules: no one may enter another studio uninvited and no one may ask another how his work is going. Artistically, the colony is tolerance itself. One composer works on a choral piece which consists of aspirant sounds and no musical notes at all; another artist is immersed in "acrylic stained abstractions and experimental caustic works on rice paper."

While the colonists live in small dormitories and meet for breakfast and dinner, the solitude of most of the day is total. There is no break for lunch. A scout silently steals up to the cabin porch and leaves a hamper of food. Some people cannot bear the strain. A few take to each other, some to the bottle. For most, the opportunity to work without interruption or noise, away from children, telephone, television and office, is precious and they make the most of it. The average stay is about two months.

Who goes there? Who doesn't? Certain great names are always mentioned in the same breath as MacDowell—Virgil Thomson, Stephen Vincent Benet, Aaron Copland, Edwin Arlington Robinson. But the list of slightly lesser and more recent lights is longer and more interesting: James Baldwin, Padraic Colum, Rumer Godden, Leonard Bernstein, Frances Fitzgerald, Max Frankel, Marya Mannes, Nora Sayre, Peter Viereck and Alec Waugh, to name a very few.

ISRAEL AND TORTURE

Mr. ABOUREZK. Mr. President, on June 11, 1977, there appeared in the London Sunday Times a report entitled, "Israel and Torture." This investigation into human rights violations by the Israelis in the Arab-occupied territories is only one of several reports the Times has done so the claim cannot be made that the paper is singling out Israel for investigation.

The detailed report is well-documented by a team headed by Eric Marsden who has earned increasing respect for their accurate reports in the Times. These men and women are well-known as journalists all over Europe.

"Israel and Torture" contains details about the torture, deprivation, detention, and degradation of Arabs at the hands of their Israeli occupiers. The reports conclude in part:

Torture of Arab prisoners is so widespread and systematic that it cannot be dismissed as "rogue cops" exceeding orders. It appears to be sanctioned as deliberate policy.

But if this report were not enough in itself, what is also shocking is that the original investigation, the Israeli reply to the findings and the Times' response to the Israelis have been virtually ignored by the press in the United States. Therefore, I ask unanimous consent to print all three in the RECORD so that many more people will be able to read them. In this time when both President Carter and the Congress are speaking out strongly for human rights, such a thorough report about Israel and her treatment of Arabs should not go unnoticed or ignored.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

ISRAEL AND TORTURE

(By Eric Marsden and the Insight Team)

ISRAEL AND TORTURE: A CASE FOR CONCERN

Several pages of this issue of The Sunday Times are devoted to the result of our inquiries into alleged maltreatment by the Israeli authorities of Arabs in the occupied territories of Israel. Such coverage requires a special explanation. It is unpleasant reading; that is inescapable by the nature of the subject. It is long; that is inevitable if we are to set out the evidence properly and not merely publish assertions and denials.

The aim is to present the reader with the material on which we based our own judgment that Israel has been covering up ill-treatment and torture of Arab prisoners before they are brought to trial. As it is, we have published the minimum necessary for this purpose. We have in the form of transcripts of first-hand inerviews ten times this amount of testimony with varying degrees of plausibility.

The subject merits such intensive treatment in our view, because respect for human rights must be indivisible, and because Israel occupies a special place in our world. Israel itself has always made justice, the rule of law and the fair treatment of Arabs central to its claim to nationhood. It was founded in idealism following oppression and this is one of the emotional obstacles: few people are prepared to believe that Israelis, as members of an ancient community which has for centuries been victim of persecution, are capable of persecuting others. There is all the more reason that when allegations are made and persist—there has been an increase in them in the past year—they should be taken seriously and examined in detail.

The detailed evidence The Sunday Times has collected will be made available to any properly constituted international inquiry—that farce of a body the UN Commission on Human Rights will not do. But of course the best result would be an end to the practices we describe. The Israeli authorities know we are publishing this inquiry, but we have not presented them with the details for three reasons. The first is that the bulk of the allegations is known to the Israeli authorities and/or the courts who have rejected them in circumstances we find unconvincing and we say why in the course of the report. The second is that though a number of Arabs have agreed to be named others involved would agree to be identified only to an international tribunal; and a few were frightened even of that.

The third, frankly, is that we are not prepared to accept simple new assertions that there is no truth in any of it. Israel has for years successfully resisted outside inquiries into these matters and particularly into allegations of torture. It has been helped by the fact that many of those making the inquiries have been obviously biased and one-sided—for instance the UN Commission on Human Rights which repeatedly attacks Israel and South Africa but is shatteringly silent over Uganda.

This, though, only demonstrates the Commission's partiality; it does not necessarily mean all the testimony it has heard is false. Israelis frequently, and with justification, complain of a double standard operating against them in international affairs. In some cases, such as the present one, it operates in their favour. International bodies which are prepared to air allegations of ill-treatment of prisoners made against Latin American, Asian and African countries hesitate to do so against Israel, and there has been similar reticence in the Press and in particular in the Israeli Press.

In a free society, the Press operates as a safety valve for grievance and complaint, but Israel's Press, normally so vigorous and outspoken, has not taken up the challenge of finding out just what is going on in the interrogation centres. The newspapers have until recently given little coverage to the West Bank and Gaza (with the exception of Haaretz) and rarely refer to the allegations of ill-treatment except in giving denials. The military governments of the West Bank and Gaza have therefore had a free hand in enforcing law in the occupied areas.

Israel's conduct in the occupied lands has deserved more scrutiny than it has received in ten years; but it now assumes a profound new importance. There is a new government in Israel. The outgoing government at least held out the possibility that the most densely populated areas of the West Bank might be returned to Arab rule in a peace agreement, though it has continued to build Jewish settlements.

Likud, the party of Mr. Menaham Begin, makes no such offer. It is committed to maintain Israel's rule over all the West Bank and Gaza, adding another million Arabs to the half million who are already Israeli citizens. Mr. Begin says they will have equal rights with Jews so long as they accept they are a minority in a Jewish state.

Apart from disbelief, two other responses to the allegations are certain. The first is that very few if any of the Arab countries would emerge unstained from a comparable inquiry into methods used there by police and prison authorities. Many, indeed, would fail to pass any westernised tests of civilised practice. The second is that ousiders should have some understanding that Israelis feel besieged and under the provocation of Arab terrorism. In such circumstances, the argument will run, ends justify means: to extract from suspects a confession, followed by conviction in the courts, is so important to the stamping out of terrorism that it takes priority over everything, human values included.

Both points can be met. Torture must be condemned wherever it is practised. But in the occupied lands of Israel the people are dependent on international protection and only respect for international conventions can help them. Secondly, though surrounded by enemies, Israel has not had to contend in recent years with massive internal violence on the Ulster or Algerian pattern.

But the justification of torture for the con-

trol of populations cannot be accepted by nations with claims to western values, whatever the provocations. It is inhumane. It is self-defeating. At the minimum it strengthens the resolve of those who think of themselves as oppressed. It demoralises those who practice it; as the French in Algeria had reason to learn. And, most important, an apologia like this does less than justice to Israel's own standards. Mr. Begin, who is about to become Prime Minister, suffered in a Russian prison in his youth, had a price on his head under the British, and has written with great emotion in condemnation of British methods of interrogation and trial of his comrades in the Irgun Zvai Leumi underground organization in the 1940's. Unless his convictions have changed, he cannot be satisfied that since 1967 Israel has used against Arab prisoners the British mandate laws and regulations he so bitterly denounced.

Finally, it will be said, of course, that to publish reports of torture and ill-treatment is to strike at the very heart of Israel's existence. The opposite is true. Israel has to live in peace with Arabs. It seems unaware of the deep strength of feeling against continued occupation. Certainly the occupation has brought some material benefits to the Arabs, but the deprivation of human rights is gravely poisoning its relationships with those people it must not only subdue now but eventually live with as neighbours. In the long term a just peace is essential to Israel; and some kind of basic trust is essential to that. Torture by Israel (like terrorism by extremist Palestinians) undermines trust, is an obstacle to peace and by extension weakens Israel's prospects of survival.

Six years ago we published a report on interrogation on Northern Ireland which led to the banning of those practices by the British Government, and the removal of a little of the poison in Anglo-Irish relationships. The report we publish today, we hope, cause Israel to rethink its occupation policies and remove a little of the poison between Jew and Arab.

Early on the morning of February 24 this year, a transfer took place at the Allenby Bridge, the main crossing point from the Israeli-occupied West Bank to the East Bank of Jordan.

An Israeli army jeep drove to the centre of the bridge and pulled up. Several Israeli soldiers climbed out, followed by an International Red Cross delegate from Jerusalem, a young Swiss named Bernard Münger. Together they helped a frail figure from the jeep and laid him on a stretcher. His name was Omar Abdel-Karim. He was a Palestinian carpenter from the village of Beit Sahur, just below Bethlehem. He was 35 years old, but he looked an old man.

On the Jordanian side of the bridge a small group awaited Abdel-Karim. It comprised his brother; a Jordanian army liaison officer; and Jean Courvoisier, head of the International Red Cross delegation in Jordan's capital, Amman. The Red Cross men, Courvoisier and Münger, picked up the stretcher and carried it to an ambulance of the Jordanian Red Crescent (which operates in Jordan in liaison with the International Red Cross).

As Münger walked back to the Israeli jeep, Abdel-Karim tried feebly to wave goodbye. When an army man asked his name, his lips barely moved. To his brother's distress, Abdel-Karim appeared not to recognise him. "I thought he was going to die," Courvoisier told friends later.

Abdel-Karim lived. At midday, he was admitted to the King Hussein hospital at Salt, 25 miles from the bridge on the road to Amman. The case notes of his initial examination recorded that he was thin and weak. He complained of pains in the chest and found it hard to breathe out. He had an infection of the urinary tract. He talked of severe head pains and showed signs of giddiness. And his difficulty in moving tended to confirm his complaint that his joints, especially his knees, were painful too. Chest X-rays then showed that Abdel-Karim's ribs had at some point been fractured. The houseman also noted that Abdel-Karim was in a highly nervous state—and prescribed tranquilisers.

Abdel-Karim continued to bear the marks of having come through some traumatic experience, however. When his wife Nijmi came to see him, he stared at her. "Who are you?" he asked. It was some time before he showed signs of remembering her.

With the aid of antibiotics, multi-vitamins and a high-protein diet, Abdel-Karim has slowly recovered, though two months later, he could still barely walk.

He had been arrested, said Abdel-Karim, by the Israeli security forces four months before and accused of belonging to the *fedayeen*, the Palestinian resistance and terrorist movement. He had then, he said, been tortured. And the tortures he recounted were so brutal, so prolonged and, above all, so organised and applied as to leave no doubt—if his story were true—that systematic torture is an Israeli practice.

We were expecting Adbel-Karim's arrival. We had learned of his case in January, while he was still in Israeli custody; and before his release we had talked with his wife, his lawyer and the mayor of his village.

For five months, we have been inquiring into allegations of systematic torture by Israel of Arab prisoners. Such allegations have been persistent for almost a decade, ever since the first weeks of the Israeli occupation of the West Bank and the Gaza strip after Israel's victory of June 1967. The United Nations, Amnesty and several individuals, have, at different times, made detailed examinations of the evidence and have, in varying degrees, been disapproving of Israel. But virtually all previous inquiries have been vulnerable to criticism because they were conducted outside Israel and the occupied territories, without attempts at on the spot verification. Even a special committee of the UN, a body not loath to criticise Israel, has admitted its inability "to reach a conclusive finding, since this would only be possible after a free investigation inside the occupied territories."

For this Insight inquiry we have worked inside the West Bank and the Gaza Strip, taking statements and examining stories there and going into neighbouring Arab countries, when necessary, to check those claims further. We have questioned 49 Palestinian Arabs, who have been in the custody of the Israeli security forces. Almost all are still living in the occupied territories. Forty-four of them alleged, in varying detail, that they had been tortured.

In 22 of the cases, the Arabs involved have agreed to be named, even though they still live under Israeli military rule. In reaching our conclusions we have given greater weight to these cases. The remaining cases where Palestinians have asked to remain anonymous, we have treated with great caution, though consistent patterns emerge from these, too. Our conclusions are:

1. Israel's security and intelligence services ill-treat Arabs in detention.

2. Some of the ill-treatment is merely primitive: prolonged beatings, for example. But more refined techniques are also used, including electric-shock torture and confinement in specially-constructed cells. This sort of apparatus, allied to the degree of organization evident in its application, removes Israel's practice from the lesser realms of brutality and places it firmly in the category of torture.

3. Torture takes place in at least six centres: at the prisons of the four main occupied towns of Nablus, Ramallah and Hebron on the West Bank; and Gaza in the south; at the detention centre in Jerusalem, known as the Russian Compound; and at a special military intelligence centre whose whereabouts are uncertain, but which testimony suggests is somewhere inside the vast military supply base at Sarafand, near Lod airport on the Jerusalem-Tel Aviv road. There is some evidence too that, at least for a time, there was a second such camp somewhere near Gaza.

4. All of Israel's security services are implicated: the Shin Beth, roughly Israel's MI5 and Special Branch in one, which reports to the office of the Prime Minister; Military Intelligence, which reports to the Minister of Defense; the border police; and Latam, Israel's "Department for Special Missions," both of which report to the Police Minister.

5. Torture is organized so methodically that it cannot be dismissed as a handful of "rogue cops" exceeding orders. It is systematic. It appears to be sanctioned at some level as deliberate policy.

6. Torture seems to be used for three purposes. The first is, of course, to extract information. The second motive, which seems at least as common, is to induce people to confess to "security" offences, of which they may, or may not, be guilty. The extracted confession is then used as the principal evidence in court: Israel makes something of the fact that it has few political prisoners in its jails, only those duly convicted according to law. The third purpose appears to be to persuade Arabs in the occupied territories that it is least painful to behave passively.

It may be, therefore, that the 22 Arabs we name are at risk of reaction in Israel. The 22 knew and accepted this. We see no way to protect them except by publicity, so we publish as an appendix to this report their names and home towns.

THE PROBLEMS OF CHECKING

The case of Omar Abdel Karim, the man sent over the Allenby bridge, is typical for two reasons. His allegations differ little from those in scores of previous cases. And the difficulties of checking what he says are, as we shall show, no different either. First, his story, recorded during eight hours of questioning in mid-April. The phrase "he says" should mentally be added to each assertion that follows:

Omar Abdel-Karim was arrested on October 3, 1976, as he was crossing eastward over the Allenby bridge on his way to see his brother's wife in Amman. He was driven to the Russian Compound, known to Arabs as "Moscobiya"—the detention and interrogation centre in Jerusalem which houses Shin Beth and Latam and occassionally the border police.

Among the interrogators who questioned him the same evening were two whom he came to know as "Edi" and "Orli." They accused him of being one of the Fedayeen. When he denied this, they beat him on the soles of his feet. Later, for about 15 minutes, he was hung up by his wrists. Then he was sent to a cell in the main prison block at Moscobiya. His feet were swollen; he crawled there.

He was in Moscobiya for seven days. In later interrogations, he lay prone on the floor and, while one man stood on his legs, another pulled his arms back. Another time, a stick was twisted through his handcuffs, cutting the blood supply to his hands. He still denied involvement with the fedayeen.

After a week, he was transferred in a closed lorry to another location—he thought Sarafand. So far his treatment might just be described as "brutality" rather than torture. But the new centre was more purposeful. Except during interrogation sessions, he was continuously hooded by a black canvas bag. Fresh interrogators took over, though Orli was also there.

Electricity was now used. Two thin, black leads were taped to Abdel-Karim with sticking plaster. These went into a black box, presumably a transformer, and from it a thick white wire was plugged into a wall

socket. A button on the box switched the current on. "It felt as though my bones were being crushed," Abdel-Karim said. "The most painful was when they attached the wires to my testicles. When the current was applied, I felt it through my whole body. After the shocks ended, I felt pain in all my joints. Every muscle ached and I felt that my nerves were exhausted."

Abdel-Karim says electricity was used at "eight or nine" sessions. But he says he continued to maintain his innocence. After 11 days he was moved again, to the prison at Hebron on the West Bank.

Edi and Orli were still with him, but yet more interrogators now joined in. In his first day at Hebron, one named "Ouzi" kicked his face; when blood from Abdel-Karim's nose spotted his boot, Ouzi made him lick it off. Abdel-Karim recalls the boot: "Thick, with a kind of grid on the soles, like a commando's."

He also identifies one interrogator as "Abu Ghazal," a man with an "Aleppo rose" on his cheek, a pitting peculiar to the Middle East. Abu Ghazal swung him round the room by his hair and, when it came out, forced him to eat it. "It stuck all down my throat. It made me want to throw up." Then he had to drink salty water. Finally, Abu Ghazal and a second interrogator forced a bottle up Abdel-Karim's rectum.

That was the first day. The second day, he says he was again suspended by his wrists from a pulley and beaten. "I felt something break in my chest. . . . Then I fell unconscious. When I came to I was on the floor and they were throwing water in my face. . . ."

It was on the third or fourth day that Orli brought Abdel-Karim's wife Nijmi to the prison. "When she saw me in such condition she started screaming. Orli grabbed her by the hair. He started slapping her face until blood came from her nose and mouth. . . ." Abdel-Karim said he would confess.

"Orli said: 'Now we are friends.' He pulled out a cigarette and handed it to me. I took the cigarette and started smoking and he said: 'Now talk.' So I had to start lying. I had nothing to tell and I had to save my wife. I said I had bombs and I hid them in my lavatory. When I said this my wife said: 'No, I was the one who put them there.' In fact there was nothing we had done but she said she had done it to save me, and I said it to save her.' "

Abdel-Karim was taken back to his home at Beit Sahur where sewage trucks sucked out the cesspit by his house. They found nothing. When it was realised he had lied, Edi repeatedly banged Abdel-Kahim's head against a rough wall. Pieces of plaster fell out and Orli told him to swallow them, which he did.

"If I had anything I would give it to you," Abdel-Karim kept telling his interrogators. They did not believe him. He was kept under a cold shower; jammed into a barrel of freezing water; and suspended from his wrists once more while the interrogator Orli squeezed his genitals. "The mind cannot imagine how that hurts. It was so bad, it made me forget all the other pain."

The last assault Abdel-Kahim remembers is being shut in a small cell into which some kind of gas was squirted through the judas-hole in the door. "I couldn't stop coughing. My eyes and nose were running. The whole world started turning round me." He remembers "a piece of glass like a finger" which was finally slid into each nostril to ease his breathing.

From that point, Abdel-Karim's alleged recollections are confused and fragmentary. We have established that at the end of November, for example, he spent a week in the main Israeli prison hosptial at Ramleh. He says he does not remember this. Then on December 12, his wife Nijmi says, she and their 12-year-old son visited him back in Hebron and he did not recognize the boy. He says he does not remember this episode either. About this time, the Israelis took him to the Jordanian border; but the Jordanians refused to accept him because no arrangements had been made. Abdel-Karim says he just recalls something like that. Of his eventual journey to Salt in February through the mediation of the International Red Cross, he remembers very little.

It is an appalling story, but how much of it is true? In the nature of torture, only two parties are present: torturer and victim. As Amnesty International has said: "The confrontation between the individual and the limitless power of the state . . . takes place in the darkest recess of political power." Failing a confession by the torturers, we have to look for other things: corroboration of verifiable details; or the consistency of one account with others, in circumstances where collusion can be ruled out. By those tests, Abdel-Karim's story deserves credence.

We had learned of his case, as we said, even before his release. The independent interviews we conducted then went some way to corroborate his account.

Six weeks before Abdel-Karim's release, his wife Nijmi had told us—in an interview at Beit Sahur—how she had been arrested and taken to Hebron prison. She and her husband had been beaten in front of each other, she said. Her face had been slapped and her hair pulled. Her husband appeared "badly beaten on his face and his eyes were swollen. There were burns on the back of his hands and there were burns on his face as if made by an iron or an electric fire." (Abdel-Karim later showed us, among other marks on his body, a flat scar on the back of his right wrist. He said it had been caused by the application of electricity, unmodified by a transformer, in Hebron. "They taped the wires to me and then put the plug directly in the socket. It just blew me away, and they had to re-attach it. Sparks came from my hand. The other equipment didn't cause sparks.")

Other interviews helped to corroborate Abdel-Karim's story. On November 14, his lawyer Felicia Langer and her clerk Abed el-Asali visited Abdel-Karim in Hebron prison. Langer subsequently wrote an account of the visit:

He was brought to me supported by other prisoners because he was unable to walk by himself. . . . He was looking very bad, his face was completely yellow. . . . All the time he was pointing to his ribs, claiming he was unable to breathe out. One of his fellow prisoners told us that his ribs had been broken during interrogation. . . . Omar indicated to us that he had been tortured by electricity and while speaking of it he started trembling terribly. . . . It was as if his body was convulsed.

He did not know his age, place of birth, address, or whether he had children. Just once during our visit, he let slip that his wife had been beaten in front of him, but then he stopped talking about it. It seemed to us that he was in another world.

In another interview six weeks before Abdel-Karim's release, Langer's clerk Asali confirmed her account, adding that they had seen Abdel-Karim suddenly start laughing and kiss a prison guard. "He said that the guard was the only one who didn't torture him. . . ." (Asali did not mention burns on Abdel-Karim, but he did claim to have seen "blue marks and red marks like blood near his ear.")

It was also in mid-January, again six weeks before his release, that we interviewed the mayor of Abdel-Karim's village, Hanna al-Atrash. He told us then how the Israelis had spent several days draining the sewers round Abdel-Karim's house. His account of the episode agrees in general with that given to us later by Abdel-Karim—who could in no way have colluded with him.

The mayor also told us that in late November, having heard from Felicia Langer of Abdel-Karim's state, he went to see the Israeli military governor of the Bethlehem district: "He said he didn't believe the story, but he would look into it." He later told the mayor that Abdel-Karim had been moved to a prison hospital.

The mayor also contacted the International Red Cross in Jerusalem: "I asked them to look into the allegations. Later the Red Cross delegate Bernard Munger confirmed to me that they were true. He confirmed Felicia Langer's letter completely."

As a matter of policy, the Red Cross never comments publicly on cases. The chief Red Cross delegate in Jerusalem, Alfredo Witschi, said he could not confirm or deny the mayor's statement. "We make our reports to the authorities and request action," he said. Similarly in Amman, Jean Courvoisier would confirm only that he had met Abdel-Karim on the Allenby bridge.

We have established, however, that the Jerusalem Red Cross delegate Munger first got access to Abdel-Karim at the end of November, about 55 days after his arrest. It was about then—and so possibly as a result of Munger's intervention—that Abdel-Karim was moved to Ramleh prison hospital. He was X-rayed, but returned, after a week to Hebron. In the light of his later condition—which Munger described to doctors in Amman as "lamentable" and to which the medical records at Salt bear witness—this seems a strange decision. It is not surprising that Abdel-Karim has the fondest memories of Munger, whose continued efforts helped finally bring his release. "He saved my life," Abdel-Karim says.

MEMBER OF THE FEDAYEEN

But if there is independent corroboration for points of Abdel-Karim's story, there are also weaknesses which make it fall short of final proof.

In the first place, he was once a member of the fedayeen. Seven years ago, he served a 20-month sentence for possessing a revolver. His lawyer, Felicia Langer, though Jewish and a refugee from the Final Solution, is an active Communist, regularly denounced by the Israeli Government for political contacts with enemies of the state.

Secondly, the medical evidence is not conclusive. It rests ultimately upon the judgments and testimony of the director of the Salt hospital. Dr. Ahmad Hamzeh. But Dr. Hamzeh is scarcely neutral. In 1976 the Israelis deported him from the West Bank. His clinical judgments, too, are open to challenge. In finding Abdel-Karim's injuries "consistent with" his story of torture, Dr. Hamzeh placed some emphasis on his fractured ribs. Yet in February 1976, we have discovered, Abdel-Karim visited the Mount of David orthopaedic hospital in Bethlehem, complaining of pains in his back and chest. Hospital records show that an X-ray taken then also showed "evidence of multiple fractures in ribs." Medical experts in London say that even if Abdel Karim's ribs had later been refractured, Dr. Hamzeh's X-rays might not have allowed him to distinguish between the two sets of breaks.

It might be said that, in a country of avowed political freedom, Felicia Langer's politics should not debar her testimony. It could also be said that old fractures were surely susceptible to fresh damage from beatings. Yet doubts remain. And while we could corroborate many points in their accounts, Abdel-Karim and his wife disagreed on one significant detail. He said that his wife was brought before him at Hebron about October 25—and the detail of his testimony leaves little room for error. She had already told us that the date was October 15.

This ebb and flow of evidence is typical of torture allegations; and it illustrates the persistent difficulties of proof. In Abdel-Karim's case, however, one piece of external evidence strongly suggests that something which the Israelis wish to hide did indeed

happen to him. It comes from the Israelis themselves.

The day he was sent over the Jordan and up to Salt hospital, Dr. Hamzeh contacted Reuters and told them of Abdel-Karim's condition. A Reuters' reporter in Israel asked the West Bank military authorities for an explanation.

He was told that Abdel-Karim was a convicted Arab guerrilla and saboteur who had fallen ill in prison after serving three years of an 11-year sentence. He had asked the Israelis to let him go to Jordan for medical treatment, and they had agreed.

The story was a lie. Medical records in Bethlehem show, as we have said, that in February 1976—a year before his release over the Allenby bridge—Abdel-Karim went a free man, to the Bethlehem orthopaedic hospital, and made several further visits as an out-patient before his arrest. The mayor, Hannan-al Atrash, confirms that the arrest was in October 1976. Finally, we reproduce (page 17) the picture of Abdel-Karim and his wife taken on their 13th wedding anniversary. It was taken at the Photo-david studio in Bethlehem in the spring of 1976. The studio remembers taking it.

Mistaken identity can be ruled out. Few convicted "guerrillas and saboteurs" are invalided in mid-sentence over the Allenby bridge. Nor did the military authorities sound confused. The point, however, is not that they probably lied. The disquieting point is that the officer who told the lie must either have been ordered by his superiors to do so—or else lied on his own initiative, knowing he would not be punished if his superiors found out. Whatever happened to Omar Abdel-Karim, in other words, was part of an officially-sanctioned system.

THE JUDGMENT OF THE WORLD

On the day after the United Nations had voted to establish the State of Israel in November, 1947, Chaim Weitzmann, Israel's first president and, to many, its founding father, wrote: "I am certain that the world will judge the Jewish state by what it shall do with the Arabs." The dilemma his prophecy encapsulates leads directly to the situation revealed by our investigation.

Israel is a Jewish state, determined to remain so. Yet it rules 1.7 million Arabs—for a decade 1.2 million of these have been under military occupation.

The reasons why Israel has since 1948 steadily increased its dominion over Arabs and their land go back into the infinite regress of cause-and-effect, charge and countercharge that makes up modern Middle Eastern history. That is outside the scope of our inquiry. The fact is that most Israelis see no choice but to continue military occupation; while some Israelis actively want to do so, on the grounds of historic Jewish rights to the land.

Because Israel is so dependent on what Weitzmann saw as the judgment of the world, it must try to ensure the judgment is favourable. The conflict between this international need and the domestic reality of military rule and Arab resistance expressed sometimes through terrorism seems to us the most concrete explanation of why torture has become, on the evidence, an accepted Israeli practice.

There are, of course, many who will passionately reject our evidence as literally unthinkable. Many more will find in the idea of a persecuted race becoming in turn the persecutors a paradox so distasteful as to demand better evidence than perhaps would be needed against other countries. Even more will point out that Israel claims—and undoubtedly feels itself—to be at war for its life; and that the Arabs' record on civil liberties is, to say the least, poor.

The point, of course, is that Israel itself does not, in theory, accept the unspoken implications of their argument.

Israel does not admit that torture is justified by its situation. It denies that torture is ever used. Nor does Israel justify failures in civil rights by comparisons with Arab deficiencies. On the contrary, it is fundamental to Israel's ethos and to its claims for international support that it is part of the West—thus to be judged by Western standards. Israel claims as "a fact"—in the words of an official Israeli observer to a United Nations Human Rights Commission meeting in March 1973—"that the human rights of the civilian population [in the occupied territories] have been and are fully respected and protected. . . . The realities are those of an open society, tranquil and relaxed."

After a decade of military occupation, Israel has felt able to state, in its official handbook:

"The administered areas are tranquil and thriving today. . . . Arabs and Israelis who until 1967 had lived in mutual separation and estrangement, are today enjoying the beginnings of a peaceful and fruitful coexistence."

Since our thesis is precisely that the international need to maintain that position goes far to explain the use of torture, it is necessary to begin by outlining Israel's response to the problems of "co-existence":

On the West Bank, Palestinian reaction to the Israeli occupation has run through three phases. Phase One: active resistance from mid-1967 to the end of 1969. By the end of 1969 raids on border settlements had almost died out.

Phase Two from mid-1970 brought relative quiescence. With the crushing of Palestinians in the "Black September" struggle in Jordan, and the death of President Nasser, the activists looked abroad: to the Munich Olympics of September 1972, for instance.

Phase Three can be traced back to the Israeli raid on Beirut in April 1973, when it seized thousands of documents. On the basis of these, the West Bank, and, significantly, Galilee, within Israel's old borders, saw fresh waves of arrests of suspected *fedayeen* activists or sympathisers. The unrest these sparked—largely in the form of civil disorders and demonstrations by high school students—has ebbed and flowed but never really died. With continued Israeli settlement on the West Bank, and Palestinian suicide raids like those on Kiryat Shmona, Maalot and Beit Shen, feeling between the two communities has steadily worsened.

In Gaza, the sequence has been different. With 300,000 refugees crammed into camps alongside 100,000 native Gazans, the area is one of the most overcrowded in the world—and perfect guerrilla country. Active resistance continued there until mid-1971, when it degenerated into a mini civil war between rival Palestinian factions. Israel bulldozed wide roads through the camps as the first step towards their pacification and control. By mid-1972 the *fedayeen* were crushed.

Israel has never denied that its battle against the Palestinian resistance has involved tough measures. It has demolished homes (16,212 between July 1967 and August 1971 according to an independently-kept log) and deported "known agents of subversion" (1,130 to Jordan since 1967 according to Jordanian police records). But it points out that the Arabs have free municipal elections and enjoy better standards of living than Arabs in Egypt, Syria and the Lebanon, and that it uses punitive measures with restraint.

Against this background, Israel has confronted the hardest problem for any occupying power, its treatment of resistors and terrorists. In 1976, it claimed to have broken up 91 sabotage rings and arrested 807 people connected with them.

Even before its 1967 victory, Israel had prepared an administrative structure for territories to be occupied—and a system of military courts. But the round-ups of late 1967 and early 1968 swamped the system. Faced with similar problems in the Mandate, the British resorted to detention camps—one near Tel Aviv; one in the desert near Gaza. (Arabs and Jews alike still refer to them as "concentration camps", conditions were apparently dreadful.)

The idea of the Jews of all people reviving "concentration camps" was rejected in emotional debates in the Israeli parliament. There was no alternative to overcrowding the jails of Israel and the occupied territories with detainees. In the months after the 1967 war, the number held without trial passed 2,000. By early 1970 it was still 1,923.

But, slowly, the military courts caught up. Gradually, almost all Arabs picked up in new sweeps—and most of those held from the early days—were convicted by the military courts of "security offences" ranging from membership of an illegal organisation, distributing leaflets, or daubing slogans, to possessing arms or committing sabotage or murder.

Ten years after the occupation, Israel has (on the latest published figure) only 37 detainees. But nearly 60 per cent of all prisoners in jail in Israel or the occupied areas are Arabs found guilty of security offences—some 3,200 out of 5,800.

Thus Israel can demonstrate to itself and to the world that it has no political prisoners—only convicted terrorists. As Israel's ambassador to the United Nations, Jacob Doron, asked in a speech last November: "What is wrong with the holding of trials and the conviction of those found guilty after due process of law?" The answer is: when those public convictions are gained by means of secret torture.

The military courts are the fulcrum of Israel's claim to rule the occupied territories according to the rule of law. We have talked with six lawyers—two Israelis and four Palestinians—who regularly appear in them to defend those accused of security offenses. For the record, their names are: Felicia Langer, Lea Tsemel, Wasfi O. Masri, Anton Jaser, Elias Khoury and Fayez abu Rahmehs. Their unanimous opinion is that the military courts collude in and knowingly conceal the use of torture by Israel's intelligence and security services. The mechanism is, in its way, elegant, almost syllogistic. Most convictions in those courts are based on confessions by the accused: most of those confessions, the lawyers are convinced, are extracted by ill-treatment or torture; almost without exception the courts reject that contention.

A security suspect in the occupied territories is usually arrested by Israeli soldiers or border police, accompanied mostly by one or more men in civilian clothes. Most Palestinians we spoke to referred to the plain-clothes men as Shin Beth, Israel's internal security service. (In fact, we have learned they are just as likely to belong to Israel's military intelligence.)

The suspect can be held for up to 18 days before being taken before a military judge. He can order further detention of up to six months. In this time the suspect is interrogated. When eventually he is brought to trial—up to a year later—the prosecution is almost invariably equipped with a statement, signed by the suspect, confessing to at least some of the charges.

Israel says that all confessions are voluntary. The six advocates we have spoken to do not believe this. Wasfi O. Masri, a 60-year-old lawyer from Nablus, and a senior judge under Jordanian rule said: "In 90 per cent of cases I have, the prisoner had told me that he was beaten and tortured. Of course it is very difficult to prove because they don't have witnesses to see them beaten. But I am certain that it happens."

The military courts usually have three military judges—of whom only one must have been qualified, through six years at the Bar, to become a civilian judge. The Military Regulations they apply are based to some extent

on regulations drawn up by the British in 1945—to counter mainly Jewish terrorism.

But it is not in the courts that the crucial maneuver takes place. The courts do indeed allow defense counsel to challenge the validity of confessions. When that occurs, a "little trial" (in Hebrew, a *zuta*) is held.

This is what happens. The defendant tells the court that he was ill-treated or tortured. The prosecution then produces the policeman or army officer who took the confession. According to the young Israeli-born advocate Lea Tsemel, the officer tells the court: "I sat with the suspect, we had coffee together, I gave him cigarettes, he talked freely, and everything was normal." And this officer is almost always telling the truth.

The catch is that the policeman may indeed have taken the statement. But he did not conduct the interrogation. Many of the former prisoners we questioned said that after they had agreed to make a statement they were passed from interrogators to the police, together with a note of the offences they were admitting. The new officer then composed the statement for the court.

Several had tried to change their minds about confessing. One, Shehadeh Shalaideh of Ramallah, protested for instance, that he could not read his supposed confession because it was in Hebrew. (This is a common complaint.) "The officer left the room and two men in civilian clothes came in. I told them I wanted to know what I was signing. They said, 'we haven't got time for all that' and they started beating me. So I said 'okay, okay, I'll sign'."

It is almost impossible for defendants to bring their real interrogators to court because they use Arab names—"Abu-Sami," "Abu-Jamil," 'Abu-Daoud"—or nicknames like "Jacky," "Danny," or "Ari." Even if the defendants did succeed, the result was the same. Lea Tsemel told us how she had finally brought to court an interrogator her client had described. "He just looked at the defendant and said he had never seen him before in his life."

Successful challenges to the validity of confessions are rare. Wasfi O. Masri is much admired by other advocates for having persuaded military courts to rule out confessions in five cases—from a total he estimates as "thousands." Lea Tsemel said she had "almost succeeded once."

Her real role, she explained, was plea bargaining. One of her clients was the only survivor of a band of infiltrators who had been shot down by an Israeli patrol. "He told me he had suffered very bad torture and he wanted to protest in court. The prosecution offered a deal. If I did not contest his confession they would ask for a maximum of 18 years. As he could have got life, I advised him to agree."

A Palestinian advocate from Gaza, Fayez abu Rahmeh, told us that he had decided not to take any more security cases: "I told the Israelis, I have had enough. I told them they should just go back to internment and end this farce."

The question, therefore, is what happens in those secret interrogation sessions?

THE STORY OF GHASSAN HARB

Ghassan Harb is a 37-year-old Palestinian intellectual and journalist from Ramallah, on the West Bank ten miles north of Jerusalem. On the night of April 21–22, 1974, he and his wife were staying with his father-in-law there. Shortly after midnight, they were awakened by half a dozen Israeli soldiers and two men in civilian clothes. One of the civilians told Harb to get dressed.

"What is the matter?" Harb asked.

"You will find out," the man replied. Harb was handcuffed, blindfolded and bundled into a vehicle which took him to Ramallah prison.

What happened to Ghassan Harb over the two months that followed has already excited international attention. When his case was raised at the United Nations last year. Israel's ambassador there, Jacob Doron, dismissed it as "typical of the kind of atrocity stories spread against the Israeli administration by certain elements."

What he meant was that Harb was a Communist. It is true, however, that both sides, Israel and its accusers, have distorted the Harb case—in part because the key witness, Harb himself, was unavailable. For two-and-a-half years after that midnight visit, Harb was detained without trial.

Only on January 18 this year was he released and sent home. Soon afterwards, we recorded for the first time his own account of his experiences. Harb struck us as an excellent witness: careful, restrained, questioning his own impressions and anxious to find points that might be verified. This, in essence, is his story:

For the first 50 days, nothing happened to him. He was punched and kicked on his arrival at prison and, still blindfolded, heard others getting the same treatment. But then, after three nights in a small cell with six other prisoners, he was moved to a larger room containing 40 men. As the days passed, the others—most of whom had been arrested on the same night as himself—were taken for questioning. After six, seven or sometimes 15 days they would return "in very bad condition," he says. "They had been beaten. You could see the marks on their faces and chests." Strangely, they appear to have talked very little. It was not until June 12, 51 days after his arrest, that Harb's own turn came.

He was blindfolded again and made to lie down in what he thinks was a jeep for a journey of two or three hours. When the jeep stopped at last, and Harb got out, still blindfolded, a heavy cloth bag was put over his head. After perhaps 30 or 40 minutes just standing there with his hands in the air—"when there are bad conditions, perhaps a person thinks that the time is longer than it really is," Harb adds cautiously—he was taken into a room, and both blindfolds were removed. A man in civilian clothes addressed him in Arabic.

"Do you know where you are?"

"No," Harb said.

"You are in Kasr el-Nihaye."

That is the name of a prison in Baghdad, the capital of Iraq, notorious for its tortures and secret executions. Harb knew he was not in Iraq. But he also knew what Kasr el-Nihaye means: The Palace of the End. And he knew what his interrogator meant.

Harb learned that he had been arrested because, as an admitted Communist, he was suspected of complicity in armed resistance on the West Bank. He had joined the Communist party as a schoolboy in Ramallah, then part of Jordan. The Jordanian government had banned the party and in 1957 Harb was arrested. He was 17. With other party members he spent the next eight years in prison.

An amnesty finally released him and during the 1967 war, Harb was studying economics at Moscow university. He returned to Ramallah in 1972, to work for the Arab newspaper El-Fajr, published in Jerusalem. He wrote and spoke against the Israeli occupation.

These activities may have irritated the Israelis but none of them was illegal. As Israel's Ambassador, Jacob Doron, said: "Nobody is in prison because of their political beliefs." Israel permits Communists to stand for election in Israel itself.

On the West Bank, however, all political parties and their activity are banned, and known Communists are kept under surveillance. This has been especially so since 1973 when the West Bank communists and the Palestine Liberation organization decided to form an alliance, which they called the Palestine National Front. Since Israel regards the PLO as a purely terrorist organisation it soon saw the Front in the same light. On the night of April 21–22, 1974, it moved against the Front. Harb was arrested.

At the UN, Ambassador Doron said afterwards that Israel had only "arrested those against whom there was evidence of criminal offences." But most of those arrested in the sweep were never charged. We know of nine men—one of them Harb and eight of them avowed Communists—who were apparently taken to Israel's own Palace of the End. Three were deported to Jordan in 1975; two more were allowed to return to their West Bank homes in 1976; Harb and another were released this year, two are still in prison. None has ever been tried, let alone convicted.

That does not, of course, prove that none had committed an offence. The secretary of the Jordanian Communist party has been quoted as saying that his West Bank comrades had indeed been active. The fact remains that Harb denies involvement in any criminal activity, and no evidence has ever been produced.

It is necessary to spell this out only because Ambassador Doron has dismissed the allegations which follow as "an attempt to arouse public opinion and to cover up the crimes committed." He, therefore, uses the assertion of unproved crimes to brush aside the allegations of torture.

The underlying issue remains: Even if Harb and his comrades were guilty, how were they treated in Israel's Palace of the End?

ORDEAL IN THE "CUPBOARD"

On Harb's account, his first meeting with his interrogator there ended abruptly. "We know you are against the authorities; tell us everything you know," the interrogator said. Harb replied that he had no information. "All right," the interrogator said, "You don't want to speak." He gestured to the guards, who wore soldiers' uniforms. "Take him," he said.

In another room, Harb was made to strip, given a military-type overall and photographed. Then he was brought back to his interrogator. He was to see him many times in the next 16 days.

"He was stout, rather dark-skinned, but not black. Black hair, no moustache. His hair was a little curly. I don't remember if he had a parting or not." He was, Harb thinks, about 170 centimetres—5ft 7in—tall, and between 32 and 40 years old. "He spoke Arabic with a Syrian accent." Herb recalls that he always wore civilian trousers and a short-sleeved shirt.

The first beating began at once. "He sat on a table, I was on a bench and he began to beat me. Fifteen minutes, 20 minutes, beating with his hand across my face," Harb says. (Again, Harb warns that he may exaggerate the time.) Only one question was asked: "Do you want to speak?" Harb repeated that he had nothing to say.

At the end of that first session Harb, blindfolded once more with the bag, was led away. His handcuffs were removed, he was stripped of his overall, his hands were refastened behind his back and, naked apart from the bag over his head, he was pushed into what he felt was a confined space. The door shut. Despite two air holes in the top of the bag, Harb feared he would suffocate, so by sliding his head against the wall he removed it. He found himself in a tiny windowless cell, the only light coming from a crack under the door.

"It was really just a cupboard," he says. He thinks it was 60 cms (2ft) square and no more than 150 cms (5ft) high. "I am 178 cms and I couldn't stand up in it." Nor was it possible to sit down.

But the most curious feature was the floor. It was concrete, and set into it at close but irregular intervals was a set of stone spikes. "They were sharp, and they had acute edges. They were perhaps one-and-a-half or two centmetres high. I could not normally stand on them. I could stand on them

but with difficulty and pain. I would lift one leg and put the other down, and then lift that one when it got tired and put the other down, and so on."

Harb thinks he spent three or four hours in "the cupboard" on his first occasion—though he cautions this may be an overestimate. But his release from the place brought no relief.

The door opened. A soldier undid Harb's handcuffs to let him dress, then fastened his hands in front of him. Because Harb had pulled off his hood, he was slapped and blindfolded again, this time with "some kind of spectacles, cloth spectacles made of a black material." The bag was then put over these. Harb was led into what he thinks was an open courtyard, for further treatment.

"There were three or four of them. I judged that by their voices. They were beating me, and then they said: 'Now go down on your hands and knees'. There were little stones in the yard, and they were very painful to crawl on." (Particularly painful for Harb, he has bone deformities protruding from his knees.)

"That continued for about an hour perhaps. I was crawling around on the ground and they were kicking me and beating me. While I was crawling around they rode on me, sat on me like a horse."

When Harb was at last brought to his interrogator once more, the man said: "Now see your condition." He then punched Harb repeatedly, while he and a second interrogator asked questions.

"They said: 'Do you know this person, that person . . .' mentioning names. I said I didn't . . . One of them said I was accused of military charges and I told them 'No, no'. He said: 'We know you are active in this field,' and I said: 'All right, if you know I'm active show me some evidence. I know it isn't true. If you have some evidence, please show it to me.' He said, 'We know, we know,' and he kept on beating me."

That was the first day. Eventually, according to Harb, he was locked into a cell and allowed to sleep. In the morning, the routine began again—and again almost without variation over the four days that followed. "Cupboard," courtyard, interrogation, cell—though not always to rest. The routine could start at any time of day or night.

Sometimes during the beatings in the courtyard, Harb would be stripped: "They took me outside, took my clothes and there were four or five people. Now one kicks me, the other receives me, and gives me to the first—as a ball, kicking to and fro. Afterwards they let me crawl. I was still without clothes of course. Somebody sat on my back, and they were laughing."

On another occasion, Harb was made to crawl, bizarrely, into a dog kennel, less than two feet square. The dog was not in it, but Harb could hear it howling nearby.

Harb also heard the sounds of other prisoners: "On one occasion in the very early period they took me to the cupboard at night . . . at perhaps nine or twelve o'clock. Then I was taken outside and I heard some voices, sounds of pain, crying, pleading. 'Oh my head.' 'Oh my stomach,' 'You are killing me.' Of course I couldn't see who were the people who were groaning, but I heard it."

Certainly, the centre appeared to be staffed to handle more than one inmate. Between June 12–16—the five days of intensive questioning—Harb was interrogated by six or seven different men, all in civilian clothes. The "Syrian" was not always among them. Nor was violence always used—though when it was, it was severe. At one point, Harb says, his feet were beaten with a stick.

After those five days, however, his treatment eased. He was interrogated for another 12 days, but the sessions became more relaxed and discursive, and he was spared the "cupboard" and the courtyard. "I don't know if I had convinced them I had nothing to do with military charges," Harb says.

On what he calculates was June 28, Harb, still blindfolded, was driven from the centre to Yagur prison outside Haifa in northern Israel. Five or six other prisoners went with him. At Yagur, Harb began the detention from which he was released in January this year.

Israel denies that Harb was tortured. Its most detailed rebuttal was given by Ambassador Doron in a speech at the United Nations last November, after a report by a "special committee" of the U.N. on the occupied territories had mentioned Harb's case among others.

The lawyer Felicia Langer had brought several of these cases to the U.N.; so Doron first attacked her credibility: "a member of the politbureau of the pro-Moscow Communist party" and "an active propagandist against the state . . . devoted to the slander and denigration of Israel."

Harb, Doron continued had been detained for investigation of his "subversive activities on behalf of a terror organisation." As soon as his allegations of torture had become known, he had been examined by two doctors who had "found absolutely nothing wrong with him." An Arab delegation from his home town, Ramallah, had also been allowed to visit him; they too, Doron said, had been "satisfied that he had not been mistreated in any way." As to the substance of Harb's charges, Doron said that after "impartial inquiries" which the Israeli authorities had themselves instituted, he could state that no torture had taken place. "Nobody's held in prison blindfolded and tied up."

The other parties involved in those inquiries have different recollections. It was only a day or so after Harb had left the interrogation centre that his wife Afaf visited him in Yagur prison. She was, she says, horrified: "He looked terrible. He was pale and exhausted, and he had lost a lot of weight."

Her report of what she had seen and what her husband told her caused unrest in Ramallah. Harb's family is well-known locally; and Harb's own writings and speeches had given him a reputation. Seeing this, the Israeli military governor of Ramallah ordered Harb's transfer from Yagur to the local prison.

It was on his arrival there that Harb was examined by two Israeli doctors—perfunctorily, Harb claims. He was also interviewed by a delegate of the International Red Cross, to whom he made a formal complaint of torture. And, as Doron said, he was allowed to meet a local deputation: the deputy mayor of Ramallah and his own brother.

We have talked to both men. Contrary to what Doron claimed, both say they did think Harb had been mistreated. His brother says Harb looked ill, had lost weight and showed signs of ill-treatment, including scars. The deputy mayor of the time, a lawyer named Alfred Kisek, recalled: "He told us he had been tortured. He didn't seem as bad as I had heard, but he looked ill and we believed that he had been ill-treated."

What of Israel's "impartial inquiries" into the case? Early in July, as unrest grew over the allegations put about by Harb's wife, the police minister, Shlomo Hillel, announced an inquiry—under a police officer, Harb was taken to Ramallah police headquarters to be questioned. It was, he says, a cursory affair. The resultant statement was no more than 500 words. (By contrast, the transcript of our detailed questioning of Harb totals 11,000 words.) The policeman also questioned Langer's six other complainants. By early August, he had presented his report. It dismissed the allegations.

Langer fought back. With another lawyer, Whalid Fahum, she filed a complaint in the Supreme Court in Tel Aviv alleging that the inquiry had been inadequate and the minister, Hillel, delinquent in his duty. Technically, therefore, the court could only examine the narrow procedural issue. But the lawyers, of course, hoped the court would consider the wider issue of the allegations themselves. And this the court duly did.

Its procedure was so strange, however, that at the very least considerable doubt must be cast on what it found. No witnesses were called. No fuller statements were taken. The court said it limited itself "to choosing between the conflicting claims of the prisoners and the investigators as submitted in writing." On the strength of medical reports which, "did not show any signs of intentionally inflicted injuries" it chose to believe the investigators. On December 18 the complaint against Hillel was dismissed.

FOUR STORIES IN SUPPORT

We know, as we have said, of eight other Palestinian Arabs who appear to have been in the special interrogation centre at about the same time as Harb. Two are still in custody, but of the six who were freed we traced and interviewed four:

Mohammed abu-Ghabiyr,
Jamal Freitah,
Kaldoun Abdul Haq
Husni Haddad.

Only Haddad was in exile in Jordan. (He died in Amman in May this year; we retain the tape of our interview with him.) The other three still live, like Harb, on the West Bank. None was ever charged.

In view of what they say, it is important to consider whether these four and Harb could have colluded their accounts.

Harb and three of them were certainly together for some days in Yagur, immediately after interrogation. But then they were split up, and only two served in the same prison (Haq and Freitah in Nablus). Haddad had not been in Yagur with the others, but he saw Harb for a few days in Ramallah when he was taken there for a hearing to extend his detention.

This gives the theoretical possibility that the five men could have conspired to fabricate a story. But only during those days at Yagur could a story have been cooked up—to be passed to Haddad later. And there are two further points. After his deportation to Jordan, Haddad had no chance to meet the others. Secondly, we first interviewed two of those still on the West Bank—Haq and abu-Ghabiyr—without any warning and before the final pair, Harb and Freitah, had been freed. We questioned *them* only days after their release.

In our view these facts and the weight of detail the men volunteered 30 months after their experiences argues reality rather than some long-remembered fabrication.

These are their stories:

Mohammed abu-Ghabiyr, a shoemaker from Jerusalem, spoke of the interrogation centre as a "military camp" where the guards wore "soldiers' uniforms." He too was stripped, photographed and given a one-piece overall in camouflage colours. He too talks of being blindfolded with "a black bag made of very thick cloth" with two air holes in the top. He too was blindfolded the whole time except in his cell or under interrogation. Like Harb he described a "stony courtyard," and mentioned the presence of dogs.

Harb, asked to estimate the layout and size of the centre, said that he could not do so, because he thought he had been led everywhere in circles. Ghabivr, asked the same question, replied: "I couldn't tell. The problem was they used to walk me in circles. . ."

Jamal Freitah, a labourer from Nablus, talked of "a prison uniform" and a 'bag of black cloth' over his head. He spoke of crawling naked over gravel; during that ordeal, he added, his eyes were covered with an extra blindfold under the bag.

At least once a day, he said, he was put into what he called "the frigidaire": It is about 60 cms by 60 cms by 160 cms high. The concrete in the floor was made in a way that it looks like small hills near to each other

with very sharp edges. Everyone of them is like a nail."

Kaldoun Abdul Haq, a partner in a Nablus construction company, spoke of being stripped, photographed and given "a camouflage overall" to wear. His blindfold was "a black sack made of cloth with two holes in the top to let air in." He talked of a courtyard—he called it "a place in the open air"—where, he said, he was hung by his arms from a hook in a wall. And he remembered a tiny cupboard—"the floor was covered with very sharp stones which were set in cement."

Husni Haddad, at the time of his arrest a factory owner in Bethlehem, was given a khaki jacket and trousers rather than an overall. But the "black canvas sack" with the two holes was unchanged. So was "a sort of garden" with "gravel underfoot," where he was once made to crawl and kicked as he did. He too remembered a cell 50 cms by 50 cms by 150 cms, the floor of which had spikes "like people's thumbs" but with sharp edges.

Even mundane details in Harb's account were confirmed by Haddad. Both men said that the first interrogation room had instructional charts showing weapons on its walls. Both said that a strange noise disturbed their sleep. Harb talked of "sounds of engines, whirring." Haddad spoke of "a kind of hissing noise from an engine, or maybe a buzzing noise." The plastic plates, the absence of cutlery, the plastic bucket for a lavatory, the lack of lavatory paper . . . scores of details match in the five accounts.

There were also inconsistencies. Haq, for instance, recalls the courtyard as being "like the soil" and denies there were stones or gravel. And the ill-treatment alleged varied in type and extent Freitah alleged almost continuous beatings and abuse. Ghabiyr said he was hardly touched. (Perhaps the reason was that Ghabiyr has a history of tuberculosis and, at his arrest, was ill with a stomach complaint.)

Taking the evidence as a whole, however, we conclude that it amounts at least to a strong prima facie case that in 1974 Israel maintained an interrogation centre administered by the army, where suspects were hooded, continuously handcuffed, deprived of sleep and other human amenities, and systematically subjected to physical and mental suffering.

WHERE DOES IT ALL HAPPEN?

Where is this interrogation centre, this "Palace of the End"? The most likely answer is that it lies behind the high wire fence that all tourists see as they drive the last stretch from Jerusalem to Tel Aviv. The wire, the military checkpoints at a couple of entrances, and a few low, scruffy buildings in the distance are virtually all that is visible of the ten square miles of Israel's biggest army ordnance and supply depot, Sarafand. (The Jewish National Fund also uses part of Sarafand to house the equipment for roadbuilding in its new settlements in Israel and the occupied territories.)

Sarafand occupies a prominent place in Palestinian demonology. Scores of statements talk of it; and most of those who have been through the interrogation centre refer to it automatically as Sarafand. But that is an assumption on their part, as questioning soon shows.

There are, nevertheless, historical reasons why they could be right. Sarafand was built as the main British ordnance depot in Palestine before World War Two. When Britain then needed two camps to house Arab detainees during the riots of the late 1930s, one was built inside Sarafand. (The other was in Sinai.) So many of the old British mandate buildings were taken over, function and all, by the Israelis that Sarafand would have been a logical choice to house a new generation of Arab detainees.

For it is clear from detainess' accounts that the mysterious new interrogation centre run by the military came into operation after the 1967 war. And it was another three years or so before its buildings—ramshackle at first, as if disused for a time—had been renovated. (Some detainees, taken there at intervals, observed the process.)

The assertion that they were in Sarafand comes most confidently from those early alumni. Yet each in turn seems to have learned this only from inmates already there. Only one claimed to have seen a sign "Sarafand prison," and we thought this improbable.

In those early years, blindfolding was less rigorously enforced, and a few detainess caught glimpses of their surroundings. One recalls a eucalyptus tree. But after 1970, continuous blindfolding and isolation shut out even those fragments.

Detainees could still hear, of course, and many speak of aircraft overhead. Sarafand lies below a flight path into Lod airport five miles away. But while some spoke of low-flying heavy aircraft—which suggests an airport nearby—others said they had been high. (Because theirs is the less predictable testimony, the high-fliers seem preferable witnesses.)

So completely have the Israelis managed to isolate those under interrogation since 1970–1971, in fact, that the only evidence that the centre did not shift to some new locale then comes from two prisoners who, having been there before and after, that period are confident they were in the same place both times.

But when we tried to match those few early topographical details with those from Harb and the others arrested in 1974, we could not decide if they related to the same place. Nor was Harb or his comrades prepared to assert that they were in Sarafand.

"Others said it was Sarafand," Harb recalled. "But I don't know." Because it was so hot there, Harb tends to believe he was in "the southern part of Israel." (But he lived in the cool hills, and all the Israeli coastal plain is hot in June.)

Husni Haddad agreed with Harb. "I was a driver and I knew the roads," he said, and he thought that on the journey from his home in Bethlehem the jeep had turned south before reaching Sarafand. Haddad also said that near the end of his stay at the centre, the shutter outside his cell window slipped.

He saw fast traffic on a main road about 150 yards away, he said. That is roughly the distance from the road to the buildings visible at Sarafand. But Haddad thought that a high proportion of the cars he saw had light grey number plates, which indicates Gaza registrations. He believed, therefore, that the centre was somewhere close to the Gaza strip.

LIMITS ON THE RED CROSS

Israel commonly cites the International Committee of the Red Cross in its defence. At the UN last November, for instance, Ambassador Doron said: "Following his imprisonment, particulars of each security prisoner are sent to the International Committee of the Red Cross." This category of prisons, he said, "even enjoy some additional privileges, e.g. visits by the representatives of the ICRC. . . on these occasions, they may talk with each prisoner without witnesses."

Ambassador Doron did not mention two important points. The Red Cross has indeed been able to visit prisons in the occupied territories since 1968. (Israel denies that the Geneva Convention applies, so it concedes the Red Cross no rights there; but it is allowed in.) Throughout those nine years, however, the Israelis have consistently forbidden the Red Cross to see prisoners undergoing interrogation. Nor did Doron say what we know from unimpeachable sources to be true; over the last nine years, when Red Cross representatives have got to prisoners in jails, they have heard story after story of ill-treatment and torture. And the Red Cross has filed hundreds of notices to the Israeli Government pointing this out.

The International Committee of the Red Cross has, of course, won its right to operate by promising governments to remain silent. Its delegates, all Swiss, undertake never to talk of their work. We have, however, learned from impeccable sources of the problems the Red Cross faces in the occupied territories.

The Red Cross is not immediately notified of arrests. Often it is the families or lawyers of prisoners who contact the Red Cross—and usually they do not themselves know where the prisoners are now. The Red Cross then tries to trace and get to the detainees as swiftly as possible—especially if there are any grounds for suspecting ill treatment. But the delegates face three obstacles.

They have access only to prisons, not to police stations or military camps. Nor do they have unrestricted access even to prisons. Attached to prisons in the occupied territories are sets of cells which the Red Cross cannot see. Some are outside the prison proper, attached to the local military governor's office. But inside Nablus jail, for example, the special cells—known there as "X-cells"—are to be found on the south side near the solitary confinement cells.

These remain under the control of the security services, and the Red Cross has no access.

Nor, for the first eight years of occupation, could the Red Cross visit any prisoners in the holding and interrogation centre known as the Russian Compound in Jerusalem. And it has no access to the secret interrogation center where Harb was held.

Moreover, 48 hours before a prison visit, the Red Cross submits to the prison authorities a list of prisoners it particularly wants to see. It sometimes then happens that when the delegates arrive, they are told that the prisoner in question has just been moved to another jail. The delegates covering that jail promptly add the man to their list. If they in turn are told that the prisoner has again been moved—a process described to us as "playing paper games"—their concern inevitably increases.

So the Red Cross may only get to prisoners after a search and rarely if ever until interrogation is over. Several witnesses told us how Red Cross delegates greeted them when they finally met. I've been looking for you everywhere," one delegate allegedly said. Another apparently remarked: "Now I have found you, you will be safe."

How often does the Red Cross then hear allegations of ill-treatment? The Red Cross, of course, will not say. But our impression is that while beatings are commonly mentioned, more elaborate ill-treatment is alleged by half the prisoners or less. Not all of these decide to make formal complaints.

Even a formal complaint is made—which the Red Cross then transmits without comment to the Israeli authorities—the Red Cross rarely learns officially if there has been any action as a result—or even if there has been an inquiry into the complaint. Over a period of six months delegates may notice that complaints about a particular form of treatment are diminishing; or discover that a particular interrogator has been transferred. That is all.

Only for five months, through the summer of 1969, did the Red Cross persuade the Israelis to let its delegates see some of those under interrogation—and then only in prisons, not military camps or police stations. But then the Israeli authorities changed their minds. The International Committee of the Red Cross subsequently reported: "Even though its delegates thought that there had been some improvement in the interrogation conditions, the ICRC considered that the visiting procedure now laid down by the Israeli authorities no longer permitted it to ensure that interrogation methods at variance with humanitarian law did not occur."

That was in September, 1970. Six years later, after reports in Israeli newspapers that the Red Cross was satisfied with conditions, the ICRC made another of its rare public statements. (The Red Cross says it does this only when it feels its policy of silence is being exploited or abused.) On January 12 this year, the Red Cross said that "a number of problems which have been raised regularly by the ICRC have not been solved." And it pointed out that it was still not permitted to visit "those undergoing interrogation."

AN ASSERTION OF POWER

Interrogation, of course, is only one of the ends of ill-treatment or torture. Ill-treatment may also deter a rebellious populace. For that, however, a degree of openness is required—a semi-public assertion of power. That is one possible explanation for what happens in the Russian Compound in Jerusalem.

The Russian Compound which sprawls over several acres in the heart of Jerusalem just north of the old city, derives its name from its original use as a hospital for Orthodox pilgrims. Inside its walls today are a prison, a repair depot for police vehicles, petrol pumps and two rows of single-story barracks.

Much of the compound is open to the public: barrack number two issues driving licenses and identity cards. But barracks four, six and eight house the Jerusalem outposts of Israel's civilian security services, including—in Barrack Four—the section called Miotim, the department of minorities. Its boss is an Iraqi Jew named Naim Shabo.

Unlike the rest of the captured territories, east Jerusalem has been not merely occupied by Israel but effectively annexed—and its 90,000 unwilling Arab citizens with it. Miotim's job is to cope with the "subversive elements" among them.

A few minutes after 3pm last December 15, Hevda Sarid walked into Barrack Four. She is the secretary of the Israeli-born lawyer Lea Tsemel, whom she had arranged to meet there. "I looked for a secretary in the reception office, but nobody was there. Then I heard a shout—I think *'halam* (Arabic for 'immediately'). The door of an office a little further down the corridor was half-open and I looked inside.

"There were some men—five, six or seven—around someone who I recognised as a client of ours. They were all talking to him at the same time. In the middle of snouting at him, one of them—a man with grey hair—swung his leg and kicked our client in the genitals. The client cried out and folded over. He held his genitals and he was crying.

I started shouting at the men. They came and pushed me away and shut the door behind them. I saw the man with grey hair and I shouted at him: 'I saw you kick that boy. I want your number; that's illegal.'

"He said: 'I am the head of this department. My name is Naim Shabo. What do you want here?' " They pushed her out.

Hevda Sarid is not the only person who claims to be have witnessed violence in the Russian Compound. An American charity worker whose business sometimes takes him up there recalls seeing, last year, a man, clearly in a dazed state, brought out of Barrack Four, led around in the fresh air for a few minutes and then taken back inside. On another visit, he saw a man led across the compound bleeding from the nose and mouth.

Lea Tsemel's client, whom Hedva Sarid says she saw being kicked, was a youth called Mahmud el-Mughrabi. At 16, he had already been picked up a dozen times, and he was clearly regarded as a trouble-maker. Mughrabi gave us a detailed account of how he was beaten at the session Hedva Sarid interrupted. His story is in part corroborated by another prisoner, though Mughrabi's additional allegation of electric shock remains unconfirmed.

Mughrabi was one of 24 Palestinians we interviewed who had been interrogated in the Russian Compound—"Moscobiya" the Arabs call it. Twenty-two said they had been ill-treated or worse.

Like the allegations involving the prisons of Ramallah and Hebron or the secret interrogation centre, those relating to the Russian Compound consistently specify a range of abuses which is both limited and by and large peculiar to that place. At the Russian Compound, these centre on sexual assault.

Nine of those we interviewed spoke of having had their genitals beaten, squeezed or twisted. Consistently, they said this was done mostly from behind, while they stood, naked and with legs apart, facing a well.

What is unusual is that Miotim makes little apparent effort to conceal at least these more common assaults. Indeed, it seems to go out of its way to demonstrate its power over east Jerusalem. While most of those in its hands are arrested in night raids, for example, many are simply summoned by pro forma letter. It talks of an interview, but Miotim's reputation among Palestinians is such that the recipients automatically expect worse.

Most of those summoned accept it is pointless trying to escape, though. So they turn up as requested, and frequently just disappear into detention. No notification is given to their families.

Mughrabi's experience, in other words, seems fairly typical of what Miotim has taught "troublemakers" to expect. But the Russian Compound has, like the "Palace of the End," interrogation and confession functions as well. For what happens there to those suspected of knowledge or complicity in more serious offences seems to be altogether harsher.

In assessing those allegations, however, we were frequently driven back to gauging from long interviews what Amnesty calls the "credibility and motivation" of a witness. The testimony of Josef Odeh, for example, is terrible—though by no means unique. It squares with the pattern thrown up by other testimony, and some corroboration is available. But the most impressive aspect was Odeh's manner in giving it.

Odeh's allegations go back to 1969 when his daughter Rasmiah, then aged 21, was given two life sentences for terrorist offenses which included the planting of two bombs which killed 14 people.

Odeh says that it was around 1 am on February 28, 1969, when Israeli soldiers burst into his home, then in Ramallah, and arrested him and his three daughters—one 23, one 17 and Rasmiah. They were taken to the Russia Compound.

His testimony bears out what the later prison sentences argue: that the Israelis were from the start, really interested in Rasmiah. According to Odeh's account, during his 20 days at the compound, the interrogators arranged a series of confrontations between members of the family, seemingly, as a pressurising device.

Once, he said, he was kept in one room while Rasmiah was beaten nearby: "When they took me back . . . Rasmiah couldn't stand on her own feet. She was lying on the floor and there were blood stains on her clothes. Her face was blue and she had a black eye. Then she was picked up by two soldiers, and at that moment I started crying and screaming and they blindfolded me and I think she was then taken away."

As his recital continues, Odeh became visibly distressed. He began to breathe rapidly and the muscles in the side of his neck were twitching. We asked him when he next saw Rasmiah, and he began to cry. At last he said to our interpreter: "I wish I had died rather than see this thing . . . It's a question of honour . . . It's all right, interpret, why not? What is there to tell? They held her down and shoved up a stick."

When he could go on, he said that he had been taken into an interrogation room to find Rasmiah naked and handcuffed. One of the interrogators, he said, "asked me to sleep with her, and I said: 'Don't even think of that. I would never do such a thing.' They were beating her and we were both screaming Rasmiah was still saying: 'I know nothing.' And they spread her legs and shoved the stick into her. She was bleeding from her mouth and from her face and from her end. Then I became unconscious."

"An important element in determining Amnesty's reaction to any evidence (on torture)," the organization has written, "is the government's readiness to investigate allegations and to punish any offenders."

Israel's habitual response to allegations of ill-treatment or torture is to dismiss them as fabrications. Some, even many, may be—but not, we think, all. And, judged by that Amnesty criterion, Israel's denials are not always convincing. We have already outlined Israel's domestic response: the repeated failures of lawyers to persuade its courts to accept the allegations; the "impartial inquiries" where court procedures effectively bar the complainants from seeing, let alone challenging, official denials; in sum, a judiciary usually equivocal and often hostile to attempts to probe the truth.

ISRAEL'S U.N. EXPLANATION

Internationally, Israel's response is exemplified by the assertions given at the United Nations last November by its ambassador there, Jacob Doron: "My country can proudly stand by its record of scrupulously observing the rule of law in the administered areas." Israel, he said, showed a "liberal and enlightened attitude, including the candid admission of any mistakes that may have been made and the efforts to correct them. . . ."

Doron admitted those mistakes: "It is true that in one or two cases, which are completely exceptional, force has been regrettably used against prisoners. One of these exceptional cases unfortunately brought about the death of Ahmed Sheikh Dahdoul. . . ."

Dahdoul was beaten to death by soldiers in a military vehicle in March 1976 while being driven to Tulkarm police station 20 miles northeast of Tel Aviv. Doron described the aftermath: "The rule of law is strictly applied by the Israeli authorities and . . . no favouritism is shown by the authorities or the courts. The officer in question has since been found guilty and was sentenced to a long term of imprisonment."

When Dahdoul died, the Israeli authorities announced that he had done so of a heart attack. This was challenged by the Arab doctor who had treated him. Despite considerable uproar, the truth did not begin to emerge until four months later when the authorities suddenly told Dahdoul's lawyer—once again, Felicia Langer—that an officer would be charged.

No evidence has yet been publicly produced that any trial occurred. It was allegedly in a military court. But it was held in camera. Mrs. Langer was not permitted to send an observer, let alone participate. No action has yet been taken against the soldiers who actually did the beating (through the Attorney General has recently announced that they will now be filed). Nor were any depositions ever taken from the other Arab prisoners in the truck with Dahdoul. The authorities merely announced that a major had been reduced to the rank of private and jailed for two years. To this day, Israel has refused to name the soldier or say where he is serving the sentence.

Last December, Dahdoul's family at last got an order from the high court for a transcript of the trial. Two months ago, the military court responded by saying that it would allow only Mrs. Langer to see a copy—and then only if she agreed not to copy it or to write anything about it. Mrs. Langer refused. The battle to see the record of this particular "candid admission" continues.

So do the allegations.

THE ARABS UNDER ISRAELI RULE

About 1.7 million Arabs live under Israeli rule. Half a million live within the pre-1967 borders, and are Israeli citizens. The other 1.2 million live in areas occupied by Israel during the 1967 six-day war—800,000 in East Jerusalem and the West Bank (formerly part of Jordan), and 400,000 in Gaza (formerly administered by Egypt). A small number also live on the Golan Heights, captured from Syria.

Israel annexed East Jerusalem to "reunite" the divided city. The rest of the West Bank and Gaza are administered by military governors, and basic policy is made by Israel's Ministry of Defence—which has, for example, sanctioned about 80 Jewish settlements in the occupied areas.

A degree of normal civilian life is permitted: there are Arab newspapers (though subject to censorship), and last year municipal elections took place on the West Bank. Beyond this, political organisation and activity is banned.

Local justice is administered by Palestinian Arab officials, who apply Jordanian law on the West Bank, and British Mandate law in Gaza. (This is the same legal system applied there by Egypt from 1949 to 1967.)

All "security offences," however, are handled by military courts staffed by Israeli judges and court officials. Most allegations of torture and ill-treatment involve border police and members of Israeli intelligence who arrest and interrogate suspected security offenders before bringing them before a military court.

THE PATTERN OF TORTURE

The allegations of the 44 Palestinians who told us they had been ill-treated or tortured covered all of Israel's six main interrogation centres, shown on the map. Some general patterns did emerge: 19 told us, for example, that their genitals had been hit or otherwise abused. But from these accounts it was also possible to discern the apparent predilections of interrogators in different centres (and we found this picture confirmed by examination of some 50 statements from other sources).

At the "Russian Compound" in Jerusalem, interrogators tended to favour assaults on the genitals, besides endurance tests such as holding a chair with outstretched arms or standing on one leg. The speciality of the military centre known as Sarafand was to blindfold prisoners for long periods, threaten them or assault them with dogs, and hang them by the wrists. From Ramallah came many allegations of having been immersed in cold water for long periods—either in a shower, or in a pool in the centre of the prison courtyard. Ramallah was almost alone, on the other hand, in giving rise to no allegations of electric shock torture. From Hebron came several allegations similar to that of Omar Abbel-Karim—with whose account our story begins—of anal assault.

THE ARABS WHO GAVE THEIR NAMES

Insight interviewed 44 Palestinians who alleged ill-treatment or torture at the hands of Israel's security services. Of those, 22, still living under Israeli purisdiction, agreed to their names being published. They are:

Ghassan Harb, Ramallah: Mohammed abu-Ghabiyr, East Jerusalem; Jamal Freitah, Nablus; Kaldoun Abdul Haq, Nablus; Mahmud El-Mughrabi, Old City, Jersusalem (since being interviewed he has been re-arrested and is currently serving a six-month sentence in Dimoun Prison, Israel); Hasan Hammad, Old City, Jerusalem; Eshak H'lefawi, East Jerusalem; Samir Edkeidek, East Jerusalem; Omar Salameh Abdel-Karim, Bie Sahur, near Bethlehem; Joseve Odeh and his daughter Leila, Jericho; Jamil abu-Ghabiyr, East Jerusalem; Fawzi Abdel-Wahed Nijim, El Mugazi refugee camp, near Gaza; Zudhir Al-Dibi, Nablus; Nablan Kreishy, a student at Bir Zeit College near Ramallah: Shehadeh Abdel Hadi Mohammed Shaladeh, Ramallah; Isam Atif Al Hamoury, Hebron; Abed Al-Kareen Taha Al-Shalloudi, a student at the UNWRA Vocational Training Centre at Kalandia; Asad Sinnokrat, a student at Bir Zeit College; Misief Suleiman Atrash Abu-Atwan, Dcura; Nalfa Awawdeh, Doura; Fayez Toutunji, Old City, Jerusalem.

Three other Palestinians who though not alleging torture provided corroborative evidence also agreed to be named; Hassan El Mughrabi (father of Mahmud el Mughrabi), Old City, Jerusalem; Taha Massalha, student at the Hebrew University, West Jerusalem; Khalil Rasmawi, Beit Sahur, near Bethlehem.

The Insight team has carried out a detailed inquiry in Israeli-occupied territories into Arab allegations and official Israeli denials of the use of torture. It concludes in part: "Torture of Arab prisoners is so widespread and systematic that it cannot be dismissed as 'rogue cops' exceeding orders. It appears to be sanctioned as deliberate policy."

TORTURE: ISRAEL REPLIES

(On June 19 The Sunday Times published a four-page Insight report entitled Israel and Torture, which dealt with alleged torture of Arab prisoners by Israeli security forces. Before publication we gave an assurrance to the Israeli authorities that we were "very ready indeed to consider giving space to a detailed reply from your Government." Here we publish in full the official Israeli statement issued to us last week by the Israeli Embassy in London. Next Sunday we intend to reply to the points raised in this statement and also to publish a further selection of letters received about the report. To date these total 237, of which 142 criticised publication of such a "farrago of innuendo," 72 supported our "courageous exposure" and 23 raised associated issues.)

We regret that the Sunday Times did not ask for Israel's reaction or response to the statements made in the Insight article on torture before publishing it. Although the journalists involved claim that they were working on the story for more than five months, there is no reference made to any attempt to verify the stories from any authoritative Israel source whatsoever.

It is striking that there is not a single interview with an Israeli judge, nor with a member of the Israel Bar other than the two hostile lawyers who apparently inspired the article. There is not a single attempt at verification with members of the prison service. A place such as the Jerusalem local police station is ominously termed "a detention and interrogation centre" in order to try and create a suitable *"mise en scene"* for The Sunday Times horror fiction. Yet this local police station is in the centre of town and, as every Jerusalem lawyer and journalist is aware, local police are perfectly willing to allow visitors. The buildings, by the way, served as British Police Headquarters, including the barracks, and any Jerusalem resident who has lost a camera will also be visiting these "barracks." Incidentally, driving licences and identity cards are not issued there.

Some legal facts: Israel has an independent judiciary, a Ministry of Justice, an Attorney-General and an Office of State and District Attorneys, all staffed by lawyers. We possess a judicial system which even Israel's avowed enemies admit is both fair and of extremely high calibre, yet the journalists did not apparently feel there was need to ask these people about what was supposed to be going on in the State.

That Israel is the one and sole country in the area that does not carry out the death penalty, and that torture is a crime under Israel law are facts not mentioned. That torture or use of force in addition to being crimes are also offences against the police and military codes is not referred to, and that in the past officers have been punished and demoted for use of force, is given but scanty mention.

Only by careful reading of the article can a reader realise that even the writers of the article have grudgingly admitted that Israel courts refuse to consider any statement by the accused if the court is not convinced that it was given of the accused's own free will, without use of force or threat of force, and that Israel applies the British "Judges Rules" in regards to statements made to the police. The journalists did not apparently feel it necessary to add that the onus of proof in such cases is on the prosecution, although they do, again grudgingly, admit that even the Arab lawyer to whom they spoke knew of five cases where military courts had refused to receive confessions by accused terrorists, as the prosecution had not shifted the burden of proof.

Only a reader with legal training can realise that in Israel, as in other common law countries, a statement to the police containing a confession needs corroborative evidence and it is impossible to obtain a conviction based on a confession alone. In the well-known case of Zoher Wasef Zaki Amira, who admitted in his statement to the police to the murder of a policeman and the defence did not object to the admissibility of the statement, he was nevertheless acquitted by the military court in Hebron solely on the ground that there was no corroborative evidence to that contained in the statement to the police; and after being kept in administrative detention he was been released to Jordan last week.

Selective and misleading reporting: The article most carefully refrains from mentioning for what crimes people involved were found guilty. It was in fact, acts of terror against civilians; it was the placing of bombs in supermarkets, buses and high street shops. This terror has been aimed at Arabs and Jews alike. In the Gaza Strip alone between January 1968 and August 1971 over 215 Arabs were killed, 51 of them women and 29 children, and over 1,314 wounded, of them 180 women and 139 children—all by Arab terror groups.

The impression the reader is intended to get is that what is involved is some sort of political agitation, and that the only evidence against the persons were their confessions. The phrase used, for instance, "the secretary of the Jordanian Communist Party has been quoted as saying that his West Bank comrades had indeed been active," is a prime example of the sort of deliberate avoidance of the fact that there had been clear statements from the same source that the "activity" involved was physical and brutal terror.

On first reading the article one's impression is that although, as the journalists admit, there is no hard evidence of such torture, there is "corroboration of verifiable details." On a second careful reading, it transpires that the corroborative evidence exists as regards details that are not disputed. The persons were indeed arrested, interrogated and charged with crimes. That is not in issue. The fact, for instance, that prisoners were at such-and-such a prison together and both describe it, is indeed evidence, but it is evidence as to facts that are not in question. All Israel prisons are open to inspection and such inspections are carried out frequently by judges, representatives of the Attorney General and defence-counsel, including advocates Tsemel and Langer. It is only on careful reading of the article, that it becomes apparent that there is no evidence whatsoever on the actual use of torture.

Israel emphatically denies the truth of the allegations in the Insight article. Since a detailed refutation of all the allegations published in the four-page report of The Sunday Times would require at least the same amount of space, we would like to refer only

to some of the more blatant alleged evidence quoted in the article.

Omar Abdel Munini Abdel Karim Salame: The case referred to is that of Omar Abdel Munim Abdel Karim Salame. The authors of the article admit that "the medical evidence is not conclusive." However, they add that there is "external evidence," this being, according to the article, that Israel military authorities told a Reuter's correspondent that Omar Abdel Karim had served three years in prison while in fact Insight "discovered" that he had been only three months in prison. In fact Omar Abdel Karim had been arrested in 1970 and sentenced to four years in prison, of which two and a half were suspended. He was released on June 20, 1972, his period of arrest pretrial being taken into account. He was arrested again four years later on October 3, 1976 and three months later, on February 24, 1977, released to Jordan on medical grounds. These facts are on file and available to the public. The fact that the Reuter's correspondent referred to the earlier period of imprisonment and not the later is the "external evidence" submitted by the Insight team. The article quotes the fact that the Mayor of the village saw Israeli soldiers draining Karim's sewer as "corroboration" of Karim's story. This is, in fact, evidence that was not in dispute. The search of the sewer was done openly, and it was as a result of this search that damning evidence against Karim was found. The article continues to quote another classic case of a half-truth. It is stated that in 1970 Karim "served a 20-month sentence for possessing a revolver." Karim refrains from adding that in addition to the revolver, he was found guilty by a court of complicity in the placing of a bomb in the Labour Exchange of Bethlehem on August 17, 1969 and a further bomb in the Municipality of Bethlehem on March 7, 1970. Incidentally, both places, are frequented by local Arab residents.

After quoting the allegations by Karim of torture, the Insight report goes on to quote him: "I had to start lying. I had nothing to tell and I had to save my wife. I said I had bombs and I hid them in my lavatory." However, the article does not state that Karim then went on to give a long and detailed statement in which, *inter alia*, he described how and from whom he received explosive charges and his meeting in Amman with Yusul Qumsieh, a leading member of Fatah, who in turn was under instructions from Abdulla El Atira, the man responsible for placing the boobytrapped refrigerator in Jerusalems Zion Square in which 14 people were killed and 78 wounded. Omar Abdel Karim went on to describe how he had sent his nephew, Othman, to Damascus to obtain arms (the nephew Hassan Othman confirmed this in a separate statement to the point). He then described how he had hidden detonators in the roof of his house in the village of Beit Sahur. After signing the statement, Karim went with an escort of border police to his house where the detonators were found, as Karim had described them.

Karim was released after three months because of his medical condition. The fact that he was under treatment prior to his arrest is not disputed by Insight.

Incidentally, two days after being released from prison in a state where "he couldn't recognise his brother," he happily appeared at a Press conference and on Jordanian television. Release of a prisoner on medical grounds is a regular procedure in Israel and in many countries but it might well seem an extraordinary step to people in our neighbouring Arab states. This reasoning might well go a long way to explaining why Karim felt it necessary to elaborate a false story of torture to explain his statement to the police and his early release.

Hassan Harb: As regards the second case mentioned, that of Hassan Harb, there is a formidable list of medical certificates disproving the allegations. Hassan Harb was examined on admission to prison on April 24, 1974 and was found to be suffering from haemorrhoids. On May 2, 1974 he received a dental check-up and dental treatment. He was examined again on June 11, 1974 and on July 4, 1974. On August 8, 1974, Hassan Harb again received dental treatment and a further medical check-up on August 14, 1974. On all the medical check-ups, Hassan complained of the haemorrhoids and received medication. On the examination held on July 4, 1974, the examining doctor noted a cut on the right ankle. In none of the examinations did Hassan complain that he had been tortured nor did any of the examinations reveal any signs of such torture. The Insight team do no directly attempt to deny the veracity of the medical reports, and they admit that the medical statements were subjected to examination by the Israel Supreme Court and were not faulted.

No attempt to bring any conflicting medical report was made; yet the paragraph on Hassan Harb ends by criticising the Supreme Court of Israel that "at the very least considerable doubt must be cast on what it found."

The Insight team do, however, quote Harb's wife as saying that when she visited him at Yagur Prison some days after 28 June, that is after he had been allegedly tortured at an interrogation camp, "he was pale and exhausted and had lost a lot of weight." This statement, however, takes on a different hue when it transpires that the same person, the wife of Hassan Harb, had at least a week before the visit submitted a sworn affidavit to the Supreme Court (H.C. 247/74) stating that her husband was "a sick person and she was worried about his health." This was before she had seen him after his alleged "torture" or heard about the allegation.

Yusuf Oden: A further case referred to is that of Yusuf Odeh, who recalls a tale of sexual sadism that indeed sounds horrifying. "The event allegedly took place eight years ago; yet there is in the article not a word of any attempt to verify the incident, although Odeh claims there were soldiers present. No mention of any complaint made to Army authorities, no mention of any request for a medical examination, no mention of any names. The authors however state simply that "the most impressive aspect was Odeh's manner in giving the evidence." Israel emphatically and categorically denies that this incident (and the other incidents) occurred—it is the warped imagination of a sick mind.

In addition to the quoting of allegations that are simply not true, there is the omission of facts that must have been known to the Insight team. As regards the Odeh story, the article admits that Rasmiah was sentenced for "terrorist activities which included the planting of two bombs which killed 14 people." (They were indeed planted on a shelf full of glass bottles in a supermarket on Agron Street in Jerusalem, and two other bombs in the British Consulate.) However, the article fails to point out that Odeh himself was tried for participating in the bomb outrages, found guilty by the court after hearing of evidence and witnesses and sentenced to life imprisonment.

Abed Al Shalloudi Al Karim: The pattern of refraining from mentioning facts that must have been known to the Insight team comes up again and again. Obed Al Shalloudi Al Karim is quoted as complaining of being beaten, yet at his trial held in the Lod court, he was represented by advocate Razi Kfir who put up a bitter and prolonged defence of his client but made no objection to the admission of his statement to the police and made no mention of such a beating.

He is quoted as having been held 16 months without trial, but the Insight team then fails to add that he was then brought to trial and sentenced to four years imprisonment of which all but 15 months were suspended, and the sentence ran retroactively from the day he was arrested; so that in fact he was released immediately after being sentenced.

Zuher Al Dibl: Zuher Al Dibl is quoted as having received a seven-year sentence for distributing leaflets. It is true that he did distribute leaflets, but the Insight team fails to add that he was also convicted of throwing hand grenades at a truck on December 28, 1969 and of possessing explosives. It was this that earned him a 12-year sentence, of which five were suspended and he was released on February 12, 1977.

Fayez Toutunji: Fayez Toutunji appears on the list of those claiming they were ill-treated or tortured. However, advocate Tsemel, on July 13, 1976, wrote to the Minister of Police complaining that when Toutunji had been arrested, one of the policemen who accompanied him back to the house drew a revolver in a threatening manner against a member of the household. (The policeman later explained that he thought he was being threatened, and nevertheless was reprimanded). Lea Tsemel specifically states in her letter that there was no violence during the arrest. In a further letter to the Minister of Police, dated September 29, 1976, on the issue advocate Tsemel again makes no reference to any violence against her client. The Insight team fails to quote either of these two letters or explain why advocate Tsemel did not complain if there had been ill-treatment.

The methods of advocates Langer and Tsemel: Again and again reference is made to advocates Langer and Tsemel as sources. Both advocate Langer and advocate Tsemel make a practice of claiming that every client of theirs who makes a statement to the police does so under pressure. A case of advocate Tsemel that has become famous in Israeli legal history is the case of Khaled Zawawi v the Minister of Defense (H.C. 98/76). Here she claims that her client had had to undergo two brain operations to remove thrombosis caused by "previous interrogations." What advocate Tsemel had forgotten was that a year earlier, at Zawawi's criminal trial (H.C. 1104/75), she herself had pleaded for leniency on the grounds that her client had a long history of chronic brain thrombosis dating back many years before. When this discrepancy was pointed out at the Supreme Court session, advocate Tsemel hurriedly withdew her petition and only requested that the State not press for expenses against her client (which they refrained from doing).

Advocates Tsemel and Langer have made a practice of submitting complaints about ill-treatment of their clients, yet when the police open inquiries and request the people to provide statements or to submit evidence the two lawyers simply fail to reply.

For example, in police file 598/76 advocate Langer complained about an arrest that had taken place on February 25, 1976. The police phoned and wrote a number of letters, the last being on May 31, 1976 asking her to substantiate the claim. No answer at all was received from advocate Langer. In police file 755/76 advocate Tsemel complained on April 1, 1976 to the Minister of Police that nine of her clients had been beaten by the police. The police wrote repeatedly asking her that her clients or witnesses make statements as to the allegations. Advocate Tsemel ignored the letters and no statements were received. Again in police file 76/76 advocate Tsemel complained on January 8, 1976 that a client of hers had been struck by a policeman during his arrest. The police authorities wrote three times to the advocate asking that her client make a statement. The letters were ignored by advocate Tsemel.

In many of the cases the persons referred to had good reason for claiming that statements they made were made under torture.

for in these statments they implicated others in the various acts of terror committed. There have been a number of cases of Arab prisoners being brutally murdered by their fellow prisoners on suspicion that they had cooperated with the authorities. Once claiming torture, they perhaps feel that they can no longer be accused by their colleagues of betrayal.

Israel police and security have every reason to refrain from use of force. Such use of force is a serious criminal offence, and where cases of police brutality have been found in the past, police officers have been prosecuted, and it is Israel's policy to do so in the future.

Furthermore, as has been emphasized, any statement obtained by such methods is inadmissible. Torture leaves medical evidence; yet in not one of the alleged cases has medical evidence been submitted. On the contrary, in every case where Israel authorities were informed of the allegations, medical reports failed to substantiate the allegations.

Every prisoner admitted to prison is subject to a medical examination and to a further examination on release. These examinations are on record.

During 1975, 216 of the persons from the territories brought before military tribunals were given full acquittals, and in 1976, 408 of such persons were given full acquittals. The total number of persons sentenced to more than ten years imprisonment was 31 in 1975, and 26 in 1976. This figure includes both persons sentenced for regular criminal activity and persons sentenced for crimes connected with security offences. Israel reports to the Red Cross on every single prisoner from the territories. The details of the prisoner are listed on a computer run by the Red Cross.

If clear evidence is produced, the Israeli Government undertakes to make every effort to investigate such complaints and to prosecute any policeman, soldier or security official involved, but no such evidence has been produced and we can but reiterate our regret and dismay that The Sunday Times found fit to print such an article.

[From the Christian Science Monitor, July 12, 1977]

TIMES DEFENDS ISRAEL TORTURE REPORT—BRITISH PAPER URGES INSPECTION OF PRISONS

(By William Blakemore)

LONDON.—London's Sunday Times stands by its original report of routine torture in Israel's prisons. It describes Israel's reply to that original report—which reply the Sunday Times printed in full—as a flawed defense.

"Israel's reply to our investigation dealt with the central points by flat denial, rather than with detailed evidence; it raised side issues; it devoted great energy to attacking two of its own citizens who were by no means our principal witnesses; it contained a number of untruths," the Sunday Times wrote July 10.

The Sunday Times article then went on in a careful point-by-point analysis of the Israeli reply (published in the Sunday Times one week earlier) pointing out the ways in which many of the reply's claims were demonstrably false.

RED CROSS ACCESS SOUGHT

In an editorial accompanying the article, the Sunday Times called for the International Red Cross (ICRC) to be allowed free access to Israeli prisons as a means of ending the controversy, and reasserted that the ICRC does not have such access.

"We reject the idea that to criticize Israel is to deny her right to exist. We are not anti-Israel. We believe strongly in her right to peace and security. We have said so consistently over many years. But no state is above criticism," the editorial said.

The original article, published in the Sunday Times June 19, carefully detailed results of a five-month investigation by the papers "Insight" team which concluded that torture has been regularly used against Palestinians during the 10 years of the Israeli occupation of the West Bank for the purpose of pacifying the population as well as obtaining information.

ISRAELI FOREWARNED

The London paper made a point of informing the Israeli Government of the original report before its publication, and of giving full and unedited coverage to the Israeli replies, and to the many letters the sensitive story has produced.

"Since publication of the Insight report, we have received 384 letters of which 262 criticized publication of a farrago of inuendo, 90 supported a courageous exposure, and 32 discussed associated issues," the paper reported.

Anticipating the nature of the controversy to which its published investigations would lead, the Sunday Times said of Israel in a June 19 editorial: "It was founded in idealism following oppression and this is one of the emotional obstacles: Few people are prepared to believe that Israelis, as members of an ancient community which has for centuries been victims of persecution, are capable of persecuting others.

EXAMINING ALLEGATIONS

"There is all the more reason that when allegations are made and persist—there has been an increase in them in the past year—they should be taken seriously and examined in detail," the June 19 editorial added.

Repercussions of the Sunday Times report continue to be felt among Britain's Jewish community. The Jewish Chronicle of July 8 featured on its front page the attacks of eminent British judge Lord Salmon against the Sunday Times.

The judge, speaking in London at a dinner held by the legal group of the Friends of the Hebrew University was quoted as saying that it was crystal clear to him that there was no truth in the Sunday Times accusations.

A former Conservative Lord Chancellor, Lord Halisham, in whose honor the dinner was held, endorsed Lord Salmon's assertion of the integrity of the Israeli judiciary, and was quoted as describing them as men of manifest independence. He said:

"I am quite convinced that they would never have allowed things to pass them by that would have aroused criticism or complaint in the most meticulous of English courts.

In its July 10 edition, the Sunday Times publishes two long letters from Israeli lawyers Felicia Langer and Lea Tsemel (the two citizens the Israeli reply sought discredit) which describe repeated and extensive difficulties they have had in attempting to represent Palestinians in Israeli courts.

In its firm reassertion of its original report, the Sunday Times takes care not to confuse the stated ideals with the reported practices of the Israeli judiciary—Israel: "torture is a crime under Israeli law." Insight: "so it is in most countries that use it."

A TRIBUTE TO HERBERT T. EDWARDS

Mr. CRANSTON. Mr. President, I would like to take a few moments to share with my colleagues a moving eulogy paid at the memorial service for Herbert T. Edwards at St. Albans Church on June 25.

Herbert was the husband of an extraordinary woman and a good friend, India Edwards, known to many of us as the grande dame of the Democratic Party and one of our most energetic fighters for women's rights in this century.

Herbert Edwards, as Leon Keyserling states in his tribute, "was one of this century's first fully liberated men." Truly so, for he was a man without affectation or pretense, endowed with a keen perspective, a deep humanity and unfailing good humor. He was a humanist in his interests and outlook, an idealist in principles and example. I believe his life—and his way of life—merit our most thoughtful attention.

I ask unanimous consent to have Leon Keyserling's remarks printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS ABOUT HERBERT T. EDWARDS

(By Leon H. Keyserling)

My wife, Mary, and I were deeply touched when India asked me to say a few words about Herbert at this Memorial Service—deeply touched because we knew without being told that the request stemmed from India's feeling that our long years of friendship with Herbert blossomed into great appreciation of his unusual endowments as a man and love for him as a human being. We know that this attitude toward Herbert is true also of his many close friends among those here today.

It is of Herbert's qualities as a human being that I shall mainly speak, although I cannot refrain from a brief reference to his splendid professional career. His early efforts as a volunteer doing medical and social work in Labrador and Newfoundland bore the stamp of his conviction that the welfare of mankind is the supreme law on earth in all temporal things. His sensitive and efficient administration of the international motion picture programs of the U.S. Information Agency after World War II bespoke his awareness that the towering problem of the world is to substitute the contacts which unite people and nations for the quarrels which divide, and that cultural activities know no restrictive barriers and are the main medium for peaceful togetherness. Herbert's later surveys related to the United Nations and other matters evinced similar concerns. And his retirement from official obligations and restrictions in 1970 did not release him from many further manifestations of these personal commitments. It merely enabled him to continue them as an even freer spirit.

Turning to Herbert's great human qualities, the only aspect of the man about which I am really qualified to speak and which are in any event the most important things about Herbert, or most of us: Herbert's ever-present sense of humor, which was instrinsic to his attitude toward life and living rather than superficial, comes first to mind. Herbert would never have wished that this occasion be solemn, much less mournful. His humor and bubbling good spirit were brilliant but never showy, and while much humor has in it an element of cruelty, his was sharp and penetrating but never cutting. I can cite but one example.

Herbert knew that Mary, being born and raised in our greatest metropolitan area, had a considerable knowledge of plants and is a good gardener, while I, being born and reared in one of our most rural areas, am hard put to distinguish between a geranium and a palmetto tree. Years ago, Herbert had witnessed one occasion, at one of Mary's garden parties, when Arthur Schlesinger from an elevated vantage point was admiring an array of beautiful flowers, at which point Mary called Arthur's attention to a distant flower bed which seemed especially colorful and said this was Leon's contribution to the garden. Arthur walked over to inspect it more closely, and discovered it was a small group of artificial flowers Mary had stuck in the ground that morning. Shortly thereafter, we had dinner at the Edwards' home and heard Her-

bert's embellishment when this flower incident burst forth. He said he had just planted a cornflower in their backyard garden, which I think he had named "headacres," and had named this flower "Leon's cornflower," in the certainty that with that helpful characterization it would soon transmute itself into an American Beauty rose!

But Herbert's humor was not his main stock in trade in his contacts and conversations with his friends. On the Washington scene, the manifestations of his multiple interests contrasted with that of many others. So many of those in this capital city reveal the fact that they are looking for something—political office/or still higher poitical offices, or Executive appointment, rewarding private clienteles, or even another chance to be seen in the company of the high and mighty. But not Herbert. He was never looking for something, but rather at everything, and with wisdom and discernment. He valued the judgments of others, but his own candid and clear values always involved the test of what was for the common good at home and around the world.

This predominant trait in Herbert was manifest in his comments on the political scene. On principle, he was committed to the Democratic Party. But when a new Democratic Administration took over after a number of years of a Republican Administration, as in 1961, Herbert was not like the majority of Democrats who were prone to say, "At last all is well; we can rest content." Rather, he would ask his friends what they thought of the newcomers, how they were doing, and what they should do. His politics was pragmatic and utilitarian, never partisan in an invidious sense. His own ideas on the subject were always modestly expressed, but always unreserved, objective, and perceptive, and almost always correct.

In all of these aspects and activities, Herbert was the shining exemplar of generosity of spirit, modesty almost to a fault, magnanimity and tolerance, and kindliness toward people. He always saw the best in everyone. He embodied the words of an ancient admonition: "There's so much bad in the best of us, and so much good in the worst of us, that it hardly befits any of us to be too hard on the rest of us." Herbert Edwards saw evil to be sure, but I practically never heard him speak evil of anyone. After I had written this, India told me today that Herbert was the kindest person she ever knew and that, throughout his years, he was looked upon by old and young to extend help in practical matters and as a father confessor as well. And, I never knew a person with a kindlier expression upon his face, the very mirror of his soul.

The relationship between Herbert and India was what Shakespeare called "a marriage of true minds," which would "never admit impediments." For many years in Washington, India was in the limelight. But always their marriage evinced an unqualified and equal partnership, and I believe that such a partnership is a prime aspect of the nobility of the marriage relationship. In the minds of all their friends, it was never India and Herbert, nor Herbert and India. It was two magnificent people, viewed together with no order or precedence. What a tribute this is to both of them.

Indeed, Herbert was one of this century's first full-liberated men. And how could he be otherwise with a wife like India, his dear step-daughter and the five beautiful and extraordinary granddaughters?

The quality of a person is often indicated by his or her attitude toward death. None of us knows when it is coming to us, but some of us at times know that it is probably closer to us than to some others. This must have been true of Herbert in recent months. He was not unaware of this prospect, but rather impervious to it. This was not conspicuous nor contrived bravery; it was of the essence of the man. In the words of Browning, Herbert did not ask that "death bandage his eyes and bid him creep past." Or in the still more applicable words of a great Latin poet, uttered about a millenium earlier, Herbert seemed to feel that "Death plucks at my ears, and bids 'live, I am coming?' "

Just more than a week ago, at a party Herbert felt faint and was taken to the emergency room at a nearby hospital. But during the following days he was insouciantly "carrying on" again in Washington and New York. Last Sunday, India was busy but Herbert said to Mary on the phone—I was in Europe—that he wanted to come by for a visit and bring a copy of India's wonderful new book on his way to returning a rental car. He did come by, was of good cheer and was his vivid, entertaining and good humored self, although looking weak and not well. Mary offered to return the car for him, but this gallant gentleman would have none of that.

Today we do not need this typical and tell-tale vignette of Herbert, nor this Memorial Service, fitting though it is, to keep Herbert alive and throbbing before us. What he was and what he did during his long and inspiring life will remain a part of the lives of all of his friends, in their hearts and minds, as long as we live.

VETERANS' GI BILL

Mr. DURKIN. Mr. President, I have long maintained that the GI bill stands as one of the most successful Federal programs in the history of this Nation. The Vietnam war was the cause of much conflict within this country, but perhaps its most tragic and lasting effect is the readjustment problems which have endured in the many veterans of that war. Unemployment for Vietnam-era veterans remain dangerously high. A successful GI bill which will provide meaningful educational opportunities for the Vietnam veteran can ameliorate much of the negative readjustment difficulties.

The Senate Veterans' Affairs Committee will soon be considering comprehensive legislation which will improve deficiencies in the present GI bill. Included in this legislation are provisions incorporating acceleration of tuition, extension of the delimiting date, and a cost of living increase in benefits. An editorial in today's Washington Post stresses the necessity for these provisions. I ask unanimous consent that a copy of this editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VIETNAM VETERANS AND THE GI BILL

The Congress is discovering, and rightly so, that the unfinished business having to do with equity and reasonable opportunity for the veterans of the Vietnam era cannot be wished away. The other day we talked about the efforts of sensitive and responsible members of Congress to rescue the administration's program for speedier review of less-than-honorable discharges. Today, as the Senate Veterans Affairs Committee begins to debate amendments to improve the GI Bill, we would like to take note of another effort by those in Congress who recognize the importance of working for fair and humane solutions to the particular problems confronting the veterans of Vietnam as a consequence of the particular nature of that conflict.

Sens. Alan Cranston (D-Calif.), John Durkin (D-N.H.), Jacob Javits (R-N.Y.) and Hubert Humphrey (D-Minn.) are aware of the flaws in the current provisions of the GI Bill. But doing repair work on this legislation is not one of the appealing pursuits in Congress. For one thing, the GI Bill is perhaps the best known of the veterans' programs, which means that its failures receive the most publicity. For another, when Vietnam veterans are involved in the failures, a kind of general, anti-Vietnam prejudice sets in. A few years ago, when abuses involving Vietnam veterans began to be reported—overpayments, payments to those who didn't attend classes, creation of training courses that had no substance—the critics seemed not to remember that similar abuses occurred after World War II and Korea; only the glowing successes of those programs were well remembered. That almost nobody seemed to remember any *successes* of the GI Bill for Vietnam veterans may have something to do with a general inclination on the part of politicians as well as the public not to want to be reminded about anything having to do with the first war America lost.

In any case, Sens. Cranston and Durkin have set out, first of all, to correct some of the abuses that have come to light. This is expected to be handled without great difficulty by balancing the needs of the schools with a prudent use of federal funds. Other problems will not be resolved so easily. For example, the GI Bill as it is now operating favors veterans in states that have educational systems providing low-cost schools—unlike the World War II program, which gave all veterans equal amounts to live on. An example of this, as Stuart Feldman has pointed out in a report to the National League of Cities and the U.S. Conference of Mayors, is that "a veteran at Temple University, the public college in Philadelphia, would have to pay $1,498 for tuition fees and books. A veteran attending San Francisco State would have only to pay $200 tuition. When coupled with expenditures for average book and supply costs, this means that the California vet, who may have served in the same company with the Philadelphia vet, has to spend only 15.1 per cent of his yearly GI Bill benefits for education costs—while the Philadelphia vet has to spend 57 per cent of his benefits. The California vet has $122 more per month to apply to his living expenses."

Sen. Cranston would take a step toward correcting these inequities by allowing veterans whose tuition is more than $1,000 a year to use their benefits at a faster rate to cover the differences. This is the "acceleration provision," which was part of the World War II GI Bill. It has the support of the VFW and American Legion. An alternative, which also has merit and which passed the Senate in 1974, is being offered by Sens. Javits and Humphrey. It would pay 80 per cent of a veteran's tuition between $400 and $1,400. The Javits-Humphrey proposal would help veterans who are now locked out of high-cost schools that may be the only ones in their area. A third alternative, is to provide a five per cent increase in educational benefits. But this does little to affect the geographical inequities.

Another proposal, offered by Sens. Cranston and Durkin, would allow veterans whose benefits have run out to pick them up again so they can complete their training or schooling. This would extend the delimiting period that cut off benefits to veterans whose time has or will run out 10 years after eligibility began.

Although the GI Bill legislation is in only the markup period in the Senate, it is important that a strong bill emerge now. In the past, the leadership of the House Veterans Committee has resisted such proposals as the tuition-equalization plan, accelerated payments and delimiting-date removal. The President has an obvious role to play in the debate. In his campaign, he spoke out in behalf of Vietnam veterans. He now has the opportunity to involve his administration in ensuring that the money that it has already committed goes to those legislative ap-

proaches that promise to serve veterans with the greatest need.

THE INTELLIGENCE AGENCIES: WHAT IS TO BE DONE?

Mr. GOLDWATER. Mr. President, Mr. Michael Raoul-Duval who was special Counsel to President Ford and executive director of the President's Foreign Intelligence Coordinating Group, has written a very interesting article entitled, "Intelligence Agencies: What Is To Be Done?" This is another piece of paper I have found that expresses more of my concern about the direction the Congress is traveling in its seeming responsibility to intelligence.

Now that the House has finally brought about the creation of its own Select Committee on Intelligence, we have both Houses equipped with people to do investigative work on the intelligence agencies and make recommendations. I am hopeful that the House unit will prove to be as dependable as far as classification protection as the Senate committee has been. I also hope that the House will not take off on wild excursions never attempted before in the intelligence field.

I would suggest that my colleagues read the article by Mr. Raoul-Duval because he points out, as others have pointed out before him, the absolute need for intelligence and the absolute need for covert intelligence with as few people knowing about it the better. We are probably the only people on Earth who want to expose to everyone's view the findings of our intelligence community and this is wrong. I ask unanimous consent that the article I have referred to be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE INTELLIGENCE AGENCIES: WHAT IS TO BE DONE?

(By Michael Raoul-Duval)

DAYTON, OHIO.—President Carter is now reviewing the activities and organization of the nation's intelligence community, including the C.I.A. and portions of the Defense and State Departments, the F.B.I. and other agencies.

Despite public attention over intelligence abuses, the problem for Mr. Carter is with the quality of the product.

There are five principles which should serve as a foundation for considering foreign intelligence issues.

The United States must have a foreign intelligence capability superior to that of any other nation, and it must be able to deal with multiple and simultaneous events involving military, economic, social and political matters.

We must have the capability to conduct necessary covert operations.

Activities of the intelligence community must conform to an acceptable moral standard.

Activities of the intelligence community must be legal and constitutional and never aimed at United States citizens.

The President must conduct foreign intelligence activities, and the role of Congress must be limited to oversight. The role of the judiciary should be generally limited to cases and controversies involving individuals protected by the United States Constitution.

Besides the need for quality foreign intelligence there are other reasons for these principles. No matter how distasteful we may find covert operations they are absolutely necessary if we are to have a "third option." Conventionally there are two ways for any country to influence world events: by diplomatic or military action. However, there are an increasing number of situations in which diplomatic actions cannot resolve the problem and military actions could risk nuclear confrontation. In these situations, the "third option" of covert action is essential.

Partially in overreaction to excesses and abuses by the intelligence community and former Presidents from the Korean War to the early 1970's, Congress is attempting to move beyond oversight and is reaching for operational control of our intelligence activities. If Congress is successful in this power grab—and indeed if current Congressional involvement is not pruned—our intelligence community will cease to function effectively.

Congress should oversee the activities of the intelligence community, but oversight and management functions should always be separated. Effective oversight requires the objectivity of judgment that comes from not having participated in the operational decisions leading to the activity being judged.

In addition, Congress cannot be trusted to keep secrets, and key covert and clandestine intelligence operations will fail if secrecy is not maintained. Under current law over six Congressional committees must be informed of all ongoing covert operations. Furthermore, under the rules of both the House and the Senate all members can get access to any information given any committee. There are no enforceable secrecy rules in Congress, and any member can reveal classified information with complete immunity from prosecution.

Thus an individual senator or representative can actually overrule a covert action decision made by the President with the concurrence of his Cabinet and a majority of the House and the Senate. This is irreconcilable with the constitutional principle of separation of powers, and the law which created this anomaly, section 662 of the Foreign Assistance Act, should be repealed.

There are some decisions which must be made by an individual who retains ultimate responsibility and not by a committee. A wartime example—which is just as valid as during modern peacetime when international tensions are high—can be found in Winston Churchill's 1940 decision not to alert the city of Coventry that the Germans were about to launch a massive air attack against it. Churchill decided not to risk tipping off the Germans that England had broken their codes. It is inconceivable to think that a deliberative body could cope with such a decision.

Congress should establish overall objectives for the intelligence community primarily through the appropriations process, but its major role should be limited to rigorous oversight by judicious examination of community's actions and judgments.

The converse of this is of equal importance. The President must effectively control the operations of the intelligence community, and he must be ultimately accountable for its performance. The surest way to reduce the quality of our intelligence and increase the likelihood of abuses is to diffuse responsibility and accountability within the executive branch, and between it and the Congress.

In February 1976, President Ford restructured the intelligence community by rejecting the concept of deniability and the confused and overlapping intelligence command structure that went with it. He established clear lines of defined authority in a new command and control structure where ultimate responsibility rested in the Oval Office. President Carter should build on this approach.

The President and Congress should also:

Avoid statutory charters for the various intelligence agencies because President Ford's 1976 executive order does have the force of law in preventing abuses, and legislative debate in this sensitive area will greatly assist our adversaries.

Maintain the intelligence community's current organizational structure which has replaced deniability with accountability, closed the gap between responsibility and authority, centralized resource control and maintained competition among the agencies in the analysis of intelligence information.

Avoid creating an intelligence "czar" because the intelligence agencies must be insulated—in fact and appearance—from domestic politics, and this will be very difficult if the leader of the community draws his institutional support from the White House. Further, the appropriations committees of Congress with support from the Pentagon will soon undercut the czar's control over resources, thus leaving him with paper power but no real authority.

The examination and reforms of the intelligence community which began in 1975 have demonstrated that it is possible to have quality foreign intelligence and effective covert operations while adhering to sound moral principles and without abridging the constitutional rights of U.S. citizens.

The key is firm control by the President over the activities of the intelligence community and effective oversight by the Congress. If these roles overlap and if the President does not provide the leadership to maintain public support for the intelligence community, America will grope blindly toward disaster.

PUBLIC SUPPORT FOR BILL TO BAN STEEL-JAW, LEG-HOLD TRAP

Mr. WILLIAMS. Mr. President, on February 25 of this year, I introduced S. 818, a bill to ban the steel-jaw, leg-hold trap.

Since that time, I have received nearly a thousand pieces of mail in support of the bill from every area of the United States.

Much of the mail was generated by an ad that the Committee for Humane Legislation ran in 26 newspapers nationwide. The committee itself received 29,135 pieces of mail and 12,306 signatures on petitions in support of S. 818 and H.R. 3516, a companion measure introduced in the House by Congressman CLARENCE LONG.

Mr. President, I believe that these letters and petitions indicate strong and broad-based support for a ban on the steel trap. More and more people are becoming aware of the cruelty that these devices inflict on wild animals and of the threat they pose to pets and children. Mr. President, I am hopeful that the strong sentiment expressed in these letters will help to increase the Congress understanding of this important issue.

A FAMILY'S AFFAIR WITH JAPAN

Mr. PERCY. Mr. President, I would like to share with my colleagues a very interesting and enjoyable article from the New York Times magazine of July 10 entitled "A Family's Affair With Japan," by Andrew H. Malcolm. The author's account of life in Tokyo captures the flavor of a culture which is full of contrasts and contradictions, where good manners and gracious traditions endure in the midst of the hectic daily pace of a crowded modern city.

Japan is about the size of California but has five times the population. Yet

Malcolm observes that crowded conditions have not led to a callous everyone-for-himself attitude; quite the opposite. Malcolm believes that—

This constant proximity of people, this smaller personal space by wide-open U.S. standards, may help explain Japan's unique group interdependence and the apparent consideration given to others, even strangers.

In Japan he also finds an innate sensitivity to the events of nature; a simple rainfall can be a special experience.

Malcolm finds much importance attached to having things work smoothly: Trains run on time. There are musical signals at traffic lights to assist blind people. "Things work according to plan in Japan," he says. "Surprises are not valued."

Yet, in contrast to this penchant for precision, we learn about a mysterious aspect of the Japanese language which can pose quite a challenge to the foreigner. He says there is an unspoken Japanese language, a "language of implication, which is much preferred here, and makes what you don't say often more important than what you do say."

Mr. President, I believe Andrew Malcolm's article about our valued ally is worthwhile reading, and I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A FAMILY'S AFFAIR WITH JAPAN

(By Andrew H. Malcolm)

TOKYO.—What my family and I didn't know about Japan 18 months ago when we arrived here is what we are only beginning to understand about Japan now: The honesty that keeps a man from picking up a forgotten coin in a phone booth because "it's not mine." The personal security that makes fear in the city a fiction. A service philosophy that makes a dentist phone a patient several days after an appointment to make sure a new tooth cap is still fine. The values that turn a common boulder into a decorative object of great worth. The traditions that prompt a shopkeeper to double-check an electronic calculator with an ancient wooden abacus. The language based on vagueness where a single world like hakitai carries three meanings: to sweep, to put on shoes and to vomit.

Already, my wife, June, and two sons, Christopher, 8, and Spencer, 4, have become accustomed to some of this. Now it seems natural, for instance, for Kojak to speak Japanese. We leave our doors unlocked. My wife walks home at night without a second, or even a first, thought. After using chopsticks so much, Spencer has yet to master fully the knife and fork. And the other day I caught myself considering the purchase of a large rock for our garden.

But even today, a year and a half after the movers here shocked us by delivering our household goods at the precise moment they said they would, we are still fascinated by the sometimes bewildering, sometimes warming, sometimes plain weird events that form the life of an American family abroad, a burgerless band of former beef addicts adrift in a land of fisheaters. Here are a few of our first impressions.

CROWDS

Upon arriving here, we were instantly engulfed in a swarming mass of humanity. As June said on our first ride into Tokyo (pop. 12 million), "I don't think there's any room for us in Japan." Elevators, trains, planes, sidewalks and parks are all packed (in fact, picnickers depart at dawn to reserve a good spot for lunch). Even stairways, which are steeper here to conserve costly building space, are packed.

Everything here seems small in scale: the streets, the cars, the houses, the rooms, the soft-drink cans, the cigarette packs. Things must be small to fit. It is our first fact of life in Japan, homeland of the tiny radio and tiny television. Japan's 112 million population is five times that of California—in the same space. And mountains cover 80 percent of Japan's 3,937 islands.

People, lots of them, are everywhere, even under elevated roads or tracks, where battallions of boutiques, shops and restaurants stand. Fire hydrants are buried under sidewalk covers to save space. Doors don't swing open in Japan: To save space, they slide open.

These crowds, this constant proximity of people, this smaller personal space by wide-open U.S. standards, may help explain Japan's unique group interdependence and the apparent consideration given to others, even strangers. This blatant politeness may sometimes be mechanical and it may be deteriorating, as some complain, but it is striking.

MANNERS

When anyone enters a neighborhood restaurant, everyone from the cashier to the chef calls out, "Welcome, welcome!" On a train, when the conductor enters the car, he says, "Good day, everyone," and tips his hat. A friend loses her subway pass one morning on the way to work; by nightfall, it has been returned. The day before a new construction project begins, the foreman delivers giant boxes of cookies to all the neighbors to apologize in advance for any inconvenience.

Such social manners are especially apparent in stores, where the concept of customer service is not foreign. I was caught in a rainstorm out of town one day. An acquaintance of a few moments called a local store, which delivered a new umbrella in minutes. At gas stations, three men in spotless shirts and ties descend in our car to wash windows, vacuum the inside and polish the hubcaps.

When June stops by a liquor store, the owner says he will deliver her order that afternoon. Then he spies a heavy bundle of linoleum she is carrying. "We'll deliver that too," he says. And they do—on time.

CLEANLINESS

Bathing is a state religion. Litter is noticeable, not normal. Housewives and shopkeepers tend to their own curb sections. Some crews sweep up the gutters, while others, often the elderly, wash roadside guardrails until they are bright green again.

I am greatly embarrassed when, knowing that Wednesday is the day for collecting burnable trash, I somehow let an orange Fanta can creep into our garbage bin. When I go out to the street, the lone soda can is sitting upright on the curb next to the emptied container. Someone has sorted our trash.

OPPOSITES

Life here seems so full of opposites. Pop-top cans in Japan are really pop-bottom cans. One washes before getting into the bathtub. Department-store bargain basements are on the top floor. Taxi drivers protest higher fares. The emergency phone number is 119. Papers are stapled in the upper righthand corner. Romance and inspiration are associated not with sunsets but with the rising sun. A woman applies lipstick to her lower lip first. On St. Valentine's Day, Japanese women give the gifts.

Baseball announcers give the full count as "two and three." Stand-up comedians don't stand for their monologues; they kneel. The barber sits our boys on the floor, then squats next to them to cut their hair. Scolding mothers in this group-conscious society threaten misbehaving children with having to play outdoors away from their side.

EARTHQUAKES

You'd think we'd get used to them, but we still get white knuckles. Tokyo registers about two quakes a day, though not all are noticeable. One recently began with a sharp crack, and our wooden house began to move. Glasses and windows rattled. Boards creaked. Dogs barked. In 20 seconds or so, the two land masses 38 miles beneath us settled down. It took us a little longer.

COMMUNICATING

The Japanese make every effort to understand and sympathize with us awkward-mouthed foreigners—the simplest *arigato* ("thank you") draws a flood of praise and compliments—but we still have to struggle to make ourselves understood. June went shopping for a Western-style toilet seat recently (Japanese so-called conveniences are little more than holes in tiled floors). Armed with the proper measurements and diagrams and drawings, she explained in great detail to the clerk, and then the supervisor, exactly what she needed. The sales people nodded knowingly and led June to the ladies' room.

We have discovered another cultural barrier, the complex unspoken language of Japanese. It is the language of implication, which is much preferred here, and makes what you don't say often more important than what you do say. Twice tonight, Mrs. Kazuko Ishibashi, an elderly widow who gives Japanese instruction, interrupted our lesson to suggest that the boys playing elsewhere in the room might be cold. It wasn't until 15 minutes later, when Mrs. Ishibashi donned her sweater, that we grasped what she had really been saying.

RAIN

So much of living in Japan is like watching a storm on a dark night. It may seem like a plain old rainstorm, but suddenly there's a flash of lightning. And in the instant between the flash and the thunder you can see through the rain to something deeper. You can't quite understand it or remember it all, even one moment later when the light subsides. But somehow you feel different, a little richer usually.

In the cities, the rains turn single trees into glistening green clumps. In the countryside, where emerald hillsides sway in the winds like coordinated cheering sections and pockets of white fog cling to the folds of the valleys, I find myself simply listening to the rain. In Kyoto, there's a Buddhist temple with a gutter in the ground instead of on the roof. The trough is filled with stones, and throughout each rain the drops plop and plip and splatter and splash right next to the meditation garden. The effect is calming. Nearby is a waterfall hidden by bushes. You can only hear the waterfall. Its appearance is left to each person's imagination. I have never seen the fresh water gushing over that shiny black stone precipice, but I know exactly what it looks like.

Day after day come such delightful discoveries: The old man who rides the subway with a parakeet on his shoulder to entertain youngsters. The door-to-door salesmen selling clothes poles or collecting old newspapers in exchange for fresh rolls of toilet paper. The lantern-lit wooden cart dispensing hot noodles near our house every night at 9:10 P.M. The signs for Ronald McDonald that call him Donald McDonald because the Japanese have trouble saying "R."

There are egg timers that stand by many pay phones to mark the three minutes when the 3-cent calls are automatically cut off. And musical tones at traffic lights to tell the blind when it's safe to cross. But even the unpredictability of these experiences is somehow predictable. Things work according to plan in Japan. Surprises are not valued. Trains leave and arrive on time. If the

painted platform arrow says car No. 5 will stop there, it will—precisely there.

There is, of course, some unpleasantness for foreigners. This can come as remarks or "accidental" fondlings by passing Japanese men who use an excess of alcohol as a license to release the suppressed emotions that society does not permit them to show when sober. But there is also in life for the foreign family here a removal of a city's rougher edges, a sense of general security that seeps from such a strict social order, a reliability that makes urban living once again pleasant.

It is, we know now, impossible ever to fully understand this complex society. Just when you think you have the planks nailed down, a new door opens on an unfinished room. We were riding along a familiar expressway one day when I noticed a sign that read: "R 450.5." I asked the driver what it meant, and he told me, "Oh, that's the radius of the next curve."

When Japan's professional baseball season is well under way, it ignites fierce loyalties for the Whales, Swallows and Fighters in Christopher and Spencer, who also provides reams of dinner-table sports comments about men named Horiuchi, Takahashi, Shibata. Each team is allowed to hire two foreign players, but, as Chris notes, "all those American players look alike."

A recent incident produced final proof that the family is firmly settled in Japan. American friends, passing through Tokyo on a tour of the Orient, remark on the immense costs of their trans-Pacific tickets, which they say totaled something like $1,200.

Christopher pipes up. "How much," he asks, "is that in yen?"

RETIREMENT OF EMILIO DADDARIO

Mr. KENNEDY. Mr. President, on July 1, 1977, Emilio Q. Daddario retired as the first Director of the Congressional Office of Technology Assessment—OTA. I want to take this occasion to pay tribute to Mim Daddario for his statesmanlike leadership of OTA during its critical formative years, as well as for his long record of distinguished service to the Nation.

Emilio Daddario is a native of Newton Centre, Mass., and was graduated from Wesleyan in 1939, where he was an All-American football star. He received his law degree from the University of Connecticut in 1942, and soon after enlisted in the Army where he was assigned to the Office of Strategic Services—OSS—and worked behind the lines with the Italian partisans.

His bravery and leadership as a young OSS captain is recounted in the book, "Cloak and Dagger: The Secret Story of OSS," as follows: "This one man taskforce, Capt. Emilio Q. Daddario maneuvered single-handed the surrender of the Nazi S.S. Headquarters . . . arranged with the German general in command to confine his troops to the barracks . . . and made a prisoner of Marshal Graziani, Chief of the Italian Fascist Army. Captain Daddario had orders from Allied Headquarters to bring Graziani back alive. Somehow he managed to spirit his prized prisoner out of Milan. Several times the OSS party was under fire from excited Italian partisans; the car which was assigned to the marshal was dynamited and an OSS lieutenant badly wounded, but Graziani was delivered intact." For this daring feat, Captain Daddario was awarded that U.S. Legion of Merit and the Italian Medaglio d'Argento.

After leaving the service in 1946, Daddario was elected mayor of Middletown, Conn., and at age 28 was the youngest mayor in the State's history. He was recalled to active duty as a major in the Korean war, served as a municipal judge, and was elected to Congress from the First District of Connecticut in 1958.

He served in the House for 12 years where he chaired the Subcommittee on Science, Research, and Development and provided a major national forum for science and technology policy issues. He was the author of major legislation reshaping the National Science Foundation—which I sponsored in the Senate—and he contributed greatly to the Nation's understanding of science and its applications for the public good.

Through all of his efforts, Mim Daddario exhibited vision and foresight. Thus in the mid-1960's, he recognized the need for technology assessment, if our democratic society was to survive and solve the complex technological issues facing us in the closing decades of this century.

Mim Daddario is one of those rare individuals who both conceive a significant idea and have the opportunity to put it into practice. He had the vision to recognize the need for technology assessment before anyone else even knew what the term meant. He had the resourcefulness to build the legislative record which eventually led to the establishment of the Office of Technology Assessment. And as first Director of OTA, he exhibited a high degree of statesmanship in demonstrating that OTA could function as a nonpartisan, objective analytical arm of the Congress.

Mim Daddario has achieved a niche in the history of our Nation and the history of science policy. He conceived the innovative idea of technology assessment, and he demonstrated that it could work in practice.

We in the Congress and all American citizens are indebted to him for this accomplishment and for his long record of dedicated service to the Nation. As Chairman of the OTA Board, I know I can speak for all the Board members in expressing our gratitude to him and our deep sense of loss at his retirement.

In whatever career he pursues in the future, I am confident he will continue to exhibit the same vision and dedication he has shown in the past. And we in OTA—and in the Congress at large—will continue to be privileged to call on Mim Daddario for sage counsel in the years ahead.

CAPTIVE NATIONS WEEK

Mr. PERCY. Mr. President, on the occasion of the 19th observance of Captive Nations Week, we once again express our concern for the millions of people who live under governments which do not allow them full freedoms, including the freedom to national self determination and expression.

It is beyond belief that now—in the last half of the 20th century—so many nations and peoples are still denied a meaningful national life and basic human rights. Despite all the advances in education, science and technology, and social and behavioral studies, the world does not reflect progress of the most fundamental kind—progress in expanding man's freedom.

We must do our best to support such progress, and we must not forget those who—in captive societies—continue to live a deprived life.

VETO THE FARM BILL

Mr. ANDERSON. Mr. President, ever since the Senate passed its farm bill, big city editorialists, economists, Federal Reserve officials and others have complained about the bill's price tag. These people prefer the administration's approach to the farm problem and urge the President to veto the farm bill if it resembles what we in the Senate passed just a few weeks ago.

A typical example of this kind of thinking came just a few days after the Senate sent its farm bill to the House. In a June 6 editorial, the Wall Street Journal advised the President to reject what we passed. It is a "bad bill," they said, apparently because it offers too much aid to thousands of depression-stricken farmers engaged in raising wheat and feed grains.

The truth is, Mr. President, that the only legitimate criticism of the Senate farm bill is that it does not go far enough to guarantee our farmers a price that is equal to their cost of production. The Wall Street Journal should have talked to rural bankers. The bankers know that at least one-third of those farmers who have had to seek bank financing to stay in operation are suffering serious credit and income problems. And about one in five of these farmers will probably fold up their farming operations forever.

These same rural bankers know that many midwestern banks are perilously close to their maximum lending capacity, and all because of shockingly low farm prices and rising farm production costs.

In spite of this, the Wall Street Journal and others persist in urging the President and the House to reject the Senate-passed farm bill. I am pleased that Senator Humphrey did not allow the Journal's editorial to go unanswered. There is no more eloquent and knowledgeable defender of the family farm than our distinguished and beloved senior Senator from Minnesota. His detailed response to the Wall Street Journal's misguided editorial appeared in the July 11 issue of that paper. It is "must" reading for those seeking the facts about the Senate's 1977 Omnibus Farm Bill.

I request unanimous consent that the original editorial and Senator Humphrey's response be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal, June 6, 1977]

VETO THE FARM BILL

We hope President Carter is serious in his threat to veto the farm bill Congress is concocting. It is a bad bill. Worse, there are rumors floating around that Republicans have lent their support to confront the

President with a political embarrassment. Naughty, naughty.

Senator Muskie may not have been entirely on target when he said it would "bust the budget," since the budget has been a wreck for some years now. But with farm price supports for next year costing $2 billion more than the President's $2 billion ceiling it certainly won't help unbust the budget.

In fact, the first-year costs are only a beginning for this five-year bill. The sleepers buried in it remind us of some expensive congressional high jinks of the past—the 1972 double indexing of Social Security, for example.

One such joker is the inclusion for the first time of land costs in the production cost estimates used to set "target" prices for farm subsidies. When market prices fall below the target, farmers get a government check to make up the difference. But when you include land costs there is a ratchet effect. As the target rises, land becomes more valuable and as land becomes more valuable the target rises. A nice machine for enriching farmers and milking taxpayers.

The Senate bill mandates a target price on wheat that is already above current market levels, so the machine could start working soon after Mr. Carter signed the bill. Wheat state interests, where admittedly there have been some impacts from declines in world prices in recent years, are a major force behind the bill. Kansas Republican Senator Dole has been an important backer. It of course mandates higher target levels for other commodities as well.

Aside from the exposure of the Treasury to large payouts under the target system, the Senate bill harks back to the support tactics of the 1950s. It calls for a return to a commodity reserve program to support the price of wheat, a prelude to a hoped-for international grain reserve, which is the brainchild of Mr. Carter's own Agriculture Secretary. Farmers would be granted loans on their stored wheat and paid storage costs. Loan price levels are keyed to the target prices.

Which reminds us of those days 20-odd years ago when the government was spending over $1 million daily for grain storage costs, not to mention the cost of the loans (in reality grants). Such attempts to support and "stabilize" prices of a commodity unleash something equivalent to a sorcerer's apprentice. The artificial supports encourage farmers to produce more than the market wants when they should be switching to other crops. They at the same time discourage demand. Unless Secretary Bergland really succeeds in his efforts to set up a worldwide wheat cartel, other countries will be in a position to undersell American farmers. U.S. stocks of wheat will rise and rise.

The traditional answer to that is acreage controls. Farmers neatly circumvent that by using more fertilizer to increase yields. Or maybe the government moves in and attempts direct production controls—a cop in every wheatfield, so to speak. There are certain inefficiencies in that as well. In short, there is no satisfactory answer, as the U.S. wisely decided when it backed away from commodity reserves in the 1970s to let U.S. farmers fully exploit world markets.

U.S. farmers admittedly have not fared as well in the last two years as in the early years of this policy, when they fared very well indeed. But its benefits to the U.S. and the world at large have been little short of spectacular. U.S. agricultural exports in the first quarter of this year were running at an annual rate of $24 billion, triple the level of 1972. The U.S. in 1975 accounted for over 40 percent of the world's wheat exports, over 60 percent of corn exports and 76 percent of soybeans.

The Senate is obviously responding to farm belt political pressures but it may well have overreacted. The American Farm Bureau Federation, which is not an inconsiderable representative of the farm bloc, has been wise enough to see the eventual public reaction to a farm program run wild. It is against the target price ratchet and the grain reserve. It is particularly opposed to linking loan levels to the ratchet, preferring instead to give the Secretary of Agriculture considerable latitude in setting loan prices.

In short, Congress is in the final stages of writing a farm bill for the next five years based almost entirely on pressures from the wheat belt, from militant farm groups such as the National Farmers Union and, bless their souls, a group of Republicans still smarting over the way Democrats booby-trapped a farm bill to force a veto from President Ford last year. It simply won't do. The President will win more friends than he will lose if he throws it out.

SEN. HUMPHREY RESPONDS

Editor, The Wall Street Journal:

I feel compelled to comment on The Wall Street Journal editorial of June 6 which recommends that the President veto the farm bill being developed by Congress.

The editorial refers to it as a bill which "Congress is concocting" and terms it "a bad bill." The editorial also implies that this is a bill sprung on Congress and the public by farm interests and refers to the inclusion of land costs in setting target prices as a "joker."

Your newspaper should be aware that the Senate farm bill, S. 275, involved months of preparation before it was introduced on January 19, with additional months of work by a wide variety of groups and extensive hearings, culminating in two and one-half weeks of mark-up sessions during April and May which began at 8 a.m. each day.

A main concern of the Journal editorial is the bill's cost. But I am amazed at the certainty with which you put forward your position. The editorial spoke of the bill as costing $2 billion more than the President is prepared to accept. But the fact is that the cost is very much open to debate.

The Senate Committee on Agriculture, Nutrition and Forestry, in its cost estimates, provided a range of costs for commodities from $2 billion up to $3.9 billion per year on the average, depending upon weather and other factors. The levels were developed on the basis of the previous five years' weather.

Even if the Journal's cost figures are accepted, your newspaper should be aware that nearly a third of the cost is for crop loans which ultimately mean little if any actual cost to the government. And yet the Journal's conclusions reflect the same trap which some of the other news media have fallen into—accepting the administration's cost estimates without question.

The subject of cost also is directly related to farm income. Without adequate crop loans and target prices, farm income will drop. And when farm income drops, taxes that farmers pay to the federal government drop. It can be argued that the cost of a farm bill, such as reported by the Senate Committee on Agriculture, is more than offset by the increase of revenues to the Treasury from improved income. Furthermore, farm income is the economic fuel for rural America and the many business enterprises that serve our farm producers. The cost that Congress needs to be concerned about is the cost of depressed farm income, coupled with high operating cost. This is the problem and this is the danger.

Moreover, the editorial said that "sleepers" in the bill were reminiscent of "some expensive congressional hijinks of the past" and it referred to the legislation as unleashing "something equivalent to a sorcerer's apprentice."

Very careful analysis was involved in developing target prices and loan levels which would provide some stability but still enable the United States to be competitive in the world markets. There was little question over including land in the calculation of the target prices. Rather, the issue was at what level. Should a business ignore the cost of its buildings and land in calculating its produce prices? Farmers remember, cannot turn off or adjust their production like an assembly line.

I would suggest that there are numerous complex issues involved here, and they deserve a more careful airing than they received in your editorial.

HUBERT H. HUMPHREY,
U.S. Senate.

TEAMSTER CENTRAL STATES PENSION FUND ABUSES DETAILED

Mr. PERCY. Mr. President, on July 18, 1977, the Subcommittee on Permanent Investigations aired publicly, for the first time, the results of an almost 2-year Federal investigation into the operations of the Teamsters Central States, Southeast, and Southwest Areas Pension Fund.

I, personally, and the subcommittee members share an abiding concern for the future security of union fringe benefit programs, which include severance pay plans, health and welfare funds, and pension funds. Many of these Teamster funds may be well managed and fully solvent. But one of the largest of these fringe programs is the Central States Teamsters Pension Fund with a face value of $1.4 billion in assets that has been widely discussed in the press. It covers 459,000 active and retired employees, mostly from the trucking industry. Each week, nearly 16,000 employers contribute up to $28 for each of their employees in order to finance pension, disability, and health benefits. The funds pays out $22 million each month to 74,000 retirees.

The purpose of the hearing was to inquire into the fiscal integrity of the fund, in view of what appears to have been, over a period of years, a pattern of mismanagement, cronyism, and faulty judgment on the part of former fund trustees.

We have learned of millions of dollars of bad investments in Las Vegas gambling casinos, a Florida dog track, Ohio and Pennsylvania race tracks, and a Connecticut jai-alai fronton. Millions have also been invested in a luxurious California resort frequented by Teamsters officials, and a failing Chicago hotel whose construction was financed by a bank which had a fund trustee serving on its board of directors. Millions were loaned to a firm which allegedly gave at least one trustee a gift of substantial stock.

Associates of organized crime figures were loaned enormous sums. Reportedly, an associate of Meyer Lansky was loaned $15 million; $150 million went to Allen Glick, mostly for Las Vegas gambling casinos which were subsequently investigated for skimming from slot machines. At the time of the loans, Glick had no substantial business experience.

Fund investments resulted in a 4.9-percent rate of return between 1960 and 1974, compared with 7.5 percent on Treasury notes. Some 29 loans were listed as in default as of December 1975. Many more were uncollectable. Some 71 percent of fund assets were in high-risk real estate ventures; by comparison, most pension funds limit their real estate investments from 5 to 10 percent of their

portfolios. About half of the fund's loans were to a handful of individuals. More than half were for ventures in just two States—Nevada and California.

There is concern on the part of some Federal officials that the fund may have lost between $500 million and $700 million—perhaps as much as one-half of the fund's assets—because of these bad investments.

As a result of bad investments and diminishing assets, a fund administrator has warned that future employer contributions may have to be increased about 20 percent to $37 a month for each new employee. If so, every consumer in this Nation will ultimately have to pay for this increase through higher costs for goods that move by truck. There is also speculation that, if things continue as they have been, newly enrolled Teamsters may not be able to draw full pensions until after 30 years of service or age 65. Currently, fund participants can retire with a full pension after 20 years of service or age 57.

Why did this occur? I believe the answer lies in consummate arrogance on the one hand, and excessive secrecy on the other. It is an arrogance born of too little attention by the former trustees to their obligations to the rank and file. And it is a secrecy that appears deliberately intended to conceal their reckless investment decisions.

For years, rank and file union members have inquired, "What about my pension?" Our best source of information has been an alert press which has investigated and uncovered fund abuses that jeopardize individual pension rights.

Although the Labor Department has briefed committees of the Congress, these briefings have either been in executive session or in public hearings of little use to the fund beneficiaries because of the guarded nature of the testimony. It was for that reason that this subcommittee decided to conduct a public session. Had we not asked, in all probability the pension fund door would remain tightly shut. As noted, the fund trustees have in the past been unwilling to discuss the details of their questionable investments with the rank and file. Likewise, the Labor Department has also declined to discuss publicly their investigations into past mismanagement and their negotiations concerning the future management of the fund.

For the Congress to acquiesce in the withholding of this vital information would only compound this problem. The problems which have afflicted the Central States fund vitally and directly affect the lives of almost a half million Teamsters and indirectly affect the 9 million Americans who rely on similar union fringe benefit plans to sustain them in times of sickness and to provide for them in old age. Surely, any matter of this consequence deserves to be discussed fully and openly.

The Twentieth Century Fund, in a March 1977 study of the management of union pension fund assets, urged certain changes which this subcommittee should examine with a view toward recommending remedial legislation. These include a requirement that third-party trustees be appointed to prevent domination by union trustees, and that management trustees of union funds be given incentives so as to become more actively involved in making sound investment decisions—that they truly be watchdogs instead of puppydogs.

Finally, I believe the doors to fund meetings should be thrown open so that the rank and file can see and hear what is being done with its moneys. Toward that end, I intend to explore the possibility of recommending a "sunshine bill" for the working men and women of America entitling them to closely monitor the critical decisions that affect their own economic security for years to come.

Our hearing on Monday was ably chaired by Chairman HENRY M. JACKSON and Vice Chairman SAM NUNN both of whom have consistently taken a keen interest in this area, and pressed Secretary of Labor Ray Marshall for more detailed information.

Testifying at the hearing, Secretary Marshall outlined the steps taken by his Department to protect the assets of the fund. His report, however, fell short of reassuring the subcommittee or the rank and file as to the current soundness of the fund. His testimony indicates, after an 18-month investigation, his Department still does not know the full value of the fund's assets or the status of each of the loans which are now outstanding.

While the Labor Department should be commended for forcing a restructuring of the fund's board of trustees and putting investment decisions in the hands of independent professional managers, too many questions remain unanswered to assure rank and file members of the union that their pensions are secure. Their legitimate concerns, and our subcommittee's, can only be assuaged when we have a complete assessment of the current value of the fund's assets. The rank and file who depend on this fund for future economic security deserve better answers.

I ask unanimous consent that the opening statement by Secretary Marshall be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the Record, as follows:

STATEMENT OF RAY MARSHALL, SECRETARY OF LABOR

Mr. Chairman, Members of the Subcommittee: I am glad to be here this morning to discuss the progress we have made in our investigation of the Teamsters' Central States, Southeast and Southwest Areas Pension Fund. As you know, the authority for our investigation is based on ERISA, the Employee Retirement Income Security Act of 1974.

We have not been alone in our investigation of the Central States Pension Fund. We have worked closely with the Internal Revenue Service and the Justice Department, each of which has been pursuing its own statutory mandate. Since representatives of both the IRS and the Justice Department will also be testifying, I will focus my remarks on the actions of the Labor Department under ERISA.

Let me begin by talking about how I became involved in this investigation. During my confirmation hearings, several Senators on the Senate Human Resources Committee expressed serious concern about the Labor Department's conduct of this investigation. I told them that one of my first steps as Secretary of Labor would be to take personal control of the investigation.

I recognized the importance of our efforts to examine the Teamsters' Central States Pension Fund. Following the disappearance of Jimmy Hoffa, there was widespread interest in the activities of the Fund by Congress, the press and the public. Also important was the fact that this was the first major investigation under ERISA. If this landmark piece of legislation was to have lasting value, it was crucial that the Labor Department be zealous in its efforts to safeguard the pensions of American workers.

To help me personally supervise the investigation, I brought in Eamon Kelley, an experienced investment manager on leave from the Ford Foundation. With his help, I think we have made great progress in our efforts to preserve the integrity of the Central States Pension Fund. I think we have also demonstrated the effectiveness of vigorous enforcement of ERISA.

To understand our investigation it is important to have some background on the Teamsters' Central States Pension Fund. The Fund was established in 1955 as a collectively bargained, multi-employer pension fund. Under federal law, the Fund must be held in trust for the exclusive purpose of providing pension benefits to Teamster members.

The law also requires that union and management be equally represented on the board of trustees. As a result, of the original 16 Fund trustees, 8 were appointed by various associations of contributing employers and 8 were appointed by the International Brotherhood of Teamsters and the Central States and Southern Conference of Teamsters.

The Fund is one of the largest private pension funds in the country. The ERISA annual report for fiscal year 1975, the most recent report available, shows the Fund's assets carried at a book value of about $1.4 billion. The Fund now covers about 450,000 participants in 22 states and currently provides pension benefits to roughly 70,000 retirees. Each month the Fund receives contributions of about $29 million. About $21 million of this money goes for pension benefits and administrative expenses. This leaves about $8 million a month available for investments.

About 70 percent of the Fund's holdings are in real estate related investments. Most of these assets consist of notes held by the Fund on loans secured by real estate mortgages. In a few cases, the real estate is owned outright by the Fund, often as a result of mortgage foreclosures. The remaining 30 percent of the Fund's portfolio is in securities.

Let me briefly sketch out the history of our investigation of the Fund. Our power to undertake investigations of this kind began on January 1, 1975, when ERISA's fiduciary, reporting and disclosure provisions took effect.

Since numerous charges had been made about the Central States Fund over the years, it was not surprising that it was one of the first targets of an ERISA invesigation. The mysterious disappearance of Jimmy Hoffa during the summer of 1975 added to the urgency of the investigation. There was widespread speculation that Hoffa's disappearance was related to information that he had about the operations of the Central States Pension Fund. Other allegations which had been made about the Fund included charges that individuals involved in organized crime had connections with the Fund. It was also alleged that questionable loans had been made by the Fund to people who were linked to organized crime. The net effect of these charges was to raise serious questions about the prudent management of the assets of the Central States Pension Fund.

The joint Labor and Justice Department investigation of the Central States Fund

began in the fall of 1975. A separate investigation by the Internal Revenue Service had already been underway and arrangements were made to coordinate the efforts. The focus of the joint Labor and Justice Department investigation was on the handling of the Fund's assets and the conduct of people who managed these assets.

The authority for the Labor Department's investigation is the fiduciary responsibility and enforcement provisions of Parts 4 and 5 of Title I of ERISA. The Justice Department has centered its efforts around possible violations of Federal criminal laws. The applicable criminal provisions of the U.S. Code pre-date ERISA, but the emphasis is similar—the conduct of people operating on behalf of employee benefit fund assets.

The basis for the IRS investigation is somewhat different. Even before ERISA, the IRS had authority under the Internal Revenue Code to qualify pension plans and to make sure that such plans did not abuse their tax privileges. While parts of the IRS investigation dated back as far as 1965, the current emphasis of IRS is to make sure that the Central States Pension Fund met the new minimum standards in the ERISA amendments to the Internal Revenue Code.

When the Labor Department began its investigation in 1975, certain steps were taken to prepare for an effort of this scope and gravity. The Department established a Special Investigations Staff to run this investigation. And a coordinating board was set up in order for top officials from the Labor and Justice Departments to discuss strategy and tactics during the investigation.

Shortly after the Labor Department's investigation began, the Fund trustees in April 1976 decided not to make any new loans. At the same time, they decided to place all new money (their $8 million per month surplus after benefits and administrative expenses were paid) in a group of six banks. These banks would manage these new assets up to a limit of $75 million each.

In June 1976, the IRS revoked the Fund's tax qualification. A few days later, the IRS issued the first in a series of grants of discretionary relief. This relieved such innocent parties as participants in the Fund of the adverse tax consequences of this action. The IRS did not grant relief to the Fund itself, meaning that the income earned by the trust could be taxed.

In July and August of 1976, the Labor Department subpoenaed and deposed several Fund trustees and members of its professional staff. In September 1976, one of the trustees resigned after refusing to give a deposition. In October, 11 more Fund trustees resigned, leaving only 4 of the original 16 trustees.

Meanwhile, the joint Labor and Justice Department investigation was continuing. The focus of these efforts was transactions by the trustees of the Fund in which Fund assets were loaned to various borrowers with the loans being secured by mortgages on real estate. Most of the allegations of wrongdoing have focused on these real estate transactions and on the Fund's asset management practices in general. There are about 600 of these real estate loans and Fund officials maintain that the great majority are current and trouble free. While we have not yet reviewed all these loans, our investigators have found that some Fund loans are neither current nor trouble free.

That roughly was the situation when I became Secretary of Labor. One of my first steps was to undertake a review of the investigation's status. Working with the Special Investigations Staff, the Solicitor's Office and officials of the Department's Pension and Welfare Benefit Programs, we assessed the evidence that we had. We came to the conclusion in late January that our primary goal had to be the preservation of the Fund's assets. We decided that, if necessary, we had a strong case that could stand up in court. But we also realized that this would likely lead to bitter and protracted litigation. That is why we decided to explore with representatives of the Fund the possibility of achieving the relief that we believed necessary without resorting to litigation.

During the second week in February, I met with Secretary of the Treasury Blumenthal, Attorney General Bell and then Commissioner of Internal Revenue-designate Kurtz, as well as other Treasury, IRS and Justice Department officials, to discuss my plans and solicit their views. This discussion led to a decision to present a series of demands to the Fund's representatives. These demands and all further actions were closely coordinated among the relevant government agencies. In fact, the demands were presented to the Fund's representatives as "Government" demands.

On February 16, we told the Fund representatives that we were prepared to go to court to accomplish three objectives: (1) that the four "holdover" trustees must resign; (2) that they had to take steps to remove the day-to-day management of the Fund's assets from the management and union trustees; and (3) that certain changes must be made in the terms of the Central States plan and its procedures outside the asset management area in order to bring the plan in compliance with ERISA's minimum standards and to meet other requirements of the IRS.

In many ways, the second objective (that day-to-day asset management be taken out of the hands of the Fund's trustees) was the most important. It was imperative that those who contributed to the Fund should not see their assets dwindle because of mismanagement. In this area, we gave the Fund two choices. They could either restructure the board of trustees to obtain a majority of neutral, independent professionals, or they could turn over complete asset investment control to one or more professional, independent asset managers.

On February 23, Fund representatives gave us the trustees' initial reply. They said that the trustees refused to obtain the resignations of the four "holdover" trustees. They were willing, however, to discuss several alternate methods of professionalizing the Fund's asset management. These ranged from improving the Fund's professional staff, to hiring an investment adviser who would direct the trustees, to a true independent investment manager arrangement. They also stated that the trustees were willing to comply with our demand to change plan procedures to comply with ERISA and IRS rules in areas other than asset management.

On February 28, the then current IRS letter granting relief from the consequences of disqualification was due to expire. IRS decided that the trustees' response on February 23 was encouraging enough to justify an extension of relief. However, the Department of Labor could not accept the trustees' response because it did not include the resignation of the four "hold-over" trustees.

On February 26, with Labor Department approval and authorization, a news release was issued by the IRS which announced an extension of relief from the disqualification until the end of April 1977. At the same time, the Labor Department announced that because insufficient progress was being made from our perspective, we had decided to take "appropriate remedial action."

Within a few hours after the news release was issued, Fund representatives told us that the trustees would meet again in a few days to reconsider their decision. At a meeting on March 11, the trustees decided to comply with the Government's demand. On March 12, we met with their representatives. On March 14 the Labor Department and IRS issued identical news releases announcing the terms of an agreement. The critical points were as follows: (1) that the trustees would reach agreement in principle as soon as possible with one or more independent investment managers of nationally recognized stature; (2) that they would make the required changes in the terms of the plan; (3) that they would have an independent legal audit undertaken of all Fund investment transactions, beginning with 1965; (4) that they would begin making certain annual disclosures; and (5) that they would secure the resignations of the four "holdover" trustees. When these steps were completed or underway, the Service would requalify the plan and the Department would terminate that portion of its investigation which related to Fund asset management practices.

On April 14, the trustees entered into an agreement in principle with the Crocker Bank of San Francisco, under which Crocker would become the fund fiduciary, with authority to hire other investment managers to assist in asset management. On the same day, the Labor Department announced that the choice of Crocker was fully satisfactory to us. On April 26, the Internal Revenue Service requalified the Fund with certain caveats. On April 29, the four holdover trustees resigned.

During the latter part of April and the month of May, Fund representatives and Crocker worked diligently to attempt to put together an asset management group and a contractual structure that would be satisfactory. This proved to be a difficult task. From the standpoint of the Government, the arrangement had to satisfy several criteria. It had to provide for complete divestiture of trustee control, subject only to the obligations imposed by ERISA that the trustees not be relieved of their duty to monitor. The arrangement also had to involve managers who were competent and who could withstand the public scrutiny. The contractual structure had to be one which was workable and which met ERISA's requirements. Most important, the arrangement had to be put in place as rapidly as possible.

When the end of May approached and the parties did not seem close to agreement, we informed the Fund representatives that time was running out, and that the Department would have to consider alternatives if progress did not accelerate. During the week of June 6, Fund representatives told us that they were considering a different arrangement, under which the Equitable Life Assurance Society of the United States, a large insurance company headquartered in New York City, would become the Fund's fiduciary, real estate-related assets would be managed by Equitable and the Victor Palmieri Company, and the securities assets would be managed by Equitable, Lazard Freres, the Crocker Investment Management Company and the Mercantile National Bank of Dallas. These institutions and their management assignments were fully satisfactory to the Labor Department.

On June 16, the trustees instructed their representatives to proceed rapidly to prepare contracts between the trustees and the Equitable group. That was done, and the contracts were executed during the week of July 5.

The key features of the contractual arrangement are as follows:

Equitable is fiduciary of the Fund. Its role can best be understood if it is described as the "managing" fiduciary;

Equitable and Palmieri are the managers for real estate related assets. Equitable will manage those assets located east of the Mississippi River; Palmieri those assets to the West;

Equitable, Lazard Freres, Crocker Investment Management Company and Merchantile National Bank will each have responsibility for approximately one-fourth of the Fund's securities portfolio:

The trustees will monitor Equitable's performance as fiduciary and real estate manager, and, with Equitable, will monitor Palmieri's performance; Equitable will monitor the performance of the other managers;

As managing fiduciary, Equitable has the exclusive power to appoint and remove investment managers and custodians; to allocate available investment funds among types of investments and among the various managers; and to develop and implement long- and short-term investment strategies. To assist the trustees in their monitoring, Equitable must report regularly and maintain complete and accurate records.

The contracts anticipate that management control of all or most of the assets will be transferred to the respective investment managers by September 1, 1977.

Under the contracts, the trustees, who are chosen by the collective bargaining parties, retain power over those aspects of Fund administration that are closely related to labor relations and collective bargaining. For example, the establishment of benefit levels, enforcement of collective bargaining agreement rules, eligibility and benefit payment rules, and the actuarial soundness of the Fund.

We believe that the contractual structure provides a sound basis for proper future management of the Central States Fund's giant portfolio. It removes entirely asset management control from the trustees, yet retains their authority and power to monitor performance. It provides sufficient security for the independent professional fiduciary and the investment managers to insure that they cannot be dismissed at the whim of the trustees, yet permits the trustees to dismiss them for cause. It leaves the affairs of a private sector fund in private sector hands, yet provides for lawfully authorized government assistance. It also contains a triggering device to insure government oversight in the event the trustees, Equitable or the investment managers need advice or help in matters relating to Fund management. And it contains great promise of ending, once and for all, the years of suspicion, allegations, and demonstrable wrongdoing that have surrounded asset management of the Fund and the people associated with it.

The portion of the Labor Department investigation that focused on investment management practices of the Fund ended with the execution of these contracts. Another part of the investigation continues. That part is designed to establish whether evidence of fiduciary violations, during the period since January 1, 1975, warrants proceeding against people who have served the Fund in a fiduciary capacity since then. Such action would seek restitution for losses that may have occurred because of such violations and the return of any wrongful profits.

At this time, our investigative activity is shifting from a review of Fund records and documents to a search for evidence in the possession of others such as individuals associated with the Fund. Much of what we discovered in the asset management phase of our investigation will be relevant to this second phase. In addition, we have periodically turned over to the Justice Department evidence that may warrant prosecution under federal criminal statutes. We will continue to do this as we proceed with the second phase of our investigation.

In addition to our activities respecting the Pension Fund, we have been reviewing available data relating to the Central States Health and Welfare Fund, a plan which is also covered under ERISA.

In conclusion, Mr. Chairman, I want to say that I am aware that you and other members of your subcommittee helped to enact ERISA. And, I want to emphasize that the actions taken recently by the Trustees of the Central States Pension Fund represent an extremely important step in the right direction. In my opinion, these steps would not have been taken so quickly, or perhaps not at all, if ERISA didn't exist. ERISA's fiduciary responsibility provisions are powerful, but flexible, civil enforcement mechanisms gave the Department of Labor the authority and strength to bring about a truly significant change in the Fund's asset management practices.

MAX CLELAND: THE RIGHT MAN IN THE RIGHT JOB AT THE RIGHT TIME

Mr. MATSUNAGA. Mr. President, disabled veterans at Hawaii's Tripler Army Medical Center were considerably cheered to receive a visit, last week, from a man who has been there himself—VA Administrator Max Cleland.

Touring the hospital in his wheelchair and declaring that he is "the right man in the right job at the right time," the new VA Administrator inspired hope in the hearts of hundreds of Vietnam veterans who feared a life of inactivity and second-class citizenship. Because of his visit, some of them will return to school. Others will seek meaningful employment when discharged from the hospital. Declaring war on the debilitating environment of some facilities for the handicapped, Cleland promised that the VA will stress rehabilitation, therapy, and other programs aimed at returning veterans to society with useful skills and the educational background necessary to earn a good living.

Clearly, Max Cleland is the right man, in the right job at the right time. With the thought that my fellow Senators will find it of interest, I ask unanimous consent to have printed in the RECORD a description of his visit to Tripler Hospital which appeared in the Honolulu Star-Bulletin of July 13, 1977.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the Honolulu Star-Bulletin, July 13, 1977]

HE'S A MAN WHO'S BEEN THERE HIMSELF

(By Lois Taylor)

Max Cleland, U.S. Administrator of Veterans' Affairs, rubbed the small plastic bandage on his left thumb. "I caught it in a door in Chicago, and it has rendered me almost disabled," he said with a small laugh. And, of course, it had. Cleland uses his super-strong left arm and hand to power his wheel chair, to hoist himself in and out of it, to write and to shoot an occasional basket.

Cleland, 34, lost both legs and his right arm nine years ago in a hand grenade accident near Khe Sahn, Vietnam, while serving as a captain in the 1st Air Cavalry Division. His battalion was preparing to move by helicopter when he saw a live grenade on the ground that had dropped from someone's pack. He threw himself on it, and in doing so saved the men he was with.

"The good Lord works in mysterious ways to shape our lives," Cleland said yesterday on a tour of Tripler Hospital. "I feel now that I'm the right man in the right job at the right time.

"It gives me a great deal of pleasure to wheel up to a guy in bed and give him my hand, and he knows that I know about being there. It makes all I went through have some positive meaning and purpose."

Cleland is in town for a week on his first official visit as the youngest man ever to head the Veterans' Administration.

"The Veterans' Administration is the sleeping giant of the federal bureaucracy. We have a budget of $19 billion and more than 200,000 employes. We have the largest health care delivery service system in the country, the fifth largest life insurance company, 103 cemeteries, and the largest federal aid to education program, too," he said.

The G.I. Bill's education benefits were pushed by Cleland as he toured the wards of the tremendous hospital. When he stopped to talk to David A. Ross of Kailua-Kona, Cleland asked Ross how many years of college he had.

Ross told him he had three years, and Cleland said, "If you were discharged in 1969, then you still have two more years to use the benefits. Go back and use the G.I. Bill to finish college. Think about it." Ross promised he would talk to William Oshiro at the Honolulu regional office.

Cleland could probably do wheelies in his wheelchair, which he propels at a pace hard to keep up with by those on foot. As he sped through the halls of Tripler, accompanied by a trailing parade of generals, lesser officers, a nurse, a public relations woman and several members of the press—patients and their visitors watched with amazement.

Bruce Brown in a full leg cast approached on crutches and presented Cleland with a plumeria lei. Cleland wanted to know all about the injury and was introduced to Brown's visitors. "God bless you," Brown said. Cleland smiled from ear to ear.

Another happy surprise was Cleland's meeting with Lt. Col. Jo Ann Grownley, a physical therapist at Tripler who had been his therapist at Walter Reed Hospital in Washington, D.C., during his eight months there.

"I had a pretty good experience at Walter Reed," Cleland said. "I gained a definite point of view about hospital therapy while I was there, and I'm putting it into action in this job.

"I'm big on rehabilitation. I'm declaring war on the debilitating environment at some government hospitals. I'm big on color, a good strong therapy program and adequate staffing. I'm big on maximizing the potential of every veteran, getting him back into society and not being a ward of the state if it can be avoided. That's a very dehumanizing experience.

"Unfortunately, there are those who cannot cope in the real world and we will always meet their needs."

He announced last week that the Veterans' Administration would open a second rehabilitation research and development center particularly for spinal injuries, amputees and the blind. The new center, similar to the one now in New York, will be built near Chicago.

"The Veterans' Administration has a $100 million research program, probably one of the biggest in the country. One out of every two doctors in private practice, the Veterans' Administration helped train."

It was while an out-patient for a year at a veterans' hospital that Cleland learned again to swim, play basketball and tennis. "I hit the Pacific for the first time yesterday," he said of the swim he took at Waikiki. "I was a lifeguard once. I shoot baskets, and play a little tennis. I was right-handed, so I play net now in doubles. I can't cover the back court in my chair."

He is accompanied on his trip by hs parents, Mr. and Mrs. Joseph Cleland of Lithonia, Ga. "It's nostalgic for my father—he was stationed at Pearl Harbor for a while during World War II. I hit Honolulu on a refueling stop for a couple of hours on my way to Vietnam," he said.

An Army doctor stopped on his rounds to talk to Cleland, and extended his left hand. "Dan Inouye and I are the only left-handed shakers in Washington. I must remind him of that when I see him," Cleland mentioned.

"Nothing is more eyecatching than a missing limb, unless it's a glaring facial injury. A missing limb gives an impression of a greater disability than it really is," he said, and as he said it, you knew he believed it because he wanted to.

When he was discharged from Walter Reed Hospital, Cleland went home to Georgia and ran for the State Senate at the same time that Jimmy Carter ran for Governor. Both were elected and met each other during that period. Cleland remains one of Carter's greatest admirers, but unlike the President, Cleland has lost his Georgia accent.

"Somewhere between Monmouth, N.J., and downtown Saigon I realized it was gone," said Cleland. "I never got it back. That's the way it is sometimes." And he wheeled off to cheer up a veteran with his arm in a sling.

EXTENSIONS OF REMARKS

REVOLUTION ON THE FARM: PART V

HON. BILL ALEXANDER

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. ALEXANDER. Mr. Speaker, I would like to share with my colleagues the fifth in a series of articles that appeared in the Arkansas Gazette that deal with emerging trends in Arkansas agriculture. I commend this article to my colleagues:

REVOLUTION ON THE FARM: V—DRAMATIC POPULATION REDUCTION INSPIRES TECHNOLOGICAL CHANGES

(By Tom Hamburger)

WILSON.—The technological changes in the last 30 years at the 33,000-acre Wilson family farm are astonishing. Even more amazing is the fact that they are continuing.

For example, the Wilson fields average about 50 acres each, limited by the drainage ditches that surround them, but Robert E. Lee Wilson III, Board chairman of the Lee Wilson Co., sat in his office recently discussing future expansion of the fields until they are a mile long and a mile wide.

The six-row cultivators now in use handle the 50-acre fields nicely, but tractors capable of cultivating 18 rows at a time now are available and a 70-foot disc capable of discing 48 rows just has been introduced by one implement company.

The new equipment is more efficient and expensive and Wilson knows that to meet the expense the farm will have to become more efficient.

"We'll have to figure out a way to drain the land without ditches," he said in his office. "We'll have fields that are a mile long and a mile wide. They're doing it now in the Imperial Valley [California] and there must be some way we could get underground drainage in the big fields here."

The dramatic loss of population from Wilson and other towns in the South after World War II inspired one of the most dramatic technological revolutions in history. The town's population has dropped from more than 10,000 before the war to 1,048 today.

The Wilsons, for example, employed as many as 3,000 workers before World War II. Today, they have 200 employees.

In searching for answers to the problem of farming without cheap labor, the Wilsons were daring. Sometimes they made mistakes.

In the 1960s, for example, when the Mexican labor needed to weed cotton fields was no longer available, the Wilsons invested in geese.

That's right, geese. The company paid $16,000 a year for the birds because it was known that, while they don't care for cotton shoots, they thrive on Johnson grass, a weed that plagues cotton fields. The geese were set loose on thousands of acres of fenced cotton fields and Robert E. Lee Wilson II liked them because they would "work from dawn to sundown, seven days a week." But the noise they made, the fences that were needed and their inefficient methods doomed the project.

HERBICIDE EXPERIMENT

The Wilsons concentrated their efforts in an area they had pioneered a few years earlier. In the 1950s, in cooperation with a national chemical company, the Wilson plantation became the first farm in the United States to experiment with aerial application of herbicides. Company officials came down to witness the results. They were pleased and a workable answer to the labor shortage in chopping weeds was born. Chemical farming spread across the country in a very few years.

METHODS CHANGE

The change in the number of Wilson employes reflects the effect mechanization has had on agriculture in Arkansas in the last three decades. Farm methods at Wilson have changed from that of a Southern plantation to "agribusiness."

A new position at the company, "marketing manager," has become about the most important. Robert E. Lee (Bob) Wilson V, 24, is the Lee Wilson Co.'s marketing manager and his primary responsibility is watching the company's trading on the Chicago Board of Trade futures market.

MARKET CRUCIAL

In the last decade, the futures market has become a crucial part of American farming. The reduction of federal price supports and the instability of the market caused by speculators following the recent boom in international trade has caused the market to fluctuate wildly. To protect themselves farmers have had to become market experts. In the last five years, trading volume has more than doubled from 18.3 million contracts in 1972.

"Due to these fluctuations," Bob Wilson says, profitability today depends as much on careful marketing as it does on your ability to farm well."

Hudson Wren, recently retired general manager of the Wilson holdings and the company's historian, joined the company in January 1945, when much of the Wilson land was farmed with mules. The property then was still divided into 40-acre tracts, he said.

TRACTORS PURCHASED

Today the Wilson's 33,000 acres is farmed from two company "headquarters" and three or four men are responsible for every 1,000 acres. When Wren joined the Wilsons, the company had purchased 40 35-horsepower John Deere tractors, Wren said, for $1,600 each. The tractors were replacing mules and, in addition to increasing efficiency, the change was opening up new land for growing cash crops. For each 40-acre unit, eight to 10 acres had to be set aside to grow feed for the mules. As the mules were replaced, acreage for cash crops thus increased 25 per cent.

BLACKS LEAVE AREA

The war and its economic prosperity raised the hopes and expectations of many of the blacks who lived at Wilson, as it did elsewhere in the South, and blacks left the area in record numbers. More tractors were needed to take up the slack caused by the sudden outmigration.

Wren remembers the coming of the tractor and other devices to save labor as "kind of a happy marriage" because the labor was leaving for better opportunities just as mechanization was coming in.

CHANGE SWIFT

The change at Wilson, and the rest of the country after the initial breakthrough of mechanization, was swift. When steel became plentiful again after World War II, the Wilson Co. ordered more tractors, Wilson farm manager Jim Germany recalled. The efficiency of the tractors pulling two-row cultivation equipment was considered spectacular.

In those early days, a 35-horsepower tractor with a two-row cultivator attached could farm about 30 acres a day. Today's tractors work 120 acres a day pulling six-row equipment. The 85 to 185-hp tractors also pull herbicide and fungicide as they drive, thus making the operation even more efficient. "It has practically eliminated hand labor," Mike Wilson said.

As fast as tenant farmers would leave the land, Germany recalled, "we would combine land * * *. As fast as the land was available we took it."

By 1950, all the 40-, 80-, and even 120-acre farm units were gone. The green, red-roofed farmworker houses began to disappear and the company began to reorganize the farm.

In 1950, Robert E. Lee Wilson III took over management of the farm from his father. He changed the organization of the plantation, dividing it into 20 farms averaging about 1,500 acres. These became the responsibility of individual farm managers, each of whom was put in charge of 10 tractor drivers, 15 pieces of heavy farm equipment and as much itinerant hand labor as was necessary during peak seasons. The managers reported to Wilson through a general farm manager. Records and books were kept for each farm and the managers paid the parent company rent for use of the land. Each 1,500-acre plot was worked with 12 to 14 persons working on it year round and hundreds employed during chopping and harvest season.

DAY BEGINS

Steve Wilson, the second son, is manager, along with Germany, of one of the units. He starts his day at 6 a.m., supervising the fields from his Ford LTD, equipped with a two-way radio. He is consulted by radio about all major decisions concerning the farms in his unit and, when necessary, he drives to the farms to supervise in person.

Also in the 1950s, the company began a policy of land leveling to better use the increasingly expensive equipment. The Wilsons used earth moving machinery to level out the knolls, fill in the low spots and give the acreage a slight, 1½ foot a 1,000 feet tilt to assure proper drainage. In the last 25 years, the Wilsons have graded about 1,000 acres annually at a cost of $75 to $150 an acre and have leveled most of the land.

The Wilsons hope to be able to lessen the odds of danger from drouth. This year they started a $1.5 million project to irrigate 10,000 acres of farmland.

During peak season, the company still employs itinerant hand labor, mostly from Memphis. In 1950, when Robert E. Lee Wilson III took over operation of the company from his father, 3,000 itinerant laborers were brought in to help in peak seasons. In 1964, the company used only about 500 extra hands and in 1976 hired only a few busloads of choppers from Memphis. In the future they may discontinue hiring outside labor altogether. "When the minimum wage goes to $3 an hour, we may not be able to afford to do any chopping at all," Mike Wilson says.

Most of the reduction in hand labor was the result of the introduction in the early 1960s of mechanical cotton pickers.

During planting season, a reduction of labor was made possible in the last decade with the development of a technique that permits herbicide and fungicide to be applied from a tractor at the same time as seeds are planted. Formerly, Steve Wilson said, the herbicide and fungicide were added on separate trips.

A veteran Wilson farm hand, in his 70s, retired five years ago in part because he was unable to handle the new, more complicated tractors that require tractor drivers to mix the chemical herbicides and fungicides for their tractor before they work each field.

But a farmworker's retirement is different at Wilson from what it was in years past. The Wilson Co., at its expense, instituted a pension plan for its employes in 1967. The plan provides, when combined with Social Security, approximately three-quarters of a farm worker's wage at retirement.

TRIBUTE TO GEN. CASIMIR PULASKI

HON. LUCIEN N. NEDZI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. NEDZI. Mr. Speaker, the passage of time naturally blurs the sharpness of peoples and events. It drains from them the sense of immediacy and, inevitably, some of their significance.

Most people tend to tire of celebrations of events which took place long ago and also to lose sight of their importance.

But any nation which fails to look back to its early history will tend to forget the ideals and purposes which brought it into existence.

I believe it is important, therefore, that Congress take note of the 200th anniversary of General Pulaski's arrival in America.

Almost all of us know of the great contributions two men of Polish blood, Pulaski and Kosciuszko, made in the American War of Independence. I will not dwell on them here.

But it should be noted that not only was Pulaski the highest ranking officer of the American cavalry, but his name represented something far greater, namely the idea of liberty that knew no national boundaries.

Pulaski was a rare individual. While in his thirties, he had fought gallantly but unsuccessfully to save Poland from Russian occupation. Forced into exile in 1773, he continued his efforts to organize military action against Russia. In the course of his travels in behalf of this cause, he arrived in Paris in November 1776. He met French sympathizers of the American Revolution and Ben Franklin himself.

Pulaski saw America's fight for freedom as his own. Shortly after his arrival in the United States, he entered into a close association with Gen. George Washington and distinguished himself in a series of battles until he was mortally wounded in Savannah in 1779.

We should note that special ceremonies are being held late this month in Savannah to honor Pulaski's life and contribution.

The Polish contribution to America has been very considerable. It is not limited to two men. For every famous figure like Pulaski there have come to these shores hundreds of thousands of unknown, but honorable, men and women. They have built their homes, raised their families, and made a life here which shines with honor, duty, and self-respect. They have helped make America great.

Pulaski embraced the principle that all people should have the right to decide for themselves their own form of government. Americans of Polish blood have taken Pulaski's legacy and improved on it and that is what I would like to have remembered today.

MISLEADING INFORMATION

Hon. Theodore M. (Ted) Risenhoover

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. RISENHOOVER. Mr. Speaker, I take this opportunity to inform my colleagues that the National Republican Congressional Committee, NRCC, has started its own news service.

UPI and AP need not worry. However, after seeing a couple of NRCC dispatches, I think that supporters of truth and honesty have cause for concern. NRCC's two news releases to papers in my district are classic examples of shoddy journalism, slanted propaganda, half-truths, and misleading statements.

They are the kind of political trash that editors expect from extremist lobby groups like the "Right-to-Work-Committee," which starts off with a misnomer and should be called the "Right-to-Slavery-Committee." I am surprised that NRCC, an organization representing some good Republican Congressmen, would adopt such tactics.

NRCC heralded this new news service by writing to editors in my district promising "news which is on balance critical * * * You may think that is biased." NRCC was right. They could have added "misleading, dishonest, slanted, and shoddy." Those same editors have received their first samples of such reports.

One dispatch claimed that I had "voted to virtually repeal the Hatch Act," and continuing with an unattributed statement, the Hatch Act "was designed to prevent employees of the Federal Government from being coerced into engaging in political activities against their desires." Good journalists generally attribute such claims.

That handout prompted a letter to the editor from Charles M. Nobles of Tulsa who said the story was "amusing and puzzling * * * not logical."

As for the issue of Hatch Act reform, I believe it was due an overhaul. We saw high-profile Republicans receive high-paying Government appointments under the Nixon administration. These policy jobs then were placed under the civil service system and the new administration appears powerless to rid the Government of these people.

In that context, I could understand the Republican opposition to H.R. 10. In any context, I certainly respect any position taken by Republican Members; however, there is little room to respect the NRCC's interpretation of my vote for the bill.

Perhaps the Democratic Campaign Committee could "get even" with the Republicans by fashioning similar releases critical of Republican colleagues. That is a poor solution.

Congress has an "image" problem. Individual Members, however, judging from election returns and the rate of reelection for incumbents, obviously are viewed by their own constituents in a more favorable light.

Neither side of the isle is exempt from problems and the specter of criticism. Neither party has a monopoly on morality nor saintdom. Each Member makes daily decisions on issues which are controversial. We have plenty of critics and we graciously accept each other's criticism.

But, in my view, we should be fair and evenhanded with each other. Unfortunately, the first two news releases to newspapers in my district by NRCC failed to meet the criteria of balanced criticism. They were a despicable example of yellow journalism and partisanism.

Over the long haul, I believe the credibility of our minority critics may be the loser and such tactics help explain why the Republicans are in such a minority position.

I ask unanimous consent to include the news releases in the RECORD:

AN INFORMATION SERVICE OF THE NATIONAL REPUBLICAN CONGRESSIONAL COMMITTEE

WASHINGTON, D.C.—Congressman Ted Risenhoover (D–OK–2) voted to virtually repeal the Hatch Act in floor action yesterday.

The Hatch Act, on the books since 1939, was designed to prevent employees of the federal government from being coerced into engaging in political activities against their desires and insured an employee could not be discriminated against for personal beliefs. Yesterday's bill would remove almost all restrictions on participation in political activities.

The bill faces an uphill struggle in the Senate where the opposition is expected to be bipartisan and stiff.

It passed the House 266 to 164 over the objections of nearly all Republicans, Common Cause, the Civil Service League, and Americans United Against Union Control of Government. Over 30 Democrats joined the coalition against the bill.

But their efforts were overcome by the lobbying of labor unions who sided with Rep. Risenhoover in voting for the bill.

Opposition to the bill centers around concern for rights of federal employees, who could already engage in most political activities, from being coerced and discriminated against, and the right of the public to expect an impartial administration of the law.

Congressman Edward Derwinski of Illinois, ranking Republican on the Committee responsible for the legislation, said: "To in effect repeal the Hatch Act represents nothing less than the enactment of special interest legislation."

Congressman James Mann (D) added: "It is only the more active levels of partisan activity that are barred by the Hatch Act, and those restrictions have proved successful over the years in promoting fair administration of government policy and freedom against political pressure for federal employees."

Representative John Rousselot (R) summed up opposition to effectual repeal of the Hatch Act by saying: "No amount of rhetoric can change the simple fact repealing the Hatch Act will politicize our merit Civil Service system. It is naive to believe people will not try to reward their friends or that a person can campaign effectively for one point of view and loyally serve another."

NEWS RELEASE FROM CONGRESSMAN TED RISENHOOVER

WASHINGTON.—Congressman Ted Risenhoover today charged that a Republican propaganda agency has misrepresented his view concerning reform of the federal Hatch Act—which affects political participation by U.S. government workers.

"The Republican Congressional Committee, without attribution—which is shoddy journalism, indicated that my position would allow political coercion of federal employes. That is a total misrepresentation."

Risenhoover said the bill he supported would:

Encourage federal employes to exercise their rights, as American citizens, to voluntarily participate in the political process.

Prohibit official influence or coercion regarding the right to vote or to encourage or discourage political participation.

Prohibits use of federal funds to influence votes or to raise political money.

Allows federal employes to seek public office—but only on their own time. Leaves of absence would be required.

Banned certain law enforcement, management and national security officials from running for office or engaging in politics.

Risenhoover charged that the past Republican Administration had placed high paid political appointees under the merit system even though they held policy positions. Risenhoover pointed to Truman Branscum of of the Small Business Administration and Ludwig Johnson of the Farmers Home Administration, two such GOP appointees in Oklahoma, as "glaring political abuses of the civil service system."

"Hatch Act reforms approved by the House would prohibit agencies or officials from intimidating federal employes who exercise their rights as American citizens," Risenhoover said.

"The problem is opposite from the propaganda the Republicans are distributing," Risenhoover said.

SOUTH DAKOTA'S SKY RANCH SCHOOL FOR BOYS

HON. LARRY PRESSLER

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. PRESSLER. Mr. Speaker, flying and ranching are unique ways of rehabilitating teenage boys in trouble with their families or the law. But Father Don Murray, the late founder of South Dakota's Sky Ranch School for Boys, found them to be an unbeatable formula.

Since 1960, more than 800 boys from broken homes or the courts have passed through Sky Ranch in the famous Black Hills of northwestern South Dakota. Of those boys, a stunning 90 percent have been successfully rehabilitated, returning to full lives in society.

Under the close supervision of Father Dale Kutil, Father Murray's successor, the boys at Sky Ranch spend their days raising vegetables and chickens, tending cattle, and attending classes in the ranch's fully staffed grade school and trade shop.

The boys are rewarded for special achievement in work, school and their relations with others with the privilege of flying in the Sky Ranch plane. Responsibility on the ranch prepares them for responsibility in society and the inherent rewards.

Working with the soil brings the boys in tune with the rhythms of nature and their own souls, according to the school's founder. Flying above the clouds gives them a unique perspective on the world that led them astray.

Surely the Sky Ranch formula is unusual, but the rehabilitation rate is proof positive that a return to the simple values of hard work and concern for the individual works.

As a member of the House Education Committee and chairman of the Rural Caucus' Education Subcommittee, I was proud to address this year's graduating class at Sky Ranch. I hope that educators and juvenile justice organizations will consider the school as a model for future youth rehabilitation ventures.

Fathers Murray and Kutil and the alcohol industry which has almost singlehandedly supported the school can be proud indeed.

TRIBUTE TO JAMES DURANTE: A VERY SPECIAL CONSTITUENT

HON. HENRY J. HYDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. HYDE. Mr. Speaker, I am honored to pay tribute today to one of my constituents, Mr. James (Jimmy) Durante of Wood Dale, Ill.

Mr. Durante has been an active member of the Knights of Columbus for the past 54 years and presently holds the rank of Grand Knight. The Father F. X. Breen Council recently honored him at a testimonial dinner, and I am pleased to share with my colleagues several paragraphs from the Columbian, the official publication of the Knights of Columbus of Chicago and the surrounding Cook County area, concerning the dinner in Mr. Durante's honor:

* * * SK Sheik Pintozzi, never one to let the grass grow under his feet, found the time and effort to personally organize a testimonial dinner for hard working SK James (Jimmy) Durante.

The dinner was held on June 21st at the Ferrara Manor under the tender loving care of B. K. Mario Conti. It was a fantastic, sumptuous dinner and was enjoyed by all. Sheik received pledges from over 125 members but only 75 were able to attend this beautiful affair-all pledges were honored-Sheik-toastmaster for the affair gave his usual entertaining talk and spoke about Jimmy who is a member of F.X. Breen for 54 years. He told the audience how Jimmy is a giant amongst K of C members, well liked and respected by all.

His charitable work in the Mentally Retarded program and the CYO programs are sincere. (I know, I saw him on the street-hustling Tootsie Rolls). His hard work on committees such as the dinner dances, St. Joseph Parties, Picnics, Christmas Parties, Quarterly Communions, Theatre Parties and so many others over the past 50 years is something no one will ever forget.

Msgr. Pellicore, gave his usual short talk praising Jimmy for being a good Catholic gentleman and the many times he stood honor guard at quarterly communions, wakes and other festive occasions. God bless you Sheik Pintozzi, for taking the time and showing the young members that there is still a lot of zip in the old-timers but most of all for letting the old-timers know that sooner or later someone thinks of them in a special way.

Mr. Durante has also been the recipient of the Knights of Columbus Fellowship Award, and he has been a leader for many years in the KC's fund raising programs to benefit children and senior citizens.

From personal knowledge, I can attest to Mr. Durante's willingness to lend a helping hand for any worthwhile cause.

I addition to his many church, community and political activities through the years, Mr. Durante has been a devoted family man.

People like James Durante are not the kinds of people we hear and read about every day. And that is unfortunate because such people are rare. He is a man who possesses three great virtues: faith, hope and charity; a person we should all strive to emulate.

Mr. Durante has my greatest admiration and respect. I know my colleagues in Congress join me in wishing him and his lovely wife, Jo, continued success and great personal fulfillment.

POSTAL PROMISES HARD TO DELIVER

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. DERWINSKI. Mr. Speaker, I have been continually pointing out to Members the need to move slowly, carefully, and properly on any new reform of the Postal Service.

The Postal Service is consistently advised to return to the "good old days." That is to political domination of the Post Office Department—which is certainly not the answer.

A practical editorial commentary in the Chicago Sun-Times in their Sunday, July 17, 1977, edition follows:

POSTAL PROMISES HARD TO DELIVER

We poked editorial fun the other day at proposals for a 13-cent "citizen rate" letter, which will require handwritten addresses. Yet deteriorating mail service is no joke. And if the best the U.S. Postal Service can suggest is a two-price plan for first-class mail, what hope is there for improvement?

Many people like the idea of a 13-cent stamp for ordinary letters and 16 cents for business mail. But is that unprecedented step fair? Will it work in practice? And will it really save money, since business will pass on its extra costs to consumers anyway?

When it was formed in 1970, the semi-autonomous Postal Service was told to be businesslike. It hasn't done well. To be sure, Congress never fully freed the service, impos-

ing old Post Office ideas on the new agency—from rural post offices to special services that don't pay their way.

To its credit, the system has cut some 60,000 jobs, mostly through attrition, from its swollen work force, and it may go to five-day deliveries, which is a businesslike move. But its deficits continue. Mail rates have climbed sharply. Mail service has declined.

And while customers turn to United Parcel Service, electronic communications and other delivery systems, the Postal Service has been reluctant to compete. It said no, for example, to a Xerox Corp. offer to install an electronic mail system that might have lured back customers.

Congress should consider restoring mail service as a full government function. Or it might want to push the Postal Service to new business-management techniques and innovative technologies, though a self-financing postal-service isn't needed. What's needed is fast, reliable, reasonable mail delivery.

WORLDWIDE HUMAN RIGHTS

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. CRANE. Mr. Speaker, of late, our policy toward human rights is based on a worldwide respect for the rights of individuals and minority groups alike. President Carter has repeatedly reaffirmed his commitments to human rights, although he has encountered some opposition and criticism. Yet, we must discern that this commitment is often disregarded when it comes to positive action in regard to Communist governments. As recently as June 3, 1977, the President asked us to approve most-favored-nation status for Romania despite the continued human rights violations of the government both in the field of emigration, family reunification, freedom of speech and, last but not least, in the field of open discrimination against the national minorities, particularly the 2.5 million Hungarians of Transylvania.

The situation of the Hungarian minority has been amply described by me and my colleagues in past sessions of Congress as it constitutes an almost perennial problem of discrimination in the fields of religion, education, jobs, and housing. Some of it is attributable to the Communist dictatorship and some of it is the pursuance of a chauvinistic policy against the national minorities by the present Communist Romanian Government.

We must not forget, however, the rights of the gallant Hungarian people in Hungary and other Danubian states where significant Hungarian minorities reside. While the tenor of oppression in Hungary compares favorably with that of Romania, very substantial problems remain in the field of human rights. Freedom of religion is still closely limited, despite Janos Kadar's recent visit to the Pope, but state interference is the administration of the Catholic and Protestant churches remains an everyday affair and discrimination against youths active in religion has not ceased. Freedom of speech is limited to remarks against some of the leaders of the regime but not against the Party whose commitment and allegiance to the Soviet Union may not be criticized without the fear of jail and labor camps. Twenty years after the glorious revolution of 1956, the Hungarian people still do not enjoy the rights they so heroically strove for in the days of October 1956.

An almost similar situation exists for the 700,000 Hungarians of southern Slovakia in Czechoslovakia. They are oppressed, together with Czechs and Slovaks, by the regime and the freedoms of speech, religion, assembly, and press are practically unknown to them. In addition, the educational and cultural situation of the minority suffers under constant Slovakization tendencies of the present regime although measures taken are not as obvious as those taken by the Romanian Government.

Few people know that the Soviet Union, itself, harbors about 180,000 Hungarians in the Ukrainian S.S.R. This territory was originally allotted to Czechoslovakia in 1919 in order to prevent a common Soviet-Hungarian border. In 1939, it was returned to Hungary and in 1944, it became Czechoslovak territory for a few months. At that point, the Soviet Union forced the Czechoslovak Government to cede the territory. The 180,000 Hungarians of Subcarpathian Ruthenia, as the area is called, suffer all the indignities of Soviet citizens. They are an insignificant minority, among more than 40 million Ukrainians, and they live in a frontier region which is often off limits to Westerners. They have very limited educational and cultural opportunities and far fewer rights than their brethren in Hungary or Romania.

The only Hungarian minority of the region which enjoys at least cultural rights and relatively good educational opportunities, while remaining curtailed in regard to individual human rights, are the Hungarians of the Voivodina in Yugoslavia. They number about 560,000 but their situation has been deteriorating with regard to religious rights in the past year.

In conclusion, it can be said that the Carter approach to human rights in the Soviet empire remains inadequate, although more courageous than that of previous administrations. If the President is serious about human rights let him concentrate also on the less known but no less real problems of individual and group human rights violations in east central Europe, which would encompass the Hungarians and the Hungarian minorities in four different countries. After all, human rights, like freedom, are indivisible.

The ongoing preparatory meeting in Belgrade for a new conference of the Foreign Ministers of the Cooperation and Security in Europe provides an excellent opportunity for the administration to insist on a full airing of the human rights violations committed since the Helsinki Declaration of 1975 by the Soviet Union, Hungary, Romania, Czechoslovakia, and other Communist governments. Action must be taken now unless our policy becomes a sham which hurts not only the gallant freedom fighters and dissidents in these states but also the oppressed peoples in other lands.

BOB CURRAN REMINDS US OF OUR OBLIGATION TO PRESS FORWARD ON BEHALF OF THE FULL ACCOUNTING OF MIA'S

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. KEMP. Mr. Speaker, I would like once again to bring to the attention of my colleagues the plight of the 742 POW's and MIA's who are still unaccounted for.

The determination of status of our American men still missing in Southeast Asia is one of the most vital and compelling tasks continuing to face our Nation. Families are anxious and frustrated as their agony in compounded by rumors, neither confirmed nor denied. It is vital for the families' emotional and physical well-being to determine the truth about their loved ones. I believe that we owe it not only to the families of the missing men but to all Americans to bring about a speedy and complete resolution to this vitally important problem.

We have just recently celebrated the 201st anniversary of our Nation's independence. Our Forefathers, despite great odds and consequences, fought for freedom in order to guarantee all Americans both liberty and democracy. In this light we must continue to work with the families of the MIA's to put an end to the unrelenting struggle to obtain information on the fate of their loved ones who so bravely served this Nation, and who have yet to know their freedom.

I wish to congratulate Mr. Bob Curran, columnist for the Buffalo Evening News, who has continued to keep this tragic situation in the public eye. The following article depicts the hard work and sacrifices made by one western New York family. Mrs. Susan Czajkowski, a good friend, has dedicated the past several years of her life to this cause and by doing so, she continues to reflect the tremendous sacrifice made by these men and their families for the cause of freedom. American men, such as Lt. Col. Robert Dyzkowski, Susan's brother missing since 1966, must not be forgotten. It is up to the Congress and the President to bring about the complete and expeditious accounting of Americans still missing in action.

Mr. Speaker, at this time, I include for the RECORD and commend to the attention of my colleagues, this July 9, 1977 Buffalo Evening News column by the highly respected journalist Bob Curran concerning Susan Czajkowski and the ongoing tragedy of the POW–MIA's. It is entitled "Some Special People Coming to Call on You, Mr. President."

At a time when the administration is reportedly supporting membership in the U.N. for Vietnam and has even discussed

foreign aid to Vietnam, I believe this letter and this cause becomes even more significant. I still believe that to do so without a full accounting of our MIA's would be turn our backs not only on these men and their families but every man and woman who has ever served our country in military uniform:

To: President Jimmy Carter.
From: Curran's Corner.
Subject: Some bullet-biting friends of mine.

Dear Mr. President: I am writing to you five days after your first Independence Day as our president to tell you about some fine Americans who on the Fourth of July could not mouth the words, "Independence Day."

While others around them talked about the tall ships of the bicentennial and other glorious times, their minds were occupied by reminders of one of the most shameful chapters in our short history. It is a chapter in which they are involved. A chapter whose end they want so desperately to see.

It is the chapter about our men missing in action in Southeast Asia.

There was a time when most Americans were interested in that chapter. Unfortunately, too many of these people came to the conclusion that the end of it had been written during those great days when they saw the returning prisoners being welcomed home.

* * *

Within a week after the last scene unfolded on the television screen, most people discarded the PW-MIA bracelets they had worn as a reminder. They did this because they felt that there was no more they could do—that the living were back and the rest were dead.

Others continued to wear the bracelets because they realized that for the families of the men still missing, the war was still raging. And that for them it would not stop until the hour they learned what had happened to their loved ones.

To most people the missing men are just a statistic. I know that a man of your sensitivity appreciates that behind that cold statistic is a host of human beings, a long line of flesh and blood.

A large part of the long line of flesh and blood will be in Washington Thursday through Sunday. And the hope here is that you will have the opportunity to meet some of them.

I use the word "opportunity" because they are very special people. The sort of people who could march to the White House a few years back and throw roses—each of which bore a missing man's name—over a fence while ignoring those who said they would get more attention from the media if they desecrated the grounds.

* * *

One day a few weeks back I journeyed to Rochester with Susan Czajkowski. Susan's brother and Lee's son, Lt. Col. Robert Dyezkowski, has been missing in Southeast Asia since 1966.

The reason for the trip to Rochester was to attend a state convention of the Army-Navy Union. The members of that organization had invited Susan to attend and this young housewife has never missed the chance to keep the memory of the missing men green.

I've been working with the MIA families for about 8 years now and until the other night in Rochester I thought there were no new jolts in store for me.

Then as I talked to a man from the Army-Navy Union, I happened to glance inside the meeting room where we would have dinner. And all of a sudden I didn't trust myself to speak.

* * *

What I saw inside was a young brave housewife going from table to table leaving MIA buttons and literature at each place setting. She was so alone and yet so determined. At that moment she represented every person who has a loved one missing in Southeast Asia.

Susan and the other MIA people from Western New York and those from all over the country who will be in Washington next week do not ask for much, Mr. President.

They ask only that you give one-tenth of the attention to their men that you have given to the people who, for various reasons, chose not to pay the rent the last time around.

Respectfully,

BOB CURRAN.

NATIONAL FAMILY WEEK—DR. RICHARD HALVERSON'S TRIBUTE TO THE FAMILY AND ITS ROLE IN OUR SOCIETY

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1977

Mr. KEMP. Mr. Speaker, I was pleased that the House yesterday passed a bill which I cosponsored to designate the week of Thanksgiving as National Family Week. I cannot think of a more important time for Congress to be reaffirming our support for families and family life. For as the outstanding journalist Michel Novak recently commented:

Clearly the family is the seed bed of economic skills, money habits, attitudes toward work and the arts of financial independence. The family is a stronger agency of educational success than the school. The family is a stronger teacher of the religious imagination than the church. Political and social planning in a wide social order begin with the axiom: "What strengthens the family strengthens society."

Recently, a very revealing story broke in the Washington Post, reporting that the key element in juvenile delinquency was not poverty or deprivation, materialism, or permissiveness—but family background. Those families who emphasized love, teamwork, and a respect for their members, had children whose sense of selfworth supported them even in the face of extreme adversity—whose sense of pride in their families carried them through difficult as well as happy times.

Dr. Richard C. Halverson, Minister of the Fourth Presbyterian Church in Washington, D.C., gave what was to me the very finest sermon I have ever heard on the meaning of the family in modern-day life, in honor of Father's Day last month. I would like to enter it here into the CONGRESSIONAL RECORD, for I feel that it expresses my strong dedication to the continuation of the family unit as the cornerstone of our society, and as the backbone of our Nation and its Judeo-Christian values. Dr. Halverson is truly one of the outstanding Christian leaders in the Nation and speaks eloquently to not only the fathers of America but also to all family members, of all religious persuasions:

HOW A FATHER LEADS

(By Dr. Richard C. Halverson—Fathers' Day Sermon, June 19, 1977)

Four quotations from Michael Novak, writing for the Washington Star, April 4, 1976, are relevant to this Fathers' Day message. They have been used before, but no one has verbalized more effectively the basic indispensability of the family.

"Clearly the family is the seed bed of economic skills, money habits, attitudes toward work and the arts of financial independence. The family is a stronger agency of educational success than the school. The family is a stronger teacher of the religious imagination than the church. Political and social planning in a wide social order begin with the axiom: 'What strengthens the family strengthens society.' . . ."

"The role of a father, a mother and of children with respect to them, is the absolutely critical center of the social force . . . it is family strength that most defends individuals against alienation, lassitude or despair. . . . One unforgettable law has been learned painfully through all the oppressions, disasters and injustices of the last thousand years: if things go well with the family, life is worth living; when the family falters, life falls apart."

". . . Every avenue of research today leads to the family. Do we study educational achievement? nutrition? the development of stable and creative personalities? resistance to delinquency and violence? favorable economic attitudes and skills? sex role identification? relations to authority and to dissent? Family life is fundamental."

Finally, ". . . Apart from millions of decisions by couples of realistic love to bring forth children they will nourish, teach and launch against the void, the human race has no future—no wisdom, no advance, no community, no grace.

"Only the emptiness of solitary space, the dance of death.

"It is the destiny of flesh and blood to be familial."

We have learned in this series that God is a God of order. He created an orderly universe. There is physical order, there is moral order, there is spiritual order, there is social order; and when God's order is violated, destructive forces are discharged and set in motion. You cannot violate God's order physically, morally, spiritually, or socially without triggering destructive forces. You can't jump from a building and say, for example, "I don't believe in the law of gravity; it doesn't make any difference to me; I don't believe it." You can't go against the Ten Commandments the moral law of God, without being destroyed ultimately—individually and corporately. And when we violate the social order, destruction of society is inevitable.

Now God began the social order with marriage—a husband and wife and children. Marriage is, therefore, the ground and core of all social order. Marriage, family, a father and mother and children are at the heart of all social order—and if the core or the heart breaks down, the social order simply cannot survive. And I believe that this is precisely what we're seeing. You can't legislate order when the family breaks down. You can't get order politically when the family breaks down. It just gets worse and worse and worse, until the social order, or the civilization itself or the culture itself, comes to its own destruction.

Not only so, but it is clear in the Bible that marriage is the supreme human analogy to the relationship between Christ and His church. Consider Ephesians 5, verses 30, 31, and 32. Here Paul is setting forth the relationships in the order of God between husbands and wives. Start at verse 29: "No man

ever yet hated his own flesh, but nourisheth and cherisheth it, even as the Lord the church." And by the way, I believe the implications of that statement are significant.

A great deal of the breakdown in a husband's life, in a father's life, is due to his failure to obey this order of God concerning his wife. He will probably not attribute the negative things that are happening to him, the breakdown in his own life, to this; but the fact is when he violates God's order in his relationship with his wife, it affects his own flesh—he cannot escape it. Paul goes on, "he that loveth his wife loveth himself, even as the Lord the church." You see how closely together these are in Paul's mind as he writes. Verse 30: "for we are members of His body, of [Christ's] flesh, and of [Christ's] bones"; following which he quotes from Genesis 2:24—"for this cause shall a man leave his father and mother and shall be joined unto his wife and they two shall be one flesh." Incidentally, it is assumed always in marriage that a wife leaves her parents for the husband, so it is the husband that needs the command to leave his parents.

In other words, it works both ways—both husband and wife leave their parents to become one flesh. Then he says in verse 32, "This is a great mystery." What is a great mystery? What he's talking about in Genesis 2:24—a man leaves his family and is joined to his wife and they two become one flesh. This is a great mystery, this institution of mariage. ". . . but I speak concerning Christ and the church." You see that in the mind of God and in the mind of Paul, the family relationship and the church are somehow inseparable. This passage describes marriage as God ordered it. And because this is Fathers' Day, I'm going to ignore those things which have to do with the wife, and speak only to the fathers, the husbands.

The interesting thing to me is—and I've been in the ministry forty years—with all the messages I've heard on Ephesians chapter 5—the emphasis again and again and again has been "wives, be subject to your husbands as the church is subject to Christ." Maybe that is one reason why we need female preachers—because it is the male preachers that are presenting this lop-sided view. Well, we are going to change the focus this morning.

The first thing that's very clear and explicit and you can't argue out of it because it is precise and explicit, is a verse 25: "The husband is the head of the wife even as Christ is the head of the church"—but notice what else it says: "the husband is the saviour of the body." "The husband is the saviour of the body"! Where does the responsibility for saving a marriage rest? Precisely—the husband is the head of the wife; the husband is the saviour of the body. Now that's the way God made it, whether we like it or not. That's the social order.

In verse 21 Paul lays down a basic principle for all relationships and he develops the application of this principle in the relationship between wives and husbands, and in Ephesians 6, verses 1 through 4, between parents and children, and in the next two verses between an employer and an employee. In principle he covers all social relationships; he covers the whole social order in these verses by saying, "Submitting yourselves one to another out of reverence for Christ." The word "submit" means to put oneself under another—it suggests servanthood. Jesus said that in the kingdom we must be everybody's servant—husbands, wives, children—fathers, mothers. My children are not only to submit to me, I am to submit to my children. The employee is to be in submission to the employer, but the employer has the same accountability to the employee. This is the basis of all human relationships, submitting one to another. Relationships break down when we refuse to obey this command.

But we are talking to fathers today, and the record is, "Fathers, submit . . . to your wife, to your children." That's what Paul is saying—the husband is required to submit to his wife as much as she is required to submit to him. Submission is fundamental.

The question then is how is the husband and father, the head of the household, how is he the saviour of the body? The answer is love, verse 25. "Husbands, love your wives." How? How should we love our wives? "Even as Christ loved the church and gave Himself for it, that He might sanctify and cleanse it with the washing of water by the word, That he might present it to Himself a glorious church, not having spot, or wrinkle or any such thing; but that it should be holy and without blemish." Christ's love for His church is the model of the husband's submission to his wife, as well as to his children. Incidentally, the model for the wife's submission is the church, a very human, very faulty model; but the model for the husband's submission to his wife is the perfect submission of Christ's submission to the Cross. Christ is the model for the husband to follow, and his love is to be selfless and sacrificial.

Three things are true about that love: First, love is defined in I Corinthians 13. This is the way a husband is the head of a house, this is the way a husband leads, this is the way a husband rules, this is the way a husband expresses his headship in verses 4, 5, 6 and 7 of I Corinthians 13. Instead of the word charity in our King James Bible, I'll substitute the word love. "Love suffereth long, and is kind; love envieth not; love vaunteth not itself, is not puffed up, Doth not behave itself unseemly, seeketh not her own, is not easily provoked, thinketh no evil; Rejoiceth not in iniquity, but rejoiceth in the truth; Beareth all things, believeth all things, hopeth all things, endureth all things. Love never fails." This is the way I am to love my wife.

Look at the end of Romans chapter 8. Paul asks the question in verse 35 (now remember, fathers, husbands, this is a description of your relationship to your wife and to your children in your submission to them), "who shall separate us from the love of Christ? shall tribulation, or distress, or persecution, or famine, or nakedness, or peril, or sword?" Verse 37 answers: "Nay, in all these things (notice in them now—in tribulation, in distress, in persecution, in famine, in nakedness, in peril, sword—in all these things, husbands, if we are obedient to Christ) we are more than conquerors." Verse 38: "For I am persuaded that neither death, nor life, nor angels, nor principalities, nor powers, nor things present, nor things to come, Nor height, nor depth, nor any other creature, shall be able to separate us from the love of God, which is in Christ Jesus our Lord." Let me paraphrase that in the light of Ephesians 5: "I am persuaded that neither death, nor life, nor angels, nor principalities, nor powers, nor things present, nor things to come, nor height, nor depth, nor any other creature, shall be able to separate a husband from his wife."

The love of God, the love of Christ, is unconditional love, and I'm to love my wife that way—unconditionally. That is God's order. If I don't, the whole social order begins to break down. If the husband and the father violates God's order, the family, the neighborhood, the larger community, the city, the county, the state, the nation, the world, the social order breaks down. There's a destructive process at work that cannot be stopped. God began with a father and a mother.

One other simple passage that is a clear answer. How does a father lead, how does a father rule, how does a father save the body, how does a father express his headship? Listen to this from II Corinthians 5, verse 14. Paul writes, "For the love of Christ constrains us." The whole mission of the church, the whole life of the church, constrained by the love of Christ. The father controls by love, the husband controls by love. It is the love of the husband and father that saves the body. Note, please, that this is not optional—it is a command: "Husbands, love your wives as Jesus Christ loved His church." That is a command to be obeyed.

How do I obey? Well, we were talking this morning in the little meeting with the brothers upstairs about love. I didn't start the conversation—it had started before I arrived—but it was interesting to see that when they talked about love they talked about emotional things. Now you can't obey a command with emotion. You obey a command, even if emotionally you don't want to. You obey a command or an order even if, emotionally, you don't feel like it. You obey with your will. That's discipline—obedience.

So this is the message for Fathers' Day. This is God's order—and I urge husbands and fathers in the closing moments of this service to decide that you're going to obey. Many of you already do, of course. Some do not. But quit blaming circumstances, wife, children, for the breakdown in your marriage if there is one. You have the responsibility to save the body. And you do so by loving as Christ loved His church—and gave Himself for it. Let us pray.

Father in Heaven, help us to hear, understand, receive, and obey the truth, for Jesus' sake. Amen.

OBSERVATIONS ON SALARIES

HON. JAMES ABDNOR

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. ABDNOR. Mr. Speaker, the July 1977 edition of the Uniformed Services Journal, a publication of the National Association for Uniformed Services made some very pertinent observations in their editorial column. The subject was age, background, experience, and responsibilities and their comparative worth in prominent walks of life. I commend it to the attention of my colleagues:

SOME OBSERVATIONS ON WHITE HOUSE EMPLOYEES AND THEIR COMPARATIVE WORTH

President Carter's frequently voiced concern about military personnel costs, particularly retirement costs and dual compensation of the military retiree in the Civil Service, does not appear to be matched by concern about personnel costs in his own staff. In spite of campaign promises to reduce the White House staff and return responsibilities to the Cabinet Departments, his staff is now larger than President Ford's by some 80 individuals. He now employs 590 people. Because of the prestige of White House assignments, nearly all of these employees enjoy higher-than-average government pay levels for their particular skills.

Few critics of government pay scales complain about the pay of top level government officials. At a time when $1 million or more a year is not unusual pay for corporation presidents, prize fighters and rock musicians, $67,000 is modest indeed for Cabinet officers and top-level Presidential assistants.

Neither is $57,500 a source of great wealth for the next level of Presidential appointees. Serious inequities appear from there down, however, if any weight is given to comparative responsibilities, qualifications and length of service of career uniformed personnel.

Comparison of military pay with civilian pay is inexact at best. The Congress and the

Department of Defense have devised a formula for converting basic pay, quarters and subsistence allowances, and tax advantages into a figure for each grade called Regular Military Compensation (RMC). This formula is used in most military studies, and it does give a reasonably valid basis for comparisons. The RMC figures from the Third Quadrennial Review of Military Compensation (Jan. 1977) are used for the military in the following comparisons.

Members of the Joint Chiefs of Staff:

Ages 54 to 59.

Experience: 34 to 36 years of command and staff duties in the most competitive, demanding and dangerous profession in the modern world. In a lifetime of ever-increasing responsibilities, each has risen to the top by a process that repeatedly selected him from peer groups numbering in the thousands. Each has been tested in battle.

Responsibilities: Direction of the globally-deployed armed forces of the United States and their reserve forces, administration of an annual budget of $123 billion, and the military defense of the United States and much of the free world.

Pay (RMC): $62,106/yr.

White House "Chief of Staff" Hamilton Jordan:

Age: 32

Experience: International Volunteer Services in Vietnam, Governor Carter's Campaign Manager and Executive Secretary, Democratic National Committee, President Carter's Campaign Manager.

Responsibilities: Trouble-shooter for the President and the nearest approximation of a Chief of Staff in the White House.

Pay: $56,000/yr.

White House Deputy Press Secretary Rex Granum:

Age: 27

Experience: Three years as a newspaper reporter and one year managing press affairs for the Carter campaign and the Carter-Mondale transition.

Responsibilities: Assist in advising the President on press affairs and participate in the care and feeding of White House press corps.

Pay: $48,500/yr.

Commanding General, 2d Marine Div., Maj Gen Kenneth McLennan:

Age: 52

Experience: Thirty-four years of command and staff duties in a Service that has few easy jobs.

Responsibilities: Command, training and administration of a 18,000-man fighting force with the obligation of keeping it and its hundreds of millions of dollars worth of supplies and equipment ready to move anywhere in the world on a few hours notice and land ready to fight.

Pay (RMC): $46,090/yr.

White House Staff Secretary Richard G. Hutcheson, III:

Age: 26

Experience: Three years on the Democratic National Committee Staff.

Responsibilities: Supervision of White House paper flow.

Pay: $42,500/yr.

Commander of the Aircraft Carrier Forrestal, CAPT Joseph S. Barth, Jr.:

Age: 46

Experience: Twenty-one years of command and staff duties as a line officer of the U.S. Navy.

Responsibilities: The all-encompassing burden of the Captain of a ship that is one of the largest and most expensive combat vessels in the world. Its crew numbers more than 3,000, and with its aircraft aboard, the Captain is responsible for 4,500 highly trained men and $2.5 billion of the United States property.

Pay (RMC): $33,024/yr.

Senior Drill Sergeant, Sergeant First Class Derek A. Barlow:

Age: 37

Experience: 19 years as a combat engineer, developing his technical skills and natural leadership. He served twice in Vietnam, volunteering to return the second time after evacuation for wounds.

Responsibilities: Training hundreds of young Americans each year to become effective soldiers—making the All Volunteer Force Concept work.

Pay (RMC): $18,605

Some further comparisons

White House			Military		
Name and job	Age	Pay	Rank	Age	Pay(RMC)
Tim Kraft, appointments secretary	36	$51,000	Col	45	$33,024
Richard Harden, accountant	32	51,000	Lt Col	39	26,359
Greg Schneiders, special projects	30	48,500	Maj.	34	21,394
Bob Russell, Congressional Liaison	31	42,500	Capt.	27	18,011
Elizabeth Rainwater, Deputy Assistant for Research	30	42,500	1st Lt	25	13,538
Barry Jagoda, Media Advisor	33	42,000	MSgt.	40	23,729
Sara Emery, secretary-steno	33	20,000	Sgt.	37	18,605

NAUS does not object to the basic concept of higher than average government pay for elected and appointed government officials. The best ones are worth far more than they are paid, and a large number of appointed officials take substantial income losses to serve the President. Neither do we criticize the President for surrounding himself with trusted and loyal subordinates who have already proved their worth to him. He really has too few appointive positions at his disposal throughout the Executive agencies.

Our objection is to the establishment of any government job of modest importance and responsibility at pay and protocol levels far above its true worth in relation to other government positions. This objection is compounded for appointees to such positions who are so very youthful and inexperienced that only the magic of Presidential favor could have placed them in government career supergrade levels.

The members of the uniformed services who work for financial rewards are few indeed. Their greatest job satisfaction comes from service in a cause vital to their country's security, pride in accomplishment, and recognition of the importance of their services. Pay and acknowledgement of status are the measures of that recognition by the President and the Congress.

Therefore, NAUS hopes that the President will take note of the above pay comparisons in weighing military compensation. We also hope he will note that the current average total pay of the military retirees working in the Federal Civil Service—the "double dippers" who (he has repeatedly said) were overpaid—is $34,000/yr. for officers and $19,500/yr. for enlisted. These figures include both their retired and Civil Service pays. Surely, the President does not really believe that his 27-year old Deputy Press Secretary is worth $2400/yr. more than the Commander of the 2d Marine Division or that his 26-year old Staff Secretary is worth $9,000/yr. more than the Commander of the USS *Forrestal*. By this same comparison, the pays of the young and inexperienced staffers and several of their associates make the pays of most of the 141,000 military retirees in Civil Service look small indeed. Yet, every one of the latter has had almost as many years of adult experience in demanding and dangerous work as these young men and women have had on this earth.

NAUS recognizes the wisdom of a policy of rapid promotion and lateral injection of bright, young people in any organization. Promotion on longevity alone can only result in hardening of bureaucratic arteries. But the transfusion of new blood to higher levels can be destructive if it not based on merit demonstrated long enough inside or outside the organization for some measure of comparison with the other members. The fundamental requirement is that not only the boss recognize that the individual is exceptional, but also that the majority of the organization's members agree.

ENGLISH AMENDMENT TO H.R. 7171

HON. LARRY PRESSLER

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. PRESSLER. Mr. Speaker, today we begin debate on the farm bill. I implore my colleagues to carefully study the English amendment of which I am a cosponsor. The family farmer or rancher is the most efficient unit of production. Consumers will benefit from a strong farm bill. If we can preserve family farms and small towns, much unemployment and congestion in larger cities can be avoided.

I strongly support the English amendment to increase the target price for the 1977 wheat crop to $2.90 a bushel.

Wheat is the largest cash crop in my home State, South Dakota. The United States went into this crop year with a huge wheat carryover. South Dakota alone went into the 1977 crop year with 26 million bushels of wheat in storage. A year ago, my State had an 18.5 million bushel carryover.

No doubt many of my farm State colleagues can point to similar excess carryovers, however, the irony of the South Dakota situation is that so much wheat is in storage despite the drought conditions which prevailed in my State last year. Indeed, many South Dakota wheat farmers have had 3 drought-stricken years in a row.

Last year the rest of the country had a record wheat harvest, while South Dakota had a miserable harvest. We have had some rain this year, and the small grain harvest looks pretty good for the majority of South Dakota wheat growers.

However, there can be little joy over a good harvest this year. A fair crop year in South Dakota in 1977 will not get a fair return on the market. I support the English amendment, not only to keep South Dakota wheat farmers' heads above water this year, but to benefit American consumers.

A $2.90 support price is not the actual cost a farmer incurs in growing a bushel of wheat—which averages approximately 4.16 a bushel—but it will help our farmers and consumers more than the committee bill. I can assure my colleagues

from urban areas that many farmers in my State cannot afford to farm if the wheat target for this crop year is inadequate. This is particularly true for young farmers who have yet to have a good year. These young farmers are the ones who will be providing food for our country over the next 40–50 years. If the Congress does not help our young producers now, the consumer will certainly pay the price in higher food bills later, because our young people are not going to go into farming or will be wiped out by 5 to 7 years of bad conditions.

It is in the interest of both the food producers and food consumers that the English amendment gain approval.

THE BALANCE(S) OF POWER

HON. JOHN BRECKINRIDGE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. BRECKINRIDGE. Mr. Speaker, I interrupt this schedule of my Balance(s) of Power series, which I have been running in the CONGRESSIONAL RECORD since April of last year, to incorporate the following article appearing in the July 18 issue of Aviation Week & Space Technology.

The particular attention of CONGRESSIONAL RECORD readers is directed to so much of paragraph 2 as reads:

This * * * Library of Congress report to the Senate Armed Services Committee is currently being suppressed by certain committee staff members because they believe it paints too bleak a picture of U.S.–U.S.S.R. comparative pictures.

Mr. Speaker, I have been trying unsuccessfully for months to obtain permission to make this document—bought and paid for by public funds of a congressional agency—the Congressional Research Service—public and available to the Congress, the administration and the American people.

The article follows:

PRACTICAL POWER USE URGED ON PLANNERS

(By Herbert J. Coleman)

WASHINGTON.—U.S. strategic and tactical warfare decision makers, faced with growing Soviet might in quantity and quality of defense equipment, should concentrate on defining the U.S. uses of practical power to counter the threat from USSR forces in the Warsaw Pact and at sea.

This is a conclusion of a Library of Congress report to the Senate Armed Services Committee, currently being suppressed by certain committee staff members because they believe it paints too bleak a picture of the U.S.–USSR comparative postures (AW& ST July 11, p. 11).

The report, prepared by John M. Collins of the Congressional Research Staff, compares the growing Soviet threat with U.S. positions and trends, and concludes:

"Procuring unnecessary or unusable assets simply for the sake of achieving apparent parity (a strong argument supporting some U.S systems) seems a poor way to influence perceptions among enemies, allies or uncommitted countries. Practical power would pay greater dividends."

The Collins report is being held back by some Senate staff members who are promoting PRM–10, a presidential review memorandum, which takes a more optimistic view of the balance between U.S. and Soviet capabilities.

The Collins report makes these points:

Quantitative changes in U.S. and Soviet armed forces since 1970 favor the Soviet Union, with scattered exceptions.

U.S. qualitative leads, less pronounced than in the past, cannot completely compensate for these changes.

Essential equivalence with the Soviets across the conflict spectrum is neither necessary nor desirable. Opposing capabilities would be quite different in many cases if U.S. and USSR forces were identical in size and structure, because circumstances and strategies are dissimilar.

Possible Soviet preemptive use of intercontinental ballistic missiles or anti-ship cruise missiles, for example, would pose counterforce perils far out of proportion to reciprocal U.S. actions constrained by second strike concepts.

The report stressed that current trends curtail U.S. freedom of action and now impinge increasingly on U.S. abilities to deter attacks against the U.S., to defend the country if deterrence fails and to safeguard allies whose security is linked closely.

The concept of Mutual Assured Destruction as a means of deterrence for both nations is less mutual than it was in 1970, the starting year for the comparison study, and U.S. conventional capabilities also have faded in comparison with those of the Soviet Union, Collins found.

"U.S. land, sea and air forces alike consequently would be hard pressed to support North Atlantic Treaty Organization plans at existing levels and cope concurrently with large-scale contingencies, including those caused or sustained by the Kremlin," the report continued.

The report warned that clashes between Congress and the Executive Branch over expensive programs, each considered essentially in isolation and each with a life of its own, focus on forces and funds, adding "interrelationships with enemy systems and each other commonly get short shrift, except for matching counts with Moscow." It continued:

"Problems will prevail as long as U.S. decision makers bank on bigger budgets to cure defense ills, without reference to better strategy. More money will ensure substantial improvements only if connected with force sufficiency factors that match meaningful U.S. ends with measured means in ways that minimize risks and reinforce weak spots."

All Hawk launchers have 3 arms. SA-3's originally had 2 rails, but some were deployed with 4 rails, beginning in 1973. Each arm/rail holds 1 missile.

[2] 54 Nike-Hercules launchers now are in Alaska. All other U.S. SAM's are in Florida, on call, but out of position to deal with surprise attacks.

Note: Bomber force loads vary according to assigned missions. U.S. weapons figures were derived by subtracting ICBM/SLBM warheads from total loads published in Defense Department posture statements for fiscal 1971-77. Soviet figures reflect 1 large bomb or ASM per Bear/Bison, and 2 ASM's per Backfire. No reserve weapons are counted on either side.

Report highlights include:

Better bombers, combined with more and bigger ballistic missiles, multiple independently targetable reentry vehicles (MIRVs) and maneuverable reentry vehicles (MARVs) will improve U.S. counterforce capabilities very little because of the U.S. second strike strategy.

Soviet capabilities will increasingly endanger U.S. intercontinental ballistic missiles as long as U.S. missiles constitute undefended point targets in silos.

Matching the Soviet submarine-launched ballistic missile buildup would serve little purpose, since essential U.S. missions depend on survivable systems, not more submarines, missiles or warheads.

The Soviet Backfire bomber buildup has a direct bearing on U.S. air defense needs, but is unrelated to requirements for the USAF/Rockwell International B-1 bomber (a comment made before B-1 production was halted by President Jimmy Carter).

U.S. technological supremacy shows signs of perishability that results more from policies than potential.

The report contended that the Soviet forces already field new systems based on technology well known in the West, but slightly exploited. These include ICBMs with cold launch capabilities, mobile air defense, satellite intercept and surveillance craft, armed vehicles and ships from chemical and biological warfare, rapid-fire rocket launchers, antiship cruise missiles and "fire-control systems unmatched either in [the U.S.] or among other NATO members."

Soviet developments that can bear strongly on the future balance, if breakthroughs occur, include controlled thermonuclear fusion for limitless power supplies. Wing-in-ground-effect aircraft are being developed as skimmers in antisubmarine warfare units.

In contrast, U.S. funds for abstract research are being curtailed drastically or canceled, the report said. It continued:

"One-way-street technological transfers to Soviet competitors create sharp anxiety among some U.S. authorities. . . . Nevertheless, the United States still holds unsurpassed abilities to compete technologically and could consistently create superior products, if policies and priorities changed."

In referring to the influence of 5,000-naut. mi. range supersonic Backfire bombers, the report claimed that Backfires have some bearing on U.S. needs for improved air defense—they could strike some U.S. cities without refueling and land in Cuba—but their value to the Soviet inventory is unrelated to offensive force requirements. The main use is in threatening sea lanes and NATO.

"Backfire squadrons, which currently contribute less to Soviet strategic nuclear capabilities than forward-based fighters add to ours [the U.S.], could double in number or disappear without diluting any advantages that accrue from Strategic Air Command's aircraft," the report said. "Manned bombers may indeed be a legitimate leg of the U.S. triad, but maintaining superiority, essential equivalence, or any other military balance with Backfire would serve some cosmetic or symbolic purpose, nothing more."

The U.S. has maintained a higher reliance on airpower than has the Soviet Union, largely geared to its ICBM and SLBM forces

for offensive power, the report said, noting that ballistic missiles on both sides essentially are unopposed because neither country has erected an extensive antiballistic missile shield.

The SALT 1 treaty and protocol limit scientists on both sides to ABM studies and restrict developments and deployments but not basic research, and the report said "the stakes are high, because a breakthrough by either side could suddenly shift the strategic balance."

Collins said it became apparent, in conversations between himself and officials of the Defense Intelligence Agency, that "there is no consensus in the U.S. intelligence community concerning Soviet progress [in ABMs], but their purpose appears unswerving."

The U.S. also has all but abandoned point defense of U.S. cities to rely on General Dynamics F-106 fighters as the first line of defense to the degree that U.S. defenders now have a watered-down mission for limited day-to-day control of U.S. airspace, according to the report. It continued:

AIR DEFENSES

"The Soviet Union, in stark contrast, has amassed the world's most impressive array of air defenses, which currently includes 2,700 interceptor aircraft and 12,000 surface-air missiles. Numerical strengths are slightly smaller than they were in 1970, but sheer mass serves a useful purpose even though half the inventory consists of items outmoded according to U.S. standards.

"U.S. bombers fighting their way to targets, therefore, would face serious competition that cuts penetration prospects considerably."

The report also stressed that effective solutions to Soviet antiship cruise missiles now transcend all other requirements of the U.S. surface Navy.

WARHEAD WEIGHT

The weight of some warheads in the Soviet antiship missile inventory exceed a ton, and Soviet strategy according to the report seems designed for the purpose of seizing and securing initiative with a single killing salvo.

Soviet submarine-launched cruise missiles now have operational ranges from 25 to 250 naut. mi. and supplement new Soviet advances in homing, acoustic and wire-guided torpedoes, according to the Collins study.

TECHNOLOGICAL BALANCE U.S. VS. USSR

U.S. Clearly Superior

GENERAL: "black box" electronics; computers; integrated circuits; microtechnology; night vision; small turbofan engines; space technology; submarine noise suppressants; target acquisition; and terrain-following radar.

SPECIFIC: aircraft; air-to-air missiles; artillery ammunition; ECM, ECCM; look-down shoot-down systems; precision-guided munitions; remotely piloted vehicles; strategic cruise missiles, and survivable submarines.

Soviets Closing Gap

GENERAL: aerodynamics; composite materials; and inertial instrumentation.

SPECIFIC: MIRVs; missile accuracy; satellite sensors, and tactical nuclear systems.

Soviet Union Clearly Superior

GENERAL: cast components; commonality of components; ease of maintenance; high pressure physics; magneto-hydrodynamic power; rockets and ramjets; simple systems for common use; titanium fabrication, and welding.

SPECIFIC: air defense missiles; antiship missiles; armored fighting vehicles; artillery/rocket launchers; chemical/biological warfare; cold weather equipment; gas turbines for ships; ICBM payloads, yields; mobile ballistic missiles; ship size vs. firepower, and tactical bridging.

Status Uncertain

GENERAL: acoustics; adaptive optics; high explosive chemistry; inductive storage and switching systems for pulsed power control, and reduced drag for submarines.

SPECIFIC: antiballistic missiles; antisubmarine warfare; high energy lasers, and satellite-borne radars.

PRESIDENT NYERERE OF TANZANIA

HON. TOM HAGEDORN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. HAGEDORN. Mr. Speaker, Tanzanian President Julius Nyerere has achieved enviable respect among many elements of Western leadership. He is endlessly extolled as a prime example of responsible African statesmanship. U.N. Ambassador Young refers to him as "my mentor," and the World Bank seems to fall all over itself to "loan" him what he wants. Just for the sake of a little perspective, however, I would like to call to the attention of my colleagues a recent column by Evans and Novak. I believe that they make clear that with friends like Nyerere, the United States has little need for enemies on the African Continent:

THE UNITED STATES-SOVIET CONTEST FOR "PROGRESSIVE" AFRICA

(By Rowland Evans and Robert Novak)

DAR ES SALAAM, TANZANIA.—The hazards invited by the Carter administration's attempts to compete with Moscow for the affection of Africa's "progressive" nations became clear in the reaction of Julius Nyerere's Tanzania to Washington's new policy. President Nyerere's position can be authoritatively described as follows: President Carter's tough stand against white-ruled Rhodesia and South Africa "is a far cry from the Kissinger policy" and warmly appreciated. But U.S. "non-lethal" aid to Zaire during last spring's Communist-backed invasion was a "hangover" from the bad old days, greatly to be deplored. Furthermore, it is noted that the "armed struggle" against Rhodesia is still paid for by Moscow, not Washington.

The message is chilling but clear. To achieve the Soviet Union's status in "progressive" Africa, the United States must abandon its "conservative" friends—particularly President Mobuto of Zaire—and support a military assault on white-ruled southern Africa. In short, Nyerere wants Washington to duplicate the Kremlin's policy, which was specifically tailored for maximum Soviet influence on the continent.

This does not mean Nyerere is a Soviet agent but it does reflect basic incompatibility between U.S. interests in Africa and the "progressive" bloc. Whereas Nyerere is referred to by Ambassador Andrew Young as "my mentor" and is the favorite of touring congressional liberals, his rigid policies, both internal and external, run much closer to traditional Soviet than American models.

This hard reality is partly obscured because Nyerere, who earned his master's degree at Edinburgh, can test the intellectual mettle of even Henry Kissinger. U.S. officials enjoy the challenge of dealing with Nyerere and are reassured when he passes slighting remarks, fairly common among leftist African leaders, about the Russians.

But Nyerere's record speaks louder than words. He supported the Soviet-backed Cuban intervention in Angola from the start. He intervened with Tanzanian troops when Mozambique's Marxist government was threatened by armed resistance. He was blatantly sympathetic to armed rebellion—traced to Angolan, Cuban and Soviet sources—against Zaire.

As the most prestigious of the "front-line" presidents, Nyerere has grown closer to the Soviet Union as principal supplier and financier of guerrilla warfare against white Rhodesia, no matter what he might say about the Russians in private. His government perceives no ulterior Kremlin motive in its bountiful financing of the Rhodesian war. "The Soviets would just like to have a government in Zimbabwe [Rhodesia] that does not hate them," Sammie Mdee, an intimate Nyerere adviser, told us.

The government-owned Daily News recently called for a Zimbabwe government that is not merely black but also Socialist and revolutionary—a view, we were assured by high-level sources, that reflects Nyerere's own. Thus, the Tanzanian government is neither interested in preserving Rhodesia's highly developed private-enterprise economy nor worried about Soviet influence in Zimbabwe. That fits this reality: Julius Nyerere may be one of Africa's most respected leaders, but there is no more doctrinaire Socialist on the continent. His regime looks with contempt across the border into Kenya, where an open door to private investment and tourism produces a buoyant economy in sharp contrast to Tanzania's prolonged stagnation (alleviated recently by high coffee prices).

Kenya, Zaire and, most of all, the United States are viewed here as exploiters of the common man. Indeed, the Americans are seen as ideological adversaries. If there is a model to which Tanzanian socialism aspires, it is the faceless, dehumanized communism of China.

Western political models are no more popular here than are Western economic models. Nyerere runs a typically African one-man, one-party show, but 3,000 political prisoners (exceeding South Africa's total) in a country with no overt insurgency is excessive even by African standards.

Such repression, sluggish economic development and the physical deterioration of Dar Es Salaam are supposed to be compensated for by egalitarianism and freedom from the high-level corruption permeating Kenya and Zaire. But diplomats, businessmen and ordinary Tanzanians told us of petty corruption at middle and lower levels that impedes commerce and torments the average citizen.

There are then elements of hypocrisy when the new moralism in Washington, assailing repression in South Africa and complaining about corruption in Zaire, finds no quarrel with Tanzania. An answer is that the political and economic unpleasantness here is nobody's business but the Tanzanians', and the Carter administration should be commended for restraint in its moralizing at least here.

That still leaves unresolved the question whether Nyerere's standard is suitable for U.S. policy to set its African course by. Nyerere's high esteem in Washington, reflected by his coming state visit, suggests Andrew Young is not the only U.S. official who thinks so.

ELISA BETH WOLFE, NATIONAL YOUTH OF THE YEAR

HON. B. F. SISK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. SISK. Mr. Speaker, it is a particular pleasure for me to take this occasion to recognize the achievements of my con-

stituent. Elisa Beth Wolfe of Modesto, Calif., who has been selected as the National Youth of the Year by the National Exchange Club. She is to be formally honored at the Exchange's annual banquet in New Orleans next week.

Elsia Wolfe recently graduated as valedictorian of her class at Beyer High School in Modesto. In the fall she will be attending the University of California at Los Angeles on a Regents scholarship. Active in high school organizations and community service activities, Elisa is a credit to her family, friends, and community.

As National Youth of the Year, Elisa Beth Wolfe offers a fine example for the youth of this Nation—an example that more and more of our young people will hopefully follow.

NO "FREE RIDE" ON THE WATERWAYS

HON. GENE SNYDER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. SNYDER. Mr. Speaker, only God can make a tree. Nobody ever challenges this truism. But listening to the proponents of waterway user fees, one certainly gets the impression that the Federal Government—not the Almighty—is responsible for the creation of our vast network of rivers and streams. It just is not so.

The Federal Government has contributed to the endeavor of making rivers and waterways more navigable, but the Federal Government has contributed to the development of railroads, airways, and highways as well. In fact, instead of being unduly favored by transportation subsidies, our waterways have absorbed a modest amount of Federal assistance when compared to the amounts which have gone into the highways, railways, and airways.

Harry N. Cook, executive vice president of the National Waterways Conference, Inc., airs these facts and puts the Federal subsidization of waterway projects into its proper perspective in the following article which appeared in today's Washington Post. Mr. Cook contends there is "no free ride on the waterways" and the facts back up his contention.

I commend them to your attention—article follows:

NO "FREE RIDE" ON THE WATERWAYS

After following T. R. Reid's continuing coverage of the saga of S. 790 in The Washington Post, many readers must be saluting efforts of New Mexico's Sen. Pete Domenici (R) to end the waterway users' "free ride" on the "federally built and [federally] maintained waterways." In fact, each of the articles must lead readers to wonder why on earth Congress hasn't gotten around to enacting waterway tolls in almost 200 years of federal government.

There are many reasons why not. I want to address just two of them. These are, first, that the federal taxpayer foots the entire bill for the inland navigation system and, second, that waterways have been unduly favored by transportation subsidies.

Even when defined in the narrowest sense, as a series of dredged channels and navigation structures to control depths, the waterways are not wholly federal projects. The U.S. Water Resources Council determined that non-federal interests currently provide seven per cent of the construction costs and eight per cent of the operation, maintenance and repair costs of in-channel navigation improvements. Non-federal expenditures include provision of lands, easements and rights-of-way, and dredged-material disposal sites.

But navigable channels alone do not make usable waterways. Before a waterway can be productive, extensive non-federal investment is required for onshore facilities such as wharves, terminals, docks, warehouses, elevators, special cargo-handling equipment, fire, water and sewer services, highway connections and railroad spurs. Much of this investment comes from private-sector users and beneficiaries of the waterway system, including port authorities and communities.

Port-related investments often total 20 to 40 per cent of the federal cost of inland-waterway improvements. Thus, waterways are hardly projects of the federal government. Rather, the federal investment serves as the "seed money" to attract large investments by states, localities and the users themselves.

These shippers, in return, have made a financial commitment stimulated by the federal investment that first made the channels navigable. Since 1952, some 10,000 plants have been built or substantially expanded along the nation's inland waterways. This expansion represents a capital investment exceeding $171 billion.

When the inland-waterway system is viewed as the complex transportation system and critical component of America's industrial and governmental economy that it truly is, the nonfederal and especially the "user" contribution to the system's viability has been enormous. It far outstrips the modest $5 billion that the federal government has spent since 1824 on construction, operation and maintenance of navigation channels.

The federal government has always assisted all the major transportation modes: railroads, highways and airways as well as waterways. All are the beneficiaries of subsidies and other programs totaling in the billions of dollars. However, the lion's share of federal assistance has gone to highways, railways and airways.

While highway users do pay fuel taxes, it is important to note that government expenditures for streets, roads and highways that are not recovered from the users amounted to $4.3 billion in 1973, a typical year. In other words, in a single year, the total unrecovered government investment in highway, roads and streets almost equalled the 150-year total unrecovered government investment in inland-waterway construction, operation and maintenance.

Likewise, the cumulative waterway subsidy was exceeded by a single program of federal aid to the nation's railroads—the $6.4 billion Rail Revitalization and Regulatory Reform Act. A century ago, American railroads received perhaps the largest government subsidy in history: land and right-of-way grants totaling 9.4 per cent of the continental United States. In more recent times, railroads have been the beneficiaries of various programs having the effect of subsidies: grade-crossing eliminations, the Regional Rail Reorganization Act, a 1974 act to refinance the Railroad Retirement Act, inauguration of the quasi-governmental Amtrak passenger service. In addition, railroads are the beneficiaries of special federal tax relief.

Frequently, the statement is made that railroads must build, operate and maintain their own rights-of-way, while barge and truck rights-of-way are furnished by the federal government. There is one important difference, however. Waterways are public ways, open to all, and the competition is fierce. Because they own private rights-of-way, railroads control the traffic that moves over their tracks and the freight rates that are charged. To have a similar situation on the waterways, the federal government might consider granting a particular bargeline company exclusive rights to operate on, for instance the Ohio River. If that line had the right to control all the traffic on the Ohio River and the rates charged, it is entirely probable that it could maintain the waterway, pay taxes on it and make a profit, too. But the line surely could not do all this without raising rates substantially. And who would pay? Clearly, the taxpayers and consumers.

The point is that waterways have been neither alone nor at the forefront in receipt of national support. The inland waterways move 16 per cent of the nation's cross-country freight at a cost of less than two per cent of the total freight transportation revenues.

A waterway-user charge might be designed to recover revenues at a certain level for the government. Advocates in government have suggested 100 per cent cost recovery. But consumers of transportation services would actually pay several times the intended amount. They would pay again as water-competitive rail rates increased. Railroad spokesmen have estimated that water-compelled rail rates depress rail earnings by approximately $500 million a year. It is reasonable to assume, therefore, that imposition of waterway-user charges—freeing railroads from the constraint of lower water rates—would cost rail shippers as much as $500 million annually in higher rail rates.

These considerations suggest the wisdom of a careful and exhaustive study of the economic impact of waterway-user charges before rushing into inadequately considered legislation.

EMERGENCY RULE ON SPECIAL PROSECUTOR BILL

HON. JOHN B. ANDERSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. ANDERSON of Illinois. Mr. Speaker, today the distinguished minority leader (Mr. RHODES), the gentleman from Maine (Mr. COHEN), and I are introducing an emergency rule to discharge the Judiciary Committee from further consideration of our special prosecutor bill—H.R. 8125—and send the matter directly to the House floor. Under the terms of our bill, which is nearly identical to the special prosecutor provisions of a Senate-passed bill—S. 555—a standby special prosecutor is authorized to prosecute crimes committed by high Government officials, and the Attorney General is required to determine within 90 days whether there is sufficient evidence in the so-called Korean influence scandal to warrant the activation of the standby special prosecutor for that case.

Mr. Speaker, when Mr. Cohen and I introduced our special prosecutor bill on June 30 we noted there was a dark cloud hanging over this Capitol as a result of allegations that Members of this body had accepted monetary gifts from agents of the South Korean Government. This

cloud has grown even darker and more ominous as a result of certain events and news reports of recent days. The time has clearly come to dispel those clouds of suspicion, doubt, and mistrust in the Congress by appointing a distinguished, independent special prosecutor to take over the Justice Department's investigation of these matters. I think it is important to emphasize that the President has endorsed the concept of such a standby special prosecutor in his ethics message to the Congress on May 3. Quoting from that message, "This approach will eliminate all appearance of high-level interference in sensitive investigations and prosecutions. The American people must be assured that no one, regardless of position, is above the law."

Mr. Speaker, we endorse and concur in those eloquent words of the President, but we would submit that the time has come to follow through on that rhetoric with the type of action which is called for in our bill—a speedy determination on the need for a special prosecutor in the Korean influence scandal.

Mr. Speaker, neither the introduction of our bill nor the emergency rule is intended in any way to impugn the integrity of the Justice Department investigation to date or the persons responsible for it. But, as our bill and the Senate-passed bill make clear, whenever any investigation substantially and directly affects the political interests of the President or his political party as to make it inappropriate in the interest of justice for the Department of Justice to conduct such an investigation, then the appointment of a special prosecutor should be seriously considered. In testifying for the Senate special prosecutor provisions, Justice Department spokesman John Harmon said the following:

> We must not only do justice, but be able to assure the public that justice has been done.

And to quote from the report of the Senate Governmental Affairs Committee on the need for a special prosecutor:

> The appearance of conflict is as dangerous to public confidence in the administration of justice as true conflict itself. Having men of integrity operate in the face of a conflict is an insufficient protection for a system of justice.

The Senate report went on to note that provision for a special prosecutor does not reflect on the integrity of any individual; but it goes on to state:

> It does reflect the legal profession's constant concern with whether or not justice is administered with complete impartiality, and, equally important, whether or not there is an appearance of such impartiality.

I underscore these points because I think that now more than ever before the public needs the "appearance of impartiality" in connection with the investigation of the Korean influence scandal.

At the same time, I want to make it clear that our bill is in no way intended to serve as a substitute for the House investigation into these matters which we have authorized. We have a clear responsibility under article I, section 5, of the Constitution, to punish our Members for disorderly behavior, and it is our hope that the current investigation will be pursued with full vigor in the interests of justice and our institutional integrity.

But the responsibility for prosecuting any violations of the law rests with the executive branch, and we feel that in this instance the Attorney General should apply to a special panel of the court under the terms of our bill for the appointment of a special prosecutor. Because this is a matter of such grave concern, affecting as it does the very confidence of the people in their government and elected officials, we strongly feel an emergency rule providing for the consideration of our special prosecutor bill is warranted. Under this procedure, the emergency rule would be referred to the Rules Committee, which is considered an arm of the majority leadership. A mere majority vote of that committee—nine votes—would send this matter to the House floor for a final determination. We think this is far preferable to the secretive and timeconsuming procedure of filing a discharge petition which requires the signatures of 218 Members.

This is indeed an emergency situation requiring expeditious consideration and leadership backing. In view of the fact that the Senate has already passed such a Special Prosecutor bill which is now pending at the Speaker's desk, there should be no problem in sending this bill to the President prior to the August recess if the majority leadership gets behind it. Our emergency rule places that decision squarely in the leadership's court where it belongs, since it moves the matter from the Judiciary Committee into the Rules Committee, two-thirds of whose members are appointed directly by the Speaker. As one Republican on that committee, I think I can predict that this emergency procedure will have the full backing of the minority Members.

Mr. Speaker, today Mr. RHODES, Mr. COHEN, and I will be circulating a letter to all House Members urging their cosponsoring of our emergency rule. The rule itself does not prejudge the final form of the legislation since it is a 2-hour open rule, permitting amendments to be offered on the House floor. But Members will have an opportunity, through this vehicle, to voice their approval for at least considering and deciding this issue on the House floor. We hope that a large number of our colleagues will respond affirmatively to our request for cosponsors and thereby to adopting this emergency procedure.

At this point in the RECORD, Mr. Speaker, I include the text of our emergency rule:

RESOLUTION

Resolved, That upon the adoption of this resolution the House shall immediately resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 8125) to provide for the appointment of a special prosecutor in appropriate cases, and to require the Attorney General to make a preliminary investigation of alleged improper foreign influence in Congress to determine whether or not such a special prosecutor should be appointed for any cases arising therefrom. All points of order against said bill are hereby waived. After general debate, which shall be confined to the bill and shall not continue to exceed two hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on the Judiciary, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

IMPORTANCE OF THE SUGAR INDUSTRY TO HAWAII

HON. DANIEL K. AKAKA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. AKAKA. Mr. Speaker, as you know, the members of the House-Senate conference committee on H.R. 7558, the fiscal year 1978 agriculture appropriations bill, will be meeting to make important decisions with respect to Federal payments to the domestic sugar industry. I am pleased to submit for the record the statement of the Honorable Robert Yotsuda, a member of the city council of the island of Kauai. Councilman Yotsuda has made an excellent analysis of the importance of the sugar industry to Hawaii. I would like to ask my honorable colleagues to carefully consider Councilman Yotsuda's remarks when the fiscal year 1978 agriculture appropriations bill comes before the House for consideration:

STATEMENT OF COUNCILMAN ROBERT YOTSUDA

In Hawaii, sugar production is the major agricultural activity and the second largest provider of export income in the private sector. Sugar is an essential part of Hawaii's economy—much more so than in any other sugar-producing state.

The loss of the sugar industry to Hawaii would have a serious impact on employment in the State. At a time when Hawaii's economy is unable to provide a sufficient number of jobs for the rapidly growing labor force, the loss or even the decline of the industry would strike a crippling blow to the State.

To see what impact the sugar industry has on the island economy, let us look at the number of jobs and the payroll it provides. In 1976 there were 9,430 jobs in sugar which represented 3.2 percent of total private jobs filled throughout the State.

Sugar payroll in 1975 amounted to $114.6 million or 4.7 percent of total private payroll. When broken down by the islands, Oahu had 1,640 sugar jobs, or 0.7 percent of total private jobs on the island last year. The total payroll in 1970 amounted to $21.3 million, or 1.1 percent of the total private payroll for the island.

On Kauai, the sugar acreage of 45,727 represents more than 96 percent of all of the cultivated land on the island. The high percentage of land used for the sugar crop reflects the indispensible part the sugar industry plans in Kauai's economy. In 1976, the sugar industry on Kauai supplies 2,450 jobs or 21.5 percent of all jobs in the private section. The payroll amounted to $25.3 million or 31.3 percent of total private payroll in 1975.

On the island of Hawaii, the sugar acreage is twice as large as that on any other islands. The industry is concentrated mainly in east

Hawaii, which makes that half of the island almost totally dependent on sugar—somewhat like Kauai. And on the island of Maui, the sugar industry is also a major part of the economy, and yields a larger crop because of better overall soil and growing conditions.

This brief sketch of the size of sugar in each island's economy demonstrates clearly the dominant part the industry plays on the Neighbor Islands. It is estimated that the loss of the sugar industry to Hawaii would amount to a decline in some 31,000 jobs, which would double the jobless total and increase the state unemployment rate from 8.8 percent to some 17 percent. The State of Hawaii cannot afford to have such a drastic reduction in its labor force at this time, or in the future.

FISH AND WILDLIFE EDUCATIONAL EFFORTS

HON. JAMES ABDNOR

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. ABDNOR. Mr. Speaker, I am pleased to note the recent efforts of the Fish and Wildlife Service of the Department of Interior, and the Extension Service of the U.S. Department of Agriculture, in working to provide increased fish and wildlife educational efforts through the Extension Service. I would like to emphasize that this is a much needed vehicle for communication of local feelings to the policymakers in both the USDA and DOI.

The following correspondence, a letter from myself to Mr. M. Rupert Cutler, Assistant Secretary of Agriculture for Conservation, Research and Education, U.S. Department of Agriculture, and his reply provide the specifics of this important act, and I would like to draw the attention of those of my colleagues that I know will be interested:

JUNE 29, 1977.

Mr. M. RUPERT CUTLER,
Assistant Secretary of Agriculture for Conservation, Research and Education, U.S. Department of Agriculture, Washington, D.C.

DEAR MR. CUTLER: I was pleased to see the June 27, 1977, release from USDA announcing the agreement signed with the Department of the Interior to increase fish and wildlife educational efforts through the Extension Service. I would appreciate receiving any more detailed information you may have in this regard.

In my view there is a great discrepancy between Federal policies and local views on many fish and wildlife issues, and increasing Federal regulation is a poor substitute for a more informed public. Hopefully, this effort will be a two-way street for improved communication of local feelings to the policy makers as well as the reverse.

Again, your efforts have my commendations, and I look forward to receiving additional information.

Sincerely,

JAMES ABDNOR,
Member of Congress.

DEPARTMENT OF AGRICULTURE,
OFFICE OF THE SECRETARY,
Washington, D.C., July 15, 1977.

Hon. JAMES ABDNOR,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN ABDNOR: Thank you for your letter of June 29, 1977, regarding increased fish and wildlife educational efforts by the Extension Service.

We are enclosing a copy of the Memorandum of Agreement between the Fish and Wildlife Service, DOI, and the Extension Service, USDA. You will note that the objective of the Agreement is to provide for a closer working relationship between the two agencies. Concurrently, we feel that this arrangement will enable a more effective use of research information and technical assistance from the Fish and Wildlife Service. It is felt that, through this arrangement, it will be possible to resolve the discrepancies existing at the local level.

In addition, the Extension Service, USDA, is in the process of filling the position for a full-time Fish and Wildlife Specialist thus enabling a more effective coordination, not only with the Fish and Wildlife Service, but with the State Cooperative Extension Wildlife specialists as well. This will also fulfill another aspect of your concern, that of providing a vehicle for the communications of local feelings to the policymakers in both USDA and DOI.

Again, our thanks for your expressed interest and support for this effort.

Sincerely,

M. RUPERT CUTLER,
Assistant Secretary for Conservation, Research and Education.

MEMORANDUM OF AGREEMENT BETWEEN THE FISH AND WILDLIFE SERVICE, U.S. DEPARTMENT OF THE INTERIOR, AND THE EXTENSION SERVICE, U.S. DEPARTMENT OF AGRICULTURE

I. Purpose—

The purpose of this agreement is to establish policies and administrative arrangements that will provide for a working relationship between the Fish and Wildlife Service, U.S. Department of the Interior, and the Extension Service, U.S. Department of Agriculture, to provide more effective procedures for planning, coordinating, and developing fish and wildlife extension services of mutual interest for the benefit of the Nation.

II. Background and authorities—

The Fish and Wildlife Service, U.S. Department of the Interior, is charged with the responsibility for carrying out programs relating to fish and wildlife throughout the Nation, in accordance with the Fish and Wildlife Coordination Act (16 U.S.C. 661–667e), as amended; the Fish and Wildlife Act of 1956 (16 U.S.C. 742(a)–754), as amended; and with other authorities.

The Extension Service engages in extension work pursuant to the Smith-Lever Act, as amended (7 U.S.C. 341–349), to aid in diffusing among the people of the United States useful and practical information on subjects relating to agriculture and home economics.

Many programs conducted by the Fish and Wildlife Service and the Extension Service include the dissemination of useful and practical information of mutual interest to both agencies. Accordingly, cooperation and coordinated efforts in the conduct of such programs will be mutually beneficial and will avoid needless and duplicative efforts.

III. Responsibilities of agencies—

A. Pursuant to this agreement, the Fish and Wildlife Service will:

1. Provide technical assistance on fish and wildlife matters to the Cooperative Extension Services.

2. Make its published information available to the Cooperative Extension Services.

3. Cooperate with Extension Service in the design, development, and support of educational programs and materials through which the useful and practical information generated by the Fish and Wildlife Service may be disseminated to the people of the United States through interested State Cooperative Extension Services.

4. Cooperate with Extension Service in the preparation of educational materials that may be used by Cooperative Extension staffs on a national, regional, state, or local basis.

5. Keep Extension Service informed on the status of Fish and Wildlife Service national and regional objectives.

B. Pursuant to this agreement, Extension Service will:

1. Cooperate with Fish and Wildlife Service in the design of appropriate educational programs and materials for dissemination to the people of the United States through interested State Cooperative Extension Services.

2. Provide channels of communication and distribution to the State Cooperative Extension Services for information relating to such educational programs.

3. Coordinate with Fish and Wildlife Service in the development and conduct of fish and wildlife programs.

4. Encourage effective involvement of state fish and wildlife agencies in Extension and Fish and Wildlife programs.

5. Provide feedback and information from State Extension Services to Fish and Wildlife Service of current information on fish and wildlife problems and to assist the Fish and Wildlife Service in evaluating the cooperative programs in developing new programs of mutual interest.

IV. Programming, budgeting, and reimbursement arrangements—

This agreement is not a fiscal or funds-obligating document. Any joint endeavors involving reimbursement or transfer of funds between the parties to this agreement will be handled in accordance with prescribed financial procedures, and will be the subject of subsidiary agreements that shall be effected in writing by representatives of both parties to this agreement.

V. Public affairs/press liaison—

Releases to the press, public announcements and communication with the Congress concerning joint programs can be made by either party to this agreement following coordination by representatives of each party. Credit will be given to the Fish and Wildlife Service and Extension Service interests as appropriate.

VI. Amendments and review—

This agreement will be reviewed periodically but not less than annually. It may be subject to reconsideration at such other times as may be required and as agreed to by the parties to this agreement.

VII. Implementation—

Fish and Wildlife Service and Extension Service will assign senior staff to serve in a liaison capacity to satisfy requirements of this agreement.

VIII. Terms of the agreement—

This agreement will become effective upon the signature of both approving officials of the respective agencies entering into this agreement.

The terms of this agreement will remain in effect until terminated by (1) mutual agreement, or (2) ninety-day advance written notice by either party.

IX. This Memorandum of Agreement supersedes the previous Memorandum of Understanding executed in July of 1970.

FOR THE RECORD

HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. BROOMFIELD. Mr. Speaker, on July 18, the House voted during roll No. 432, to agree to the Conference Report on H.R. 7556, making appropriations for 1978 to State, Justice, Commerce, and Judiciary.

Although I was present and voted "Aye," I am recorded as not voting.

Mr. Speaker, I ask that the record reflect that if my vote on roll No. 432 had been recorded, it would have been in agreement to the Conference Report on H.R. 7556.

RENEGOTIATION REFORM ACT

HON. JOSEPH G. MINISH

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. MINISH. Mr. Speaker, since the House will consider the Renegotiation Reform Act (H.R. 5959) in the near future, I want to share with my colleagues the testimony of the distinguished chairman of the House Government Operations Committee on this legislation. Chairman JACK BROOKS has done outstanding work on renegotiation and is one of the foremost experts on this subject in the Congress of the United States.

Mr. BROOKS' testimony follows:

STATEMENT OF HON. JACK BROOKS, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF TEXAS AND CHAIRMAN OF THE HOUSE COMMITTEE ON GOVERNMENT OPERATIONS

Thank you very much, Mr. Chairman, for inviting me to appear here today.

I want to commend you and the subcommittee for your efforts to strengthen the Renegotiation Board and make it more effective. This legislation will help to do that. I supported it in the last Congress. Regretfully, it cleared only the House and not the Senate.

I am pleased to be a cosponsor of it again this year.

It is a pretty good indication that we are on the right track with this bill from the way that the defense industry and its friends, all the subcontractors, of course, are carrying on in opposition to it. They wouldn't be trying so hard to have the Board abolished if it were going to be the same old paper tiger that they have been dealing with all these years. The old paper, toothless tiger.

Now, there isn't much they have to worry about when they can lump the profits of all their products together so that the fat ones don't show. With all the exemptions they can take, it is easy to stay outside the whole renegotiation process. In most years, none of the 100 largest defense contractors must renegotiate their profits.

The odds are pretty good that you won't be touched at all.

Now, even those that do have to go through the process don't usually find it too painful. A study by the Joint Committee on Internal Revenue Taxation a few years ago found that of 131 firms that were determined to have pocketed excessive profits, and had to give some back, 94 of those had after-refund profits of over 50 percent of net worth.

Forty-nine of them made profits over 100 percent of net worth, and four made over 500-percent profit of their net worth.

Now, that is after this terrible, mean, old, arbitrary Board had worked them over so badly.

Now, that is like going to the dentist expecting to have some teeth pulled and winding up in a massage parlor. [Laughter.]

It should be a lot different under our bill, the requirement for reporting profits by product line, the repeal of the oil and gas well exemption, the narrowing of the commercial articles exemption, and the change in the methods of accounting should lead to much more accurate reporting of a contractor's profits. That is all going to help, but the real key to making the Board more effective, in my opinion, is to give it the resources to make the best use of any broader authority.

Part of that can be accomplished through a better organization of the Board. I believe our bill provides that. Making the Chairman the chief executive officer, providing the members with fixed terms, giving the Board subpena power, these are bound to improve the Board's performance.

An absolutely essential need, however, is to increase the size of the staff of the Renegotiation Board. I understand it is now down to somewhere around 177, where just a few years ago we conducted oversight hearings in the Government Operations Committee and it was 232. I thought that was too low. You just cannot handle 3,000 or 4,000 filings totaling $40 billion each year with that few people. They fall further behind each year, and I understand that the backlog awaiting process is now around $90 billion, and because of the lack of staff, the great bulk of filings are never even assigned to a regional officer for processing. They are just passed over.

So, besides enacting this kind of legislation, we need to follow up and be sure there is enough in the budget and appropriations bill to enable the Board to hire people it needs to properly do this job.

I would like to make one more point I understand you are being asked to amend the bill to limit renegotiation to sole source contracts, the idea being that if there has been competitive bidding on a contract the Government would not have to worry about profiteering.

I would just like to tell you about a couple of contracts that our Committee on Government Operations looked into that were awarded in competitive bidding.

In one, the company getting the contract bid $528 a unit for some 5,500 mobile field radios. After the initial batch was delivered, the contract was simply amended, and 5,500 more radios were sold at prices ranging from $570 to $870. In fact, the $528 bid that won the award was $150 below the actual cost of production to that company. It was simply a buy-in to get the contract, and nevertheless, it would technically qualify as a competitively awarded contract, and thereby escape renegotiation.

Another contract we looked into for flight control communications equipment involved a rebid and a company that had been high the first time came in about $10 million lower and got the bid at around $78 million.

Then, through change orders and negotiations it jacked up the total price by $25 million.

When they reached a draw of $102 million, and still had not delivered a workable product, the contract was at long last, belatedly, but thank God, terminated.

So with the ability to amend and change Government contracts, the bidding process is no surefire protection against excess profits and no reason whatsoever to avoid renegotiation if you honestly want to protect the public interest.

Now, Mr. Chairman, I certainly support the right of manufacturers to make a reasonable profit on their Government contracts. The renegotiation process, however, should serve as a check on those few who would abuse the public treasury. With the appointment of Goodwin Chase and Harry VanCleeve and Bill McQuillen as members of the Board, the President has indicated his intention to make the Board function once again.

I hope you will reject efforts to abolish the Board and instead will give it the tools it needs to become a meaningful and effective Government entity.

I commend you for your efforts.

ACTIVE AMERICANS OVER 65

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. BIAGGI. Mr. Speaker, on Monday July 11, I chaired a hearing of the House Select Committee on Aging in New York. The hearing spotlighted a diverse and distinguished group of active Americans over 65 as a means of developing support for legislation to abolish mandatory retirement.

The committee received testimony from some 10 witnesses including Hon. Paul O'Dwyer, president of the New York City Council, Gabe Paul, president New York Yankees, Ms. Penny Singleton, director, American Guild of Variety Artists.

The predominant theme presented in testimonies was that mandatory retirement is unfair and unjust. Mr. Paul stated that the proper criteria for retirement should be performance, not age. Ms. Singleton strongly and eloquently opposed mandatory retirement. "Retirement should be voluntary" she stated "because people have enough common sense to know when they should retire."

One of the most interesting testimonies was presented by Mr. Ralph Destino, president of Cartier's, Inc. Mr. Destino pointed to the fact that many of his most expert jewelers were over the age of 65 and in some cases even over the age of 75. As an example he brought with him a $10,000 watch made by a 78-year-old watchmaker.

The main purpose of the hearing was to develop arguments against mandatory retirement and support for H.R. 5383 the main legislation calling for its abolition. The bill which abolishes mandatory retirement in the Federal Government and raises the retirement age to 70 in the private sector was reported favorably last week by the House Education and Labor Committee.

The comments of many of the witnesses were revealing in that most who were asked what they would do if they retired replied that they either did not know, or that they would seek part time work. Not only do Americans not want to retire, they simply are unprepared economically and socially for retirement.

Mandatory retirement is based on a fallacy that age determines ability. It is discrimination of the highest order.

It is my hope that the hearings will play a significant role in gaining full congressional approval of H.R. 5383. For the benefit of my colleagues I now wish to insert my opening statement delivered at the hearing as well as the testimony of Paul O'Dwyer.

STATEMENT OF MARIO BIAGGI, ACTIVE AMERICANS OVER 65—A CASE AGAINST MANDATORY RETIREMENT

I am pleased to chair the Select Committee on Aging's hearing his morning entitled

"Active Americans over 65—A Case Against Mandatory Retirement". This is the second in a series of hearings which the Committee has conducted on behalf of this issue. The Committee has made the passage of legislation to abolish mandatory retirement its primary goal in the 95th Congress.

As Chairman of the Subcommittee on Federal, State and Community Services of the Select Committee on Aging, I have long been opposed to forced retirement and believe its elimination to be vital to the well being of our nation's senior citizens.

I am opposed to mandatory retirement for several reasons. It is based on the fallacy that age determines one's capability to do a good job. In addition, mandatory retirement can cause unnecessary financial hardships, it is discriminatory and it has been proven that it is not good for either the individual or the economy.

The American people have expressed their opposition to mandatory retirement. A recent Harris poll reports that 86% of the persons polled feel that no one should be forced to retire because of age if that person wants to continue to work and is able to do a good job. In April of this, year the elimination of mandatory retirement was tested at the polls. A referendum for the elimination of mandatory retirement for City employees of Los Angeles was passed by 58.2%. To date, 13 states have passed laws prohibiting mandatory retirement in the public and private sectors. In addition, the New York State Assembly recently passed legislation to eliminate mandatory retirement in both the public and private sectors.

Major progress toward enactment on the federal level was achieved on June 28, 1977, when the Subcommittee on Economic Opportunities of the House Education and Labor passed legislation which bans mandatory retirement from the private sector before the age of 70 and eliminates it entirely for civil service employees. I am fortunate to serve on the full House Education and Labor Committee and will make every effort to see that the full Committee acts favorably on the measure. Its prospects for full House approval are good.

Each day 5,000 people in this country reach the age of 65. It is an arbitrary age at which many are forced to retire, although there is no evidence that this is an age at which one becomes incapable of functioning in the work force.

Many of our witnesses here today represent not only all walks of life but, more importantly, they represent visible proof against mandatory retirement. Our witnesses have not had the doors of employment close on them at 65. They have dispelled the myth that age determines ability they are proud of their continuing contribution.

Mandatory retirement is wrong from an economic, social and personal standpoint.

For the individual, forced retirement can be traumatic and cause financial hardships. The American Medical Association tells us that forcing people to retire, when they are capable of working accelerates the aging process and is a direct threat to the health and life expectancy of the persons affected. Part of the reason for the difficult transformation from employment to retirement is due to a lack of an overall retirement plan for the elderly of this nation.

It is simply too expensive for the average person to retire. The financial hardships mandatory retirement causes are unnecessary. The median income of the typical retired worker is lower than preretirement earnings by almost one half. With the soaring cost of living these days, it is impossible to make ends meet on a fixed retirement income. Today almost one half of our elderly citizens live at or below the poverty line.

For the economy of a particular business, mandatory retirement is unwise. A report by the Conference Board, after examining the retirement policies of 800 companies, concluded that those companies requiring mandatory retirement are increasing costs for the company. The report also cited the mandatory retirement was creating numerous financial, medical and social problems for those forced to retire. It has been proven that older employees have a better attendance record and that older employees do not change jobs as much.

From a national economical standpoint mandatory retirement is unsound. The future of the Social Security System is a major economic problem this country must confront. I have proposed on numerous occasions that the President consider the elimination of mandatory retirement as an element of his proposal to preserve the fiscally beleagured Social Security System.

For the first time in its 40 year history, the Social Security System faces the threat of going broke. The system is currently paying more in benefits than it receives in payroll tax revenues. Projections indicate that if this trend continues, the Social Security trust fund will run out in the early 1980's.

The relationship between mandatory retirement and the future of the Social Security System is simple. Forced retirement imposes an unnecessary expense on the Social Security System, an expense which the System cannot afford.

As older workers are forced to retire, they tax an already strained Social Security System. Social Security benefits are financed by payroll taxes contributed by employees, employers and the self employed. Declining birth rates, coupled with increasing retirement rates, have resulted in less workers supporting the system. A few years ago, the ratio of workers to Social Security beneficiaries was 4 to 1; today the ratio is 3.2 to 1; by the year 2030, the ratio will approach 2 to 1.

The abolishment of mandatory retirement would alleviate this lopsided ratio by permitting workers to continue contributing to the system instead of merely taking from it.

A survey conducted by the Social Security Administration found that 52% of the males who were forced to retire under mandatory retirement did not want to do so at that time. Ideally, these persons should have been permitted to remain in the work force, paying Social Security taxes, rather than forced to join the retirement ranks, collecting cash benefits.

A national poll commissioned by the National Council on Aging shows that there are approximately 4 million Americans over the age of 65 who would work if they had a job. With 90% of the persons over 65 on the Social Security beneficiary roles, it is safe to assume that many of these 4 million persons are Social Security recipients who want to, and should be able to, contribute to the system rather than draw from it.

The abolishment of mandatory retirement would have obvious financial benefits on the future of the Social Security System. This proposal is gaining support. For example, Hobart Rowan, Financial Editor of the Washington Post, in an editorial entitled "Must the Elderly be Forced to Retire?" stated:

"It is clear that under present rule, with an aging population, the percentage of people paying into the Social Security System, compared with those taking the money out, will decline dramatically. More money is going to have to put into the system. One way of easing that burden on corporate and individual taxpayers is to encourage people to stay on the job longer, instead of severing them as the calendar ticks off their 65th birthday."

Its human benefits would be equally compelling. Compulsory retirement violates the basic principles of democracy which this nation cherishes. Many elderly Americans are willing and able to continue working. They should be allowed to. This nation prides itself as a leader in the fight for self-determination for peoples of foreign nations. We should insure that our own elderly citizens also have the right of self-determination with respect to employment and their economic security.

STATEMENT BY CITY COUNCIL PRESIDENT, PAUL O'DWYER, BEFORE THE HOUSE SELECT COMMITTEE ON AGING

Congressman Biaggi, members of the Select Committee on Aging, I am pleased to have this opportunity to come before you today to state my views on the question of mandatory retirement.

First, for the record, I would like to commend the work of this Committee in seeking legislation to end discrimination on the basis of age. The criterion should be capacity to do the job, and to do it well. The man who has worked at a lathe and has done it proficiently for a lifetime is in a position to pass along his skill to a neophite. The compulsory retirement of such a man removes his special talent from an industrial society. Apart from the injury done to the individual, we have hastened the day when his or her capacity to function shall have been threatened. That may affect the quality of a product.

The City of New York must bear its share of the blame for contributing to this shame. Last year it was used rather hysterically, I thought, when it was found necessary to reduce our work force and the plan to drop many of our elder workers from the payroll was proposed with callous disregard for the rights of the City's most productive, most experienced and most dedicated employees.

But I do not wish to dwell on the lack of sensitivity which such a rule implies. I am sure these aspects of the problem will be adequately dealt with by others during these hearings. One thing is clear, however. Setting limits to employment based on age factor alone is discriminatory.

The history of any form of discrimination establishes that its tendency is to expand.

Parenthetically, I want to point out the inconsistency of such a law which is out of step with the New York Supreme Court where a judge may serve up to the age of 76, and Federal Court judges, including Justices of the United States Supreme Court, may serve without limitation as to age.

It is obvious that there can be no special magic about the age 65, in its relationship to employment. Why not 64 or 66? It was an arbitrary decision made by someone and others followed blindly. It cannot be logically argued that all those who have reached that stage in life are a detriment to professions, to industry or to the arts. If 65 is the age selected for enforced retirement, will not the same argument in time be applied to 62 and 60, and I have heard talk of 55 as the appropriate time to enforce citizens into a state of idleness.

Truly the middle-aged are the most vulnerable part of our working force. The efficiency expert knows he can save money by eliminating the forty-year-old and replacing him or her with a younger worker who has not yet acquired family obligations and therefore can work for less.

When we begin to tell the country how desirable it is from a financial viewpoint to eliminate those over 65 from the work force, we are moving in the direction which must affect middle-aged people. That can be disasterous to family life.

Our general hiring practices are affected by this insidious approach as we focus on the age of our workers. For instance, it is a fact that the insurance arrangements and pension plans and the cost of health benefits make hiring those who have reached their

fortieth birthday all the more difficult for union and management alike. When we speak about age in relationship to work we have moved into dangerous waters and the 65 mark is, to use a cliche, 'but the tip of the iceberg'.

Furthermore, we may not in good conscience cure or ameliorate our unemployment problems at the expense of any one segment of our society. And it is obscene when such a rule does violence to those who during a lifetime have paid our taxes, supported our institutions—yes—and even fought our wars.

In the long run, it is our nation as a whole which is the loser when we fritter away the skills, the experience and the wisdom of those who can continue to make a valuable contribution to life.

Men and women who have acquired and used the art of production in a highly industrialized world gave our country its preeminence. We should hesitate to tamper with customs and practices which have been so helpful in the development of our nation. Again, let me congratulate you in probing the facts which we hope will be the basis for remedial legislation in this important area.

JACKIE ROBINSON: AN INSPIRATION FOR ALL AMERICANS

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. RANGEL. Mr. Speaker, this evening at Yankee Stadium, professional baseball and baseball fans will pay tribute to Jack Roosevelt Robinson. The tribute was organized through the efforts of the Jackie Robinson Foundation and is scheduled for the pregame activities of the annual all-star game.

Much of his life was centered around the struggle for racial equality and human rights. He was an admirable person who bore the insults of players and fans alike with dignity. His persistence and grace under these adverse conditions were an inspiration and won the hearts of all Americans.

This past Sunday an article by Pee Wee Reese, the Brooklyn Dodger shortstop when Jackie Robinson came to the major leagues, appeared in the New York Times. Their friendship was unique and grew from a deep respect and admiration which grew from their contact both on and off the playing field. No tribute to this great ballplayer and man is adequate, but Mr. Reese's comes from one who knew Mr. Robinson about as well as two humans can. The text of his article follows:

ARTICLE BY PEE WEE REESE

It was October, maybe November, in 1945 and I was on a Navy transport ship coming back from overseas, from Guam. I'd played shortstop for the Brooklyn Dodgers for three seasons, then into the Navy "for the duration," as they used to say during the war. Now I was finally coming home, and somebody on board told me that the Dodgers had signed a black ballplayer. And that was the first time I can remember being aware of Jackie Robinson's arrival on the baseball scene.

Actually, I had heard of Jack before—as a football player at U.C.L.A. But now when his name came up in a baseball context, I didn't give it a whole lot of thought. You know, I reacted kind of instinctively to the news, something like "You've got to be kidding," because the color line was still keeping black players out of the major leagues.

But, except for that initial reaction, I didn't give it too much thought. I had been away for three years and was more concerned at the moment with getting myself back to work. Then I realized that Robinson could run and hit and play shortstop, and some of the guys started kidding me about my job. Welcome home, Pee Wee.

AWFULLY BIG, AWFULLY FAST

After that, it was more than a year before I saw him in a baseball uniform—a year that Jackie spent at Montreal in the International League and that I spent in Brooklyn with the Dodgers. Then in spring training in 1947, we had our camp in Santo Domingo in the Dominican Republic that year, and I finally got my first look at him. What was my first impression? That he was big, awfully big. And fast, awfully fast.

Anyway, Jack was there that year; and, once we realized he was there to stay, I began to realize that there were more problems facing him than I'd thought at first.

One thing I remember was the petition some guys passed around. But I wouldn't sign it. I wasn't trying to think of myself as being the Great White Father, really, I just wanted to play the game, especially after being in the Navy for three years and needing the money, and it didn't matter to me whether he was black or green, he had a right to be there, too.

Then you'd hear a lot of insults from the opposing benches during games, guys calling him things like "nigger" and "watermelon-eater," trying to rile him. But that was when Jackie Robinson started to turn the tables: You saw how he stood there at the plate and dared them to hit him with the ball, and you began to put yourself in his shoes. You'd think of yourself trying to break into the black leagues, maybe, and what it would be like—and I know that I couldn't have done it.

In a word, he was winning respect.

ALL KINDS OF CLASS

That was the decisive thing about Jack: He had all kinds of class. That's the reason he was selected by Branch Rickey, and that's the best way to remember him. And right there, now that they're honoring his memory and his impact on baseball at this year's All-Star Game, you have the key to it all—if he hadn't "made" it, the black movement would have probably been set back several years. It still would have happened, but it would have taken longer.

Playing alongside him for so many years—10 years, actually, until the Dodgers left town after the 1957 season—I realized his impact in other ways. For one thing, he was one of the best pressure players I ever saw and he became instrumental in those Dodger pennants because of it. The old saying applied to him perfectly—"When the going gets tough, the tough get going." And when the chips were down, he was at his best. So after a while, I didn't pay the slightest attention of his being black. At first, he'd been a big black guy who came into a white man's game. But after two or three years, with all that class and talent, he was just a great ballplayer alongside me.

He had a big impact on all the Dodgers, too. In Birmingham and some other Southern towns, traveling up from Florida, it was rough. Even during the season, I remember we got to St. Louis for a series, and that might've been the last place in the league where the black players were segregated, where they stayed in one hotel in the black section and the other guys stayed in the regular hotel.

GETS THE JOB DONE

Jack got off the train one day there and said, "I'm going to the hotel with you." Roy Campanella and some of the other black guys told him not to do it, they said they were doing O.K. and so don't rock the boat. But Jackie joined us on the team bus, went right into the hotel and registered, and Campy and the others followed. That was Jack—he got the job done.

Finally, Jack had a big impact on me personally. We had many conversations about things, and I'd ask: "Do you think blacks and whites will ever get along smoothly?" And he'd say: "Yes, it'll work, give it some time."

I used to say to him later: "You know, I didn't particularly go out of my way just to be nice to you." And Jack would say: "Pee Wee, maybe that's what I appreciated most—that you didn't.

As a ballplayer? Super. Jack was super. For a guy his size, well over 6 feet and maybe 215 pounds, he had the quickness of a guy 5 foot 10. In a rundown, you couldn't run him down. I don't know how many bases he would have stolen if our club ran more. I led the league with 7 steals one year, but mostly we depended on power. And he didn't have the greatest arm in the world, but making the double play, he'd straddle the bag and dare you to hit him.

For all that, he was a fun guy. Sure, he could be a little nasty at times, but who couldn't? I never saw him take a drink in my life. He was just a great friend, a great baseball player and a great influence on our lives—a lot greater than I ever could have guessed that day on the ship coming home from Guam when somebody told me the Dodgers had signed a black ballplayer.

FEDERAL ATTRITION TIMETABLE

HON. CARL D. PURSELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. PURSELL. Mr. Speaker, throughout the past several years, we have consistently heard criticism of our inflated bureaucracy, listened to cries against increased Government control, and watched the growing frustration among our citizens as the Government seems to become more distant and abstract to them with each passing day. While we have many fine, hard-working civil servants, we also have room for improvement in productivity. We have all experienced the inefficiency of the bureaucratic system, and we are well aware of its high costs. Our constituents tell us of long delays in replying to requests, arbitrary and conflicting rulings, and the entangled mass of regulations which few ever understand.

While our leaders express the thoughts of the people on this issue, and advocate reform, few sound and extensive solutions have been offered to deal with the problem. By 1974, the American bureaucracy—at the Federal, State, and local levels—had grown to 14.5 million civilian workers. In effect, one out of every six American workers were on the public payroll.

The problems of our mushrooming bureaucracy are very real and must be dealt with immediately if we are ever to solve them. Reorganizing this tangled web will not control its increasing size. It is time that the unchecked growth which must be curtailed. My studies have convinced me that we can increase productivity

sufficiently to continue essential services to our citizens, without enlarging our bureaucracy any further.

Therefore, today I am introducing legislation to provide for a reduction in the number of Federal employees through voluntary attrition. Attrition, wherein positions which become vacant because of retirement, resignation, removal or death are simply not filled, is generaly viewed to be the least disruptive means of achieving across-the-board reductions in the numbers of Federal employees.

This method has already been proven successful in the past few years. In 1969, the President ordered a reduction in Federal civilian employment through attrition which led to a workforce drop from 3,076,414 in 1969 to 2,981,574 in 1970. In 1974, a further reduction of 37,400 was ordered.

My bill sets a goal of a total reduction of 10 percent across-the-board within 5 years, at a rate of 2 percent a year, and maintains that reduction. The only stated exemptions from the provisions of this bill are the armed forces, law enforcement officers, and firefighters.

In fiscal year 1976, there were 640,887 separations throughout the Federal Government, at a rate of 22 percent. While my bill is somewhat of a departure from standard congressional procedure in such matters, such a rate should allow considerable flexibility in achieving a 2-percent annual reduction in 5 years.

A bureaucracy is necessary to help implement the laws which we pass. However, an inflated, inefficient bureaucracy only serves to complicate and hinder the orderly functions of Government. We have exhausted all discussions on this issue—it is now time for decisive action to bring about solutions. I feel my legislation is a strong and equitable answer to the problem of our mushrooming bureaucracy.

"EXCLUSIONARY RULE"

HON. TOM HAGEDORN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. HAGEDORN. Mr. Speaker, one of the most indefensible remnants of criminal law fashioned by the Warren Court is the so-called exclusionary rule. The rule states that evidence obtained through means which are later determined to be unconstitutional shall be inadmissible in the courts, regardless of how inherently trustworthy the evidence otherwise is. Subtly, in recent years, the major objective of the American criminal justice system has evolved from pursuit of a fair trial to pursuit of a perfect trial—in the process insuring the attainment of neither. This is a process noted at greater length by Judge Macklen Fleming in his book "The Price of Perfect Justice." He observes that there are at least 26 separate stages of the judicial process at which a criminal defendant can make collateral attacks against the admissibility of evidence. The trustworthiness of the evidence is irrelevant at each of these stages.

The Supreme Court has explicitly stated that the "exclusionary rule" is not of constitutional origin, but is simply the best that the Court can come up with. If we are to restore a modicum of sense to our criminal justice system, I believe that we must insure that all relevant evidence should be considered in the determination of criminal guilt or innocence. Fourth amendment guarantees can be protected in better ways, such as direct penalties against jurisdictions whose law enforcement officers violate these guarantees, or perhaps by some formula for at least balancing the gravity of the constitutional violation with the value of the obtained evidence. An otherwise culpable individual should not be released to prey on society simply because of an error in judgment by the constable.

I would like to call to the attention of my colleagues an excellent article on the subject of the "exclusionary rule" by Judge Albert M. Rosenblatt and Julia Carlson Rosenblatt from Harper's Magazine:

A LEGAL HOUSE OF CARDS

(By Albert M. Rosenblatt and Julia Carlson Rosenblatt)

Now and again it is heard that the American criminal has a monopoly on the United States Constitution. Day after day, the public sees the guilty set free through legal procedures which they do not understand, but which, they are told, have something to do with someone's constitutional rights having been violated.

At its basis, the Constitution is blind to differences between people. Its protections, including the Fourth Amendment's guarantee against unreasonable searches, apply to the young, the old, the poor, the rich, the honest, the wicked. But things have taken a curious turn. In order to see to it that the Fourth Amendment is honored, the United States Supreme Court has decreed that anyone caught with incriminating evidence is authorized (and, increasingly, expected) to cry out that the evidence not be used against him because he was unlawfully searched. The trial court must entertain the claim even though the claimant may be undeniably guilty. Evidence obtained unlawfully must be thrown out, and this is the essence of the exclusionary rule.

The doctrine was first promulgated in federal courts and then expanded by the Warren Court in 1961 to embrace every state and local criminal court in the land. It was heralded as the enlightened solution; it was repudiated in England; it is unique among the nations of the world. It does not work.

In a free society, the government owes its citizens freedom from crime as well as freedom from governmental intrusion. Both criminal activity and police power threaten individual liberty, and the balance between the two is delicate. It was thought that occasionally releasing a lawbreaker—a short-term injustice—would bring about the higher justice of balance between these opposing forces. It has not.

The exclusionary rule was born out of concern for citizens' right to privacy, according to the theory that an errant police officer is "punished" by being made to stand by, helplessly, and watch his catch thrown back into the sea. The rule forbids the use of any evidence obtained by police who violate constitutional standards, according to the interpretations of the Supreme Court and lesser judiciary. The tainted evidence, however reliable it may be, is "suppressed" from prosecutorial use, so that, in most cases, guilt, though acknowledged, my not be proved. There is a concrete physical reality about a machine gun, a corpse, or a kilo of heroin. Yet in countless prosecutions tangible evidence is routinely excluded, in furtherance of the belief that through suppression of an ill-gotten truth a higher truth will emerge, in the form of a more nearly perfect legal system.

Ironically, if the police search someone unlawfully and turn up nothing, the victim of the search finds no solace in the exclusionary rule. A law-abiding citizen, harassed by unreasonable intrusions, cannot redress his grievance through the suppression of evidence, for there is none. Whether or not the scale has actually tipped in favor of the criminal, that is the way many people perceive it.

Americans increasingly feel under siege, with too many remaining fearful behind locked doors. Few if any citizens, however, would trade the fear of going out at night for the dread of the midnight knock on the door from the police. Although we may seem to be a long way from the police state, we must be ever mindful of the danger. The exclusionary rule was designed to keep such oppression at bay.

Let us look at the rule in action: police officers, on patrol, see two masked men flee from a jewelry store in an unidentified late model, light-colored car. The officers approach the premises and see the proprietor on the floor, bound and shot dead, his display case ransacked. No witnesses. Several hours later, in a neighboring town, other police alerted to the crime see two men traveling a little too slowly in a light-colored car. They stop the car and inquire. The answers are unhelpful. With only their intuition to reply upon, the policemen search the car and find the stolen merchandise, the murder weapon, and the masks. Arrested, confronted, and told of their rights, the suspects confess to robbery and to murder.

Nevertheless, they will go free. The search, despite its empirical success, would be held unconstitutional in the opinion of most American courts. No evidence resulting from it could be used against the criminals. The inexact suspicion of a police officer, however validated, is no proper yardstick. No search may ever be justified by what it turns up. The confessions, too, must be ignored, for they were the product of an improper arrest and a confrontation with "illegally seized evidence."

As another example, Singer tells the police that Moran has a stolen revolver hidden in his apartment. The police get a court-ordered search warrant and seize the gun exactly where Singer said it was. This sort of thing is routine, but often, in spite of the correctness of the information on which the warrant was based, the warrant will be struck down and the evidence excluded, if the warrant is signed without "probable cause." This means enough proof to convince a reasonable person that the criminal evidence is at the place to be searched. If, in presenting the proof to the magistrate, the police omit mention of how Singer knew he was right, the search will be nullified.

The paradox of the exclusionary rule was described sardonically by the late John Wigmore, dean of the Northwestern University Law School and the author of the leading treatises on the law of evidence: "Our way of supporting the Constitution is not to strike at the police officer who breaks it but to let off somebody else who broke something else."

We cannot say that the rule was imposed upon the states in order to convert irrationality into a national policy, nor can we say that it has served no purpose. That it has turned out rather badly is not a strike against the Warren Court so much as it is an outgrowth of implications which were not then foreseen. Perhaps they should have been; the Court was warned by some of its

own dissenters, but the misstep occurred in the launching of a social experiment—bold and noble as it was—which did not fully take into account the disinclinations of both police and criminals to be deterred by hollow threats.

Deterrence by punishment is experienced in all forms of human endeavor. A child is warned not to play with fire. He tries, experiences pain, then desists. If anyone is to be deterred from doing anything—the police from misbehavior or the criminal from his crime—the punishment must be swift and certain, as well as sufficiently painful to counterbalance the more immediate reward of the proscribed act.

Applying the deterrence hypothesis, the Court thought that release of a criminal was a sufficiently painful consequences of an illegal search. But the punishment imposed by the release of a mugger does not jolt the police so much as it does the next victim. The cop's hand is not burned by the fire; his palm is slightly singed as the candle is extinguished and the room darkened. The simple truth is that police brass rarely punish or otherwise discipline officers who are, to their way of thinking, guilty only of high-minded exuberance. With the quarry sacrificed, they feel that the disappointed policeman should not be set back further, but, if anything, consoled or promoted for his thwarted civic efforts. The disposition of the case matters, but is not, typically, the ultimate police criterion. It is the arrest and the maintenance of police professional standards that count for respect and advancement. If the courts want to throw out cases—well, that's their business.

With supreme irony, those who pooh-pooh the deterrent effect of punishment on criminal activity are the first to exalt it as a device to curb police misconduct. But if the threat of prison does not deter thieves, how may police misconduct be stemmed by such impersonal penalties as the judicial dismissal of cases? Both failures have a point in common: the sanction is either absent or blunted (in the case of the police) or, in the case of criminals, delayed, diminished, or denied.

DELAYED

Constitutional exclusionary battles involve judges in the adjudication of pretrial contests which have nothing whatever to do with guilt or innocence. Guilt is assumed. The defense attorney exhorts the court to throw out a case solely because it is composed of incriminating evidence claimed to have been improperly taken from his client's pocket, house, or car. Hours, days, and sometimes weeks may be spent on even one such claim. Court calendars are bloated with hearings arising out of an obsession with procedure in which guilt or innocence is irrelevant; for the exclusionary rule excludes, of all things, the truth itself.

DIMINISHED

Unsure of the unassailability of a search warrant, of the legality of a search, or of the truthfulness of its avowed circumstances, the prosecutor often finds it expedient to bargain with the defense despite unerring proof of guilt. The police seize an illegally possessed gun; when the defendant claims it, he gets a discount in culpability because there is a legal shadow over the seizure.

DENIED

If the shadow is too long, the proof is suppressed entirely under the rule.

Of course, offenders are sometimes caught and jailed. Yet, the rule operates even for them with freakish inconsistency. Bumble and Dodger are caught committing a burglary. Bumble goes to prison because his conviction is somehow free of constitutional or legal flaws. Dodger is luckier; he is sprung by the exclusionary rule. From the viewpoint of the two, there is much to be learned from this. One would like to think that a potential offender perceives some cause and effect between crime and punishment: the teachings of deterrence. But that is by no means the lesson learned by the participants or by the person contemplating a life of crime. The inescapable conclusion is that going to jail has less to do with getting caught than with the fastidiousness of some murky and incomprehensible courtroom procedures.

While intended to curb abuse of police power, the exclusionary rule has opened up a whole new field of police misconduct: perjury. Police officers who testify at suppression hearings have sometimes shown a remarkable facility for adjusting facts to fit the court's constitutional sensibilities. The bad cop, knowing that he acted arbitrarily in pulling the heroin out of his target's pocket, testifies that in fact no search was conducted but that the defendant "dropped" the drugs to the ground when approached. "Dropsy" is a bastard legal phenomenon born of cynicism, and growing in importance with each triumph. Occasionally, however, there is a true dropsy case. To the callous prosecutor, there is no need to differentiate; to the virtuous prosecutor, it is an added quandary.

Moreover, the rule has tarnished the reputation of the conscientious, honest policeman in the eyes of the public, while eroding self-respect within the profession. In most criminal cases there are now, so to speak, two accused: the defendant and the police. To have every move—especially those taken in good faith—challenged, examined, and often condemned, creates incalculable damage to police morale and to public perceptions of law enforcement.

Because the public does not fully understand the exclusionary rule, a victim will see only the outrageous release of his assailant, and may very well assume that someone was paid off. Either way, the ensuing anomie infects the public. With an air of resignation tinged with fear, the victim of crime acquiesces to his lot with scarcely a thought of recourse. "Why contribute interminable hours as a witness against a criminal?" he reasons. "He will only be right back on the street to take revenge." The victim slowly parts company with law enforcement; the cycle is compounded.

During the 1960s and early 1970s, difficult cases arose in which it became necessary to develop the rule with logic and consistency. While each extension of the irrational doctrine may have been internally consistent, the sum of the decisions was irrational—like the addition of floors, in perfect symmetry, to a house built on quicksand. Here is a sampling of further oddities, based upon actual decisions.

Skinner is charged with possession of a switchblade which the state police had, undeniably, found concealed on his person. He blames the police, testifying, at a pretrial suppression hearing, that they took it from him in violation of his constitutional rights. The court disagrees: he does not walk free but is put on trial, at which the prosecution must establish that the defendant had the weapon. The state's attorney is forbidden to so much as hint to the jury that Skinner himself swore that the police took it from his very person. At the jury trial Skinner does not testify and his attorney may successfully convince the jury that his client never had the knife.

Rust is arrested on a weapons charge. He is convicted. His guilt is not questioned by an appeals court, but it nonetheless overturns his conviction because it marks his lawyer incompetent for not challenging the means by which the police got the weapon.

Wedgewood pleads guilty to burglary, admitting a break-in and the theft of a revolver. On appeal, his conviction is reversed when a higher court finds that the police violated his rights in searching him and retrieving the stolen gun without prior justification. His plea of guilt does not bar his challenge or his release.

Enough. These are results which only legalists can fathom. And therein lies the rub. Surely a rule of such profound social dimensions should spring from something closer to social consensus than to judicial or legal dialectic. It is mistakenly assumed that these results are somehow mandated by the Constitution. The Fourth Amendment condemns unreasonable searches, but it does not decree that insult be added to injury, that the public be affronted first by the crime and then by the release of the acknowledged malefactor. Lacking an efficient legislative scheme by which citizens could be guaranteed their Fourth Amendment rights, the Supreme Court chose the exclusionary rule.

The extraordinary irony of that choice is that under the reasoning of the rule, the convictions of Skinner, Rust, and Wedgewood would be fully intact if the searches were conducted by any nonpolice member of the population. The rule does not sour the fruits of a private citizen's search; it blocks only those convictions which flow from bad police searches. Of course the citizen who searches another person risks both a lawsuit and a bloody nose, but the evidence he draws is at least permitted to be of some use.

All of this leads one to suggest that the question of police searches be reexamined. Naturally, there must be an institutionalized procedure of complaint and recompense for those whose privacy is unjustly shattered, but not if it allocates disproportionate windfalls to the guilty and nothing to the innocent.

At present, courts which routinely deal with challenges to search warrants are reluctant to release offenders who argue that the damning evidence was seized under a faulty warrant. In order to "save" the warrant which gave up a corpse, judges will sometimes engage in tortuous legal sophistry, while righteously suppressing the gram of marijuana seized under a comparably deficient warrant. The result is a jumble of precedents and standards not easily reconciled by a judge who must decide when to issue a particular search warrant. If the warrent is applied for and issued in good faith, the criminal should not be allowed to turn the results of a magistrate's understandable confusion into an escape hatch.

The exclusionary rule does not distinguish between blunder and malice. It should. If the police officer is wrong, if he lacks the legal savvy to guide him through the most arcane legal distinctions, his search will be aborted, just as though he acted out of the vilest motivations. It is not at all uncommon for an appellate court to divide, four to three, over whether a police officer was authorized to conduct a particular search without a warrant. The police officer has the unenviable duty of deciding, in the heat of the moment, whether his conduct will eventually be approved by the four or by the three. If he makes an educated choice that the court's majority does not prefer, he will be judged the "offender," and the criminal "the victim." The *level* of constitutional misconduct should have some place in these matters.

Cases may be imagined, to be sure, in which the behavior of the police is so contemptuous that exclusion of the ill-gotten evidence is a necessary sanction. But where the conduct is merely mistaken, we ought to compare our own legal practices with those of the rest of the world.

To recommend lifting the exclusionary rule is not to advocate eliminating safeguards against abuses of power. The choice should not be between repression and what we have now. Consideration of civil lawsuits against police agencies, with the awarding of money damages, raises the specter of the

medical malpractice morass, but a workable system may be fashioned. We can learn from the experiences of other eminently democratic countries, England and Canada for example, which use such a system. The solution will not be simple, but the time has come to seek a new way.

The exclusionary rule is, perhaps, the boldest experiment in enforcing civil liberties that has ever been launched. To have tried it is very much to our credit. To recognize that it is no longer tenable will be even more so.

SOME LESSONS FROM THE NEW YORK BLACKOUT BY WILLIAM SAFIRE

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. KEMP. Mr. Speaker, yesterday's column in the New York Times by William Safire is one of the most important analyses of the looting and rioting during the recent New York City blackout that I have seen in print.

Mr. Safire points out that the rampage of stealing cannot be explained either by the standard "liberal" answer that it resulted from economic deprivation, nor by the orthodox "conservative" answer that only stricter law enforcement would have prevented it. As Mr. Safire put it:

"People do not become a thieving mob because they cannot afford jewelry, booze or new couches. They do not refrain from stealing because of the pressure of glinting bayonets. They do not break the law because of signs in the sky or anti-establishment conspiracy theories.

"The looters looted because of the spreading non-ethic that stealing is O.K. if you can get away with it, as you usually can; that only a jerk passes up an opportunity to rip off his neighbor; that society not only owes you a living, but the good life."

Of course, it goes without saying that the looters have only hurt themselves in the long run—even though they may have escaped initial arrest. The shops and businesses that were destroyed will never be reopened, thereby depriving the community still further of needed jobs. This is the history of previous riots in Newark, Detroit, and Washington, D.C.

If lax law enforcement and economic deprivation cannot be considered adequate explanations for the looting, what can? Safire notes that poverty was greater during the previous blackout, yet no riots occurred. He notes that by and large the looters took toasters, not bread; liquor, rather than milk; and sport shirts for the sporty, instead of shoes for the shoeless. I have also noted news reports which showed that no bookstores were broken into, even though they stood in the middle of heavily looted areas. Of course, the very idea of looters stealing books during a riot would be absurd. They are not trying to fulfill some kind of genuine need, only get something for nothing.

Bill Safire goes on to say that this "something for nothing" philosophy is really just an extension of the "welfare rights" philosophy promulgated by Government, that welfare is a right to be expanded rather than a condition to be relieved and avoided. Likewise, a job is something to be provided by society, rather than something to be searched for and earned.

I frankly do not know what actually caused the looting and violence to arise so spontaneously when the lights went out. Nor do I know whether it would have helped to bring in the National Guard, though I suspect that it would. But I do believe that serious thought should be given to Government policies which promote the kind of attitude which makes looting and criminal behavior more likely, under conditions such as a blackout. As I have said, I believe that the welfare and tax system as it operates is a prime factor here. I hope it is reexamined before similar incidents reoccur and plague other cities.

Mr. Speaker, the real and lasting way to reduce poverty in New York and elsewhere is by lowering the tax rates and encouraging people in their own interest to choose work, production, and investment over nonwork and debt.

[From the New York Times, July 18, 1977]

CHRISTMAS IN JULY

(By William Safire)

In white letters on a black background, the headline of a New York Spanish newspaper, El Diario, demanded to know "POR QUE?" Why?

Why, when the city's lights went out, was there a billion-dollar orgy of looting and pillaging by tens of thousands of the occupants of the city's slums?

Nothing like the rampage of 1977's Bastille Day has happened to an American city before. This was not a race riot: No discrimination was shown between black or white shopkeepers. Race relations have surely suffered—television's projection of exultant black looters wiped out the gains of the televised "Roots"—but no civil rights cause motivated the blackout's glad-to-be-angry opportunists.

Nor was this an example of people driven by desperation to reach out for necessities. They took toasters, not bread; liquor, not milk; more sports shirts for the sporty than shoes for the shoeless. One of the participants aptly called the evil carnival atmosphere "Christmas in July:"

Why? The standard liberal answer is that this was a cry for economic help, an expression of despair by society's forgotten people. It is our fault for abandoning the Great Society, for not making certain that each ghetto resident has a job or a welfare payment to keep him content.

The standard hard-line answer is just as foolishly self-flagellating: that the militia was not called out in time to keep law and order, or that the cops were not equipped with shoot-to-kill instructions.

More far-fetched answers come from people in the looting area who were neither criminals nor victims. The blackout itself was described as an Act of God, as Consolidated Edison promptly called it, which suspended the rules of lawful behavior. Or that Con Ed pulled the plug on purpose, to dramatize its need for more power plants, and that such a conspiracy justified gleeful participation in its "strike."

None of these answers, nor all together, satisfy; they are excuses, not reasons. People do not become a thieving mob because they cannot afford jewelry, booze or new couches. They do not refrain from stealing because of the presence of glinting bayonets. They do not break the law because of signs in the sky or anti-establishment conspiracy theories.

The looters looted because of the spreading non-ethic that stealing is O.K. if you can get away with it, as you usually can; that only a jerk passes up an opportunity to rip off his neighbor; that society not only owes you a living, but the good life.

Millions of black and Hispanic New Yorkers were the worst victims of the looting and arson on Bastile Day, and do not deserve the shudders directed their way in its aftermath. Many of them called the looters "animals," and in a non-racial sense were right: Inhumanly, the looters attached no guilt to their actions. They took what was in the stores as their right; it was free-style Christmas in July.

What is the basis for that newly widespread attitude of a "right" to rip off? Sorry, the economic-despair excuse will not hold up, because poverty in the ghettos was greater in the last blackout, and the standard of living was lower in the past generation.

One reason for the I'm-entitled-to-what-I-want attitude is the philosophy that welfare is a right to be expanded and not a condition to be avoided by the able-bodied.

Another reason is the claim that because minorities have suffered discrimination in the past, they are now entitled to reparations in the form of special treatment—and some carry that claim to extremes.

Another reason is the notion that a job is something to be provided and not searched for, and that menial work is to be spurned as not a "decent" job.

Another reason is the argument that crime is the result of poverty, and that poverty is nobody's fault but the System's; it follows that in this no-fault world, society is to blame for what a poor person does when the lights are out.

Heresy? Of course. Most of us prefer a much more palatable get-tough-with-the-rich exploitation of resentment or a get-tough-with-the-crooks correctionism. Not many are willing to get tough-minded about the prevailing political philosophy, and to face up to the consequences of the overweening assumption of responsibility by government.

Surely there are other and more complex reasons for the suspension of ordinary civility and morality by so many New Yorkers during the city's ordeal. But that's the beginning of the hard answer to El Diario's "Por Que?"

FOOD STAMPS AMENDMENT

HON. WILLIAM LEHMAN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. LEHMAN. Mr. Speaker, because my name has become associated with an amendment to be offered concerning the "workfare" concept in the food stamp program, an explanation of my position is in order.

I unfortunately misunderstood the intent of a letter which was circulated last month expressing support for the "food for work" proposal. I had been under the impression that the letter's purpose was to voice approval of the committee's decision to set up pilot programs to test this concept. I do not support any moves to expand this provision. We must first determine whether or not these programs are feasible and fair.

THE CROWN OF ST. STEPHEN

HON. PETER H. KOSTMAYER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. KOSTMAYER. Mr. Speaker, I rise today at the request of a concerned constituent, John Letai, of Yardley, Pa. Mr. Letai has written very movingly of the importance of the crown of St. Stephen to the Hungarian people and I wish to share with my colleagues his words:

The Hungarians originated in Asia and, after a long period of wandering, settled in the Carpathian Basin of central Europe. In the ninth and tenth centuries, as a pagan, nomad tribal nation, they conducted their adventurous, predatory raids against the peaceful, Christian, agricultural Western nations.

At the early success of the Hungarians, Europe trembled. "Oh, Lord, save us from the arrows of the Hungarians," they prayed in the churches. Eventually though, other nations learned the Hungarian war tactics and countered them with feudal techniques. In 955 A.D. they met total defeat at Ausberg, Germany. In time the Hungarians learned their lesson, realizing that the only way to survive was to conform to the European social and political order.

After the Hungarians accepted the Christian moral, political, economic and social order of Europe, Pope Silvester II sent a crown to King Stephen accepting him as a member of the European community in 1001 A.D.

The crown was and still is a symbol. It has represented the source of power in Hungary since 1001. The receiver and holder, the king or the Hungarian State, had the obligation both nationally and internationally. All actions by the king or the State were done in behalf of the Hungarian Crown.

Hungary—by the symbol of the Crown—was accepted by the European community as conforming to the international standard established by that community. The Hungarian people gave the Crown to her kings as a symbol of a contract. The people expected the king to obey the constitution of the Hungarian State and the king pledged each time at the day of coronation to obey the law and fulfill the expectations of the nation.

The United States had intervened in the Second World War because—we were told—Hitler's Germany raided Europe and bluntly violated moral and political standards established by the community of civilized nations. Hungary participated on Germany's side in this adventure and suffered defeat. She lost the Crown the symbol of civilized living among nations and individuals. The American goal of intervention was reestablishment of the right of self-determination, national and individual, as well. Thousands died for the same goal in Korea and Vietnam. By policy and actions the United States sees herself as spokesman and champion of self-determination. Only the United States possesses the moral ground and military power to implement these moral and political principles of living together of nations and human individuals.

The noble effort of the U.S. in the Second World War only partially survived. The fascist terror was replaced by communist tyranny. There is still no self-determination in the eastern part of Europe. The government is not freely elected by the Hungarian people but forcefully imposed on them by a foreign power. This government rules according to the rules set forth by an outside force.

Returning the Crown to this government would mean the recognition and acceptance of moral, political, economic and social standards which are contrary to the original goals and present principles for which the American people fought, stand and live for.

There is no such symbol with a 1000-year history that plays a role which would signify the success or failure of the most important international struggle for human rights.

When the time comes, when the Hungarian nation can be an equal partner of the European free community, when the Hungarian people freely elect their government and this government respects the rights of individuals, the U.S. can take the satisfaction that those principles for which the Americans fought in World War II have been achieved and the Congress shall return the Crown to the House of Representatives of Hungary. The significance of this gesture would be so fundamental and similar to the action of Pope Silvester II, 1000 years ago, that it might inspire and reinforce the ground rules of living together among nations for another 1,000 years.

Therefore, I support the "Hungarian Crown of Saint Stephen Protection Act."

Mr. Speaker, I concur with Mr. Letai that the Hungarian Crown of St. Stephen and other relics of the Hungarian royalty should remain in the custody of the U.S. Government unless Congress provides otherwise by legislation.

To Hungarian people all over the world who honor freedom, the crown is a sacred symbol of the independence and legitimacy of their government. Just as the American flag, the Declaration of Independence, and the Constitution are symbols to Americans, so the Crown of St. Stephen is a national symbol to Hungarians. It would be an injustice, in light of the foreign domination in Hungary represented by 200,000 Russian troops occupying Hungarian soil, for the Crown of St. Stephen to be returned to the present government of Hungary.

I urge my colleagues to support the Hungarian Crown of St. Stephen Act which has been introduced by Congresswoman Oakar.

THE B–1: CLEARTHINKING VERSUS MUDDLEHEADEDNESS

HON. ROBERT K. DORNAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. DORNAN. Mr. Speaker, the Senate yesterday voted to delete funds for the B–1 program. Although this did not come as a great surprise when compared to the shock which accompanied President Carter's decision, it did seem to me to be one more nail in the coffin of our Nation's defense.

The Senate-House conferees have yet to meet and decide if they will join in the coffin hammering by choosing the Senate version of the authorization bill. But if they do decide to bury the B–1 and our national security, I can easily imagine what they in their illogic will argue was the reason. They will probably argue, as the President and the majority in the Senate did, that the costs of the B–1 are too great when compared to the cruise missile.

That illogic convinced the President and it convinced 59 Senators, but it does not convince some clear-thinking Americans who are distressed and angry at the series of defeats the B–1 is suffering and the muddleheadedness which appears to have won the day.

One of these clear-thinking Americans is Mr. Elmer Fasol of San Pedro, Calif. Mr. Fasol has recently written me a most articulate letter delineating the actual—not the muddled—comparative costs of the cruise missile and the B–1.

I call my colleagues' attention to Mr. Fasol's letter. It is my sincere hope that they will not succumb to the illogic of the other body and will stand fast on the funding for the B–1.

The letter follows:

Congressman R. DORNAN,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN: According to the recent statements by Pres. Carter and Def. Sec. H. Brown the reasons given for cancellation of the B–1 aircraft were B–1 program costs and the fact that the cruise missile could do the same job at less cost. However there are some questions which are bothersome and have not been fully addressed.

The B–1 cost is quoted at $100+ million per aircraft whereas the cruise missile is $500,000 per missile. These figures are constantly being quoted as though they were equivalent, however one cruise missile is not in any way a substitute for one B–1 and the most ardent missile proponents will not claim that it is. Due to the way the costs are quoted however the general public has been led to believe there is a one-to-one ratio, i.e. when costs are quoted no mention is ever made of the total quantity of cruise missiles which are required to have the same assurance of reaching a target as does the B–1. Also how many cruise missiles will be produced? What will be the total cost of the cruise missile program? To my knowledge this figure has not been quoted in any news releases or stated anywhere that I am aware of. The public has a right to be made aware of the total cost of both programs.

When quoting costs of refurbishing B–52's ($700,000 per aircraft), I have seen no mention of the fact that it takes two B–52's to equal the payload (and ability to deliver payload to the target is the only real threat of a weapon) of a B–1. Therefore one must double the cost of B–52 refurbishment (2×$700,000 = $1,400,000) for comparison to a B–1. But that isn't the total cost of comparison either. To arrive at the true delta cost of the program one must also add the costs of 2 air crews for the B–52 (12 men for B–52 vs 4 for B–1), 2 maintenance crews (keeping in mind that the B–1 has automated test systems), 2 complements of support equipment, etc. In each case the B–52 costs far exceed the B–1 costs. One might argue that these already exist and therefore are no extra cost. Not true. Crews are in a constant state of change (here we are talking about the life of the program, not just today's operation), ground crews come and go, support equipment is always being replaced and repaired (twice the equipment twice the cost).

One B–52 uses more fuel than one B–1, two B–52's (equals one B–1) use more than twice as much fuel as a B–1. What is the difference in fuel costs over the life of the program? And wouldn't that be a good way to start conserving fuel! Or would we rather have gasoline rationing? It appears that present administration would.

How about development costs? What amounts of money is it going to take to develop the cruise missile to the point that it will be fully operational and have the required range to get to a target? How many missiles are going to be fired during the test

and development phase and at what cost? There is no recovery of missiles. Inflation and contingency costs as well as costs for the development of all avionics and controls must be included and not hidden under some other program. What new support and check out equipments will be required? At what cost? The B–1 is fully developed and ready now! A large amount of money has been spent to develop it to a production version. Is it economical to throw that away in deference to another development program? Is the administration thinking that they will save money by developing systems and then cancelling them? Will the cruise missile also be cancelled when it is ready for production? That is false and dangerous thinking. Dangerous in that the security of this country is at stake and false in that it is a well known fact that the development costs are a major part of program costs and one cannot save money by being constantly in a development phase and never going into production.

The cost of switching over to a cruise missile development program must also include the cancellation and termination costs for the B–1, which will be quite significant. Companies spread all across the United States will be closing down work and will be entitled to payment for all termination and cancellation costs. These costs although not directly chargeable to the cruise missile program are costs to the taxpayers as a result of the cruise missile decision.

Likewise the effects of terminating some 60,000 jobs will result in added costs to the taxpayers in the form of unemployment benefits, employment aid, welfare, etc.

Would it not be meaningful and worthwhile to put all the costs down on a balance sheet side by side so that all the people could see for themselves the true savings or costs of each program? Addressing the numbers individually and in generalities only leads to confusion and misinformed people. I certainly hope that is not the intent of the administration or of Pres. Carter.

There are probably other costs which have not been included here. Actual costs to the taxpayer. These costs do not begin to address all the secondary economic impacts such as loss of sales to businesses in affected areas, loss of workers due to loss of business (foods, autos, homes, recreation/sports, etc). Nor does this letter address the human costs of the B–1 decision.

Is the taxpayer being ripped off again? From what has been published and said so far it is impossible to tell. It certainly would be a great service to the general public and to your constituents if these costs could be published for one and all to see. I'm sure that you will give this your fullest consideration.

Sincerely,

Mr. ELMER FASOL.

DALE WILSON DAY

HON. JAMES G. MARTIN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. MARTIN. Mr. Speaker, recently, on July 1, the city of Statesville, N.C., celebrated a day of tribute to former U.S. Marine Sgt. Dale Wilson. On this occasion, Dale Wilson was presented the Silver Star for heroic action in the Vietnam war.

All the people of Iredell County have a special pride in his accomplishments both in combat and in subsequent civilian life. He has become a great inspiration to many disabled and handicapped individuals who have gained from his example a renewed spirit of determination and optimism.

On Dale Wilson Day in Statesville, there were many glowing and moving statements. Mr. Speaker, I want to take this opportunity to share with the House one exceptionally appropriate and helpful statement delivered as an address by Mr. Jim Webb. Mr. Webb currently serves as an Assistant Minority Counsel of the House Committee on Veterans' Affairs, and earlier served us as commander of the Marine company to which Sergeant Wilson was assigned. He was in a special position to evaluate the importance of Dale Wilson's gallantry as well as the involvement of the United States. His insights will be of great value to all Members, and I am pleased today to make them a part of the RECORD:

ADDRESS BY JIM WEBB ON THE OCCASION OF DALE WILSON DAY, JULY 1, 1977

I've been asked to say a few words about Dale Wilson when he was with our Company, and then say a few more words about our Company during the period Dale was with us.

The first part is the easiest. There is little I can say that would embellish what is already on the face of Dale's record. His leadership is evidenced by his combat decorations—the Bronze Star he received previously for heroism, the two Purple Hearts, the Silver Star he will receive today for gallantry. It is also evidenced by the fact that he became a Sergeant during one Vietnam tour—a feat seldom accomplished in the Marine Corps. Wilson accomplished it by combat-meritorious promotions to Lance Corporal, Corporal, and Sergeant.

Dale came to my platoon as a rifleman in a place called Go Noi Island. We were also together, with so many others, in the villages and on the hills of the wide, rice-laden valleys of the An Hoa Basin. I later became a Company Commander. He became a fire team leader and, on the date of the incident for which he is to receive the Silver Star, he took over as squad leader. As you must know, people became squadleaders largely by attrition in the Marine infantry. Dale's squadleader was wounded that day. Dale himself remained a squadleader until he was wounded and medevacked. Dale was the seventh squadleader of that particular squad during the nine months I had been in the field.

Our company roamed like nomads across the valley, gave its villages and ridges our own nicknames, ripped its earth with our bombs, stained it with our blood. And when we left, each of us in our own turn, a part of us stayed there, forever, fused into the stench and dread of combat. And at the same time, a part of it clung to us forever, became an inseparable part of us, like a burden that few of our countrymen seemed willing to share.

We were, emphatically, young. I recall one afternoon when I was serving as Company Commander. We had just moved into a new position, and were digging into our perimeter. I was walking along the fighting holes, watching the Marines setting up, and it occurred to me that, except for the Company Gunnery Sergeant, and one Staff NCO, I was the oldest person in the field. It was a stunning revelation. I had 170 people under me, and 167 of them were younger than I. I personally was the ripe old age of 23.

I've often gone back to that moment, because for me it told much of the story of Vietnam, or any other war. Civilians fight wars. Dale Wilsons and millions of others like him, who join the service to fight wars and more often than not leave the service when their tour is up—these are the men who end up facing the bullet and bleeding into foreign dirt.

When I was a platoon commander, our platoon averaged perhaps 25 men. Yet, during one short period of about a month and a half, we suffered more than 50 casualties. I don't claim this was unusual. In fact, in the Marine infantry it was common. But as I look back on those 50 casualties, again I find they had two things in common. First, hardly a one was old enough to vote. And second, virtually every one was a civilian who had become a Marine because of Vietnam.

And that's important. It becomes even more important when I think, as I often do, of what I could possibly offer to these individuals I was so privileged to command as justification for their suffering and bleeding for what is now perceived to have been a lost cause. If they had all been careerists—professionals—it would have been enough to say it was a war and they were the people who were supposed to fight it.

But they were not careerists. They—like Dale—were very young, who fought because our country had made a judgment—and I would say that it was our country's best judgment—that they should interrupt their lives and face the misery and the tragedies of war.

I lived with them, Dale and the others, I felt their pains, wept when they were killed or wounded, and I shared their deep disillusions when, after all the broken bodies and the nights in the rain, so many in this country ignored their sacrifices.

So today has a very special meaning for all of us. It is Dale's day, he earned it as only an infantryman can earn it, but it is also a day for every man who shared that existence. We can all walk a little taller today.

And after eight long years of considering it, I think that I can offer at least a partial answer to those young civilians like Dale who became forever Marines in the dirt and grit of Vietnam. It is the same answer—an explanation, actually—that was offered to our mutual Confederate ancestors. It is etched into the Confederate Memorial in Arlington Cemetery. I'd like to read it to you:

"Not for fame or reward, not for place or rank, not lured by ambition or goaded by necessity, but in simple obedience to duty as they understood it, these men suffered all, sacrificed all, dared all, and (sometimes) died."

And Dale Wilson was of the very best among them.

MR. CHARLES PULASKI, CONSERVATION CHAIRMAN FOR THE SUFFOLK COUNTY AMERICAN LEGION, TESTIFIES AS TO WHY A NATIONAL CEMETERY SHOULD BE ESTABLISHED AT CALVERTON, LONG ISLAND, N.Y.

HON. CHARLES J. CARNEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. CARNEY. Mr. Speaker, on Friday and Saturday, July 15 and 16, 1977, the Subcommittee on Cemeteries and Burial Benefits of the House Veterans' Affairs Committee, of which I am chairman, went to Long Island, N.Y., to hold hearings on a proposed National Cemetery at Calverton.

One of the witnesses who testified at those hearings was Mr. Charles Pulaski, conservation chairman for the Suffolk

County American Legion. Mr. Pulaski, who has the same surname as another great American patriot, Casimir Pulaski, gave the reasons why he believes that a new national cemetery should be established at Calverton, Long Island. But beyond that, Mr. Pulaski addressed himself to the reasons why we should continue to have national cemeteries.

Mr. Speaker, I would like to insert Mr. Pulaski's eloquent and poetic statement in the RECORD at this time for the information and consideration of my colleagues in the U.S. Congress and the American people. Mr. Pulaski's statement follows:

STATEMENT OF MR. PULASKI

My name is Charles Pulaski and I am the conservation chairman for the Suffolk County American Legion. I do not hold any degrees in zoology, ecology, or forestry. I am proud, however, to say that on behalf of the Suffolk County American Legion I have accepted many conservation awards for youth, for saving of parks and woodlands, trees, meadows and wildlife.

Recently we have been the recipient of the Environmental Protection Agency's Conservation Award. One of our proudest achievements was when we were able to save 230 acres of virgin land opposite the historical Sagtikos Manor in West Islip. We did this, I might add, without help from any State conservation departments or any environmental impact statements to aid us.

For this I was named nature's humble champion by Newsday. The county executive proclaimed a day to be set aside in my honor and I received a plaque from the citizens for saving the land that God has loaned us.

The above statement is not for self-glorification but merely to bring out the fact that the Suffolk County American Legion has and will always be in the forefront of environmental battles.

Now, in regard to the proposed national cemetery at Calverton which comprises approximately 900 acres, there is mention of the wildlife that will be affected: pheasants, quail, woodcock, fox, deer, grouse, mink, raccoon, squirrels. These species are associated with hunting and trapping. But what of the wild life that will not be affected, the Robin will still arrive to herald the miracle of spring, the Thrush, Meadowlark, and Song Sparrows' sad sweet song will still be heard if one just takes time to listen.

The Swallows and Martins will still be seen flying gracefully in the open sky above in their quest for food. Warblers, Bluebirds and hundreds of other species will stop to pause and rest before continuing their long journey to some distant land.

The wild flowers in the patches of woodlands, the bloodroot, violets, wild Sweet William, untouched by the hoe, nor planned, unattend, will still remain. The bee will murmur, the fire fly glow, the wind will whisperwhisper while the jack-in-the-pulpit summarizes his own sermon. These things and hundreds more will remain; it's only sad that most of us don't see or hear them.

The land will not be covered over with concrete, it will stay open to absorb the precious rain so vital to our ground water. I wonder how many thousands and thousands of acres of prime farm land have already been covered over for roads, shopping centers and the suburan sprawl. How many thousands more have yet to go. What I'm trying to say is that the few acres of farmland here are nothing in comparison to the thousands of prime farmlands scattered throughout the east end of Long Island.

I observe no concerted effort to save these farmlands and I believe the farmland preservation program is now in a precarious position. We all love the land and like to see it remain as it is, but sometimes we must, out of necessity, disturb it; a school must be built, a home, a playground for the children, a church, roads, yes even a cemetery.

When we do these things we must try to do them with the utmost care. I truly believe the people that are in charge of this national cemetery have addressed themselves to the environment with meticulous concern.

Now what about the national cemetery. We have addressed ourselves to the environmental impact statement, but what about the human and moral impact statement? I read somewhere "that man continues to rape the living land in the name of the dead filling the landscape with slabs of cold stone".

Isn't it sad that some Americans must wait 200 years for a birthday to be reminded of what this country is all about. This is the only time I guess they remember the fields of Gettysburg, the tomb of the unknown soldier, Valley Forge and Independence Hall. Yes, they may be slabs of cold stone on the landscape, but if these stones could talk what a story they would tell: Bell Wood, Iwo Jima, Normandy, Korea, and Vietnam.

The stones would tell you a story about men who did and were willing to give up their lives in defense of their country, from the stinking jungles of Guadalcanal to the mountains of Italy, each stone has a story to tell and if it were not for these stones, the deeds of these men would be thrown on some trash heap of forgetfulness.

A national cemetery is always a reminder that men did and were willing to place on the altar of sacrifice God's most precious gift, their very lives. So that we could do such simple acts as exercising our right to vote. John Ruskin once wrote: "God has loaned us the land for our life, it belongs as much to those who come after us and we have no right in anything we do or neglect to deprive them of any benefits it was in our power to bequeath."

I don't believe that 100 years from now anyone would fault us for bequeathing this national cemetery. More in keeping with the truth though, some child probably will stand here and say these must be the men I read about in my history books. These must be the men who made it possible for me to be free.

HELSINKI'S UNFULFILLED PROMISE

HON. HENRY J. HYDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. HYDE. Mr. Speaker, all of the nations which signed the Helsinki Final Act, including the Soviet Union, pledged to do everything possible to reunite families separated by political boundaries.

Because the Soviet Union is not living up to that promise, Members of Congress are conducting a vigil on behalf of the families which remain separated. I commend Congressman DRINAN for coordinating "Helsinki's unfulfilled promise," and I am honored to speak today on behalf of the Shamuilov family of fabled Samarkand.

When the Shamuilov family applied to emigrate to Israel, the parents, Saadia and Tsipora, realized that only by undergoing a form of divorce would Tsipora and their three children be given exit permits. Tsipora writes:

We did everything possible to stay together. However, Saadia had an important job as foreman on a building site. We thought by divorcing, the authorities would let me and the children go. Then Saadia could get a simple laboring job and join me later. But the whole thing hasn't worked and our family is broken up for nothing.

The three Shamuilov children, Olga, Rambam, and Rafik, write from Israel:

On May 11, 1976, our father applied to the OVIR offices in Samarkand for an emigration permit to go to Israel. He received a verbal unexplained refusal.

Our father was never connected with any state secrets, does not have a formal education, and there could not be any reason for refusing him the exit visa so he could become reunited with his family. Both the Soviet Constitution and the Universal Declaration of Human Rights ratified by the USSR guarantee the right of free emigration of citizens.

We, the children, Olga, Rambam and Rafik, would like to stress that our father loves us very much and is very attached to us. The refusal to let him join us could have a tragic effect on his life. We appeal to you to do everything you can to enable our father to come to Israel and live together with us. Help us see our father again!

Most recently, Saadia was given an interesting proposal. In spite of the fact that the Helsinki agreement promises to reunite husbands and wives, parents and children, the emigration officer in Samarkand has his own interpretation. He told Saadia that he would be given permission to leave on condition that every one of his remaining near and distant relatives in the U.S.S.R. went with him.

The policies that decree children to be raised as orphans even though their father lives repudiate the promise of Helsinki. But the perpetrators of such cruelty must know that the free world watches and works toward the day when Helsinki will be fulfilled and the burdens of suffering will be lightened. May that day be soon!

THE ADVANTAGES OF COMMUTING BY VAN

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. FRASER. Mr. Speaker, a significant but little-noted feature of President Carter's energy conservation program involves the encouragement of a new form of commuter transportation known as van pooling. As part of the conservation program, the President wants to purchase 6,000 vans to transport Federal workers to and from work.

One of the first private van pooling programs in the country was initiated by Minnesota's 3M Co. in 1973. The 3M program has saved its employees over 100,000 gallons of gas per year and has lessened the risks and tensions of commuting. Significant benefits have accrued to the company, as well. Van pooling has decreased traffic congestion around 3M installations, reduced demand for parking and enabled the company to cut the cost of an employee parking ramp by $2.5 million.

A recent article in the Washington Post by Neal Peirce discusses the progress of van pooling throughout the coun-

try. Peirce reports on a new effort in Minnesota, spearheaded by a group known as Public Service Options, to develop multiemployer van pooling programs.

I would like to take this opportunity to have the Post article reprinted in the CONGRESSIONAL RECORD:

THE ADVANTAGES OF COMMUTING BY VAN

(By Neal R. Peirce)

LOS ANGELES.—If you drive 5 miles or more to work, there may be a van in your future.

From coast to coast, the "coming thing" in commuter transport is the mundane 12-passenger van, one of the most versatile, energy-efficient, economic, relaxing and socially pleasant ways to get to work ever devised.

Van-pooling is no cure-all for transit problems. It can't compete with high-quality mass transit, or with carpools on short commuting hauls (when it takes proportionately too long to pick up as many as 11 passengers). To date, because of complex organizational problems, large-scale van-pool operations haven't gotten off the ground without some corporate executive "burning" for the idea.

But van-pooling is spreading rapidly. Since the 3M Company introduced the first commuter van program in St. Paul in 1973, the idea has been picked up by more than 100 corporations, a number of government offices and transit agencies. As part of his energy program, President Carter wants to buy 6,000 vans for federal workers' commuting trips.

Van-pooling's big breakthrough may be occurring right now in Los Angeles, where David J. Lester of Atlantic Richfield Co. has persuaded a joint government-private industry organizations, "Commuter Computer," to sponsor a multi-employer van-pooling scheme that could easily expand to tens of thousands of workers across a five-county metropolitan region.

Under the 3M program, widely copied elsewhere an employee volunteers to drive eight people to and from work in a 12-seat van. The company purchases and insures the van, and the passengers pay a commuter fare covering gas, maintenance and depreciation. The driver can add up to three more passengers, earning some spare income, and has the use of the van on weekends at a modest mileage charge.

But there's no dominant form of van-pooling. Actual owners of the vans can be individuals, corporations, unions, governments, transit agencies, banks or credit unions. Getting riders together ranges from an ad hoc private affair to sophisticated computer matching by corporations, governments or groups like Commuter Computer. Management and maintenance of a pool of vans can vary just as widely.

"The beauty of van-pooling," 3M's Robert D. Owens, the acknowledged "father of corporate vanpooling," claims, "is that everybody wins." There are solid reasons to think he's right.

SITTING NEXT TO MARY

Van-poolers get front-door pick-up, a guaranteed seat, fast transport and no transfers or waiting for buses. As they zip along to work, many riders sip coffee, read or snooze. Van-pooling is also a social phenomenon. Practically all riders talk about a strong group identity and cohesiveness that develops. Riders in a 3M survey mentioned "camaraderie of fellow riders," "our annual van-picnic and Christmas party" and "sitting next to Mary." Ninety-eight percent said they planned to stay with the program permanently.

Van-poolers also have substantial cash. Typical monthly fares range from $20 for shorter commuting runs to $35 for long ones. Even if a rider decides not to sell the car he'd used for commuting, he can expect to pocket savings of $130 to $750 a year, plus whatever he might have been paying for a parking place.

Los Angeles' Commuter Computer has stepped up to luxury van service. At an extra cost of $1,500 (over the $8,000 standard van price), the walls and ceilings are carpeted for soundproofing; first-class, reclining airline seats are installed; finally, each passenger has an individual reading light and stereo headphones. Seating capacity is reduced to 10, and the average monthly charge increases to $50. But several firms contribute up to $25 because they save expensive employee parking they otherwise underwrite.

Van-pooling benefits employers because employees' morale and acuity are enhanced when they escape the hassle of a commuting drive. Tardiness and absenteeism may be reduced; street congestion at the work site is relieved. 3M and the Tennessee Valley Authority in Knoxville saved millions of dollars they would otherwise have had to spend for parking garages.

Van service also increases an employer's access to the labor market—particularly to low-income workers who don't own cars (an ideal way, for instance, to transport inner-city workers to suburban plant sites). And van-pooling is good public relations, showing employers' concern about energy and air pollution.

The general public benefits through reduction of cars on the road during peak commuting hours, improved air quality and reduced gasoline consumption. In energy use, a 10-passenger van is more efficient than almost any other commuter mode, including four-member carpools, conventional buses or rail transit. Only commuter charter bus service consumes less energy per passenger.

To lure commuters out of their autos, says Clarence Shallbetter, chief architect of an ambitious multi-employer, shared-riding service about to be launched in Minnesota, "you need to offer something that approximates the convenience of the private auto.

"Energy and the public good," he adds wistfully, "are not the important motivators."

But while vans excel in convenience and comfort, they are often hindered when public service commissions classify them as common carriers and try to regulate them off the roads. Several states, including Minnesota, California, Tennessee, Virginia and Connecticut, have passed laws legalizing van-pooling as a mode of commuter travel.

THE INSURANCE BUGABOO

Insurance is another knotty problem, unless vans are insured under a corporation's fleet umbrella. Commuter Computer carries insurance of $10 million per van, costing each passenger $15 a month. Yet only two minor accidents were reported in a nationwide survey of 1,000 "vehicle-years" of van-pool operations.

Fearful insurance underwriters, the University of Tennessee's Frank Davis says, visualize a catastrophic accident involving two vans of which 30 young physicians, each with six young children, are injured for life, triggering astronomic claims. That reaction, he says, ignores the fact that drivers are carefully screened, drive well-maintained vehicles over familiar routes and usually take a defensive driving course.

Davis has been working with the Insurance Services Office, a carriers' rating service, to develop reasonable van insurance premiums that will probably reduce rates substantially.

Rather than competing with mass transit, vans can actually help transit systems by relieving rush-hour loads that force them to buy extra equipment and hire extra drivers who are idle most of the day—a key factor in the alarming nationwide escalation of transit subsidies.

In fact, a growing number of governments and transit agencies are now aggressively promoting van-pooling to reduce public investment in highways, mass transit equipment and uneconomic bus lines.

The van-pool "star" among government agencies is TVA, which has 150 commuter vans serving its Knoxville headquarters and various construction sites. At TVA's big nuclear power plant construction site at Hartsville, Tenn., there will eventually be 300 vans, thus saving $7 million to widen a 12-mile two-lane road used by thousands of workers.

But while government and big corporations can set an example, van-pooling will remain limited until service linking employees of different companies is perfected and the final regulatory and insurance barriers are erased. Exclusive freeway lanes for buses and vehicles with multiple riders, rising gas prices and gas shortages will provide further impetus. And as Americans learn more of the convenience and comfort of vanpooling, the humble vans may become an omnipresent future of our roadways.

A BILL TO RESTORE EFFECTIVE ENFORCEMENT OF THE ANTITRUST LAWS

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. RODINO. Mr. Speaker, as I indicated yesterday, Senator KENNEDY and I have introduced identical bills to overrule the Illinois Brick decision, and to once again make the antitrust laws fully responsive to injuries suffered by businesses and consumers as a result of antitrust violations.

I should like to insert for the RECORD, an article appearing in the July 18, 1977, Wall Street Journal at page 12, by Mr. Stan Crock.

As Mr. Crock points out, while the Supreme Court has been rather tough on those who have committed violent crimes, defendants accused of antitrust and securities laws violations have "fared remarkably well before the Court."

Mr. Crock notes that the Court has emasculated one of the biggest deterrents to white-collar crimes—the private civil damages suit.

This article points up quite clearly that the Illinois Brick decision must be overruled. The text of the article follows:

SUPREME COURT IS TOUGH ON ONLY CERTAIN MISCREANTS

(By Stan Crock)

WASHINGTON.—The current Supreme Court has a reputation for being tough with miscreants. Some miscreants, anyway.

The court won its reputation mainly from cases involving violent crimes in which it whittled down procedural safeguards that protected defendants and upheld such deterrents as capital punishment.

But some other types of defendants have fared remarkably well before the court; specifically, those accused of violating the antitrust and securities laws. In cases involving those white collar crimes, the court has moved in the opposite direction by emasculating one of the biggest deterrents to such crimes, the private civil damages suit.

Two cases decided as the court wrapped up its term last month bring the divergent trends into sharp relief.

In one, the court upheld the death sentence of a Florida man under a law passed

after he committed the crime. In the face of a constitutional bar against retroactive laws, the court went to great lengths to sustain the deterrent in that case.

Deterrence in the antitrust area, in contrast, didn't fare so well the previous week when the court ruled that only those who buy directly from price-fixers can sue them for triple damages under a provision that allows such suits by "any person who shall be injured . . . by reason of anything forbidden in the antitrust laws. . . ."

In that case, the state of Illinois tried unsuccessfully to recover damages from concrete block manufacturers whose price-fixing raised the construction costs of some state buildings. The decision means that indirect consumers of products with fixed prices no longer can sue for damages.

The ruling may pose serious enforcement problems because the direct buyer is unlikely to sue; buyers don't want to anger their suppliers with lawsuits, and they can pass on their extra costs anyway. It is "absolutely vital that this decision be thrown out immediately," says C. Ray Marvin, Washington counsel for the National Association of Attorneys General, who is working on legislation to nullify it.

John Shenefield, acting assistant attorney general in charge of the Justice Department's antitrust division, calls the decision a "disheartening development." Triple damages suits, he says, are a "very effective" deterrent.

The Supreme Court action was only one of more than half a dozen similar rulings in the white collar area. For example, the court ruled in another antitrust case that most restrictions manufacturers put on the resale of their products by retailers are violations of the law only if they are proved unreasonable.

In the securities area, the court has ruled that the loser in a tender offer fight can't recover damages from the winner even if the winner violated securities laws. And in a separate case, the court said a breach of the antifraud provision governing buying and selling of securities doesn't give rise to damages if the breach is merely due to negligence.

The decisions cutting back on the availability of private damages actions as an enforcement tool are significant setbacks, according to Harvey Pitt, general counsel of the Securities and Exchange Commission, because the commission "cannot police all violations of the securities laws."

Despite the fact that the decisions in white collar cases seem to cripple enforcement and decisions in cases involving violent crimes back law enforcement, it would be too simplistic to say that the court winks at the former and is two-fisted with the latter.

For example, some decisions have upheld the protections of defendants accused of violent crimes. The court has refused to overrule the famous Miranda decision which protects a defendant's right against self-incrimination. And while the court has shown some solicitude for white collar defendants, it has cited other reasons for its rulings in such cases: the fact that the court is bound by the wording of statutes, a desire to prevent federal courts from being inundated with similar cases and a concern that its ruling could spur enormously complicated lawsuits.

For example, in the Illinois brick case, the court voiced concern that "massive evidence and complicated theories" would be involved in cases brought by indirect purchasers trying to prove how much extra they paid for an item whose price was fixed.

But the impact of the decisions is the same regardless of the motivation—civil damages suits no longer will serve as a potent deterrent and aid to law enforcement at a time when other deterrents are being reinforced. Congress has beefed up the penalties for antitrust violations and the Justice Department has stiffened its sentencing recommendations for those violations.

Statistics bear out the importance of the private suits as an adjunct to government enforcement. In the fiscal year ending in June 1976, 1,504 private antitrust suits were filed in the federal courts, while the Justice Department filed 51 civil and 19 criminal suits.

The same year the SEC sought 158 injunctions and referred 116 criminal cases to the Justice Department for prosecution while 2,230 private civil suits involving securities, commodities and the exchanges were filed in federal court. An exact figure for the number of securities cases isn't available, but they probably were a substantial portion of the 2,230 cases.

The court's white collar rulings are ironic because if deterrence works anywhere, it works in this area, where the economic crimes are based on cost-benefit analysis and aren't done in the heat of passion.

There may be another irony: The rulings have been viewed as pro-business when they in fact may not be in the long run. The Justice Department's Mr. Shenefield, for example, notes that as many businessmen as consumers use the antitrust laws to sue violators.

And the securities decisions also may hurt business, says Mr. Pitt of the SEC. "If investors get the feeling that their remedies are limited," he says, "they may find themselves less receptive to investments in the securities market."

"The question," he adds, "is whether we've gotten to that point."

CRITIQUE OF H.R. 2176

HON. GARRY BROWN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. BROWN of Michigan. Mr. Speaker, on June 28, 1977, the Government Operations Committee approved H.R. 2176, the Federal Banking Agency Audit Act. This bill would specifically authorize the General Accounting Office—GAO—to conduct audits of both financial accounts and programs of the Federal Reserve System—FRS, the Office of the Comptroller of the Currency—OCC, and the Federal Deposit Insurance Corporation—FDIC.

This legislation requires careful scrutiny, because it involves a reversal of longstanding Government policy against political influences in the monetary policy and bank regulation processes. Freedom from "political influences" should not be interpreted as "independence" since in passing the Federal Reserve Act, the Congress intended to make the Fed "independent" of the executive branch but not independent with respect to its creator, that is, the Congress; protected from "political influence" and, those of us who believe in a Fed protected from "political influence" have never argued it should be independent of the Congress acting in a proper statutory manner. In addition, the exclusions and safeguards in a bill such as this take on added significance—and Members must examine them accordingly.

I believe that if the Members analyze this bill closely they will find its shortcomings outweigh its public benefit or justification.

EXISTING LAW

This legislation would be a step backward to a procedure which was rejected after it was tried over 40 years ago. In 1933, Congress deliberately voted to remove the Federal Reserve System from the jurisdiction of the GAO. That action resulted from a judgment that noninterference with the internal management of the FRS would in the long run provide better monetary and credit policies.

The many reasons why the GAO has not audited the FRS or the OCC in spite of its general grant of authority are best stated in a 1973 letter from Comptroller General Elmer Staats which states:

In view of the broad authority conferred upon the Board to determine and prescribe the manner of incurring obligations and to pay its expenses, and the fact that funds used to defray the expenses of the Board are not Government funds or appropriated monies, together with the provision in 12 U.S.C. § 484, that no bank is subject to any visitorial powers other than authorized by law, or vested in the courts, or as shall be exercised or directed by the Congress or by either House thereof or by any committee of the Congress or of either House, it is our opinion that GAO would be unable to undertake an audit of the Federal Reserve System without specific authority of the Congress. (See Cong. Rec. H4574–5, May 30, 1974.)

The legislative record for H.R. 2176 does not address any of the issues raised by GAO itself which stand as obstacles to any audit. There has been no attempt to justify this bill in terms of existing law, or the circumstances which gave rise to that law more than 40 years ago.

SCOPE OF AUDIT PROPOSED IN H.R. 2176

During 1974–76 public and congressional attention focused on the bank supervision functions of the FRS, OCC, and FDIC, because of three large bank failures. During 1976, the Commerce, Consumer, and Monetary Affairs Subcommittee undertook an investigation into the so-called "problem bank" situation. Further, three congressional committees asked the GAO to study the Federal regulation and supervision policies and procedures of the banking agencies. It is important to note that the record established in each of these investigations related to the bank supervision, examination, and regulation functions only. Thus, H.R. 2176, which comes out of these investigations should be limited to a GAO performance audit of bank supervision policies and procedures, if there is need for GAO review at all. However, the bill encompasses audit of financial accounts and many programs of the three agencies beyond the bank supervision functions. There is nothing in the subcommittee record to justify or support this expanded audit.

Although I recognize there has been general agreement expressed with respect to an "administrative" audit, I would point out that there is already an extensive FRB audit of its financial accounts, required by statute, and additional independent audits by outside accounting firms. Any GAO audit would only duplicate this work, at great expense. Since there has been little or no

evidence to indicate impropriety in the handling of FRB financial or administrative accounts, I see little justification for the large expenditure necessary for a GAO audit of these accounts.

COSTS

The CBO estimate of the cost of the audit authorized by this bill is substantially understated. It merely uses the cost figures for the recently completed GAO study of bank supervision by the banking agencies—a total of $818,000. However, as stated above, the bill approved by the Government Operations Committee calls for GAO audit of not only the bank supervision activities, but in addition all other agency programs, personnel and operating policies, and the financial accounts of the OCC and the FRB. In the case of the Federal Reserve System, a GAO financial audit would cost a minimum of $750,000 annually, and would duplicate the Fed's own extensive audit required by statute, and its independent audit done by outside accountants. Adding together the costs of all these audits, $818,000, plus $750,000, plus the cost of review of the financial accounts of the OCC and FDIC and other program audits, would put the annual cost of this legislation at over $2 million, if not more.

CONGRESSIONAL OVERSIGHT OF BANKING AGENCIES

Because of jurisdictional limitations the Government Operations Committee did not consider the other forms of congressional oversight of the banking agencies: First, the semiannual testimony of the Federal Reserve on monetary policy under House Concurrent Resolution 133; second, annual testimony by all three agencies on the state of the banking system; third, congressional review of the proposed budgets of the agencies; and fourth, the proposed Federal Bank Examination Council supported by GAO. A better approach to this issue would be to consider these different forms of congressional oversight together rather than enacting one proposal such as H.R. 2176, in isolation.

AFFECT ON THE BANK EXAMINATION PROCESS

The process of bank supervision and examination is unique among the various types of Government regulation of business. It is characterized by an absence of formalized legal procedures and by pervasive exposure of examiners and supervisors to the operations of the banks they regulate. For this process to be successful and effective it is essential that communications between banks and bank examiners, as well as between examiners and other supervisory officials, be frank and uninhibited. Fundamental to the process is the opportunity for professional examiners to express their unbiased judgments. If bankers were not willing to discuss their problems freely with their supervisors, and if bank examiners were not free to express their findings and opinions about the condition of the banks they examine, without extraneous influences on the manner in which those findings and opinions are expressed, the examination process would not function effectively and the health of our Nation's banking system would probably suffer.

At present this essential freedom of communication exists in the examination process. However, the enactment of legislation that would require continuous monitoring and review of bank examination reports and other highly sensitive communications relating to bank examinations by the General Accounting Office, an agency having no responsibility for bank safety or soundness, would be an extraneous influence that could impede rather than improve the process. This problem was not presented by the recent GAO study, because GAO reviewed old examination reports that had been prepared without any thought that they would later be reviewed by GAO auditors. However, if GAO were to undertake such studies in the future, at regular periodic intervals, both bankers and bank examiners would be aware that communications made during the course of the examination process would be subject to scrutiny and evaluation by GAO auditors. The inevitable effect of that knowledge would be to inhibit those communications and encourage technical compliance at the cost of lessened substantive benefits.

For example, if a bank examiner knew that his performance would be evaluated on the basis of some statistical analysis of his success in "curing" problems noted by him in examination reports—which was essentially the approach followed by GAO in that recent study—he might be reluctant to express his comments candidly, knowing that his failure to resolve problems might reflect adversely on his statistical rating. On the other hand, some examiners, knowing that outsiders will be evaluating their performance, might be inclined to state their analyses and conclusions more strongly than otherwise, in order to create the impression of vigorous supervision. In either case, the intrusion of an outside influence would have caused distortions in the examination process that do not exist at present, and the likelihood would exist that examiners might unconsciously shade their judgments to reflect attitudes they think would be approved by GAO, irrespective of their impact on a sound banking system.

MONETARY POLICY

This bill touches the topic of whether GAO should audit the monetary policy functions of the Federal Reserve Board. With little exception, since 1913 the Fed has operated independently, without political influence being exercised over its work as the Nation's central bank. This independence must be preserved to maintain the integrity of the work of the Board. Thus, monetary policy should be excluded from GAO review. The bill contains a monetary policy exclusion, but dialogue between Representatives ROSENTHAL and ST GERMAIN at the subcommittee markup create an exception in that exclusion as it pertains to operations of the Federal Reserve discount window. Representative ST GERMAIN attempts to argue that the use of the discount window in cases such as Franklin National Bank is a supervisory action, not a monetary policy action. This attempted distinction is not workable. A staff report covering among other things the Franklin situation, which was sent out to the Banking Committee over Representative ST GERMAIN's signature, points out the serious implications for international money markets of Franklin's unmatched foreign exchange contracts. The use of the discount window in that case in order to unwind those contracts and thereby prevent a worse panic in the worldwide financial market is clearly a monetary policy function. This example points out the extremely close relationship of Federal Reserve Board bank supervision activities to its monetary policy activities. The hair splitting exclusions for the discount window and the payments mechanism, which would be interpreted by GAO personnel unfamilair with the subtleties of monetary policy underscore a basic defect in this bill.

PRIVATE CONSIDERATIONS

This bill has serious implications for the future privacy of bank records of individuals, and bank examination reports. The proposed GAO study of the policies and procedures of the agencies and the accounts of these agencies is a plausible form oversight. However, in the course of any such GAO work, its employees would review bank examination reports, problem bank lists, and personal financial information of private citizens who do business at these banks. It is essential that this information is used only for GAO to assess overall policies and procedures of the agencies, not as part of a review of an individual bank or bank customer situation. Under no circumstances should this raw data be disclosed by the GAO in any report or communication outside the agency responsible for supervision of the bank in question. Unfortunately, the proponents of H.R. 2176 have an entirely different view of this issue. The bill has two gaping loopholes concerning the confidentiality provisions. There is no reason why GAO should be discussing individuals who had a controlling influence in closed banks as allowed in subsection (d)(5)(B); and there is no reason why GAO should be discussing individual customers and individual open banks before congressional committees sitting in executive session as allowed in subsection (d)(5)(D). In the latter case the best witnesses to testify before congressional committees in executive sessions are the agencies charged with the responsibility for supervising the banks in question. This is contemplated in subsection (d)(5)(e) of the bill. These two loopholes will also raise the possibility of leaks of problem bank lists, or bank customers' names and private financial affairs from the committee executive sessions.

In short, I believe serious problems would result from enactment of this bill and the several specific provisions to which I have directed these remarks. Accordingly I believe the bill should be rejected unless it is modified and amended to remedy the several concerns I have expressed.

Mr. Speaker, I am pleased to state that the gentleman from Illinois (Mr. CORCORAN) concurs in and fully endorses these remarks.

WHO CONTROLS OUR SCHOOLS?

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. MICHEL. Mr. Speaker, from time to time our Nation is suddenly confronted with problems of such magnitude and gravity that they affect all Americans. We have fallen into the habit of labeling these problems as "crises." Predictably enough, through over-use, the word "crisis" no longer has the impact it once had.

But by whatever name we call it, the problem confronting our Nation in the field of education is one of the most serious in our history.

According to a New York Times survey, taken in New York, New Jersey, and Connecticut, the parents and taxpayers of the suburbs of those States are losing control of their schools. The Times reports that—

> Decisions about financing, curriculum and personnel are increasingly being influenced by state and Federal agencies, the courts and aggressive professional unions.

I have no doubt that generally speaking what the Times found in those three States can be found in every other State in the Union.

In a recent column, Patrick J. Buchanan told of Vice President Mondale's speech before a meeting of the National Education Association, which, for all intents and purposes, has become a union in fact if not in name. The Vice President proudly boasted of large increases in Federal spending on education. Buchanan then quoted the distinguished educator, Dr. Roger Freeman:

> "Between 1952 and 1972", he noted, "when enrollment in public schools and colleges almost doubled (increase 87%), the staffs in these institutions tripled, and their funds multiplied eight times. Expenditures per student nearly tripled in constant dollars."

What return have we received for this vast investment? Again, Freeman:

> Mean scores on college board tests (SATs) have been declining sharply and consistently for a dozen years . . . Analysis of test results in the few city school systems from which detailed data are available, such as New York and Oakland, show a clearcut and strong negative relationship between expenditures per pupil and pupil achievement.

These facts are ignored by the Congress. Instead of looking at the new harsh realities of the relationship between Federal aid and Federal control, leaders in the Congress continue to spout the big-spender cliches and platitudes of the 1960's. Well, those cliches are no longer applicable, if, indeed, they ever were.

Mr. Speaker, the parents of America are losing control of their schools. That is an established fact. The Congress is doing nothing to change that situation and both the majority leadership and the administration seems to want to make it worse. Pressure groups and aggressive unions have made schools into battle grounds in which buses are more important than learning and Federal power more important than local control. This is one of the most explosive issues in the country today.

The question is, Mr. Speaker: What is the Congress going to do about it?

I request that at this time "Suburbs Losing Control of Their Schools," the New York Times, July 18, 1977, and "Spend More, Get Less in Education" by Patrick Buchanan be inserted in the RECORD:

SPEND MORE, GET LESS IN EDUCATION

(By Patrick J. Buchanan)

WASHINGTON.—Following Sen. Robert Dole's encounter with Walter Mondale in the vice presidential debates, a resident wit suggested that rerelease of the tapes be subtitled "Jack the Ripper versus the Scoutmaster."

Last week, the Scoutmaster was in Minneapolis on an odd assignment—serving as Jimmy's bag man to the National Education Association, handling the payoff to NEA for its cash-and-kind contributions in the campaign of '76.

Mondale brought it off well. Following "one of the most antieducation administrations in history," he declared, we've made the "largest increase in federal dollars for education since the Elementary and Secondary Education Act was passed in 1965. . . ."

Actually, Congress had done the job, over Carter's protest. But Mondale's little whopper did not diminish the revelry and good cheer of the convention, which was that of a player on a long winning streak at the gaming tables in Las Vegas.

While the payoff aspects of Carter's unfortunate cave-in to the education lobby are transparent, where is his policy rationale? Is this new billion-dollar transfer from taxpayers to NEA & Friends a bonus for a job well done in public education? Is it an incentive that will guarantee continued advances?

If the President will only review his budget, once again, he will find no finer example of the futility of "throwing money at problems," than in the education division of HEW.

Speaking at Hillsdale College last spring, Dr. Roger Freeman of Stanford's Hoover Institute, reflected upon the record of recent education policy:

"Between 1952 and 1972," he noted, "when enrollment in public schools and colleges almost doubled [increase 87 per cent], the staffs in these institutions tripled, and their funds multiplied eight times. Expenditures per student nearly tripled in constant dollars."

What return have we received for this vast investment? Again, Freeman:

"Mean scores on college board tests [SATs] have been declining sharply and consistently for a dozen years . . . Analysis of test results in the few city school systems from which detailed data are available, such as New York and Oakland, show a clearcut and strong negative relationship between expenditures per pupil and pupil achievement."

In short, the richer the education industry becomes, the poorer the product it produces. This truth has penetrated into the inner city.

Here is the Rev. Jesse Jackson, Chicago-based civil rights leader, on the subject:

"Maybe the biggest fraud going on in America today . . . is that many students are being graduated from high school and getting a diploma, but they have no information and they can't read well. When that happens, you better know that you have been robbed."

Fraud? Robbed! Heavy terms, Brother Jackson. But that is precisely what's going down. Students, parents, teachers are being defrauded and robbed—by a loose conspiracy of permissive social scientists, bureaucratic meddlers, judicial ideologs, and a populous confraternity of chowderheads who run a multi-billion-dollar racket that operates behind the legitimate business front of education reform.

SUBURBS LOSING CONTROL OF SCHOOLS

(By Michael Knight)

The control and governance of suburban schools—which for decades has been the basic political focus in communities throughout the region and often the only area in which voters felt they had a stake or a voice—is increasingly passing out of the hands of parents and local school boards.

Interviews with school board members and superintendents throughout New York, New Jersey and Connecticut indicate that decisions about financing, curriculum and personnel are increasingly being heavily influenced by state and Federal agencies, the courts and aggressive professional unions.

"I think within a few years the state and the teacher's union are going to be running the whole show between them," complained Joy Emanuele, a member of the Clarkstown School Board in Rockland County.

"We don't even have any choice any more over who we want teaching where, and we can't set up our own curriculum," she added. "The school boards have tried to organize, but we are paper tigers. The average community resident has no idea of the way things are closing in on us."

Mrs. Emanuele's comments were echoed by school board members throughout suburban New York and New Jersey and, to a lesser degree, in Connecticut, which has a tradition of strong local government and a relatively weak state government. Gov. Ella T. Grasso warned last month, however, that local school boards could expect "a larger state presence" in their affairs now that reliance on local property taxes has been ruled unconstitutional in the state.

The apparent powerlessness of the school boards has led people like Annaleen Phillips to stop attending school board meetings in East Ramapo, N.Y. "Most of my neighbors have finally given up, too," she said. "We vote against the budget every year just to show they can't cram something down our throats. But we just don't have any control anymore over the way things happen here."

Even the school board's power to influence the schools through their ability to set their budgets has dwindled, now that the great bulk of local school budgets are mandated by state and Federal requirements, as well as the provisions of union contracts.

"This year we have a budget of $10.8 million, but only $300,000 of that is in the nonmandated category," said John B. Sommi, Superintendent of the Nyack School District. He said the nonmandated category included interscholastic athletics, the purchase of library books and supplies for students.

LONG-TERM SHIFT

"Whether the people vote things down or not, they're still getting pretty much the same thing," he added. "The State Legislature has mandated so many things now that there's not really much choice on the local level. Years ago there were other items that were not mandated, like textbooks."

He conceded, however, that what was mandated and was not was often a matter of definitions. "A recent state law says we must offer students music or art courses," he said by way of example. "Yes, the law doesn't say we must hire an experienced art or music teacher, and it doesn't say what the class size shall be. But the choice there is one of an unacceptably large class with an unacceptably inexperienced teacher, which is no choice at all, really."

The total effect of state and Federal mandates to local school boards is difficult to assess, since the requirements come in a wide variety of forms and stem from a wide variety of sources ranging from pension plan actuarial tables to court decisions in labor relations cases to recent ruling by the De-

partment of Health, Education and Welfare that schools across the country must remove "architectural barriers" to handicapped students. The requirement means that school districts must now eliminate curbs, rearrange doors, lower water fountains and build ramps to accommodate handicapped students, whether local voters approve or not.

Some measure of the increasing roles of the Federal and state government in local education is available, however, in figures compiled by H. E. W.'s National Center for Education Statistics. According to Dr. Vance Grant of the Center, 55.9 percent of the total education expenditures in the nation during the 1955–56 school year came from local sources, 39.5 percent came from state sources and 4.6 percent came from Federal sources.

In the 1975–76 school year, however, the local share had fallen to 48 percent, while state expenditures had increased to 43.7 percent and the Federal share to 8 percent.

"These figures actually grossly understate the restrictions in the discretionary power of the local boards," Dr. Grant said. "In order to qualify for various state and Federal funds, they have to spend increasing amounts of their share complying with requirements, and so they have less discretion on how they spend their money."

One study by the privately financed Education Commission of the States shows that local school boards spend 39 percent of their time complying with Federal regulations to receive grants representing 7.5 percent of their income.

Another study by the National School Boards Association showed that filling out just two Federal forms dealing with civil-rights compliance had occupied local school officials nationwide for 1,193,400 hours last year, at a cost of $11,492,000.

A study of the range of mandated programs in New York State was undertaken recently by Dr. Jeffrey Bowen, the assistant director of research for the New York State School Boards Association, who was unable to come up with a definite number.

"There are new requirements all the time," he said. "The Legislature considers 800 education bills annually and adds 100 chapters to the state education law each session, which is not even to begin talking about the rules of the Board of Regents or the very detailed requirements of the State Education Commissioner."

"I think it's probably impossible to ever find out how many requirements there really are," he added. "There are just so many and they're growing all over the board. There is no question in my mind that there's a lot less freedom in local control now than, say, 20 years ago, because of this."

The effect of the rapidly increasing role of state and Federal agencies at the expense of local boards has resulted in a "severe, accelerated, erosion of local control," according to Richard L. Ornauer, the president of the Nassau-Suffolk School Boards Association.

"We no longer have much control over finances because of the mandates," he said, "and we no longer have control over whom we can dismiss, because of the unions and the courts. Local control has become almost vestigal compared with what it used to be. I don't want to paint too black a picture, but it's a pretty good shade of gray right now."

In addition, the school superintendents, who are hired by the boards to run the schools for them, are required more and more now to report to state agencies as well. In New Jersey that state's new "thorough and efficient" education law is forcing local superintendents to report to the state how they are complying with new guidelines on increasing school guidance staffs, measuring the progress of students, and the like.

The slow transfer of control over suburban education is part of a long-term shift that began around the turn of the century, according to Harmon Zeigler of the Center For Educational Policy and Management at the University of Oregon. In an address earlier this year to the annual meeting of the National School Board Association, Mr. Zeigler called local school boards "irrelevant appendages" as the country moves toward what may become a national education system.

"Lay control was first destroyed by professionalism and only later was assaulted by state and national bureaucracies," he said, tracing the decline of local boards from the ascendancy of local superintendents and other educators to the present era, which he characterized as one in which education is considered an instrument for nationwide social change.

The power of local school boards is also being rapidly eroded by teachers unions, which have negotiated increasingly wide-range agreements in the period of militancy which began in the 1960s.

"Such agreements," Mr. Zeigler said, "are being expanded to include not only salary, but also course content, curriculum change procedures, teachers evaluations, community participation, teaching procedures and grievance procedures.

"As such agreements become more prevalent, the range of issues left for even the superintendent to disucss with the board will diminish."

TEACHERS HAVE LITTLE TO SAY

The rise of the unions has also prompted school boards, faced with professional union negotiators, to hire their own negotiators and full-time attorneys. The school board in Stamford, Conn., recently hired its own attorney to defend it in numerous suits rather than rely on that city's corporation counsel. The school board in Paramus, N.J., did the same. The East Ramapo, N.Y., board went so far as to hire the former chief negotiator for the East Ramapo Teachers Union as its own negotiator.

The increasing request by teachers throughout the region for some say in what is taught was angrily rejected in at least one community. "The board will approve all the curriculum and textbooks, not the teachers," argued Michael Gilmartin, a member of the Piscataway School Board in New Jersey's Middlesex County.

Other boards are under similar teacher pressure, although teachers have not yet made appreciable headway. "I've heard that demand repeatedly over the years," said Mr. Ornauer of the Nassau-Suffolk School Boards Association. "Their argument is usually that they are the practitioners, that the board should listen to them."

"If their proposals are not honored, you get job actions, slowdowns, sudden difficulties, impasses of all sorts and an inability to get things done. It's a constant situation and a constant refrain in contract demands."

The power of the unions is felt most openly when jobs and money are at stake, however. The East Ramapo Board of Education learned that lesson last year when it attempted to cut the budget by eliminating the positions of department heads, a job that entails little teaching but pays a premium salary.

"We wound up before the State Board of Education on that one," recalls Harold Block, the board chairman. "And we finally ended up restoring about two-thirds of the department head positions." In another incident an attempt to reduce the number of principals ended with one job eliminated and a new position created for the person affected. "It satisfied everyone involved, but it hardly helped us cut our costs," he said.

The district is expected to encounter even more difficulties with its most recent attempt to cut costs this time by reducing salaries an average of 15 percent.

STUDENT-TEACHER RATIO

"I would say that the teachers are much better organized than we are," Mr. Block added. "Every time we get into a dispute or a hearing process, they have some attorney or negotiating expert down here from Albany. They know the rules much better than we do most of the time; they have the manpower and the expertise to back up just about any demand that they make."

The involvement of the Federal Government in the affairs of local school systems grew rapidly beginning in 1965, according to Mr. Zeigler, with the passage of the Elementary and Secondary Education Act, which doubled Federal contributions to local school districts.

Over the last decade, for example, the student population in Stamford schools has increased 2.2 percent, while the number of teachers increased 29.2 percent, the number of administrators rose 22 percent and specialized personnel increased 129 percent. According to Allen Grafton, a spokesman for the school system, Federal funds for reading improvement, bilingual education and other special programs have led the city to hire more teachers in an effort to make use of available money.

School boards like Stamford's are eager for the money, which eases the burden of local taxes they must impose, but have also grown increasingly to resent the strings that go with the Federal money. "When I see guidelines issued dealing with the school lunch program, then I see one regulation too many," complained Paul Shelly, Superintendent of Schools in Paramus, N.J. "I am concerned about the increasingly heavy hand of control that the Government is wielding in local school matters."

The most recent Federal directive to local school boards requires them to "actively search" for children who may have learning disabilities and thus might be eligible for federally financed special education classes. The Government, however, does not provide funds for the search, which means that unwilling residents must tax themselves to pay for the search effort the Government has decided upon, or risk losing all or part of their Federal funds.

"This board is coming to the point where it will have to tell the Federal Government to go to hell," Rocco Colatrello, a member of the Stamford School Board, said at a meeting of the board, where the search effort was being discussed. But despite his angry outburst, the board is bowing to Federal pressure and searching for children with learning disabilities rather than risk losing the 18 percent of its $34.1 million budget that comes from state and Federal programs.

SUPPORT NEEDED FOR FARM PRICES

HON. RON MARLENEE

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. MARLENEE. Mr. Speaker, today we begin debate on the Agricultural Act of 1977 and I would like to commend to my colleagues attention an editorial from the Billings Gazette of July 18, 1977. The price of wheat has dropped over 35 percent since last year, while inflation has raised the cost of equipment and supplies. The Billings Gazette points out why we must reverse this trend and prevent further losses in the agricultural sector of our economy.

The editorial follows:

WHEN FARMERS HURT, SO DOES REST OF STATE

Farmers and ranchers living near Billings, Livingston, Bozeman, Missoula and a few other urban and recreation areas of Montana are more fortunate than those 'way out in the hinterlands.

When hit hard by depressed farm prices, farmers near the cities and more desirable recreation areas have the option of selling to developers or subdividing their land for other use.

This isn't the case for most of Montana farmers and ranchers. Those who reside in the wide-open spaces and near the farm service center towns have no choice but to try to make a living off their land through its food and fiber production. It's either that or sell out at a heavy loss.

What a farmer or rancher can profit today from operating his land is mostly negative. Unlike some of our major corporations, his losses are real, not paper or accounting adjustments.

How long the majority of farmers can continue to operate under current farm price conditions is questionable.

Those of us who live in the urban centers of Montana may not think it effects us, but it does.

The lack of buying power on the part of the farmer and rancher is soon reflected on the Main Streets of the smaller communities. Then it doesn't take long for it to make its impact on the major trade and distribution centers.

True, some farmers and ranchers do have reserves to hang on for a while. Quite a number don't, especially those who are younger, who purchased their land, machinery and loans at high prices.

When you hear the farmer talk about his problems remember this, if you live in Montana they are yours, too.

"HELP," CRIES AGRICULTURE

HON. RON MARLENEE

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. MARLENEE. Mr. Speaker, as debate begins today on H.R. 7171, the Agricultural Act of 1977, I cannot overemphasize the vital role farmers and ranchers play in our economy. The following editorial from the Great Falls Tribune of July 13, 1977, sums up the importance of agriculture, and I commend it to my colleagues' attention:

"HELP," CRIES AGRICULTURE

It's strange that so many Montanans and Americans in general fail to appreciate the contributions of agriculture. Although our high standard of living rests on the productivity and efficiency of farmers and ranchers, too many Americans simply don't understand the importance of a healthy agricultural climate.

An article in the current issue of "Montana, Magazine of the Northern Rockies," explains clearly the value of agriculture to Montana and the nation.

R. J. McConnen, professor and head of the Agricultural Economics and Economics Department at Montana State University, Bozeman, presents a convincing case for agriculture in his article, "Montana's Agriculture, Food, Jobs and Tax Dollars."

McConnen stresses that our "good life" depends on a solid agricultural base.

". . . if American agriculture had not been able to dramatically increase its productivity, we would have precious few choices about lifestyle to make," he writes. "Food and fiber come first. Once we are able to satisfy minimal requirements, we can make choices about how we should use the rest of our scarce resources."

The article points out that U.S. agricultural exports in recent years have had a value in excess of $20 billion and comprise the nation's single most important source of export earnings.

One of about every five jobs in the private sector of the U.S. is associated with agriculture, McConnen says. And, agriculture's tax payments, which increased 75 per cent from 1971 to 1975, are keeping Montana solvent.

Agriculture and the agribusiness sector dominate much of Montana's economy, McConnen writes. That has been true for the past 100 years and likely will continue, he adds.

"Given the capabiilties of Montana's farmers and ranchers, it probably always will be first," he adds.

"But Montana's agricultural community needs understanding and sometimes help," he continues. "If Montanans are to live comfortably in their environment, they should understand that environment. A significant part of that total environment is Montana's agriculture."

Since Montana's farmers and ranchers are in desperate economic trouble now with high production costs and depressed market prices, this is the time for Montanans and the entire nation to show some understanding of the quicksand problems facing agriculture.

THE CASE OF LEV GENDIN

HON. THOMAS J. DOWNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. DOWNEY. Mr. Speaker, I would like to bring to your attention yet another case of religious discrimination in the Soviet Union.

Lev Gendin, a Jewish resident of Moscow, strongly desires to emigrate to Israel. Mr. Gendin lost his job as an electrical engineer and was reduced to performing menial tasks, shortly after his first application for a visa in November 1970. He has been separated from his wife since 1971, when she fled to Israel under threat of KGB arrest.

Lev Gendin is presently under continuous surveillance and harassment. He has been detained in prison for a total of 160 days since 1970. Mr. Gendin has also suffered spinal injury as the result of a severe beating at the hands of the KGB. He was threatened with violence by the KGB and he was beaten into unconsciousness, following the warning, in May 1974.

Mr. Gendin recently reapplied for a visa and he was again refused. He was warned that he would be sent to Siberia instead of Israel.

Although he is 36 years old, well beyond military age, Mr. Gendin was recently called to serve in the Soviet Army. If inducted, Mr. Gendin will not be granted a visa for at least 5 years after his discharge from the army.

At the present time, Mr. Gendin is in hiding. Everyone who knows him is afraid for his life. The Soviet authorities have made repeated visits to Lev's father's house in order to trap him or discover his whereabouts. In addition, the authorities have attempted to trace mail and friends in order to locate Mr. Gendin.

Keeping Mr. Gendin in the Soviet Union against his will is a violation of the Helsinki accords provision on the Unification of Families. It is also a violation of both the spirit and the letter of the Universal Declaration of Human Rights and the Final Act of the Conference on Security and Cooperation in Europe.

Lev Gendin is presently an unhappy and unproductive member of Soviet Society. Cases like Mr. Gendin's can only serve to strain and damage relations between the United States and the U.S.S.R.

We cannot stand by while violations of basic human rights continue to occur. I again urge my colleagues, as I have urged them in the past, to do all that they can to speak out against these injustices.

AMERICA'S SECURITY MAY DEPEND ON B–1 BOMBER

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. ASHBROOK. Mr. Speaker, I am deeply disturbed by President Carter's decision to terminate the B–1 bomber program. Failure to produce the B–1 will leave a major gap in our defensive capabilities.

As my colleagues are aware, the manned bomber plays a key role in our national defense planning. Our strategic triad presently consists of manned bombers along with land-based ballistic missiles and sea-based ballistic missiles. It is essential that each component of the triad remain strong and not be allowed to become outdated or outmoded.

The B–52 has admittedly been an outstanding airplane. It has effectively carried out its job of protecting our Nation.

The fact of the matter, however, is that the B–52 is growing old. It has been in service for nearly three decades. To continue to rely on this airplane as our manned bomber is a grave error. We need to be constructing a new airplane fleet now if we are to meet the Soviet challenge in the years ahead.

This is not just political rhetoric. The Soviet Union by the 1980's will have the technological ability to defend against the B–52. Our B–52's will be outclassed by Soviet air power.

The B–1, however, is a far more technologically advanced airplane. Its effectiveness and survivability are greatly superior to the B–52.

Let me cite just a few of the many strategic advantages of the B–1 in comparison with the B–52. One such advantage is speed. Top speed for the B–52 is about 650 miles per hour. The B–1 can fly twice as fast, hitting 1350 miles per hour.

Another advantage is payload. The B–52 can carry 38,000 pounds. The B–1 has a payload of 75,000 pounds, about twice the capability of the B–52.

A third advantage is detection. The B–1 has only a third of the radar reflectivity of the B–52. This makes it much harder for the enemy to detect. Even if detected, the B–1 has advanced electronic equipment which makes it difficult for radar to determine the exact location.

These and other features of the B–1 would make it a valuable addition to our defense preparedness. For President Carter to terminate this important program at a time when the Soviets are seeking a position of military superiority is beyond belief. His decision seems to indicate a dangerous misconception of Soviet aims and world realities.

We are playing parlor games with the Communists. They are our deadly enemies and the security of America may depend on whether or not we build the B–1 bomber.

SIT ON IT, LIBERALS

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. LONG of Maryland. Mr. Speaker, I bring to the attention of my colleagues a thoughtful, penetrating and well-written article on liberalism and reverse discrimination that appeared in the Dundalk Times on July 14, 1977. The insight provided by this article should make even the staunchest liberals stop to reexamine their thinking on one of the most important issues facing our Nation:

SIT ON IT, LIBERALS

(By Ronald DeCicco)

A friend of mine is slowly, quietly, almost on tiptoe becoming conservative. It's fun to watch the changeover process, although I'm sure liberals would compare it to going mad, going blind, deaf and dumb, or being kicked in the head by a horse. I suspect she is not a loner in her new thinking; she is, rather a part of a trend away from the liberalism of the 1960s, of promises that, unfortunately, were delivered.

The liberals' brand of thinking is in every corner of our daily lives, and the result is—well, mush. Mush in the educational system, mush in the quality of performance, and mush in the meanings of degrees, awards, and accomplishments. Equality of opportunity is one thing, but equality in awarding performance is something else again. My friend is not becoming a zealot for conservatism. (She is not a zealot, period.) What she is doing, however, is much better than that. She is learning, by experience, that liberalism does not work, and that in the long run it penalizes people with talent as a way of making up for past sins and unclear consciences.

Perhaps the biggest abomination liberals have given us is the quota system, which is a basic tenet in the liberals' philosophy. The quota system, reduced to simplest terms, says employers must hire X number of people simply because they belong to a minority group. I have trouble with that. What, then, is a majority group? Name one. And what does background have to do with the ability to perform work? Here we have a phenomenon that I call inequality of opportunity.

But back to my friend. She is above average in intelligence, and her capacity for work is admired by everyone who knows her. In her job, she is witnessing a flow of college graduates who have trouble spelling, typing, following directions and answering the telephone. These are college people, not high school seniors, mind you. My friend, who is not a college graduate, is not considering going back for her degree because she knows from experience that the old sheepskin has been rendered meaningless. The evidence is all around her.

And it goes without saying that some of the graduates are working with her because of the quota system. So Dorsey Dumbbell is being passed along year after year, deficient in skills because schools do not have the gumption to say, "Enough!" Dorsey Dumbbell is being shortchanged; talented people who give a damn about the calibre of work they are doing are being overlooked; and people without college degrees are being penalized because they did not participate in what for many is a four-year sham. I use sham with all due respect for the word; any time you can get college credit for belly dancing or bowling, it's a sham.

Thanks to the liberals, college has become commonplace rather than exclusive. Exclusive connotes money, but it also means wealth of ability, which you once had to have to even be considered for college. If you wanted to go badly enough, if you had the ability, then you were willing to sacrifice for it, financially and socially, because the rewards were worth it. Not so anymore. Higher education is nothing more than a moneymaking enterprise, on an equal footing with peddlers of souos and shoes, hollipops and liquets. Let's admit it's an extension of high school, which itself is another watered-down product.

My friend is changing her liberal thinking in other areas, too. She is nowhere near as anti-rich as she once was. As so many before her, she has finally realized that it is not the rich who cause the poor. Anyone who holds that opinion is probably making excuses for personal shortcomings. It's popular McGovern dogma, but it never held water. Estates have been split up among nephews and nieces, grandchildren and great-grandchildren. The companies they own keep people in jobs and off the welfare rolls, which are bulging thanks to the liberals' abuse of the welfare system.

My friend has discovered all this and more. She did not, I should point out, think any of these thoughts back in her college days. Back then she held lofty thoughts and damned the rich and pitied the poor. It was a black and white world—then. Out in the world of work, it's another story when your beliefs crumble right before your eyes. It's a bit much to see your talents passed over because of the very theories you once held in high regard. But one of the joys of living is you never stop learning. Experience makes liberalism a youthfull idyll, fantasy not unlike Santa Claus, the Tooth Fairy and Mother Goose.

In other words, pure illusion.

JOHN E. WHITNEY SERVES MANY YEARS IN CHRISTIAN SERVICE

HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. LAGOMARSINO. Mr. Speaker, one of my constituents, Rev. Ed Crist of Ventura, recently brought to my attention the many fine works that his father-in-law, John E. Whitney, has engaged in during his many years of Christian service.

I am advised that John Whitney was born in 1890. His parents died when he was a child. He was reared in an orphanage and later in a foster home. He worked his way through school and was ordained as a Baptist minister in 1913. Shortly thereafter, he founded the Odosgih Bible Conference in New York and was its president for two decades.

Mr. Whitney, a widower, is presently living with his youngest daughter, Virginia Buchman, in Sayre, Pa. He has five children in all. The oldest daughter, Lois, has been a missionary in Kenya for the past 30 years. His son, Gordon, is also a Baptist minister. His other son, Leslie, is a surgeon in Wilmington, Del., and his daughter, Marguerite Crist, has lived in Ventura for the past 7 years.

It is apparent from his many years of dedicated work that Mr. Whitney is a man who loves and strongly supports his country. In addition to his church work, Mr. Whitney has been involved in community civil projects, often being a speaker for community organizations and special events such as Memorial Day services and Fourth of July meetings.

I know that Mr. Whitney has been a great inspiration to many people and a person many have attempted to emulate. It is my personal pleasure to commend John Whitney for his many years of dedicated service to his community and our country.

CHET HOLIFIELD SPEAKS OUT FOR THE BREEDER—PART II

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. TEAGUE. Mr. Speaker, I wish to present the continuation of CHET HOLIFIELD'S June speech on our recent nuclear policy shift and its ramifications:

President Carter is apparently obsessed with the problem of nuclear weapon proliferation. Our Joint Committee agonized over this same problem for many years. But as I said before the "atomic genie is out of the bottle."

Five nations possess atomic-plutonium-hydrogen weapons, there could be more. Hundreds of scientists and engineers have participated in the design and construction of nuclear bombs. There are hundreds of research reactors in universities throughout the world. Many full scale electricity producing atomic reactors throughout the world are also burning uranium and thereby producing plutonium. Weapon material can be produced in central station reactors and in university research reactors. I cite the most recent addition to the nuclear nation club. The nation of India, which produced their so called "peaceful-device" from material produced in a Canadian research reactor.

The President apparently believes that if we deny our people the use of plutonium for reactor fuel that other nations will also forego the use of plutonium in their reactors. But the other nations are not rich in oil, gas and coal as we are. Japan as an example has to import 98% of the oil, coal and gas they use. Many other nations lack indigenous fossil fuels. They must turn to nuclear as a matter of national survival. This they have done and are continuing to do. A breeder reactor offers an irresistable economic bonanza. A breeder reactor will create more

fuel than it burns. It is estimated that it will multiply the extraction of energy from a given amount of uranium by factors of fifty to seventy. In an energy hungry world it is naive to expect other nations to follow our lead.

The President is inconsistent in his position. He has accepted the reality of spent fuel pond storage throughout the world. If any nation builds a shielded processing facility they can extract plutonium from their spent fuel ponds. He says the problem is that some country might construct secretly the nuclear weapon assembly system and that overnight they might take the plutonium from the power system and put it through their nuclear weapon assembly system and the world would be confronted with a new nation seeking membership in the nuclear weapon nation club. He apparently assumes that the new nation would make a few nuclear bombs secretly and then blackmail the adjacent nations. This causes me to ask if the newest nations to achieve nuclear bombs, i.e., China and India have tried to blackmail their neighbor nations with their new weapons? The answer is "no". Those new nuclear weapon nations know very well that such a rash act would be counterproductive in the eyes of the world. The major nuclear weapon nations would combine in opposition to such a move and their superior strength in nuclear weapons would, in my opinion, correct such a rash adventure in brinkmanship.

When a nation enters the nuclear weapon nation club, I have noticed that they suddenly become very conservative with their new found status. They do not engage in high noon confrontations. There is no place to hide from the effects of a nuclear world war.

I know that a national questioning of atomic values is in being. I know that organized groups under unofficial, non-elected leaders who claim they represent the opinions of the majority of our citizens, are spreading propaganda and mis-information thruout the land about atomic matters.

But I also know that in seven states where anti-nuclear advocates were successful in placing the issue of nuclear power on the ballot, the people rose up and defeated those anti-nuclear initiatives by huge majorities.

The anti-nuclear people continue to oppose the use of generating electricity by nuclear reactor plants politically and with legal interventions. They oppose most of the national and international policy concepts and programs of scientific research and engineering development which have been followed for the past three decades.

I do not contend that all of our concepts and programs have been perfect. But neither have they been disastrous failures as the critics and dissidents charge. Some postmortem criticisms can be made on the minus sides. Also, a great list of of constructive achievements can be furnished on the plus side.

I can state for the record. During the past three decades we have developed many valuable and beneficial national and international policies, treaties and agreements.

Nationally we have engaged in a phenomenal and unprecedented program of scientific research and engineering development. These programs strengthened our Nation's peacetime capability tremendously.

This great national effort was financed primarily with more than $150 billion dollars from the tax funds of our people.

Concurrently with the Federal stimulus, additional billions were invested from the private funds of great corporations and other private enterprise sources.

National and State legislatures functioned as the people's officially elected representatives, in bringing to fruition the beneficial uses of atomic fission.

In the face of today's urgent energy need probably the most beneficial use was the development of the most powerful new energy fuel ever known to man—atomic energy.

During these three decades we also developed a very wise policy of international sharing. In 1953 we called it the "atoms for peace program." Its result was the sharing with the people of other Nations the peacetime benefits of the atom.

In 1957 we took the lead in the formation of the International Atomic Energy Agency. In a permanent site in Vienna, Austria, we gathered the atomic scientific leaders of many nations together to formulate in the I.A.E.A. charter, the International Rules and Regulations for Procedure. We organized seminars to discuss scientific and engineering problems. We agreed upon safe guards for the international shipment of nuclear materials and we exchanged scientific and engineering information.

International agreements and arrangements were made and officially approved by the co-operating member nations of I.A.E.A. This organization is ready to assume new and important duties in monitoring and safe guarding nuclear materials under any task which may be assigned to it under the non-proliferation treaty.

As a charter member of the United States Joint Committee on Atomic Energy for three decades, I was a vigorous participant in our national program of atomic development and in supporting international agreements and arrangements.

These national and international actions and policies were based on many years of study by scientists, engineers and Members of the Congress. They were slowly and carefully beaten out on the anvils of educational, political and legislative action.

I believe that we should pause and ask many pertinent questions before we change our course or before we jeopardize our national programs or violate our international commitments.

Questions:

Did our House of Representatives and our United States Senate fail in discharging their public trust and responsibilities in meeting the great challenge of the atom?

Were seven Presidents, Roosevelt, Truman, Eisenhower, Kennedy, Johnson, Nixon and Ford wrong in supporting and developing the national and international use of the atom?

Were we wrong in protecting our military security and pledging the use of our military strength to the North Atlantic Treaty Organization for the purpose of preventing a Communist take over of Europe?

Were we wrong in developing over two thousand peacetime uses of the atom for the benefit of our people and the people of the world?

Were all the nations of the world wrong in accepting peacetime atomic technology from us and making their own supreme efforts to develop their own atomic capabilities?

Where do we as a nation stand today?

We are justifiably a proud nation. We are zealous of our record of leadership in the atomic field. We are proud of our record of accomplishment in domestic atomic technology.

We are especially proud of our ability to manufacture and operate light water and boiling water reactors which produce safe, clean, dependable and economically competitive electricity. This capability alone may become our energy salvation as our supply of fossil fuels decline.

Concurrently with the development of our light water reactors we have improved our gaseous diffusion separation processes and we are now ready to build an advanced type of separation plant based on the centrifuge process.

We also recognized as far back as 1948 that there might come a time when our high yield domestic uranium ores would be exhausted or seriously diminished.

We foresaw the need to beat our plutonium spear and sword into an energy source fuel for a different type of reactor. A reactor that would breed more fuel than it used. So we began thirty years ago to develop a breeder type of reactor. Our strong research and development program soon gave us experimental breeder reactor No. 1. Then experimental breeder reactor No. 2. We expanded our R & D in the FERMI and SEFOR experimental reactors. We continued laboratory programs and testing devices. We started the fast flux test reactor at Hanford and we are approaching the consummation of this huge and very costly testing device, whose purpose is to undergird our liquid metal fast breeder fuel technology. It should make possible an inexhaustable energy fuel for the next thousand years.

Regardless of the final decision to defer-delay or terminate the L.M.F.B.R., the fast flux test facility must be funded and its invaluable function continued. Our Nation will inevitably be forced to build and use many fast breeder type reactors to supply our energy needs.

Our scientists and engineers were not the sole possessors of the dream of a future breeder technology. Their counterparts in the Soviet Union, Great Britain, France and elsewhere accepted the principle of the reactor that would breed fuel as it burned uranium 235 and fertilize thorium and U-238. I am sorry to state that foreign nations have forged ahead of us in building their first demonstration breeder plants.

In our own country two breeder approaches survived the screening process. The liquid metal fast breeder and the Rickover seed and blanket type of a slower breeder.

The joint committee and the Congress supported the Rickover seed and blanket slow breeder and we hope to start demonstrating its function in 1978.

The liquid metal fast breeder seemed to offer more potential in the evaluation of most of the scientists, engineers, electric utilities, and reactor manufacturers. It became the committee's greatest challenge. We have expended 2.8 billion dollars in research, design and the development of fuel and components, the site has been chosen on T.V.A. property adjacent to the Clinch River in Tennessee. The Congress authorized the breeder demonstration plant in 1973 and appropriations have been made annually for five years.

Suddenly we find ourselves faced with a new President who is opposed to continuance of the project and has decided to defer indefinitely, construction of the demonstration reactor.

ERDA has been instructed to terminate the L.M.F.B.R. program. The President has stated that he will not request 1978 fiscal year funding.

These decisions have been made abruptly by the President without consultation with the Congress. Without consultation with the private manufacturers and the more than three hundred private utilities and corporations that have pledged 250 million dollars and who are partners in the project management corporation. These people have been contributing funds and management personnel to the joint project for years and have a right to be heard.

The Federal Govrenment has expended in the last thirty years two billion eight hundred million dollars and two hundred fifty million dollars has been pledged by private and public entities.

If this project is terminated, three billion dollars of the tax payers investment will go down the drain because of a sudden arbitrary decision of the President.

But that in no way compares to the loss which the people of the United States will suffer in future years. They will lose a vitally needed inexhaustible source of energy fuel

for the production of electricity in the years and decades of the future.

They will stand aside while the Soviet Union, France, Japan, Germany and Great Britain build a series of breeder type reactors. The loss of leadership will diminish the prestige we have earned in nuclear technology. We will lose our influence in developing international agreements on further nonproliferation procedures.

Our unilateral withdrawal from breeder development will not deter other nations who are determined to achieve the energy which they must have, because of their lack of indigenous fossil fuels. The Teague report of two weeks ago reliably supports this statement.

What can pro-nuclear professional and technical associations do?

What can the people do?

What can informed scientists, engineers and technicians do under present circumstances?

The problem we face is not a technical one in my opinion. It is a problem caused by a political decision made by the President of the United States.

Let me pause here to recognize reality. The opposition of President Carter is a powerful factor, especially a new President that has proven to have a strong charisma. The polls continue to prove his popularity. He has a strong majority of democratic members in the House and Senate. They are aware of the President's popularity.

They know that in many matters they can by majority vote pass legislation but they are painfully aware that it takes a two-thirds vote to override a Presidential veto.

There will be considerable negotiation between the President and the Congress on every difference of opinion. Neither the President nor his congressional leaders relish a confrontation by veto. If negotiation fails and the President stands firm and threatens to veto legislation, either the Congress accepts the necessity to compromise or makes the attempt to override the veto. A nose count by the congressional leaders will dictate the decision of the leaders.

Few vetoes have been overridden in the history of Congress. With a popular new President the odds are in the President's favor.

The Members of Congress must be convinced that there is an overwhelming public support on an issue before they will confront a presidential veto with override action.

The President's tenure is four years. All Members of the House of Representatives will face a new primary election only 12 or 15 months from today. One-third of the Senate will also face re-election at the same time.

Most of the Democrats would rather run for re-election as a loyal supporter of the Democratic President than as one of his independent opponents.

If enough voting citizens—if enough organization groups contact their elected representatives in Congress and convey their interest in a strong nuclear energy development program as the people did in the votes on the seven anti-nuclear state initiative proposals, I know this would strengthen the will of their representatives to negotiate stronger, and vote if necessary to override a veto.

So, if you ask me, "What can I do to preserve our nuclear progress?", I can only say to you, generate letters to your Congressman and your Senators from yourself and any organization to which you may belong and let your wishes be known.

If enough voting citizens are interested enough to write their Federal officials they will strengthen their will to vote affirmatively on nuclear legislation and strengthen their backbones to vote against the President when they believe that he is wrong.

In this matter I believe he is tragically wrong on a vital issue involving the energy base necessary to protect our economic vitality and to preserve our social and political structure as a free nation.

"INDEXING"—THE WRONG WAY OUT

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. McDONALD. Mr. Speaker, as inflation continues to inflict great suffering, lowering real income, and eroding savings, many propose to remedy the injury by "indexation." This consists of raising everyone's income, prices, or wages by the average level of price increases, usually as measured by the Consumer Price Index.

The rationale is that inflation raises the wages of some faster or more than others, but that such "inequities" can be eliminated by indexing. But what is overlooked by the advocates of indexing—many of whom, incredibly, are self-styled supporters of a free market—is that in a free market one man's income is another's cost. If incomes are mandatorily raised by fixed amounts, more inequities would result than would be cured, and production would be disrupted and misdirected to a greater level than without indexing. Some results of indexing, for example, would be bankruptcies of marginal businesses and higher unemployment.

Inflation is the direct result of Federal deficit spending and amounts to an indirect tax. Indexing would not cure the problem, it would only redistribute inequities. The only real cure is to eliminate deficit spending.

An excellent analysis of the fallacies of indexing is provided by the noted economist Henry Hazlitt in the May 1977 issue of the Freeman:

"INDEXING"—THE WRONG WAY OUT

(By Henry Hazlitt)

Inflation is caused by the issuance of too much paper money. Inflation is the issuance of too much paper money. Its most conspicuous consequence is to raise prices. But it never raises all prices, wages, and incomes simultaneously or to the same extent. The persons whose wages or incomes it raises least or latest suffer the most from inflation and raise the greatest opposition to it.

Therefore some politicians and economists propose that this be remedied by what they call "indexing" or "indexation." This consists in prescribing that everybody's price, wage, or income be raised as much as the average "level" of prices. This usually means: by the same percentage as the official "Consumer Price Index" of the country has gone up.

The mere statement of this proposed remedy suggests some of its difficulties. We must distinguish first of all (though it is surprising how seldom this is done) between mandatory and voluntary indexing. This country has already adopted a large measure of the latter. According to a calculation made in 1975, the incomes of more than 65 million Americans were indexed: 31.3 million Social Security recipients, 19 million food stamp users, 7 million union members, 4 million aged, blind, and disabled persons on Federal aid, and so on—including also members of Congress and thousands of other employees of federal, state, and local governments.[1]

This "voluntary" or quasi-voluntary indexation does some harm, as I shall later point out, but not nearly as much harm as mandatory indexation. Mandatory indexing is a form of government wage-and-price control. Like any form of price control it is bound to be disruptive. "Standard" price control prescribes maximum wages and prices; mandatory indexing would prescribe minimum wages and prices. Imposing price ceilings brings underproduction and overconsumption of many commodities, causes shortages and leads to rationing. Imposing wage and price floors would lead to massive unemployment and to surpluses of goods that could not be sold at the higher prices.

WHAT IS NOT SEEN

It is amazing that among the champions of compulsory indexing there are some self-styled free-market economists. Inflation from its very nature does not raise all prices, wage-rates, and incomes simultaneously and uniformly but at different times and by different amounts. And during an inflation individual prices, wage-rates, and incomes also change in relation to each other, for the same variety of reasons that they do when there is no inflation. But the advocates of indexing see all these changing divergencies not as market fluctuations that accelerate and smooth out a necessary re-allocation of production to changes in demand, but as "inequities" that need to be eradicated.

What the advocates of indexing overlook is that in a market system, with division of labor, practically every man's money income is some other man's cost. Therefore, indexing not only creates more inequities than it cures, but it tends to disrupt and misdirect production. When wage-rates in industry X, that have not yet gone up as much as the average, are suddenly and mandatorily boosted to that level, profit margins in that industry are narrowed or wiped out. One result is bankruptcies of marginal producers and less output. Another result is not a higher income for all the previous workers in that industry, but more unemployment. Similar consequences follow when raw material prices or rents are boosted by mandatory indexing. And every upward adjustment to produce "equity" creates the need for other upward adjustments, a never-ending process.

MISALLOCATION OF SOURCES

One of the great evils of inflation, of course, is that it tends to redistribute wealth and incomes erratically and wantonly. Another consequence is that it leads to the misdirection of labor and investment. But indexing, by arbitrarily altering and falsifying the market signals still further, only tends to increase the misdirection and misalloction of labor and output.

The advocates of indexing appeal to a class interest. What they say in effect is: You haven't got your "fair share"; you are being cheated, and only indexing will save you. Powerful pressure groups push for a kind of indexing calculated to benefit them at the expense of everybody else. But if they could succeed in their aim, the result in the long run would be damaging to them as well as everybody else. The strong unions, for example, want to keep abreast of increases in the Consumer Price Index, as a minimum. On top of that they ask for so-called "productivity" increases, increased pensions, and other guarantees. The result can only be reduced returns to employers, leading at best to less capital formation and slower growth.

Footnotes at end of article.

if not to increased bankruptcies and unemployment.

The typical newspaper reader is led to assume that the official Consumer Price Index, on which most indexation schemes are based, represents all prices of all consumer goods. It is in fact not even designed to do that. Its full official name is the "Consumer Price Index for Urban Wage Earners and Clerical Workers." It covers only 400 items out of the thousands bought and sold by consumers. It is weighted to apply to a particular minority. Its calculation is arbitrary in a score of ways. As a measure of changes in "everybody's" cost of living, it lacks precision. And it necessarily must, because each person's particular "mix" of needs and purchases is individual. The average is never the actual. The average family has 3.1 members, but there is not a single family in the United States with 3.1 members.[2]

UNEVENLY APPLIED

But these statistical defects are a comparatively minor objection to indexing. Contrary to the naive assumption of its advocates, indexing simply cannot be applied evenly all around the circle. It can only fix prices; it cannot guarantee incomes. It can order that wage-rates be raised; but it cannot insure that employment will not thereby be reduced. It can order that the price of an item be increased, but it cannot guarantee that the sales of that item will not be diminished.

For another example, let us look at how indexing would affect savings and loan institutions. The government, as has been suggested, could offer notes and bonds on which the annual interest rate varied with consumer prices, and on which even repayment of principal was increased to correspond with consumer price rises. Perhaps some private borrowers would offer similar bonds. In that case there would probably be massive withdrawals from the savings banks to buy such securities. How could the savings banks then maintain their liquidity or solvency? Would they, in order to compete, have to offer their depositors a similarly indexed interest rate and indexed repayment of principal? Where would they get the money from? Would they, in lending mortgages, also demand an indexed interest rate and a similarly scaled-up repayment of principal? How many homeowners would dare to undertake such a risk or be able to meet the terms in the event of a major inflation?

Mandatory indexing is practically certain to favor the interests of the most powerful political groups. In a democracy it would favor primarily the big labor unions. It is naive to suppose, as some of the advocates of indexing do, that in the event of an actual fall in prices, the unions would tolerate a corresponding cut in money wages. Indexing would force wage-rates up, and keep them up, on a ratchet principle.

Among those whose incomes are already indexed—if not overindexed—are Social Security recipients. This is having a disturbing political effect. It must tend to remove many of our elder citizens as opponents of inflation, and make them complacent about it. If elderly persons and the members of labor unions ever come to assume that they are adequately protected against the ravages of inflation, and may even profit by it, the outlook for restoring balanced budgets and a sound currency will become all but hopeless.

Among those who are already overprotected by indexing are retired Federal employees. Lately Congressmen have been voting themselves all sorts of catch-up raises. This is the most ironic indexing, and the most ominous of all. If those who are responsible for permitting or producing the inflation are allowed to become also the profiteers from inflation, to whom can we look to end it?

Footnotes at end of article.

HIGHER TAX BRACKETS

One of the most serious inequities wrought by inflation falls on all those subjected to progressive income taxes and to capital-gain taxes. Inflation keeps pushing them into higher tax brackets. They are called on to pay higher percentage rates even though their real income may not have gone up at all. Many are forced to pay taxes on so-called capital gains when in real terms they may actually have suffered capital losses. If the taxpayer were allowed to recalculate his money income or capital gain in "real" terms, it would remove this flagrant inequity, at the same time as it would take part of the profit out of inflation for the government that was producing it.

In this instance the argument for indexation makes a strong appeal to conservatives. In fact, it might perhaps with as much accuracy be called de-indexing taxes as indexing them. But politically speaking, it would be at best very difficult to get such tax indexing or de-indexing except as part of a sweeping indexation program. And such a program would only tend to prolong and increase inflation itself.

PROLONGED AND ACCELERATED

Indexation tends to prolong and accelerate inflation for two reasons. It does so first because it postpones, diminishes, or removes the worst effects of inflation and influential groups, and so greatly reduces the political opposition to inflation. And it does so also because of its purely mathematical effect. In Phase 1, say, indexing would bring all (or most) wages and incomes that were below the average up to the average. But as soon as Phase 1 had been completed, the average itself would be raised by that increase. This would necessitate a further upward adjustment in Phase 2; and so on. To make the new wage and income levels sustainable at each stage, there would be great political and economic pressure to increase the money supply still further.

The effect is even greater when indexation directly increases government expenditures themselves. It does this most notably, for example, when Social Security payments are indexed. When government expenditures are forced up automatically whenever the Consumer Price Index rises, we have come close to a formula for perpetual inflation.

It should be pointed out that the same sort of result would follow, though on a smaller scale, if tax rates were also indexed or de-indexed so as not to go up with increasing nominal money incomes. This indexation would make tax revenues lower than they would otherwise be, and so tend to increase the deficit—unless the government compensated, as it no doubt would, by openly increasing income-tax rates.

Even if indexing did not increase inflation or the political pressures for inflation, it should at least be obvious that it does nothing by itself to reduce or slow down inflation. Even Milton Friedman, one of the strongest advocates of indexing, concedes that "indexing per se will not, in my opinion, do anything to reduce inflation," [3] and even that ". . . widespread indexation would reduce the public pressure to end inflation." [4]

How does it come about that, with all the objections to it, indexing is nonetheless being seriously proposed and discussed? The active discussion began in this country early in 1974, when Milton Friedman returned from a short visit to Brazil full of enthusiasm for the indexation program that he found there.

THE BRAZILIAN MODEL

To have Brazil upheld as an economic or monetary model for the United States to emulate seems a strange irony. Brazil, one must admit, does not have the very worst inflation record in the world in recent years. Chile and Argentina have been competing too vigorously for that honor. But Brazil does have *one* of the worst records—especially one of the worst long-term records. It was inflating at a double-digit rate as early as 1941. The accompanying table shows its annual record for the last 26 years:

Annual percentage change, year-end

	Percent
1952	20.8
1953	16.8
1954	26.2

Source: Getulio Vargas Foundation.

It will be noticed that in the single year 1964 consumer prices in Brazil soared 91.9 per cent. In fact, in the first quarter of 1964 the annual rate of inflation was running at 150 per cent, but at that point the Brazilian authorities took hold and applied the old-fashioned "classical medicine." They imposed a heroic contraction in the growth of "aggregate demand" by severe fiscal and monetary restraint. It was this, and not "indexing," that slowed down the cost-of-living rise to 25 per cent in 1967.

The indexing that was applied in Brazil in this three-year period was not the kind that its present American advocates are recommending. Brazil's authoritarian government was careful not to allow full indexing of labor incomes to rising consumer prices. In this way it was not only able to prevent heavy unemployment, but by diverting a larger proportion of industry's income to profits, it encouraged capital accumulation, plant expansion, and "economic growth." Once fuller indexing came into play after 1967, labor's opposition to inflation diminished, and inflationary policies were resumed.[5]

AUTOMATIC BUT VOLUNTARY

When an inflation once develops and continues beyond a certain point, indexing arises almost spontaneously and spreads by mutual acceptance as the only way of mitigating an otherwise intolerable situation. This was exemplified in the hyper-inflation in Germany in 1922 and 1923. But such indexing should always be voluntary, and flexible enough to adapt itself to special situations. When it is mandatory and Procrustean, it can only increase economic disruption and create at least as many inequities as it cures.

We come back to the point that one man's price, wage, or income is another man's cost. Inflation is a disguised, haphazard, and iniquitous form of taxation. It is a government-imposed swindle or robbery, and most of us must be swindled or robbed by it. As Dr. Hans F. Sennholz has put it:

"If a government resorts to inflation, that is, creates money in order to cover its budget deficits or expands credit in order to stimulate business, then no power on earth, no gimmick, device, trick or even indexation can prevent its economic consequences. If by way of inflation government spends $10 billion in real goods, capital or labor, someone somewhere must forego $10 billion in real resources. It is a fundamental principle of

inflation that there must be victims. Indexation may shift the victimization; it cannot prevent it."[6]

THE ONLY REAL CURE

One last argument against indexing remains. It is the most important of all, and in itself sufficient. The advocates of indexing tacitly take it for granted that inflation is some mysterious and incurable disease, like cancer; and as it cannot be cured, the best we can do is to live with it and try to mitigate the pain as much as possible. This is a preposterous assumption. Every economist worth the name knows precisely what causes inflation and how to stop it. It is caused by a government that insists on spending more than it can or is willing to raise by taxes; a government that recklessly runs chronic deficits and issues more paper money to pay for them. If the politicians responsible for government policy had the will, they could stop inflation overnight.

The proponents of indexing blandly suggest that the same government that is creating and prolonging the disease continue to do so but graciously provide us with indexation as a partial pain-killer—or rather, that it shift the pain from some of us to someone else. They propose a complicated and spurious cure and overlook the simple, real, and only one. Stop the inflation.

CUT THE CLINCH RIVER BREEDER

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. LONG of Maryland. Mr. Speaker, the House of Representatives will soon have the opportunity to strike a crucial blow against nuclear proliferation by voting for GEORGE BROWN'S amendment to cut funds for the Clinch River Breeder Reactor. And we can save a lot of money in the process.

The breeder will be a threat to world peace. Each reactor contains enough plutonium to build several hundred nuclear weapons. Once a country has the material, it can build the bomb. The United States has trained nuclear scientists and technicians from around the world for the past 25 years. The knowledge needed to build the bomb is out of our control. But if the United States does not subsidize the development of breeder technology, it is doubtful that other countries will be able to afford it.

The breeder is very expensive. A GAO study says that it is significantly more capital intensive than light water reactors of coal powerplants.

If it is so expensive and dangerous, why should we even consider it? The proponents answer this by emphasizing that it creates its own fuel. In other words, it is a renewable energy source. But there are renewable energy sources all around us. Solar, solar electric, wind, water, ocean thermal gradients, and biomass are all renewable, less capital intensive and less dangerous to our natural and political environment. Even countries that are poor in fossil fuels have access to these "clean" renewable resources.

The breeder program is a subsidy for the already heavily subsidized nuclear industry. Without subsidy the industry would probably not exist at all. Support the Brown amendment for a less dangerous world.

FOOD STAMP REFORM

HON. NEWTON I. STEERS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. STEERS. Mr. Speaker, as a cosponsor of the Food Stamp Reform Act of 1977, the original measure which Mr. RICHMOND introduced in this Congress and one which is essentially similar to the food stamp provisions of the Agricultural Act of 1977, I rise to express my strong support for eliminating the purchase requirement and for certain exceptions to the standard $60 deduction already provided in the full committee bill.

Under the existing program, food stamp recipients must pay a purchase price to gain access to benefits. A household entitled to $66 worth of stamps, for example, would then have to pay a "purchase" fee which could amount to $100. If the purchase requirement were eliminated, the household would simply receive the $66 worth of food stamps without the $100 payment. It is important to note here that elimination of the purchase requirement would not increase the amount of benefits a household receives. It only changes the way the household receives it.

Additionally, the elimination of this purchase requirement cuts administrative redtape, promises to decrease vendor fraud and simplifies the process of issuing food stamps.

I favor this elimination because I believe it will remove a financial barrier which keeps many low income and otherwise eligible recipients from eating decent meals. To underscore this, recent participation estimates place participation rates at 55 to 63 percent of those potentially eligible for the program.

With respect to the deduction provisions of this bill, I believe that a long list of itemized deductions is the fairest way to determine benefit levels. However, it has become apparent that such a list is too complex and prone to errors and delay in issuance of stamps. The Committee has therefore adopted a standard deduction of $60, $15 less than that mandated in the bill which I cosponsored and which included several important exceptions to this standard figure.

A child care deduction, also embodied in my bill, is kept in the committee measure we are debating here today. This deduction is essential to encourage families with children to use babysitters or other child care facilities so that they may work.

In addition, I strongly favor the deduction for shelter costs in excess of 50 percent of net income up to $75 per household to be used in computing benefits. This is a particularly important exception to the standard deduction because shelter costs are the major portion of all current deductions and easy to identify.

I would also hope that this distinguished body will accept the Jeffords-McHugh amendment to adjust the cap on the shelter deduction in the cost of living. There is no question that recipients such as those in my district of neighboring Montgomery County, Md., are paying significantly higher shelter costs than in most other parts of the Nation. As an example, a one-bedroom apartment in my district, as a conservative estimate, runs in the vicinity of $250 a month while two-bedroom apartments in many other areas of the country can easily be rented for $160. This cost of living adjustment should be supported by this body as a simple matter of equity.

I believe that in large part the sections of the Agricultural Act of 1977, as reported, which amend and extend the food stamp program are an asset to the lower-income citizens of our country and the committee is to be commended for its good sense.

SALUTE TO RAY MORELAND

HON. FRANK E. EVANS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. EVANS of Colorado. Mr. Speaker, the following is a tribute to constituent Ray M. Moreland of Rocky Ford, Colo., local businessman and president of the National Farm and Power Equipment Dealer's Association:

Today, I would like to recognize the distinctive year of service that Ray M. Moreland of Rocky Ford, Colo., has contributed as president of the National Farm and Power Equipment Dealer's Association.

During the past year, he has taken out much time from his own business to service the 13,000-plus members of NFPEDA. Not only has he been concerned with the welfare of equipment dealers, but also with the well-being of farmer-customers. Moreland has traveled from border to border during the last year to make good his commitment to agriculture.

In Rocky Ford, Moreland has served with distinction as president of the chamber of commerce, Lions Club, Rocky Mountain Council of the Boy Scouts of

America, Colorado Boy's Ranch, as past master of the Ordway, Colo., Shrine Lodge, and as a trustee of Otero Community College.

Ray Moreland is a valuable citizen of the Lower Arkansas Valley, Colo., and the Nation's agricultural community.

TRADING LED ZEPPELIN FOR HIGH-SPEED WINGS

HON. GENE SNYDER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. SNYDER. Mr. Speaker, in Sunday's Potomac Magazine section of the Washington Post there appeared a unique column by Frank Mankiewicz which dealt with the Concorde landings in America. I found the column most interesting and am inserting it in the RECORD at this point so my colleagues and others may read it:

TRADING LED ZEPPELIN FOR HIGH-SPEED WINGS

(By Frank Mankiewicz)

Out in San Francisco, they are gearing up to resist—not Anita Bryant but the Concorde. This reverses what has been called a national trend, that causes and styles move from West to East, and that what Californians find trendy today will be on sale at Bloomingdale's and on the cover of Time tomorrow.

In the case of the Concorde, it has taken San Franciscans a while to catch on, but they will soon be ready. It is a city, after all, which only reluctantly has accepted the internal combustion engine and fast food, and where J. Alfred Prufrock's "necktie rich and modest" would be asserted by a simple cocaine spoon.

But what is the fight really all about? The Concorde doesn't cost the American taxpayer so much as a penny—the issue of whether or not we would build a supersonic transport was settled in the negative some time ago. For a few Americans, those who can afford a few thousand dollars for the round trip over the Atlantic, it may even be a boon.

It is only the British and French who were so foolish as to persevere with commercial supersonic flight and not to cut their losses some time back. As things stand, they will probably never get their money out of the Concorde, but as in the old joke about the man who was selling his wares at a loss, they hope to make it up in volume. They also hope the price of fuel will come down. There are some people who hope Yasser Arafat will one day celebrate Shavuoth. Don't count on it.

As things stand, the flights from the U.S. to Europe, now exclusively through Dulles, are filled almost exclusively by people on expense accounts, many of them provided by international lending institutions which want their people to travel fast, it would appear, but who would react with horror to the idea that they are thereby subsidizing this "rich man's toy."

There is the further point that all this luxury, once you get past the transatlantic run, is designed to bring people to some of the most unluxurious places in the world. Why, you may well ask, would anyone want to hurry to Bahrein? Why cut down the time between Washington and, let us say, Dakar?

But there are people and institutions who want to use the Concorde, and why, one wonders, are there so many others who don't want to let them? Surely it can't be the noise factor alone, although that is the one most frequently cited by the Concorde's opponents. But a society that makes millionaires out of the members of Led Zeppelin is surely in no position to complain about noise. One imagines, in fact, that most anti-Concorde protestors leave their demonstrations to go to rock concerts, where the decibel count tends to put the Conocrde in the range of classical guitar.

Why, then, do motorists who would otherwise be home at their backyard barbecues spend weekend afternoons cruising slowly around the approaches to Kennedy Airport in protest, thus making miserable the lives of ordinary passengers seeking only to board—or to greet passengers aboard—conventional aircraft? It is, perhaps, envy that some people should be able to afford that kind of money just to travel a little faster? Is it fear that new things (although the Concorde hardly looks new; it resembles nothing so much as the pterodactyl in my old natural history book) will overwhelm us and change our familiar surroundings?

Or is it perhaps some unspoken recognition that we have come too far, too soon, and that the old ethic which said, "if we can do it, we should do it," was wrong and that our reliance on it needs somehow to be expiated? Have we become some sort of 1970s-style Luddites, bent at least on smashing the machines upon which society has long relied?

Whatever the reasons they can hardly be the simple ones advanced by the foes of the Concorde. Supersonic military aircraft fly all over the country, all the time, and if there is to be damage to the ozone layer from the Concorde, then there are great gaps in it already.

In any event, to deny the British the right to fly a plane we decided not to build seems churlish and unworthy of a great nation. Let us make an arm's-length deal—we will allow the Concorde to land, and the British will keep their rock stars at home.

OPERATION CORK

HON. LARRY PRESSLER

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. PRESSLER. Mr. Speaker, today I wish to call attention to a fine effort that is being made in South Dakota and elsewhere around the Nation to combat the disease of alcoholism. This effort, called "Operation Cork," is completely successful without the use of any public funds. Today I wish to place in the RECORD a brief description of how and why Operation Cork functions.

Operation Cork was founded by Joan Kroc in May 1976 and is a national program of communication and education, focusing on helping families in which there is alcoholism or alcohol mis-use.

Objectives of Operation Cork are:

One. To help families become aware of the signals in their own experience that indicate the need to seek help.

Two. To let families know there is hope if they actively seek the help that is available.

Three. To guide family members to help resources in their community.

Four. To conduct workshops that will produce practical recommendations for bringing about needed change.

Five. To develop effective education materials for various levels within the education system.

Six. To help students develop a sensitive concern for students who have a drinking problem.

Seven. To motivate students to become actively interested in the prevention of drinking problems.

Operation Cork is working to achieve its objectives by communicating with people through newspapers, magazines, radio and television, as well as through written materials and motion picture films produced and made available by Operation Cork for use in schools and by other institutions and organizations.

Working closely with Mrs. Kroc is John E. Keller, a Lutheran minister and 22-year veteran in the field of alcoholism, who became president of Operation Cork, May 1, 1977. Keller is former executive director of the Alcoholic Treatment Center at Luthern General Hospital, Park Ridge, Ill.

Mrs. Kroc describes the goals of Operation Cork as:

An effort to educate the educators, so that the helping professionals will become more knowledgeable about early symptoms. Another of our objectives is to guide families, who are living with an alcoholic situation, to other agencies—such as Alanon (for adults) and Al Ateen (for minors)—for free, immediate help.

Mrs. Kroc is the wife of Ray A. Kroc who is the founder and senior chairman of the McDonalds Corp. Mrs. Kroc was recently named to the board of directors of the National Center for Health Education.

Operation Cork, which became a program of the Kroc Foundation, October 5, 1976, is privately funded and neither seeks funds nor receives requests for funds from any public or private agency, service or project. The Kroc Foundation was created by Ray A. Kroc in 1965.

Operation Cork's national headquarters are at 4425 Cass Street, San Diego, Calif. 92109, phone (714) 270-5880.

Mr. Speaker, in conclusion I can only say that Mrs. Kroc's effort is another fine example of Americans helping each other without the construction of a massive Government program. It is this type of effort that America must rely upon in order to meet the demands placed upon todays society.

PERSONAL EXPLANATION

HON. ROMANO L. MAZZOLI

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1977

Mr. Speaker, because of previous commitments in my district, I was absent on July 15, 1977, and missed five rollcall votes. Had I been present:

I would have voted "yes" on roll No. 419 that the House resolve itself into the Committee of the Whole for the further consideration of H.R. 4287, the Federal Mine Safety and Health Act of 1977.

I would have voted "no" on roll No. 420 seeking to amend H.R. 4287 to transfer the authority for administering the provisions of the bill from the Secretary of Labor to the Secretary of the Interior.

I would have voted "no" on roll No. 421 to amend H.R. 4287 to provide separate administrations for coal and noncoal mines.

I would have voted "no" on roll No. 422 to amend H.R. 4287 to allow the States to administer certain Federal regulations implementing this act.

I would have voted "yes" on roll No. 423, final passage of H.R. 4287, the Federal Mine Safety and Health Act of 1977.

SENATE—*Wednesday, July 20, 1977*

(Legislative day of Tuesday, July 19, 1977)

The Senate met at 11 a.m., on the expiration of the recess, and was called to order by Hon. GEORGE MCGOVERN, a Senator from the State of South Dakota.

PRAYER

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Hear the words of the apostle Paul in II Corinthians, the 12th chapter:

My grace is sufficient for Thee: for my strength is made perfect in weakness. Therefore I take pleasure in infirmities, in reproaches, in necessities, in persecution, in distress for Christ's sake: for when I am weak, then am I strong.

Eternal Father in the midst of toilsome days and endless pressures, we are grateful for this moment when our place of work becomes a sanctuary of prayer. Without Thee our striving would be losing, for in our own strength we are not equal to the task. In our weakness we would lean on Thee.

We thank Thee for dark days as well as sunny days, for adversity as well as prosperity, for sickness as well as health. Make us to see life as a whole. We crave Thy nearness every hour. Prepare us for failure as well as success, for defeat as well as victory. Teach us once more that man's extremity is God's opportunity. Into Thy hands we commend our lives this day.

We pray in His name who was servant of all. Amen.

APPOINTMENT OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore (Mr. EASTLAND).

The assistant legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., July 20, 1977.

To the Senate:

Under the provisions of rule I, section 3, of the Standing Rules of the Senate, I hereby appoint the Honorable GEORGE MCGOVERN, a Senator from the State of South Dakota, to perform the duties of the Chair.

JAMES O. EASTLAND,
President pro tempore.

Mr. MCGOVERN thereupon assumed the chair as Acting President pro tempore.

RECOGNITION OF LEADERSHIP

The ACTING PRESIDENT pro tempore. The Senator from West Virginia is recognized.

THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Journal of the proceedings of yesterday, Tuesday, July 19, 1977, be approved.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

WE OWE THEM NOTHING

Mr. ROBERT C. BYRD. Mr. President, in this morning's Washington Post, former Secretary of State Henry A. Kissinger is quoted as saying we owe Vietnam "nothing" in the way of financial assistance.

I agree wholeheartedly with Dr. Kissinger.

I have always been vehemently opposed to U.S. aid to Vietnam, and I know of no U.S. commitment in that regard.

Even if these were the best of economic times—which they are not—even if we had money to spare—which we do not—I would still oppose any attempt to ship a single American tax dollar to Vietnam.

As Dr. Kissinger points out, and as the entire world knows, Vietnam has repeatedly violated the cease-fire agreement almost from day one—January 27, 1973.

Beyond that, Vietnam has responded to legitimate American concern over servicemen missing in action in the most callous and inhumane manner imaginable. It has used the bodies of Americans killed in Vietnam for political and propaganda purposes, exhibiting a disgustingly high degree of insensitivity to the long-suffering families of American MIA's.

I join Dr. Kissinger in responding to Vietnam's demand for U.S. aid by saying, as he did, "We owe them nothing."

Mr. President, I ask unanimous consent that the article containing Dr. Kissinger's remarks be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

KISSINGER: WE OWE VIETNAM NOTHING

(By Murrey Marder)

Former Secretary of State Henry A. Kissinger calls it "an absurdity" for Vietnam to claim the United States is still bound by a 1973 proposal to give it billions of dollars in postwar reconstruction aid.

"We owe them nothing," Kissinger told a House subcommittee yesterday, because "they systematically violated" the Jan. 27, 1973, cease-fire agreement between what was then North and South Vietnam "from practically the first day."

Kissinger also said he did not want "to second-guess" his successor, Cyrus R. Vance, over the Carter administration decision to support unified Communist Vietnam's admission to the United Nations. But he said "we wanted to make it more conditional" on an accounting of American servicemen missing in South Vietnam.

Now, Kissinger said, in the light of all current claims on American resources, "I would oppose" aid to Vietnam. "I would not even consider reconstruction aid until we have a full accounting" of the missing Americans, Kissinger said.

Kissinger was testifying in the two-year-old controversy over whether the Nixon administration misled Congress about aid commitments to North Vietnam in conjunction with the cease-fire accord, which brought Kissinger a Nobel Peace Prize for diplomacy. It was his first congressional testimony on international issues since he left office.

North Vietnam, in December, 1975, disclosed what it contends was a pledge by former President Nixon in a Feb. 1, 1973, letter to supply it with $3.25 billion in unconditional reconstruction aid, plus $1 billion to $1.5 billion in normal economic aid. Nixon and other officials have said the proposal was extremely conditional, tied to compliance with the cease-fire and to congressional approval.

Rep. Lester L. Wolff (D-N.Y.), chairman of the House International Relations Subcommittee on Asian and Pacific Affairs, asked Kissinger:

". . . Why did you and other members of the Nixon and Ford administrations repeatedly deny the existence, and then when that became impossible, the substance of Mr. Nixon's letter of Feb. 1, 1973 . . ."

Kissinger, bristling at some questions by Wolff and other Democrats, said "there was nothing to cover up."

There was no offer of "unconditional aid," Kissinger said. What was mentioned in the Nixon letter to Vietnamese Premier Pham Van Dong, he said, was "a target figure," a "ballpark figure around which negotiations would take place."

Potential postwar reconstruction aid to North Vietnam was never a secret, Kissinger said, for it was first suggested by President Johnson and repeatedly mentioned by Nixon and others.

A possible $2.5 billion in aid for Vietnam was cited by Nixon in 1972, but Kissinger acknowledged that the $3.25 billion and higher figures were not disclosed. He said "maybe it should have been," but that Nixon letter was not made public until it was pried out by the subcommittee. Kissinger said it was regarded as an executive document, and the record shows that it was up to Congress to decide any binding aid commitment.

To support that explanation, Kissinger produced copies of what he called a 57-page document which "we handed over to the Vietnamese in Hanoi in February, 1973, "explaining in excruciating detail . . . what the American constitutional processes would be."

The compilation, as shown, is a melange that starts with the words, "The Congress plays a key role whenever funds are involved." It includes explanations of U.S. aid programs, "how a program might be structured" for Vietnam, quotations from members of Congress protesting foreign aid spending, interviews, newspaper clippings, and even a National Security Council mem-

orandum on Vietnam discussions with congressional leaders.

Kissinger said wryly that Hanoi's leaders "could not believe that the Congress was not a docile instrument of the administration." He said the North Vietnamese "constantly told us that Congress was a rubber stamp, and therefore this was a subterfuge."

When Chairman Wolff asked if there were any other "undisclosed agreements or promises" about aid, Kissinger said "I cannot find such a document," and if the Vietnamese have one, "they ought to produce it."

Kissinger said, "I don't object to attempts to normalize relations" with Vietnam. But he said Vietnam's claims of an American aid obligation after massive breaches of the 1973 cease-fire and the military conquest of South Vietnam in April, 1975, are "an absurdity" as well as "an insult."

He also said "I find it sort of offensive . . . that a few bodies [of American servicemen] are produced by the Vietnamese in order to appeal to American public opinion."

Republicans on the subcommittee strongly supported Kissinger throughout the questioning, in which he was rarely hard-pressed and dominated the scene, with touches of his old-style quips and repartee.

Early in the hearing, Rep. J. Herbert Burke (R-Fla.) said, "It seems to me now that this question has been fully resolved." He added, challengingly, "I hope that this matter doesn't become a political type of thing—which it seems to me it is becoming." Chairman Wolff effusively commended Kissinger for his "voluntary testimony" as the hearing ended after 90 minutes, with no sign that Kissinger had been bruised by the encounter.

PUBLIC FINANCING LEGISLATION

Mr. ROBERT C. BYRD. Mr. President, on yesterday, after discussions in the Democratic policy committee, I indicated to the very distinguished minority leader that it was my intention to attempt to bring up the public financing bill. I felt it my duty to give the distinguished minority leader a day's notice. I had indicated to him sometime ago that I would not give him an hour's notice or 2 hours' notice, but that I would give him at least a day's notice. I have kept my promise.

I informed the distinguished minority leader yesterday that once I moved to proceed to the consideration of the public financing bill, it would be my intention to offer a cloture motion at that time if it were agreeable and possible to do so all the way around—pending the vote, which would be on the following calendar day but one after the offering of the cloture motion—to bring up other matters in the meantime and dispose of them so that the Senate would be continuing its fine productive work record. I did not feel that many Senators, if any, would be prone to discuss the motion to proceed for 2 days of session.

If that cloture motion were to succeed, then once the Senate gets on the bill, I would expect the Senate to stay on the bill then, if that is the desire of the Senate, until such time as the next cloture motion would be voted on with respect to the bill itself.

The distinguished minority leader indicated that it was his desire to proceed in that fashion, if possible, and that he would contact Members on his side of the aisle to see if something could be worked out, and we discussed certain measures which would be good prospects for consideration during that hiatus, if I might use that word for the moment.

Later the distinguished minority leader came back to me, and I do not think I am misstating the facts—he will speak for himself, of course—and indicated that he had tried, but he did not believe that an agreement could be worked out which would allow specific measures to be called up by unanimous consent during the period following the offering of the cloture motion on a motion to proceed and the vote on that cloture motion.

So the matter rested there for a little while.

Later in the day, I again talked with the distinguished minority leader and suggested an agreement which would allow the bill to be brought up on a date, say, next Monday, without going through any fight on the motion to proceed, and in the meantime the Senate could proceed with other matters.

He responded to that suggestion in a very receptive way, but, again, as he properly should, he felt that he needed to consult with Members on his side of the aisle.

I believe that that brings the situation up to the present moment. The distinguished minority leader and I talked briefly this morning again. I have a feeling that I am stating the situation correctly when I say that at the moment that is where the matter rests and that the distinguished minority leader is still probing among his membership to see if we can reach that kind of agreement, and I hope that we can. But he has carried out his commitments to the fullest. So have I. Having said that, I now yield to the distinguished minority leader.

Mr. BAKER. Mr. President, the majority leader, of course, is correct in his recitation of the evolution of the development of our discussions yesterday. He is correct, particularly, in pointing out that he has fulfilled his representation to me that he would let the minority know well in advance, before trying to motion up or ask consent that we proceed to the consideration of the measure; and I thank him for that. He has been, as he always is, meticulous in his honoring of those commitments.

Mr. President, the Public Financing Act or the Federal Election Campaign Act proposal is fundamentally important to the political system in the United States, to the Congress, to the two-party system, to the Republican Party and the Democratic Party. In my view, it would be difficult to overstate the care or to describe the caution that should be utilized in deciding how to proceed, how to frame the issues, how best to present the merits and demerits of the controversy to our colleagues.

The majority leader knows that I strongly oppose that legislation; that I feel if it is passed it will change, in a very basic way, the nature of the political system in the United States in the long term; and that it will be destructive.

Those issues will be the focus of the debate that we will no doubt undertake on this measure at some point.

I believe it is my obligation to see that we have the useful, thorough debate that a matter of this importance requires. In response to that feeling, I have discussed this matter with the majority leader in a number of different configurations. I have requested the distinguished Senator from Nebraska (Mr. CURTIS), the chairman of the Republican conference, to convene a conference of the Republican Senators this afternoon at 2 o'clock. That will be done, and at that time I will make certain representations to the Republican conference, and certain recommendations of which I have generally apprised the majority leader.

I think the important thing is that the Senate turn to the consideration of this matter; and when it does, in a way that will give everyone the opportunity to express his views fully, and to have a fair test of this measure.

With that in view, then, Mr. President, I would hope that we could simply lay aside this impending debate until after the conference this afternoon at 2 o'clock. If, after that Republican conference, it is possible to present a proposed unanimous-consent agreement or other arrangement to the majority leader, it may be possible to construct a schedule for the consideration of this measure. If it is not, I will very frankly tell the majority leader that I think the prospects are good that we can arrive at some sort of an agreement that protects the interests of both parties.

Therefore, I would hope that the majority leader would withhold any effort at this time to proceed to the consideration of the bill, either by request for unanimous consent to make it the pending business, or by moving to proceed to the consideration of the measure. I have no desire to prejudice that option of the majority leader later in the day, but I would hope that we could lay this matter aside for the moment, and turn to something else. For instance, the strip mine conference report is eligible, privileged, available, and restricted by a time order. I would hope that we could turn to the consideration of that measure as soon as possible. Meanwhile, enough time will go by for us to consider this matter fully; for each Member on this side to ventilate his point of view; and to try to formulate a proposal that will serve the interests of all parties in the Senate.

Mr. ALLEN. Mr. President, will the Senator yield?

Mr. BAKER. Yes.

Mr. ALLEN. I think both leaders know that the Senator from Alabama has been adamant in his opposition to all forms of public financing of Federal elections, though he has supported limitations on contributions and limitations on amounts of expenditures. Certainly the Senator from Alabama would vote against cloture on a motion to proceed, and he would vote against cloture on the bill itself; but I would like to impress on the distinguished minority leader that

if the majority leader is put to a motion to proceed to this legislation, and that is subjected to extended debate, there would be no chance whatsoever of successfully resisting the cloture motion, because I feel that the vast majority of the Members of the Senate would feel that we should proceed to the consideration of the measure. I like the suggestion of the distinguished majority leader that we agree to this matter being put before the Senate at a given time early next week; and I feel that the chances of defeating it by extended debate would be enhanced by letting the matter come up for consideration and debating the issue, rather than the matter of whether we are going to proceed to it.

So I hope the distinguished minority leader will pass on to the members of his conference the views of the Senator from Alabama, who has taken a fairly active part in opposition to this type of legislation, and who expects to continue such opposition when the bill is laid before the Senate.

Mr. BAKER. Mr. President, I thank the distinguished Senator from Alabama. I have listened with great care to his recommendations in that respect, mindful of his vast experience in this field. He can be assured that I will pass that on to the Republican conference this afternoon at 2.

However, I must say that as minority leader I am in no position to make a commitment of any type at this time. I am a little like the man who, when he was asked if he was ready to renounce the Devil and embrace the Lord, said, "I ain't in no position to make any enemies."

I will simply have to wait, Mr. President, until we have had time to consider this matter in conference this afternoon.

Mr. President, with that I think I have stated the matter as clearly as I can. I hope we can arrive at an orderly method for proceeding in this respect, and that the Republican conference this afternoon at 2 will produce a result that will move us in that direction. I am simply not prepared to do that at this point.

Mr. ALLEN. I thank the Senator.

Mr. BAKER. I would hope we could proceed with something else, so that the business of the Senate can continue while I have an opportunity to make my recommendations to the conference this afternoon.

Mr. ROBERT C. BYRD. Mr. President, if I may respond to the distinguished minority leader, first let me say, Mr. President, that I voted—I believe—against public financing for congressional elections at the time such an amendment was proposed to the measure providing for public financing of Presidential campaigns. I voted against that amendment at that time for at least two reasons, one of which was that I felt that public financing of a Presidential campaign ought to have some test before we proceeded beyond that. Since then, I have changed my viewpoint, and in the light of the experience under that act, I have not only lifted my opposition to the general idea of public financing of congressional campaigns, but, as I say, I support it.

I believe, Mr. President, that in the atmosphere in which we presently find ourselves, with a great lack of confidence among the American people toward their Government, toward our political system, and toward public officials in general, we ought to do everything we possibly can to restore the confidence of the American people in all three of the elements which I have mentioned.

I think a part of that restoration can only come about if we can find some way, as much as possible, and to the degree possible, to remove the possible taint of money on the elections process.

Everyone is aware of the problem that is current in connection with the so-called Korean probe. I feel that the one thing which contributes as much as anything else, if not more so, to the lack of confidence and to the distrust on the part of the American people toward the Congress is the continuing cloud which, in part at least, has to do with alleged illegal contributions, gifts of money, and so on.

It seems to me that if the Congress were to pass legislation providing for the public financing of congressional campaigns, it would to some degree at least, relieve the system of the cumbersome, suspicious, and dangerous way of raising moneys for campaigns in the past.

In the course of the debate on the bill, if the bill is brought before the Senate, there may be flaws in the legislation. Frankly, I am not familiar with the legislation to the extent that I can say that it ought not be amended. Perhaps it should be. The Senate would have that opportunity to modify it, amend it, and improve it. But first we have to get the bill before the Senate. Let the Senate work its will on the bill. If the Senate votes the bill down, then the matter is disposed of. If the Senate amends it and passes it, then that disposes of the matter, so far as the Senate is concerned, until the conference report is returned, if there should be a conference report thereon.

I believe the distinguished minority leader has made a very reasonable proposal, and I certainly want to accommodate the request of the minority leader. I think he should have an opportunity to discuss this in conference with his people at 2 o'clock this afternoon. For the moment, therefore, I will forgo any further effort toward this end until I hear from the minority leader subject to his conference.

I would, therefore, suggest, Mr. President, and I ask unanimous consent, if this is agreeable to the distinguished minority leader, that at the conclusion of the standing orders for the two leaders today, Mr. METCALF be recognized to call up his surface mining conference report.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. I ask the staff to contact Mr. BUMPERS, who has a motion to recommit, which he will make at some point. I am sure the distinguished minority leader will want to alert the Members on his side.

Mr. BAKER. Mr. President, Senator HANSEN will be managing the conference report on this side.

Mr. METCALF. Will the Senator yield? May we call up the conference report and have a brief quorum call while we do the necessary phoning to bring these people to the Chamber?

Mr. ROBERT C. BYRD. I yield the floor.

SURFACE MINING CONTROL AND RECLAMATION ACT OF 1977—CONFERENCE REPORT

Mr. METCALF. Mr. President, I submit a report of the committee of conference on H.R. 2, and ask for its immediate consideration.

The PRESIDING OFFICER. The report will be stated.

The assistant legislative clerk read as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 2) to provide for the cooperation between the Secretary of the Interior and the States with respect to the regulation of surface coal mining operations, and the acquisition and reclamation of abandoned mines, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses this report, signed by a majority of the conferees.

The PRESIDING OFFICER. Without objection, the Senate will proceed to the consideration of the conference report.

(The conference report is printed in the House proceedings of the RECORD of July 12, 1977.)

Mr. METCALF. Mr. President, I ask unanimous consent that the following members of the Senate Committee on Energy and Natural Resources be admitted to the Senate during the consideration of this conference report: D. Michael Harvey, Norman Williams and Caroline M. Clark.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. METCALF. Mr. President, I suggest the absence of a quorum, without the time being taken out of either side in accordance with the time limitation.

The PRESIDING OFFICER (Mr. HARRY F. BYRD, JR.). Without objection, it is ordered. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. HANSEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HANSEN. Mr. President, I ask unanimous consent that Tony Bevinetto, of my staff, may have the privilege of the floor during debate on this conference report and any vote occurring thereon.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HANSEN. Mr. President, I ask unanimous consent that Tom Wylie, of the Committee on Energy and Natural

Resources, and Fred Craft, be granted privilege of the floor during the debate and any votes on this bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BUMPERS. Mr. President, I ask unanimous consent that George Jacobson and Ark Monroe of my staff be granted privilege of the floor during the debate and voting on this bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. METCALF. Mr. President, this bill is the culmination of 7 years of effort on the part of the Congress of the United States to pass a measure that would control, regulate, and provide for the reclamation of areas that would be strip mined for coal.

The Senate passed the bill, S. 7. The House passed the bill, H.R. 2. We have before us the conference report today on the differing provisions of those two bills.

It was a difficult conference. It was a rather complex, rather involved one. Even though in 2 previous conference sessions we had days and days of conference, we had to have 12 separate meetings of the conference committee. We had more than 200 issues that were in conference, differentiation between the Senate bill and the House bill. Some of those issues were resolved as a result of negotiations between the respective staffs of the House of Representatives and the Senate.

Before I go any further I should pay tribute to the dedication and devotion of our respective staffs in working out these very involved, very complex issues so that they did not have to come to the conference and could be resolved by unanimous consent.

We had 37 major issues that had to be resolved by the conference. One of the major issues, of course, is the issue that is going to be addressed by the distinguished Senator from Arkansas on surface owner consent.

We had many other issues: Lignite reclamation fee, allocation of orphan lands, national disaster aid, alluvial valley floors, prime farmlands, small operators, and so forth.

I ask unanimous consent to have this breakdown printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

1. Number of conference committee meetings—12 (June 8, 14, 15, 16, 20, 21, 22, 23, 27, 28, 29 30).

2. Deferral of the surface owner consent issue—3; June 14 (p. 27 of transcript); June 16 (p. 71 of transcript); June 22 (p. 63 of transcript).

3. Number of major issues resolved by conferees—37; title I=0; title II=0; title III=1; title IV=6; title V=20; title VI=1; title VII=7; title VIII=1; title IX=1.

4. Approximate number of minor issues resolved by staff—160; title I=4; title II=8; title III=1; title IV=85; title V=40; title V=0; title VII=20; title VIII=0; title IX=0.

5. Itemization of major issues resolved by conferees, by title: title I, none; title II, none; title III, all mineral research institutes; title IV, lignite reclamation fee, allocation of orphan land reclamation funds, impact aid to communities from fund, State orphan land reclamation authority, natural disaster aid, land development authority; title V, small operator exemption; Federal inspection of mine sites, consistency of State rules and regulations, public notice and hearings, alluvial valley floor exemption, prime farmlands performance standards, alluvial valley floor constraints, surface owner protection, private coal, prime farmlands constraints, 500-foot limitation regarding underground coal mines, blasting notice, undisturbed natural barrier, variance for retention of bench or highwall, civil penalties, prime farmlands performance bond, Alaska national forests, judicial review, special bituminous coal mines, exempted coal extraction, anthracite mines; title VI, designation of lands unsuitable for non-coal mining; title VII, alluvial valley floor definition, Federal lands definition, prime farmlands definition, grants to States, Indian lands study and regulation, experimental practices, special land uses, surface owner protection, Federal coal; title VIII, coal research laboratories, title IX, energy resource graduate fellowships.

Mr. METCALF. So we are here today to adopt finally, I hope, a surface mining bill that will provide for adequate restoration, adequate reclamation, and at the same time give some stability to the mining industry and encourage the members of industry to go forward with the tremendous investments they have made in order to mine this coal, which is one of the keystones of any environmental policy and any energy policy.

I hope the conference report will be adopted.

I have put an analysis of the conference report in the July 18 RECORD. In the July 12 RECORD, the House of Representatives inserted the complete conference report and the report of the board of managers, and a copy of the report is on the desk of each Senator.

Mr. President, I reserve the remainder of my time, and I yield to the Senator from Wyoming.

Mr. HANSEN. Mr. President, I shall take just a few moments.

The country is deeply indebted to the Senator from Montana (Mr. METCALF) for his persistent interest, his continuing leadership, and his in-depth understanding of the problems this Nation faces in trying to make better and greater use of this important energy resource we have.

No one needs to remind any knowledgeable citizen these days that this Nation does face a very grave crisis—the energy crisis. When we stop to reflect that 75 percent of our energy presently comes from oil and gas, when we recognize that we are importing roughly half of all the oil we use; when we think of the implications these facts hold for our national survival, the continuing vitality of industry in this country, the reasonable expectation that jobs will continue throughout the 12 months of the year, the fact that our foreign policy can and indeed will be influenced more and more as we become increasingly aware as a nation of our dependence upon natural resources from foreign countries—all these items tend to underscore the importance of the bill we have before us.

As the senior Senator from Montana pointed out, it has not been an easy task to draft this bill. Two bills that received attention and the deliberation of both Houses of Congress were vetoed by former Presidents.

I think it can be said, aside from the fact we have lost some time, that we have come up with the best balanced bill all around that Congress has been privileged to examine as a result of the work of a conference committee. It does not suit anyone in every detail, I am certain, and it certainly does not suit me completely. But, all in all, I think it is the best bill we could hope to offer to Congress. I hope the conference report will be adopted by both Houses and the bill will be signed at an early time by the President.

It is important that we spell out in the law what the rules are, so that the industry and all Americans can get on with the job of taking positive steps to mitigate our dependency upon uncertain foreign sources of energy supply.

I again compliment the distinguished Senator from Montana for his leadership and at this time express my appreciation to each member of the Energy and Natural Resources Committee.

Mr. METCALF. I thank the Senator.

Mr. President, I yield to the Senator from Pennsylvania.

FLOOD DISASTER IN PENNSYLVANIA

Mr. HEINZ. Mr. President, I thank the Senator from Montana for yielding.

I apologize to my colleageus for interrupting the discussion of the conference report on H.R. 2, the Surface Mining Control and Reclamation Act of 1977, but I do so to bring to the attention of my Senate colleagues the fact that in my home State of Pennsylvania this morning we have had a very serious flood disaster. Four counties—Cambria County, Westmoreland County, Indiana County, and Somerset County—have been stricken by extremely severe flash flooding.

The report from Johnstown, Pa., which was the scene of the great flood of 1889, has been recalled in connection with this tragic events. In fact, some of the people in Johnstown who are old enough to remember the flood, say that this flood is that bad.

Communications with the area have been totally interrupted. There are no utilities at all in Johnstown, a town I visited only the day before yesterday.

In just a few minutes, Mr. President, I will leave to tour this area of western Pennsylvania. It is my hope that the reports are exaggerated, because the 1889 flood killed 2,300 persons. I do understand, however, that it is reliably reported that there has been at least 5 or 6 feet of water in the downtown area of Johnstown and in surrounding communities.

The director of the area civil defense, Robert Simell, has been quoted as saying:

It is hard to give an accurate rundown on the situation. There are just no utilities in all Johnstown. I have already heard this is worse than what happened in the '89 flood.

By all accounts, our various disaster agencies are responding.

The State council of civil defense in Harrisburg has had to evacuate three area hospitals and two emergency care centers. Three State emergency centers are functioning at Harrisburg. One of our State roads, route 56, is closed and has isolated nearby communities of Somerset County.

Apparently what happened was that what was thought to be a local thunderstorm simply stayed in that area. It started with a downpour, the kind we normally assume will go on through, and just stayed and continued to pour. As a result, although the waters apparently are receding rapidly, thank Heaven, it was a very severe flash flood.

I hope that as soon as the Government and the Federal Disaster Assistance Administration people have a chance to acquaint themselves fully with the situation in that area, a disaster assistance proclamation will be forthcoming, not only by our Governor, but also by the President because, by all accounts, it is a crisis situation.

I will be able to give a firsthand report to my colleagues later today, assuming I get there and back in time to do so, what the exact situation is.

I thank the senior Senator from Montana for yielding. I appreciate his generosity with his time and his sensitivity and concern about the problem.

Mr. METCALF. I am very grateful to the Senator from Pennsylvania.

SURFACE MINING CONTROL AND RECLAMATION ACT OF 1977—CONFERENCE REPORT

The Senate continued with the consideration of the conference report on H.R. 2.

Mr. METCALF. Mr. President, I believe this is a unique bill. Not only has every member of the Energy Committee participated and worked hard on this bill, but also many Members of the Senate who are not members of the committee have contributed greatly, including the Senator from Pennsylvania; the Senator from New Mexico (Mr. SCHMITT) made outstanding contributions. The Senator from Wyoming (Mr. WALLOP) made contributions.

We had some new members of the committee who had brought to us a new knowledge and new experience, especially Senator FORD from the largest coalmining area in the United States, which substantially changed the bill.

In spite of the fact that the Senator from Arkansas is going to make the motion to recommit, he also participated in many of the discussions and changed the bill that was originally introduced.

I have never known to have had more participation from people outside of a committee and more worthwhile suggestions made than were made in this bill.

I especially want to pay tribute at this time—and I hope the accolades back and forth will now cease—to Senator HANSEN of Wyoming who has been dedicated and devoted and who has attended every one of the meetings and every one of the conferences.

I wonder if the Senator from Arkansas is ready to make the motion to recommit?

Mr. BUMPERS. I will be ready in 2 or 3 minutes. If the Senator is finished we can put in a quorum call.

Mr. METCALF. May we have a quorum call without the time being charged to either side until the Senator is ready to make a motion to recommit?

Mr. BUMPERS. Mr. President, parliamentary inquiry.

The PRESIDING OFFICER (Mr. ANDERSON). The Senator will state it.

Mr. BUMPERS. Where is the time charged if the general order does not apply to quorum calls?

Mr. METCALF. The quorum call will be charged to my time of 1 hour on the bill if I do not have unanimous consent.

Mr. BUMPERS. I have no objection to the quorum call. I just thought we might clarify this point. It is my understanding from talking to the policy committee this morning that quorum calls would not be charged to either side. I do not intend to abuse this, and I think we will finish well before the 4 hours are completed, but I just thought we would clarify that point.

The PRESIDING OFFICER. If the Senator seeks unanimous consent for this purpose, the quorum call time will not be charged to either side.

Mr. ROBERT C. BYRD. Mr. President, what is the request?

The PRESIDING OFFICER. A parliamentary inquiry was made. The inquiry was whether or not a quorum call will be charged against either party's time.

Mr. ROBERT C. BYRD. I have no objection to such a request. But I should make it clear there is no assurance, no promise—I overheard something that was said about the Policy Committee staff having said that quorum calls would not be charged against either side—there is no understanding to that effect. I must say that to the Senator so he will not labor under this misimpression.

Mr. BUMPERS. Let me ask the distinguished majority leader just as a point of information: What is the precedent when the general order makes no provision for quorum calls under time limitations?

Mr. ROBERT C. BYRD. They have to be charged against somebody's time except by unanimous consent to the contrary.

Mr. BUMPERS. If there is no request that quorum calls not be charged to someone's time, are they automatically charged to somebody's time?

Mr. ROBERT C. BYRD. They have to be charged to somebody's time else they cannot be called.

Mr. BUMPERS. I understand.

Mr. ROBERT C. BYRD. I do not object to the Senator's unanimous-consent request. I am one Senator. If he wants to put in a quorum call and ask it not be charged to either side, I do not object. But it would be charged——

Mr. BUMPERS. We are still on the time of the Senator from Montana for the first hour. I simply say I would like to have 2 or 3 minutes to make some notes to myself.

Mr. METCALF. What is the ruling?

The PRESIDING OFFICER. I did not hear any objection. There is no objection. I am informed that you must make the request, unanimous-consent request, during the consideration of the motion to recommit.

Mr. BUMPERS. Mr. President, I understood the Senator from Montana to request the quorum call. I simply made a parliamentary inquiry which did, in fact, intercede, but he made the unanimous-consent request for the quorum call.

Mr. METCALF. It was my understanding that the Senator from Arkansas asked for a quorum call, and I asked that it not be charged to either side. I have no objection to a quorum, and I would hope the clerk will call the roll while the Senator from Arkansas——

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered. The clerk will call the roll.

Mr. BUMPERS. I thank the Senator.

The second assistant legislative clerk proceeded to call the roll.

Mr. BUMPERS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BUMPERS. Mr. President, I send to the desk a motion to recommit H.R. 2 and ask that it be stated.

The PRESIDING OFFICER. The motion will be stated.

The legislative clerk read as follows:

MOTION TO RECOMMIT

I move that the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill H.R. 2, providing for the cooperation between the Secretary of the Interior and the States with respect to the regulation of surface coal mining operations, and the acquisition and reclamation of abandoned mines, and for other purposes, be recommitted to the committee of conference with the following instructions to the Senate conferees:

To reconsider the issue of surface owner protection, as contained in Section 714 of the Senate amendment; and to take no action on such issue until a new motion thereon has been made and agreed to.

The PRESIDING OFFICER. There are 2 hours of debate.

Mr. BUMPERS. Two hours on either side; is that correct?

The PRESIDING OFFICER. Yes.

The Senator from Arkansas is recognized.

Mr. BUMPERS. Mr. President, it is with considerable concern and regret and not without trepidation that I have decided to make this motion. It is very difficult, and quite frankly, I am dismayed to debate a subject of this magnitude in a Chamber with four or five Senators present, at least four of whom have very fixed opinions already. Nevertheless, I have decided and elected to

make this motion to recommit H.R. 2 on very narrow grounds.

H.R. 2 is a good bill. The Senator from Montana has worked assiduously for stripmining legislation in Congress for a long time, for much longer time than I have. He certainly started long before I got here. But I happen to be from one of the three counties in Arkansas that produces coal, and I happen to be from a county where all the coal is stripmined. So I have seen the ravages of stripmining firsthand all of my life.

I have seen the pools of alkali water in the very small town I came from. We always lost one, two, or three teenagers almost every year, swimming in the pits, as we called them. We do not have the drownings any more. The pits are still available for swimming, but we have modernized the recreational facilities for teenagers. However, the moonscape that was left in my home county has been a source of resentment and outrage to me as long as I can remember.

The Senator from Montana has recognized that his own State and the State of his neighbor in Wyoming were about to be ravaged irreversibly and irrevocably. I know that has caused his great concern for this legislation and I share it.

The bill has wallowed around in the Congress for at least 6 years. As the Senator from Wyoming said a moment ago, it has been vetoed twice. The bill that we have before us now was worked on by the Senate and the House of Representatives and went to conference. There were several controversial items in the bill. There was only one that was really seriously controversial to me, and that was the so-called surface owner consent provision.

There were other issues about which I had serious reservation and grave concern, not the least of which were the alluvial valley floors, the high wall retention provision which was put in by the Senator from Kentucky, the mountain removal provision, which allows coal to be mined by removing the entire top of a mountain. I reluctantly agreed to the mountain top removal section because of the strong recommendation of both the Governor of Kentucky and the Governor of West Virginia, and of course our colleagues from those two respective States.

The prime farmlands issue was sponsored by the distinguished Senator from Iowa (Mr. CULVER) in this body, and caused considerable debate. It was finally accepted by the floor manager and the committee and was a matter which I fought very hard to keep in the conference because the House did not have a similar provision to protect prime farmlands from strip mining. The Senate provision will prevent the irreparable damage of prime farmlands which are infinite in their value to this country. Whereas, the coal is a finite resource.

Mr. President, it would have been unthinkable to me for my great-grandchildren to have looked back and seen where their great-grandfather was in the U.S. Senate at a time when we allowed the finest farmlands in the country to be ravaged and not repaired and put back into production equal to or even greater than before they were mined.

That was of concern to the House Members, but finally, after debating that issue and reopening it a number of times, we resolved it in a manner that I think is satisfactory. It is not perfect, and it is not what I would have liked, but it is good. On that issue, Mr. President, there are very few people who know that the United States is one of only six countries in the world that export food, and of those countries which export food, we export well over half the food that travels to international markets.

I have always championed land use planning, which is not understood in this country, and very unpopular in my State. I have consistently championed it because I know that some day the land will be gone.

For example, the State of Arkansas has 33 million acres, and 8 million acres of it are in rice, soybeans, wheat, and cotton. That is the cultivatable land in my State. Yet in this country we are ravaging a million acres a year for airports, for highways, for urban sprawl. So, Mr. President, we are taking a food production area equal to that of the State of Arkansas out of production in this country every 8 years. Apparently it is felt we could go on indefinitely doing that. We can say, "Land-use planning is very unpopular; or people do not like land-use planning because they think it smacks of socialism or something," but some day Congress will have to come to grips with that issue.

But back to the subject: In the conference committee we finally resolved all of those knotty issues of prime farmlands, alluvial valley floors, high wall retention, and mountain top removal. Those issues were resolved satisfactorily, I think, to most of the conferees. The point I wish to make, Mr. President, is that a number of Senators have called my office and said, "We have wanted this legislation for a long time. We favor your position on surface owner consent; but we are afraid that if we vote for this motion to recommit, the whole bill will get bottled up in conference. The bill will never get back to the Senate, and another year or two will go by, while the country, desparately needing to mine more coal, will not have a good, solid reclamation bill."

That is the reason why I have drafted the motion to recommit with instructions to the conferees on this one single issue, because it is the only issue, I think, that there is any controversy about. I do not think there is a single member of the conference who wants to reopen any other issue in the bill.

Mr. METCALF. Mr. President, will the Senator yield?

Mr. BUMPERS. I shall be happy to.

Mr. METCALF. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. METCALF. Even though the Senator from Arkansas has carefully drafted his motion on the narrow issue of surface owner consent, it is my understanding that under the rules of the Senate and under the rules governing conferences, when a bill is referred back to conference, it is de novo on every other issue: alluvial valley floors, owner consent, and every other issue is in conference. Is that not true?

The PRESIDING OFFICER. The understanding of the Senator from Montana is correct.

Mr. METCALF. So there is no way, if this bill is recommitted, to control the conference as to the very narrow issue that the Senator from Arkansas is talking about. Every one of the 200 issues that were before us in the 12 days of the conference can still be reopened and are subject to being considered de novo; is that not correct?

Mr. BUMPERS. I think the Senator is precisely correct. I think the Parliamentarian has given him the precedent that has been set in the Senate.

But the point I am trying to make is that I have tried to draft the instructions very narrowly. I understand the conferees are not bound by those instructions, and they are precatory only, but I do not know of a single conferee who wants to reopen any other single provision in the bill.

Mr. METCALF. I say to the Senator from Arkansas that several of the House conferees, on such matters as he has suggested, prime farm lands and alluvial valley floors, are anxious to open up the conference. The distinctions there were just as narrow as the distinctions on surface owner consent; and while I would be delighted to cooperate with the Senator from Arkansas to restrict the conference as he wants to restrict it, no one wants a bill more than I, and I would gladly restrict it to the provisions that he wants to, but there is no way to keep the Members of the House of Representatives who acquiesced and agreed with several of our provisions in the conference from bringing those matters up also for reconsideration.

Mr. BUMPERS. I think the Senator will recall, for example, the case of the prime farmlands, which, as the Senator knows, was the subject of discussion on numerous sessions of the conference. The last time a House Member sought to reopen that issue he was not supported by the other conferees, and the issue was not reopened. I believe that would be true in every instance where another issue is brought up. Certainly, I would vote with the chairman of the conference, the distinguished Senator from Montana, to not reopen any other single issue. I believe I speak for all of the Members who supported my position on this thing.

I think the Senator from Ohio (Mr. METZENBAUM), the Senator from Hawaii (Mr. MATSUNAGA), and the Senator from Washington (Mr. JACKSON), the Senators voting with me in the conference on this issue would uniformly and unanimously vote not to reopen any other issue. However, I recognize the Senator is correct.

Mr. METCALF. Nevertheless, we voted in conference, even under the narrow constructions the Senator from Arkansas has drafted, it is completely de novo,

a new conference, and every issue which was before the conference, 200 of them, are reopened.

Mr. BUMPERS. Let me say to the Senator from Montana:

No. 1, that does not mean that a bill would not come back, even if other items were opened, which, I strongly doubt.

No. 2, as badly as I want this legislation, I feel quite strongly about this provision and the future effects it is going to have on this country and the utility payers and consumers of the country, and the unjust enrichments which will result in so many people. I feel strongly about this provision, but I will not say that I am going to vote against final passage of the bill. I will not say that because perhaps there will be another day. I cannot overemphasize how strongly I feel about this provision. I honestly have no personal qualms or fears about allowing it to go back to conference, because I think the conference would have it out in one session and back on the Senate floor.

Mr. METCALF. The Senator can draw his own conclusions. However, I will agree that the Senator signed the conference report. I accept that as an indication that he does believe basically that this is a substantially strong bill.

I am not throwing up to the Senator the fact that he signed the conference report.

I am sorry, I am informed that he did not sign the conference report.

Mr. BUMPERS. I did not sign it. I regret it. I am very sorry.

Mr. METCALF. I thought he signed it with a very vehement objection to this provision.

Mr. BUMPERS. If I had signed it, it would have been with vigorous objections to this provision.

Mr. METCALF. Anyway, we are agreed that no matter how narrow a proposal the Senator from Arkansas has drawn, this does reopen the entire conference de novo.

Mr. BUMPERS. I concede the Senator and the Parliamentarian are technically both correct.

What is the difference between the House and the Senate bill which brings us here to this unhappy day? It is very simple. This provision of the bill pertains to all the coal which the United States owns. As a practical matter, virtually all the coal we are talking about is in North Dakota, South Dakota, Wyoming, and Montana. That coal was reserved by the United States as long as 75 years ago. After we reserved the coal, various people were sold the surface rights. The United States actually severed its ownership by selling off the surface to other people. A lot of it was taken under the Homestead Act for 25 cents an acre. The House provision simply provides that the United States cannot mine its own coal unless the surface owner gives his written consent.

That, in itself, seems fairly stringent. Why did the House put in that provision? It was not in the bill last year. It was not in the bill the year before. But suddenly it comes up in this bill. When we ask why is that provision in there, the answer always is, "We want to take care of those little ranchers out West. We want to take care of those little farmers who just want to keep ranching and doing their thing. We do not want the big, old, ugly, bad, coal miners to come in there and take their land away from them."

That is one argument, and it evokes considerable sympathy from me. As a trial lawyer for 18 years nothing was more repulsive to me than the use of eminent domain in unreasonable cases.

The argument which often evokes great sympathy is that those little farmers and ranchers out West just want to keep farming and ranching. That is just fine. But there is just one little problem with that argument. It means the United States cannot mine its coal under any circumstances, no matter how badly we may want it. If anybody owns the surface over the coal the United States owns, we just cannot mine it, no matter how badly the Nation may need it.

But there is another argument made by the environmentalists. Let me change that. They do not make this argument, but I think this is really their feeling. They have supported the House provision, because I believe they honestly feel that the coal will not be mined.

I do not believe there is anyone in the Senate who has much better environmental credentials than I have, but this is one place where the environmentalists and I part company. I think they are dead wrong. I do not doubt their motives. I do not doubt for an instant that they believe they are right. But I personally believe they are dead wrong, because I think the net result is that the coal is going to be mined at an exorbitant price which the consumers of America are going to pay.

Imagine yourself as an individual owning coal. If your section of land of 640 acres was to be sold to someone and you said to the purchaser, "Look, this land is worth $200,000, but I want to reserve the minerals." He says, "Under no circumstances. I am not going to buy if you are going to reserve the minerals."

Finally, you say, "Look, I will take $150,000 for it. I will cut the price $50,000 and reserve the minerals." Finally he says, "OK."

That is not a far-reaching proposition. That happens literally hundreds of times every day in the United States.

We have a lot of gas in Arkansas. I do not believe there was more than a week that went by when I practiced law that I did not draw a deed where someone reserved the mineral rights to the land he was selling, because he thought it had gas or coal under the surface.

This is exactly what the United States did from 50 to 75 years ago. They reserved it. Who did they reserve it for? For us, our children and grandchildren, because they knew some day we were going to need it. They sold the surface off for a pittance, just a song, and kept the minerals.

Now we say to people who have reduced the price of their property in order to reserve the minerals, "We are sorry about that. You cannot get your coal anyway. We do not care how much you reduce the price." This is what the United States is saying.

It is just unfortunate that there were some people who were visionary enough in this body 100 years ago to start reserving that coal with the knowledge that some day we would need it. What are we saying to them? "It does not pay to be very perceptive or visionary in this body."

What if the United States owns the surface and a private landowner owns the coal under the U.S. surface? What that means under this bill is that the private landowner can come in and take his coal and pay the United States just his normal damages for the surface.

What else does it mean? It means that, 100 years ago, the United States, also in its largess, was passing out to the railroads of this country 6 sections of land on either side of the right-of-way to entice them to build a transcontinental railroad to stimulate the economy of this Nation. It means that railroads like the Burington Northern, who own billions and billions of tons of coal in Montana and Wyoming, and reserved the coal and sold off the surface, can go in and mine their coal and pay the surface owner the normal damages required by State law. There will be literally thousands of instances in Wyoming and Montana where the United States will own a section of coal and, right next to it, the Burlington Northern will own a section of coal. The Burlington Northern will go in and take its coal and pay the surface owner the normal damages provided for under State law. The United States, if it goes in at all, will go in after the surface owner has given his consent, which will be given only if we pay dearly for it.

Mr. METCALF. Mr. President, will the Senator yield?

Mr. BUMPERS. I am just getting warmed up, Mr. President I am anxious to yield, but, if the Senator does not mind, on his time.

Mr. METCALF. I am delighted to yield substantial amounts of my time.

Mr BUMPERS. I thank the Senator for his generosity.

Mr. METCALF. I want to correct the Senator's statement.

The State law in Montana and Wyoming, where most of this coal is, is that there has to be surface owner consent. So the Burlington Northern cannot go in and mine, as the Senator from Arkansas has suggested, without the consent of the surface owner.

Mr. BUMPERS. I know that the Senator knows a lot more about the Montana law than I do, but does not the Montana law provide that a surface owner's consent is required only if strip mining was not a known technology at the time the reservation was made?

Mr. METCALF. That was not.

Mr. BUMPERS. When was the law passed in Montana?

Mr. METCALF. Just recently, two or three sessions ago.

Mr. BUMPERS. In the last 24 months?

Mr. METCALF. Not in the last 24 months, but I believe in the last few years.

Mr. BUMPERS. Is the Senator telling me that the Montana law provides that any reservation of coal that was made before the day that was enacted may not be made without the surface owner's consent?

Mr. METCALF. That is correct.

Mr. BUMPERS. Has that been constitutionally tested in the Supreme Court?

Mr. METCALF. It has not gone to the Supreme Court.

Mr. BUMPERS. I am not a constitutional lawyer, but I wager that it will not make it.

Mr. METCALF. I shall cite the Kentucky decisions under the so-called large forum claim, where they did decide that all of these provisions relative to surface owner's consent on mining related only to the deep mining and the kind of mining that was in operation at the time that the instrument was entered into. Surface mining was a different type of mining and you had to have the consent of the surface owner before you destroyed the surface.

That is the Montana law and that is the Wyoming law, and that is the law under which the Burlington Northern, which the Senator is suggesting, would have to come in and mine. I do not know whether it will stand up in the Supreme Court. The Senator has tried as many cases as I have. I hope he has won more, because he would not be as successful a lawyer if he had not. No one can predict what will happen in the Court on such things as that.

Mr. BUMPERS. If I may proceed.

Mr. METCALF. Surely. I am sorry to have taken the time, and I am delighted to yield to the Senator time to make up for this.

Mr. BUMPERS. I thank the Senator very much.

Mr. President, there is another significant difference in the House and Senate versions. We were trying to make sure that the United States was totally fair with those legitimate ranchers and farmers with whom the Senator from Wyoming is so concerned—and I share his concern. If I were the Senator from Wyoming, I would be trying to protect them. But I would not be trying to protect them in a way that is fraught with so many people being so unbelievably, unjustly enriched.

I think that is what this amounts to. But in any event, the Senator will recall that on May 19, 1977, the Senator from Louisiana (Mr. JOHNSTON) first offered an amendment. I cosponsored that amendment with Senator HASKELL from Colorado. That amendment was defeated, 67 to 25. The next day, I offered an amendment that we varied enough to make it in order, and we also changed it to provide such generous compensation to anybody whose surface is disturbed that he would virtually be unjustly enriched at the expense of the country. But, even so, it was so magnanimous that nobody could accuse anybody of being insensitive or less than charitable to those farmers and ranchers, who, in fact, want to continue ranching.

The next day, when I offered that amendment—and I hope this does not sound immodest—there were three or four Senators who had voted against the amendment the day before who stayed and listened to the arguments. They came up to me and said:

I voted yesterday without hearing the debate. I really did not understand the implications of this thing. You are patently correct.

Most of the Members will remember that, when we voted late that afternoon, after a long debate during the day, that same amendment passed by a vote of 44 to 32.

That is one of the reasons I am always saddened when I feel my cause is just but I do not have anybody to present it to. The next day, on that amendment, what we did was, literally, go overboard in being fair.

As a matter of fact, a Senator said to me yesterday afternoon:

Dale, one of the reasons I do not like your motion to recommit and I am opposed to this thing is because you are giving the landowners double damages.

I said:

Good Lord, Senator, that is a pittance. Giving them double the value of the surface is a pittance compared to what they are going to get without this amendment.

But to go on. What was the debate? What was the amendment the second day? It said, No. 1, we give the surface owners double the value of their surface. The law in virtually every State in the Union, Mr. President, is that when you disturb the surface in order to get minerals you own, you pay that surface owner the difference between the value before and the value after the surface is disturbed. In other words, if you own 100 acres of land and it is stripmined, and it was worth $1,000 an acre the day before it was stripmined and it is worth $100 an acre after it was stripmined, the surface owner is entitled to $900 an acre in damages. That is the difference between before and after value.

So what do we do? We give him twice the difference between the before and after value, twice the value.

What else? Two years' loss of profits. Two years' loss of profits from the day they start mining it.

What else do we give him? We give him all of his relocation costs, whatever it costs him to move off and find another place, anything he can justify.

And what else? Why, we give him any other costs he can dream up and reasonably justify.

That is not all. We give him his land back under the terms of this bill, which says that land must be put back in the same condition it was before it was mined.

Does that sound like a big bad Government that does not care about the small farmers and ranchers in this country? Never in the history of this body, of the U.S. Congress or any State, has the law been as generous to people as this Senate provision.

I think it is a fair and satisfactory arrangement. But one Senator proposes to vote against my motion, because he thinks it is too liberal.

Mr. President, let me give a comparison of this provision with the House provision. In the four States we are talking about—and certainly, Burlington Northern can mine all they want to in North and South Dakota, because there is no such law as Montana and Wyoming have. But in those four States—Wyoming, Montana, North Dakota, and South Dakota—the United States owns 96 billion tons of strippable coal. The current production rate of coal in this country is about 600 to 700 million tons a year. The United States, in just those four States, owns 96 billion tons.

Of that 96 billion tons, Mr. President, 50 billion tons lie under the surface that is owned by somebody other than the United States. So just look at it. In order to mine that 50 billion tons of coal, we have to get the surface owner's consent, whoever he may be.

And what is the going rate, the going rate for a coal royalty out West?

I hear it is 50 cents. I have heard everything from a nickel to 50 cents, but certainly 50 cents is the one I hear the most.

Mr. President, let us assume you own a section of that land, 640 acres. Let us assume further that the coal under that 640 acres is 50 feet thick—and that is just about the average thickness of the vein of coal out there, especially in Campbell County, Wyo. So if you have a 50-foot vein under that 640 acres, the National Coal Association says it will produce 85,000 tons per acre. So if you have 85,000 tons per acre under that land, let us assume the surface owner says, "Look, I really want to keep ranching, but if you pay me 50 cents a ton for my consent, I might consider it because that means my land is going to be worth $42,500 an acre."

I know it will take very little pressure for him to accept that payment for his land because some of it will carry about one cow for every 50 acres.

Assume that he will accept this $42,500 for each acre of his land, that translates to what? $27,350,000 for one section of land.

Mr. MELCHER. Will the Senator yield?

Mr. BUMPERS. I am not guaranteeing that arithmetic. The Senator from Wyoming is always questioning my pencil.

Mr. MELCHER. Will the Senator yield?

Mr. BUMPERS. Yes.

Mr. MELCHER. I do not question the Senator's arithmetic. But I question the "Dear Colleague" letter I received in my office today signed by the Senator and two other Senators that says the Burlington Northern Railroad, which owns mineral rights——

Mr. BUMPERS. If I may anticipate, we have just gone through that. The Senator from Montana points out they have a law, and Burlington must give consent. Is that the one?

Mr. MELCHER. That is exactly the point. I am glad the Senator from Arkansas has admitted to his mistake.

Mr. HANSEN. Will the Senator yield?

Mr. BUMPERS. Which means Burlington Northern may have to pay $27 million for a section of land, too.

Mr. HANSEN. I want to point out in this context, it is my understanding the

Wyoming law and the Montana law are nearly identical in this respect.

Mr. BUMPERS. So to proceed, Mr. President, I suspect it is not going to be too difficult to get some of the little farmers and ranchers to part with their land when they can get $27 million a section for it.

I think both Senators here who are strong proponents of this bill will agree that a 640-acre spread in most of Wyoming and Montana is not a very big spread.

Mr. President, in anticipation of some things that were going to happen if this bill passed, I predicted in the debate when the Senate adopted this amendment what was going to happen.

While I am most reluctant to read, and I apologize to my colleagues for reading to them, I will read an article from the Coal Daily, which is an independent publication. It deals with a matter which would have been very difficult for the Senate to have anticipated. It is a loophole in this law big enough to drive a Mack truck into. Here is the story:

Has pending federal strip mine legislation opened a loophole that will permit bypassing the Interior Dept. coal leasing moratorium?

It is possible large energy companies may be able to hold federal coal hostage under a provision in the proposed strip mine bill which enables them to control the land without owning it, the Daily learned Friday.

The apparent weakness deals with the surface owner consent section. Language in the bill requires the owner of surface land above federal coal to approve any strip mine operations on his land.

To qualify under the provision, the bill specifies, the surface owner must have resided on the land for three years or derived a significant portion of his income from the land during that period of time.

I will come back to that in a minute:

However, the bill does not prevent a company from purchasing the surface rights from the surface owner, a Congressional source tells the Daily. This would, in effect, split ownership of the land from control of it, he said.

The question came to light after Kaneb Services, Inc., Houston, Tex.—

I never heard of it, maybe some have—

recently purchased surface rights to 5,800 acres of land covering 725 million tons of coal in Campbell County, Wyo. (Daily, July 7). The coal is primarily owned by the U.S. government.

A Kaneb official acknowledged, in a telephone interview with the Daily, that the company does not expect bidding competition from other companies if the moratorium on leasing federal coal is lifted. The reason: Kaneb has secured an agreement from ranchers already living on the land enabling Kaneb to control the surface. This means the company may be able to exercise a defacto veto power over the federal coal under the surface.

The company declined to name the individual who assembled the leases to the land.

Another provision of the strip mine bill states that if a majority of landowners in an area decide not to strip mine, their decision may pre-empt that of the surface owner who consents to the surface mining.

Kaneb said it is negotiating to buy other coal adjacent to the new reserves, which are in northeastern Wyoming, near Gillette.

Another Congressional aide said the surface owner who gives up his rights to the land may cloud his title to the land. He predicted any such action taken by energy companies would lead to entangling litigation. Other companies interested in bidding on federal coal under the land would be likely to shy away, one source noted.

Kaneb is involved in mining coal and in oil and gas exploration.

House and Senate strip mine conferees are scheduled to vote on final language in the bill Tuesday.

Mr. President, I would not denigrate the small ranchers and farmers in Wyoming, Montana, North Dakota, South Dakota, for anything in the world. I know some of them feel very strongly and seriously about this provision. But it just happens to overlook the fact that speculators are already out there busily engaged in buying not the surface rights but the veto right.

The coal company goes up to the man and says, "I know you don't want your farm disturbed or to have strip mining here, but some day your son or grandson may be willing to let the coal be mined. So how about just selling me that right when that day comes?"

We have a company here which has already acquired 5,800 acres. When the President of the United States affixes his signature to this bill, we can rest assured there will be hundreds of them, literally, in all four States doing the same thing.

What are the requirements? What is the protection here?

The Secretary of the Interior said:

I don't want these surface owners to get any economic benefit from the coal. I want them to be compensated. I don't want them to have to give their consent. But if they choose to give their consent, I only want them to be compensated for the value of the surface, not with any economic royalty from the coal.

I find fault with that, but that would be infinitely preferable to what we have done. There is no provision in the bill now that prevents him from getting such a royalty.

The bill the President vetoed last year said that the surface owner does not have to give his consent; but if he does give his consent, he may only get the damages to the surface plus $100. Everybody was euphoric about it. The Senator from Wyoming and the Senator from Montana and DALE BUMPERS were all terribly disappointed that the President vetoed that bill for what I consider the most specious and spurious reasons.

What is required now for a surface owner to get the payments allowed under the consent provision of this bill? First of all, if he resides on the land for 3 years or—I did not say "and"—or farms it, or if he gets a significant part of his income from it. What is significant? It can mean anything. It is not defined in the bill. It simply means that if somebody lives on that land, or if he is engaged in farming that land, or if he gets a significant part of his income—any of those three—he is entitled to withhold his consent from the mining of that land if he fulfills any of those requirements 3 years before he is notified by the Secretary that the Secretary wants to lease the land.

I am not anticipating any big, wholesale leasing operation disturbing these ranchers' lands in the immediate future.

Here is a map I used in the debate earlier. I do not want to lecture the Senator from Montana. He has seen it a hundred times.

To illustrate my point, Senators can see here that everything in red is where the United States owns all the coal and the surface. Everything in purple is where the United States owns all the minerals but not the surface. Everything in gray is where the United States owns the coal but not the surface. Everything in blue is where the United States owns the oil and gas but not the surface.

What does that mean? It means that the Secretary of the Interior is not going to rush out there and disturb a surface owner's property. He has plenty of other land there.

About 40 percent of that map is land where the United States owns both the coal and the surface. There is no urgency about the Secretary disturbing ranchers and families right now.

What do we put in the amendment besides that compensation feature I mentioned a moment ago? We put in there that even with that, the Secretary could not lease this land unless he found it to be in the national interest. What does that mean? It can mean a lot of things, but it certainly would have to mean that the United States was in dire straits for the coal. He would not dare offer a tract of land for lease unless the surface owner consented or the surface was available, unless he knew the United States was in desperate need of the coal. We gave him that protection, but we could not even get that passed in the conference. I do not know what we have to do to be fair.

Finally, Mr. President, I have a few more comments to make, but I will sit down and let somebody else talk.

I know as well as I know my name that my motion to recommit is not going to be adopted. I am reluctant to take up the Senate's time with something that I know essentially is doomed to failure. When the Senators come in here and walk down that aisle, I know what is going to happen, and I regret it. I am saddened by it.

One of these days, as the reporters and the historians start checking out the instant millionaires and the instant billionaires we have made as a result of what we have done here, I want them to go back and look at the CONGRESSIONAL RECORD of today, and I want them to see that there was one Senator who made his case, made his point.

I do not feel mistreated by the conference. The Senator from Montana and I know that things happened in the conference about which we were both disappointed. I do not feel mistreated by the conference. It is the people of the Nation who are being mistreated. They are going to be asked to pay and pay and pay through the nose for coal they already own, under this bill.

The Teapot Dome is going to look like child's play. I will tell Senators what the difference is. This scandal has been sired and legitimatized by the U.S. Congress.

Mr. President, I reserve the remainder of my time.

(Mr. SASSER assumed the chair.)

Mr. NELSON. Mr. President, will the Senator yield for a question?

Mr. BUMPERS. I am happy to yield.

Mr. NELSON. I say to the distinguished Senator from Arkansas that I am in wholehearted agreement with the motion he has made, and I am happy to have been a cosponsor and a supporter of it.

I agree with the point the Senator has made. This provision opens the floodgates for landowners who own the surface, who got their patent from the Federal Government, with the American public holding the mining rights; and now we are saying that the landowner, who owns the surface, can refuse to let the American public have the coal they own, or, if they want to have it, can sell it at a very high price. We are going to make instant millionaires out of all kinds of people, out of the pocketbook of the American public.

It is absolutely inexcusable to have a provision that says a surface owner who got his land from the American public, with the mineral rights reserved to the American public, can now bar the public from even mining that mineral, and if they do mine it, can hold up the price and make himself an instant millionaire, on the minerals owned by the people of this country.

I say to the Senator from Arkansas that I regret I was not here when he began his remarks. I am chairman of a conference of the Small Business Committee with the House, which was to have started meeting 7 minutes ago. However, before going to that conference, I wished to commend the Senator from Arkansas for his vigorous fight in behalf of a very, very important principle, in the potential amount of money to be made by people from this provision. It will make the Teapot Dome look like a tiny, tiny, tiny teapot; because the potential is for tens of millions of dollars to be made out of the taxpayers' pockets because of the provision that was thrown out in conference, after having been voted in on the floor of the Senate.

Mr. BUMPERS. I thank the Senator.

Mr. METCALF. Mr. President, I hope that the Senator from Wisconsin will stay on the floor, but he has left. He is a signatory to a letter from Senator BUMPERS and Senator BARTLETT. There are grave misstatements in the letter and in the article that is enclosed. I will comment on that later, because neither Senator BUMPERS nor Senator NELSON is on the floor. Senator BUMPERS regretted that he did not have any audience.

Senator BUMPERS is on the floor.

I do want to correct a statement in the article that accompanied the letter from Senator BUMPERS when he said——

I see the Senator from Wisconsin (Mr. NELSON). I ask him whether he concurs in this letter he signed.

Mr. NELSON. I have never signed a letter that I did not concur in. I am not starting now.

Mr. METCALF. I want to tell you you have criticized my conduct of the conference in signing this letter. You were not there. I doubt if you had read the statement. I doubt if you had read the transcript, and I can demonstrate to you that Senator BUMPERS was treated with absolute courtesy and with great deference during the entire part of the conference.

Mr. BUMPERS. Mr. President, if the Senator will yield——

Mr. METCALF. I would be delighted to yield.

Mr. BUMPERS. I say, first of all, I drafted the letter myself. It is a very common practice in this body for a letter to be drafted by one Member and signed by others.

Mr. METCALF. It is a common practice for someone who acquiesces in a letter to read it.

Mr. BUMPERS. I consulted with Senator NELSON on almost a daily basis and told him what was happening. I told him the surface owner consent motion was made, I was defeated, and I was so upset about it that I was seriously considering a motion to recommit, and the Senator is completely aware of that. He did, in fact, read the letter. Anything in there the Senator may consider to be deprecatory toward him or his conduct as chairman I sincerely regret. The Senator from Wisconsin has the utmost respect for the Senator from Montana and he would not sign anything that would denigrate the chairman in any way.

Mr. NELSON. Let me say to the Senator from Montana that I agree with what the Senator from Arkansas said. The Senator from Arkansas—of course I was not at the conference—had a proposed draft which he did draft, and I went through it and had some reservations about some of the language, as the Senator from Arkansas knows.

He redrafted the letter, then sent it over to my office. I read it again and endorsed it.

Whatever occurred at the conference I agree I was not there. That would have to be a matter of differences between the distinguished chairman and the Senator from Arkansas. My concern only was on the question of its having been left out in conference.

Mr. METCALF. Well, the Senator from Wisconsin, while he is here, let me raise another question.

Mr. BUMPERS. Certainly.

Mr. METCALF. Accompanying Senator BUMPERS' letter, which you and the Senator from Arkansas signed, is an article called "Party Lines, the Great Coal Robbery," and in that——

Mr. NELSON. Mr. President, will the Senator from Arkansas listen to this?

Mr. METCALF. In that is a statement that "Senate majority leader Mike Mansfield put his influential stamp on the provision that was adopted by the last conference committee."

Mr. BUMPERS. What is the Senator reading from?

Mr. METCALF. I am reading from——

Mr. BUMPERS. The New Times, an editorial from the New Times?

Mr. METCALF. Yes, the New Times.

Mr. BUMPERS. Yes, June 10 issue of the New York Times.

Mr. METCALF. That you sent around with your "Dear Colleague" letter and very courteously provided me with.

Mr. BUMPERS. That is correct.

Mr. METCALF. Let me remind the Senator from Wisconsin and the Senator from Arkansas that the position of Senator Mansfield and my position, and still mine, was that we should not mine any of the coal where there was divided ownership. Senator Mansfield said when there was divided ownership and the title to the surface is in the person who owns the surface rights and the Federal Government owns the mineral rights that it is a pretty good conservation proposition to just leave it there until there is a national necessity. That would mean that nobody makes the great big ripoff that the Senator from Arkansas——

Mr. BUMPERS. Senator, that is exactly what the Senate provision does.

Mr. METCALF. No. But Senator Mansfield did not agree. Senator Mansfield said that we will not mine the coal at all, and this is entirely wrong and, I suppose I should not bring this up because Senator Mansfield is no longer here to defend his position, this is entirely a misrepresentation of Senator Mansfield's position on the bill.

Mr. NELSON. Let me say to the distinguished Senator from Montana that I recall very well the position of the distinguished majority leader, and the Senator states it correctly. He would not permit even the landowner to consent to the mining of the coal, as I recall it.

Mr. METCALF. The coal, as the Senator from Arkansas said, belongs to the United States, and he said we will keep it in reserve and where there is divided ownership we will not mine it.

Mr. NELSON. That is correct. I did not agree with that position.

Mr. METCALF. I thought it was a pretty good position.

Mr. BUMPERS. Let me say this before the distinguished Senator from Wisconsin leaves, I would like to make one point. I agree with that, and that is the reason we put in the Senate provision that none of this land could be mined until the Secretary deemed it in the national interest, and I think that is exactly what the Senate majority leader's position was.

Mr. NELSON. He would not even permit it to be mined even if the landowner wanted it.

Mr. BUMPERS. That is not correct.

Mr. METCALF. He said, and I introduced the bill that way, as the Senator from Arkansas knows, he said where there is this divided ownership—I thank the Senator.

Mr. BUMPERS. If I could make one more statement before the Senator leaves, since I made this point, we might as well put it out in the open——

Mr. METCALF. Let us put it in the RECORD.

Mr. BUMPERS. That is fine.

Mr. METCALF. The article I was talking about.

Mr. BUMPERS. That is right. The point I want to make is——

Mr. METCALF. Mr. President, I ask

unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GREAT COAL ROBBERY

(By Robert Shrum)

The Senate and the House soon will decide in a conference committee, whether or not to sanction one of the greatest giveaways to private interests in American history. The House version of the strip-mining bill would hand tens of billions of consumer dollars to oil companies and major ranching interests in the mountain states.

The story begins with the energy crisis of 1973 and the government's decision to shift to a heavier reliance on coal. Under the ground of the mountainous West, from the foothills of New Mexico to the grazing lands of Montana, lay vast coal reserves; their worth exceeds a trillion dollars. Eyeing them, the Ford Administration projected that Western coal production could be tripled to 300 million tons by 1985.

Among environmentalists, the Ford plan set off an instant alarm; the most expansive, least spoiled tract of land in the continental United States seemed suddenly to be in danger of rape; or, technically and economically, strip mining offers the most efficient method of extracting Western coal, which usually lies close to the surface. For years, there had been persistent demands that the federal government force coal companies to repair the moonscapes they were creating in Appalachia. Now, at the prospect of massive surface mining in the virgin West, the demand for tough strip-mining regulation took on new urgency.

When Congress was drafting the 1976 version of the strip-mining bill, Representative John Melcher of Montana, then chairman of the House Interior and Insular Affairs subcommittee on Public Lands, added a new, seemingly sensible provision to the legislation: that no federal coal reserves could be leased for strip mining without the consent of the surface landowner.

Although the Homestead Act had given away huge portions of the West to settlers through the 19th and early 20th centuries, the federal government had retained the subsurface mineral rights. In effect, the coal under the land was kept as the property of the American people. Now, however, the Melcher provision would transfer absolute control over it to those who have inherited or bought the Homestead grants.

It was, Melcher has argued plausibly, a matter of simple justice, "a question of basic property rights": no one should be forced to let giant bull-dozers gouge up their land to scoop out coal. Senate Majority Leader Mike Mansfield put his influential stamp of approval on the provision.

Neither Mansfield nor Melcher (who has succeeded to Mansfield's Senate seat) thought of the provision as local-interest peddling. Environmentalists have welcomed it and coal operators have not objected to it—which alone should serve as a warning that the matter is not as simple as it seems.

In fact, the Melcher provision is subtle proof that easy cases, too, can make bad law. For the best of (environmental) intentions is generating a next round of special-interest enrichment. The ecology lobbies latched on to the Melcher provision because they hoped surface owners would demand the strictest of environmental safeguards before allowing their land to be mined. But the issue is not one of despoiling the owners' land without restoring it or compensating them; other provisions of the strip-mining bill will impose as national policy the stringent Pennsylvania state standards requiring mining companies to reclaim the surface to its "approximate original contour" (with certain exceptions).

Fred Simonton, the executive director of the Midwest Electric Consumers Association, a cooperative of consumer-owned utilities, is one of the few experts who has bothered to analyze the effects of granting surface owners the additional right to block the mining altogether. In a recent letter to energy czar James Schlesinger, Simonton warned that it would be a "give-away of enormous proportions for the benefit of giant energy companies and a few landowners." And he's right.

For the energy companies will pass on to consumers the inflated cost of buying the consent of surface owners, who can set prices as high as they wish. Those prices will have to be paid because, as Simonton put it to Schlesinger, "the government is requiring a conversion [by utilities] . . . from oil and gas to coal."

Who will reap this windfall? Though precise staistics have not been compiled, most experts agree that the largest portion of the affected land belongs not to family farmers, but to agriranchers with their sprawling tracts of land. And it turns out that the other major holder of coal-rich Western land is the oil industry, which early on sniffed the breezes of this potential windfall. Quietly, big oil has gained control of five of the nation's seven largest coal companies—and, in turn, those coal companies, as Fred Simonton notes, previously had "bought up [many] surface owner consents." So as the other surface owners raise the price of giving their consent under the Melcher provision, the value of what the oil-coal conglomerates now hold will "automatically, drastically increase." For all coal—like oil—rises to the highest price of any of it. Thus, companies that already have purchased surface-owner consents cheaply could now sell the resulting coal, not at this cost plus a reasonable profit, but at an exorbitant level reflecting the higher costs of obtaining the consent of other surface owners.

Recently, the Senate approved an amendment by Arkansas Senator Dale Bumpers to dispense with the consent requirement whenever the Secretary of Interior finds that the leasing of a specific coal deposit is in the national interest. The issue must be resolved in a House-Senate conference.

In the end, the Melcher provision will *not* lead to greater land protection. Rather than higher environmental standards, most owners are likely to demand instead higher prices. One environmentalist concedes that "some of us hope that by making consent expensive, strip mining will become so expensive that it won't occur at all."

But that is wishful thinking. Like it or not, the coal soon will be coming out of the ground: Carter's reliance on it, like Ford's, is a matter of national necessity, one that the Melcher provision can't change. It began with the best of intentions, but its real effect will be to license profiteering.

Mr. BUMPERS. I think the Senator will admit that, No. 1, I asked that the provision of the surface owner's consent be postponed to be the last item considered.

Now, that was not agreed to by the conference. I admit it was not agreed to. Finally it showed up on the agenda, and I knew it was on the agenda. I also knew that the Senator from Wyoming's motion to recede from the Senate language would not pass because I knew we had five votes and he had five votes, and his motion would fail because of a tie vote.

But the day we took this vote Senator BARTLETT was in the hospital. He was one of the people who had helped me with the amendment on the Senate floor, and had debated in my behalf. He was in the hospital in Sloan-Kettering in New York the day it was voted and, therefore, the Senator from Wyoming's motion carried on a 5-to-4 vote.

Mr. METCALF. This is on my time, Mr. President. The Senator from Arkansas was absent on June 14 when this matter of surface owner consent came up. At that time I objected to bringing that up as a part of the agenda and said the Senator from Arkansas was interested in and concerned with this, and I had it put over.

On June 16 the surface owner consent was also on the agenda. At that time, in deference to the Senator from Arkansas, I had it put over until the Senator from Arkansas would be present.

On June 22 it was on the agenda again. The Senator from Wyoming made the motion to recede each of those days, and on each of those days in deference to the Senator from Arkansas I told the chairman of the conference committee, Congressman UDALL, that we could not take this up until the Senator from Arkansas was there and allowed to present his opinion.

However, we went into 2 days of discussion in the absence of the Senator from Arkansas on the matter with the understanding that he would have a right to present his case.

Then, on the final day, the Senator from Montana had to catch an airplane at 3 o'clock. I asked that we have a vote at 3 o'clock on surface owner consent. There was no objection. At 10 minutes to 3 there was a rollcall in the Senate. The Senator from Arkansas had presented his case, many other Congressmen had presented their opinions on surface owner consent, and I called for a vote on that day after deferring for three other times to the Senator who was not here and not present during the course of the deliberations.

Mr. BUMPERS. Senator, if I may make this observation. At the same time I requested that surface owner consent be postponed as the last item on the conference agenda. I also asked that it be considered when every Senator is present, which was also not acted on.

I am not unmindful of and certainly not ungrateful for the fact that the Senator protected my rights to be present when this matter was debated. But on June 14, the day I was absent, that was the first day of the conference, and the Senator from Wyoming, as the first item, said, "I move we recede from the Senate language," and I think he will admit now he said it in jest and everybody laughed.

Mr. METCALF. I do not think he said it in jest.

Mr. BUMPERS. It was considered to be in jest. Everybody laughed.

Mr. METCALF. You were not there.

Mr. BUMPERS. My aides told me.

Mr. METCALF. The record does not so show.

Mr. BUMPERS. In any event, I have stated the case as best I could. The vote was indeed taken, and on Thursday—I cannot give you the date——

Mr. METCALF. June 14.

Mr. BUMPERS. It was taken on Thursday. That was the day Senator BARTLETT had surgery, and on Sunday night he tried to call me at my home, and I was not there. He called me, got me out of bed on Monday morning, to tell me he wished very strongly to be recorded on this issue, and I said it may be too late.

He called me back three different times after that and, finally, the Senator will recall that I moved for a reconsideration of the matter and the Senator said I was out of order because I had not voted on the prevailing side. He was absolutely correct, and I did not quarrel with it.

Mr. HANSEN. Mr. President, will the Senator yield?

Mr. METCALF. I yield.

Mr. HANSEN. Let me make one observation. Senator JACKSON has pointed out repeatedly, as has the distinguished senior Senator from Montana, that absent specific rules that control conferees and conferences, the rule that has been followed repeatedly has been that the rules of the Senate shall apply.

I was present when the point was made that Senator BARTLETT had indicated that he would like to be recorded. I recall rather distinctly that Senator JACKSON made that announcement so that insofar as the——

Mr. METCALF. Mr. President, may we have the attention of the Senator from Arkansas?

Mr. BUMPERS. I say to the Senator if he does not have my attention he does not have anyone's attention, because I am almost the only other Senator in the Chamber.

Mr. METCALF. We did not have the attention of the Senator from Arkansas. Go ahead.

Mr. HANSEN. The point I was making, Mr. President, was that I do not think the Senator from Arkansas was there, but Senator JACKSON, the chairman of the full committee, one of the conferees, made the point that Senator BARTLETT, if he had been present and voting—I think this is essentially what he said—would have voted against the Senate receding on surface owner consent.

Senator BARTLETT, as everyone knows, was not there at that meeting. I can say that I think Senator BARTLETT's staff man was there, I believe, at every one of those conferences, and he knows, as do other staff members, that I worked closely with him for direction on specific points. I had proxies from I believe practically everyone except Senator BARTLETT on this issue. Before Senator BARTLETT went to New York, where he was hospitalized, I asked him specifically what his position would be on this issue and I said:

> It is going to be a tight one. This is extremely important to me. Could I have your support?

He said:

> Cliff, I feel very strongly about this issue. I have opposed surface owner consent when we had the bill up on the floor.

And I am sorry that the Senator apparently is not in the room at the moment because I wish he were.

He said: "If that issue comes up, I will try to be there," and I am paraphrasing now what I understood him to say very clearly to me. He said:

> I will try to make up my mind at that time to cast my vote.

He did not instruct me to vote one way or the other on surface owner consent. I did not vote his proxy when the issue came up for a vote. As I think most Senators here know, the motion I made recommending that the Senate recede was passed by a vote of 5 to 4. The five votes were all cast in person. The four votes that were cast in opposition to the Senate's recession as I remember were cast personally, and I think two proxies were cast.

I wanted to say this because I have not had an opportunity since our good friend from Oklahoma has been back here to tell him precisely what had taken place. I thought he knew what had taken place. I wanted to say to him that his staff man was there, and I told all conferees this, that I would seek specific instructions; if an issue came up that was important to them, I would do my best—and I repeat that now—I would do my best to see that their wishes were carried out, and that is precisely what I tried to do.

Mr. BUMPERS. If I may, and I am most reluctant to pursue this whole question of what was said and by whom, I will make two statements and ask the Senator to either agree or disagree.

No. 1, I moved that this matter not be taken up until the Senator from Oklahoma could be present, at which time the Senator from Wyoming said, "I have his proxy." And I asked: "Do you have his proxy to vote on this specific issue?" And the Senator said, "Mr. Chairman, anybody who holds a proxy is accountable to the person who gave it to him."

Mr. HANSEN. Will the Senator from Arkansas be interested in what was actually said?

Mr. BUMPERS. Yes.

Mr. HANSEN. I will be glad to read the transcript.

Mr. BUMPERS. Is that a transcript?

Mr. HANSEN. It is, of the conference report.

This is June 23, 1977.

I sought recognition. I will start with Chairman UDALL:

> Oh, yes. I'm just presenting them. No debate and no discussion today.
>
> The next item is a little old problem called "Surface owner consent," which I thought we might take a whack at today.
>
> Pages 227 to 231 deal with Federal coal.
>
> Senator HANSEN. Mr. Chairman?

Chairman UDALL says, "Senator HANSEN" and then I say:

> The House and Senate language on this issue differs, you know. I think the issue has been discussed and re-discussed repeatedly.
>
> I'm prepared to let the Senate Conferees decide if we should recede to the position taken by the House. I, therefore, move with the Chairman on my side that the Senate recede to the House conditions.

The Senator from Arkansas (Mr. BUMPERS) sought recognition by saying "Mr. Chairman." Chairman UDALL recognized Senator BUMPERS. Whereupon the Senator from Arkansas said:

> I would move that in light of the fact that one of the Conferees who steadily and bulkly supported the position of the Senate action, and will be for some time, that this matter be passed over until he can either be present or communicate his proxy to somebody on this specific issue.
>
> Senator HANSEN. Is it the presumption of the Senator from Arkansas that that has not been done?
>
> Senator BUMPERS. Well I would presume, based on conversations with his staff, based on conversations and during the debate on the issue, that he would not have given his proxy contrary to the way felt all during the debate on this issue.
>
> Senator HANSEN. Does the Senator from Arkansas know who has his proxy?
>
> Senator BUMPERS. Only what's been related to me from the Senator from Wyoming.
>
> Senator HANSEN. Mr. Chairman, I see no reason to delay a vote on this issue on that point. The Senator has left a general proxy, and I can assure the Senator—though I would not appreciate being placed in a position that I might have to assure him—but I'm answerable, or whoever may have Senator Bartlett's proxy or the proxy of any other person, a person who holds a proxy, I admit, is answerable to the person whose proxy he has.
>
> I have his proxy. I can assure the Senator from Arkansas that I will be thoroughly answerable to Senator Bartlett. I would move that we vote on this issue.

Mr. BUMPERS. Is that not just precisely what I said transpired in that conference?

Mr. HANSEN. I would ask Senators to respond to the Senator's inquiry by reading what he earlier said and what I have just said.

Mr. BUMPERS. I appreciate very much the Senator bringing that transcript. I appreciate his bringing it and I appreciate his reading it into the RECORD. That is my precise recollection of what transpired.

Mr. METCALF. If the Senator will yield, a copy of the complete transcript of the entire conference is available for the Senator or his staff at the rear of the Chamber.

Mr. HANSEN. Mr. President, I think the following should be further pointed out, and I am glad that our good friend, Senator BARTLETT, is here because from what I have just learned this morning I am fearful that I have been derelict and that perhaps there has been a presumption certainly on my part, possibly on the part of others, that he had been informed more specifically in greater detail than I gather now is the case.

Let me say this: I talked with Senator BARTLETT before he went to the hospital, and I have tried to relate here precisely what that conversation involved. Insofar as I was concerned, I had the proxies of the three other Republican conferees. I knew that they did not agree, necessarily, with my position on every issue; but insofar as I voted their proxies, I honestly tried to vote those proxies precisely as I was instructed or precisely as their staff members there instructed me to.

On the precise issue of surface owner consent, as I said earlier, I talked with Senator BARTLETT before he went to New York, and he said to me, "That is a tough issue. I have been opposed to surface owner consent. If that issue should come up, I will try to be there to vote on that issue and to make a judgment at that

time." Those are not necessarily his precise words, but that is essentially the thrust of what I understood the Senator to say to me.

So if the Senator from Arkansas had had his proxy, or had directions from him, or anyone else had voted his proxy on that issue, I would not have challenged it, except to make the point I have just now made.

Having in mind what Senator BARTLETT had said to me, I did not cast his vote on that issue.

Mr. BUMPERS. Mr. President, if the Senator will yield to me, first I would like to make a couple of comments, and then yield to the Senator from Oklahoma.

Mr. METCALF. Mr. President, I think we are operating on my time.

Mr. BUMPERS. I am sorry.

Mr. METCALF. I will be delighted to yield to anyone who wishes.

Mr. BUMPERS. Mr. President, this places the Senator from Oklahoma in a slightly awkward position, because he was not at the conference. He was a perfectly honest, innocent bystander who cosponsored this motion for a simple reason. I know he has great admiration for the Senator from Wyoming, and that it is very difficult for him, or for either of them, to be on opposite sides on any issue, because I know of their close friendship.

I think it is only fair for me to say that he joined with me on this issue not because of any procedure that happened during that conference; he joined me because he feels very strongly about the issues I outlined in my opening statement. Therefore, I hope we will not bother him further on this issue.

Mr. HANSEN. Mr. President, let me make the observation that I know of no other Member of this body more universally respected for his honesty, his integrity, than is the Senator from Oklahoma. That is a view that I share, and I can assure you there is nothing the Senator from Oklahoma has done since I have known him that has detracted one bit from the high admiration in which I hold him. The fact that he is a cosponsor of the Senator's motion does not change my feeling one bit. He has every right to do so; he is an honest person who sincerely believes what he says, and I respect him and admire him for it. The fact that he has joined with my good friend from Arkansas in cosponsoring this motion to recommit does not change that situation at all.

I did welcome an opportunity, though, to point out what had taken place, because I just learned that, while I had not told the Senator from Oklahoma what precisely had been said, I gathered that, through my dereliction, probably, he was not as completely informed as to what had taken place as he might have been, and it was with that in mind that I wanted to spell out to my cherished friend from Oklahoma exactly what I had tried to do.

Mr. BARTLETT. Mr. President, will someone yield me some time?

Mr. METCALF. This is on my time. I yield to the Senator from Oklahoma.

Mr. BARTLETT. Mr. President, I have the greatest admiration for the Senator from Wyoming, the Senator from Montana, and the Senator from Arkansas, who have been discussing the matter of my proxy and the fact that it was not cast in a decisive vote on surface-owner consent.

First, I wish to say that I congratulate the Senator from Arkansas for expressing very strongly and I think accurately, from my point of view, the arguments that show that surface-owner consent is providing to a certain few people what is tantamount to mineral assets of tremendous value that belong to the Government. That position, which is better expressed by the Senator from Arkansas than I have expressed it in the past, is one that I have espoused in the past and espoused on this floor. So I am quite at home on this side of the issue.

The question, to my mind, centers around the casting or not casting of my ballot, of my proxy. I have absolutely no question as to the integrity or the motives or the manner in which this was handled by the distinguished Senator from Wyoming.

Let me describe the committee on which I serve, which for 4 years was known as the Interior and Insular Affairs Committee and is now the Energy and Natural Resources Committee. I think the Members who are here from that committee would agree that I probably have disagreed in voting with the chairman of the committee, the Senator from Washington, as much as anyone. But I think that they would also agree that they had heard me express myself that I have always been fairly treated on that committee, and that if I had been asked or had commented abcut the rights and opportunities of other members, I would have said that every member of that committee was given due consideration to express himself as to how he felt on any particular issue.

I think you could say accurately that the committee was run in a rather relaxed way. Just as an example, which does not get into proxies or voting, but to make the point, we have on occasions voted to report a bill out subject to further amendment. This is somewhat of a contradictory situation, and when it first happened I think as far as I was concerned I was rather surprised, and did not quite see how that could be. Nonetheless, we have done that, and we have done it recently; and it works. It works because the chairman agrees that if there are any amendments to be brought up, they will be properly considered and voted on, and if there is a change to be made, it will be made in the bill that was reported out.

By doing this, just to explain the reason for doing it, the staff has been able to proceed ahead with the report and expedite the matter that much faster. On the matter of proxies, I think the chairman (Mr. JACKSON) and the floor manager, the Senator from Montana (Mr. METCALF), have likewise made every effort to see that a Member's proxy was voted the way he wanted it voted. So we have had votes in which proxies have been cast by the Senator having the proxy, and then sometimes there have been doubts as to whether or not the proxy was cast just the way the Senator wanted it.

The chairman, or the acting chairman, would generally turn to the staff and say, "Let us find out just what that Senator wants to do. Let us find his true wishes on this particular question."

This is the point I am raising. There were efforts, I believe, by the Senator from Wyoming and also the Senator from Arkansas to contact me through the office, but I do not know of any efforts by the committee to contact me to find out whether or not I wanted to cast a vote and, if so, how. Because of this, I did not learn of the action. Certainly, I want to say that I was not contemplating or thinking about the action when I left the Senate the previous Friday and checked into Sloan-Kettering Memorial Hospital on a Sunday for what turned out to be surgery on Thursday. I was not thinking of this particular question. It was not on my mind at all. But I did learn about it on Friday. I then did make a call to our chairman (Mr. JACKSON) over the weekend as well as a call to the Senator from Arkansas (Mr. BUMPERS).

I asked Mr. JACKSON if there could be a reconsideration of that question and my vote be counted.

I am aware in the past of votes which have taken place in which proxies were cast and a bill was passed or an amendment was agreed to, and then later on the person whose proxy was cast was consulted and he cast a different vote, which changed the outcome. That change stood.

In some cases that went from one day to the next.

I felt, because the conference was still in session, and since there had not been a final reporting of the conference committee report, that it was a fair request that would give me this opportunity to indicate how I would like to have my vote cast.

It is for this reason that I have joined with Senator BUMPERS, plus the basic argument on the merits of this provision of the bill, that I feel there should be recommitment for this purpose.

The PRESIDING OFFICER. Who yields time?

Mr. METCALF. I yield to the Senator from Wyoming.

Mr. HANSEN. Mr. President, I appreciate very much what our good friend from Oklahoma has just observed. I think there is one point which I believe needs clarification, a point which may have led to some misunderstanding.

I, too, know, as has been explained by the Senator from Oklahoma, when we have been in markup, when we have been in committee session, not only when our membership was part of the Interior Committee but even more recently as part of the Energy and Natural Resources Committee, and as a member of the Finance Committee, what Senator BARTLETT speaks about has happened oftentimes. Because of the inability of Senators to be present and voting as a bill has been progressing through markup, we have done precisely what the Sena-

tor from Oklahoma has talked about and has described in some detail here on the floor.

The point made by Senator JACKSON can best be explained if I just read precisely what Senator JACKSON said. I would call attention to the fact that this statement is part of the official transcript of the conference and took place on the 27th day of June of this year.

The chairman said, "Surface owner consent." Senator JACKSON was recognized and said:

Senator JACKSON. I had a call last night from Senator Bartlett from the hospital in which he stated if he had been present, he would have voted with Senator Bumpers against the Senate receding to the House language, and I think that is the way the language was.

The question I had it was five to four; that would make it five to five. It is my judgment, unless my colleagues rule me on the Senate side because this is a Senate decision, I want to bring this up at his request.

We do not have in the Senate rules that are applicable to the parliamentary conduct of the Senate in a conference. I would defer to Senator Metcalf on this. He has followed the rules a lot closer than I have, but in view of the fact, it would be my personal judgment, we should follow the rules of the Senate; that is, in order to take up the request of Senator Bartlett, we would have to move to reconsider somewhat on our side, on the prevailing side. So, the point is we would still be five to five, I assume, even if it were taken up on a motion to reconsider. It would be five to five and it takes an affirmative vote.

I would defer to Senator Metcalf on this, but it seems to me we should follow the rules of the Senate in the absence of not having rules governing the conference.

That concludes the statement by Senator JACKSON, and I believe makes the point, and the important distinction, concerning the situation to which Senator BARTLETT earlier referred and which, too, I have experienced repeatedly. If one of the committees, say the Energy and Natural Resources Committee, is in markup, we have done precisely what Senator BARTLETT has described.

I think the point made by Senator JACKSON here in essence is that in conference with the House the conduct of the Senate conferees should be circumscribed and directed by the rules of the Senate. It was that point that I think Senator JACKSON had in mind when he observed that a person in order to vote would have to be present and voting. If he happened to miss a vote on the floor, he could be recorded.

I know that Senator JACKSON wanted to make clear what Senator BARTLETT's position was, but then he made the further point that in order to reconsider an action taken by the conferees, the rules of the Senate would apply. We know, as we understand and have watched the conformity to rules of the Senate here, if a motion to reconsider is to be made it must be made by a person who has voted with the prevailing side, and it does indeed take an affirmative vote to have the Senate reconsider a vote.

That was the point I wanted to make which I thought might possibly need some clarification. I thank my friend.

Mr. METCALF. I would like to yield to my colleague from Montana.

Mr. BARTLETT. Would the Senator mind if I comment pertaining to the comments made by the Senator from Wyoming? I will be brief.

Mr. MELCHER. I will yield for that purpose.

Mr. BARTLETT. I would make two points:

I do not think in conferences in which I have participated there has been any enunciation of what rules are to be followed by the Senate Members of the conference. I think it is only natural that, since the conference is made up of members of the Energy and Natural Resources Committee, the manner in which business had been conducted in committee is the manner in which it would be conducted in the conference. As I said, I felt it was a very fair way, a fairly relaxed way, and a very workable way, which resulted in the members of the committee having their wishes presented accurately and properly.

Second, I say that I think it is also a policy of this committee, during a vote or during that period leading up to a vote, to find out what the wishes of an absent member are so that his proxy can be accurately voted. This was not done by the committee. I think this is a departure from the usual approach to making certain that the committee members do have the right to have their votes cast or to cast them in a certain way.

Those are the two points I make to what the Senator had to say. I thank the distinguished Senator from Montana.

Mr. METCALF. I say to the Senator from Oklahoma that the Senator from Wyoming told the Senator from Arkansas that he had the proxy of the Senator from Oklahoma; that his staff member was there. As the chairman of the Senate conferees, I assumed that he did not know exactly what the Senator's position was.

I had a general proxy from the chairman of the committee (Mr. JACKSON), but I did not know what his position was going to be on that and I did not vote that proxy at that time. I think that that is the best we can do when we have proxies. If we are not sure, we just do not vote those proxies.

Mr. BARTLETT. I say to the distinguished Senator from Montana that I believe I can recall a number of instances in which the chairman or the acting chairman of the committee, when the question came up about an individual member's proxy and there was some doubt, would then make a request to find out for sure what the desires of that Senator were. This is what I do not think happened in this case. This is why I felt, when I talked to the distinguished chairman (Mr. JACKSON), who is now here, that since the conference was still in session, it was a reasonable request to ask that my vote be cast in the manner in which I desired to cast it.

Mr. METCALF. The Senator from Wyoming had read that statement into the RECORD.

(Mr. LEAHY assumed the chair.)

Mr. HANSEN. Mr. President, I want to make a couple of points, at least.

No. 1, I take full responsibility for the way I voted proxies in each instance that I voted a proxy. The blame or any fault that anyone may find with the conference or the chairman of the Senate delegation to that conference that might result from the exercise of proxies under my control, I would have to believe would be placed on me, rather than on anyone else.

I shall be repeating, but I think perhaps I should, to say that, on this specific issue, as the Senator from Oklahoma will recall, I observed, before he went to New York, that this was going to be a close vote on this specific issue.

I asked, "If one vote could make the difference, may I have your proxy?"

I think that, essentially, what the Senator from Oklahoma said to me was, "Well, no, I oppose surface owners' consent. If that issue comes up—" and, of course, he and I knew that it would, in all probability—the Senator from Oklahoma said to the Senator from Wyoming, "I shall try to be free to make my judgment at that time and vote my feelings at that time."

I have mentioned, also, that, because I needed specific guidance from staff members—who, as far as I was concerned, were the best and most accurate representatives available to me of each Senator's feelings—I did follow the policy, on those issues that required my voting proxies, if I voted them, of trying to get specific instructions from staff members on specific issues in order that I could fairly vote those proxies the way Senators may wish them to be voted.

I have been repetitious, but I wanted to repeat what I had earlier said in order that our good friend from Oklahoma would not feel that the chairman of the Senate delegation (Mr. METCALF) had been derelict in any way in trying to see that the proxies that may have been voted by the Senator from Wyoming had not been faithfully voted. I felt constrained to say that.

Mr. METCALF. Mr. President, if my colleague from Montana will bear with me—he has been patient—I wish to yield at this time to the chairman of the full committee (Mr. JACKSON).

Mr. JACKSON. I thank the distinguished chairman, the Senator from Montana (Mr. METCALF). I shall be very brief, Mr. President.

I am strongly opposed to the motion to recommit the conference report on H.R. 2. I have the highest regard for my colleague from Arkansas, but I feel that it would be unwise to take this conference report back to conference and start over again on this particular issue.

I voted with the distinguished Senator from Arkansas, as I indicated in my statement yesterday, on the subject of surface owner consent, I have some very strong views on that. I understand the concern of the sponsors of the motion. I believe, however, that recommittal would, in effect, reopen the entire conference and would be a grave mistake.

The "surface owner consent" issue was only one of 37 major issues resolved by the conference committee. While on this issue, the Senate receded to the House;

on many other issues, the House receded to the Senate. The end result, I think, is a good bill which needs to be approved now.

Development of coal, obviously, is the key to meeting our energy needs for the rest of this century. One of the major inhibiting factors to coal development in all regions of the country—East and West—is the failure to establish Federal surface mining standards. Our coal industry must know what the ground rules are to plan their investments and proceed with mining. The conference report on H.R. 2 strikes an appropriate balance between the need to develop our coal resources and the need to protect our land and water. It is flexible enough to be applicable to the mountains of Appalachia, the fertile agricultural areas of the Midwest and the arid, fragile areas in the West. It recognizes the interests of individual States by giving them the principal responsibility for regulation within their borders.

Mr. President, I urge my colleagues to vote against the motion to recommit, accept the conference report, and thus end the Senate's 7-year struggle to enact the Federal surface coal mining law.

Mr. President, I shall read into the RECORD at this point a letter that I received from James A. Joseph, Under Secretary of the Interior. It is dated July 20, 1977:

U.S. DEPARTMENT OF THE INTERIOR,
Washington, D.C., July 20, 1977.

Hon. HENRY M. JACKSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR JACKSON: I understand the Senate will today be taking up the conference report on S. 7, the Surface Mining Control and Reclamation Act of 1977.

As you know, the passage of this bill into law is one of the cornerstones of this Administration's energy policy. The bill as reported from conference will provide an environmentally sound framework for harnessing our vast domestic reserves of coal.

The Department of the Interior supports approval of the conference report by the Senate.

Sincerely,

JAMES A. JOSEPH,
Under Secretary.

Mr. President, I thank the Senator from Montana for yielding the floor for this purpose.

Mr. METCALF. Mr. President, I am very grateful to my colleague and my chairman for that statement.

We did vote against this proposition. He and I joined in the two previous Congresses on this. We went through hours and hours of conference and discussion in previous years on this same grave question.

I appreciate his sincere effort to say—

Let's put an end to all of this discussion and send the bill down to the President which he says he will sign and the Secretary of the Interior supports, and let's start mining coal under the environmental provisions.

I finally have an opportunity to yield to my colleague from Montana.

Mr. MELCHER. I thank my senior Senator for yielding.

Mr. President, it was Churchill who called democracy the worst form of government except all those other forms that have been tried from time to time.

The answer we have on the final version of this bill as presented by the conference committee on the issue of surface owners' consent is the best answer after considering all other possible solutions, because the answer is that the property rights of owners will be respected and will be upheld by law.

How did we get here? How did we get to this issue?

It was because in the early 1900's Congress said in retaining the coal for the United States on lands that were offered for homestead that if that coal were mined only the improvements and the crops would be paid for by the coal company that secured the lease, or the right to mine the coal by the United States.

It was a considered action of Congress at that time that that was right and fair to allow the land to be homesteaded, but to retain the coal.

The Congress addressed the problem at a time when there was not any strip mining, when there was only mining for coal underground, and mentioned in the debate during the consideration of the bill that the homesteader, after all, would not be out very much, that he would be out the necessary land for a right-of-way, for a tipple, and for other things that were necessary for a coal company to mine the coal under shaft methods, underground methods.

Well, the technology, of course, has changed. The coal is the same, but the technology has changed. The coal that was not mined before because it was of a nature and of a geologic structure that did not lend itself to shaft mining has now become valuable in terms of mining it under the means of strip mining.

So it is time that Congress addressed this problem and in equity realize that those landowners will have not just a small fraction of their land disturbed if it is mined, but will have it stripped—all of it. The buildings moved, the fences torn down, the grass, the trees, the crops stripped, and that is a different situation—entirely different.

So, in equity, Congress should recognize the technology that will be used, that it will be strip mined, and that those landowners will not just lose a tiny fraction of their land if it is mined, but will lose it all.

Eminent domain is not the proper way to treat landowners. How about other land in the United States? What land in the United States would have attached to it the requirement that the landowner give up his surface so that Uncle Sam could have all the subsurface?

I do not know of any other land. I have not been advised that there is any other land, not by the Senator from Arkansas, not by the Senator from Wisconsin, nor by the Senator from Oklahoma that signed the Dear Colleague letter to us asking us to reject the conference committee report on the basis of this issue.

But the authors of that letter did cite the case of Burlington Northern, citing that that land acquired from the Congress through an act of Congress in the land grant to the Northern Pacific Railroad where there is split ownership would be subject to a different type of procedure.

Not so in Montana. Our State law says where private land is involved with a different owner of the coal, that that coal can be mined only after written consent is given.

It was adopted in 1975 and it was adopted by the Montana legislature specifically with Burlington Northern ownership of coal under consideration.

So the Montana legislature protected, as much as they could, the landowners' rights in that case of split ownership involving the coal.

But the Montana legislature could not act on the federally-owned coal. It is only Congress that can. We are the guardians, or the stewards of the public land and in this case the public's coal.

So it is up to us to take that step that is essential to guarantee the landowners their right of property ownership that so many other landowners throughout this country have.

The amounts of money involved have been stated to be millions of dollars, even billions of dollars involved with surface owners' consent.

That does not happen to be the case in the market where surface owners' consent has been arrived at, coal companies seeking that right to mine federally-owned coal underneath private land. That is not the case at all.

But I think that posing that question begs a point. Are we to measure property rights on the basis of dollars? Are we to take away from a landowner his or her rights to say, "My land is important to me as it is, with my buildings, my trees, my grass or crops as it is. I seek to retain that right."

Are we to take that away on the basis of so many dollars? I hope not.

I think the answer arrived at in the conference committee report on this issue is absolutely correct. It is the best solution after all others have been considered.

Mr. President, the letter from the three Senators I mentioned, who are offering the motion to disagree with the conference report, contains a page from New Times called Party Lines, which already has been made part of the record in this debate, under a unanimous-consent agreement.

In his June 10 article, Robert Shrum expressed fears that allowing landowners the right to decide whether or not his or her land would be strip mined for coal would lead to exorbitant profits. Shrum's fears have been expressed by many others who have considered the strip mine bill during the last 5 years.

Winston Churchill called democracy "the worst form of government except all those other forms that have been tried from time to time." There is a parallel to that in answering the Shrum argument. Permitting the person owning the land to make a decision on whether or not to agree to strip mining is the worst possible solution, some say, but would they admit that all other solutions are worse? To prevent an exorbitant

profit, the only alternative is to deny the landowner the right to keep his land. Shrum reports it as an environmental issue. Environmental organizations have consistently supported the requirement for written consent of landowners. But in addition they, I, and western people, see it as a basic property right that Congress should address as a major concern on what is fair and equitable.

Recognizing that a person with his home and livelihood at stake should have the basic right of deciding, "No, I want my home, my land, my trees, and my livelihood in farming or ranching to stay the way it is and I'm not interested in selling so it can be strip mined," we convinced the House of Representatives and eventually the conference committee between the House and Senate that this right should become an element in the strip mine bill passed in 1974.

We had fought hard to establish it in the bill in the House Interior Committee and on the House floor. The Senate version of the bill that year was different and the final and most difficult agreement in the conference was the section on written consent of the landowner before the federally owned coal underneath the land could be mined. It protracted the conference and almost resulted in failure to agree, thereby scuttling the bill. The conference committee first met on August 7, 1974, and we met 18 times, only reaching a final solution on December 31, 1974. That solution was a compromise and was as follows:

The landowner can make a decision whether or not to strip mine his land. If the decision is "No to strip mining," that was the end of it. If the decision was "Yes, to have it strip mined," the payment for the surface of the land would be restricted on the basis of the value of the surface, the improvements, the loss of income to the landowner, moving expenses that were involved, plus—at the discretion of the Secretary of the Interior—a bonus of up to $100 per acre. The House and Senate both accepted the conference committee decision, but the bill was vetoed by President Ford. In 1975 exactly the same provision was included in the bill passed by Congress, and again the bill was vetoed by President Ford.

During the past half-dozen years, the written consent that has been obtained from landowners over federally owned coal in the West to acquire the right to strip mine the land has varied in price depending on the offers made by coal companies. Some of those offers have been accepted, some rejected. To my knowledge, in no instance has it amounted to more than $1,000 per acre. But in order to answer the argument of utility companies and the cooperatives such as Shrum refers to, we calculated what that cost of the surface right acquired at $1,000 per acre would amount to in a consumer's utility bill: $.00636, or less than ⅔¢ per month.

It is worth knowing that the reason Congress reserved this coal for the United States while allowing homesteaders to gain title to the land was to prevent the grabbing of huge blocks of land just for the sake of the coal that underlies so much of the Western United States. Homesteaders were not deterred from taking up homesteads in North Dakota, Montana, and Wyoming, because of the coal reservation. Remember, then there was not any strip mining for coal, and the colloquy on the House floor in 1916 when the bill was passed referred only to underground coal mining and provided that if the coal was to be mined, the needed land surface for a road or a railroad and for the necessary land for a mine shaft and tipple could not be located on the homestead of the farmer or rancher where their own buildings were situated.

Strip mining, however, is different. It does not just take 1 or 2 percent of the land surface. It takes all the land, including all the improvements on the land where the homes, buildings and trees are; and even when the land is reclaimed, it involves a period of decades in the vast western strip mining operations, where seams of coal are 20, 30, and 50 feet thick and mining on small areas takes years.

Congress did not contemplate in 1916 that strip mining would occur for the coal owned by the United States. Homesteaders who received titles to the land did so on the basis that if the coal was mined it would be done so by underground shaft mining which would disturb and take only a minute portion of their land. The times and the technology have changed, and Congress must also recognize the need for change in the law.

That is the reason for this provision requiring the landowner's rights be recognized before the coal is mined. There are 175 billion tons of coal in the Fort Union Coal Deposit which underlies portions of Wyoming, Montana, and North Dakota. The procedures of obtaining written consent of the landowners have progressed thus far without modifying the law. Congress is recognizing that in the strip mine bill and is appropriately modifying the law on the basis of equity to allow those landowners who say their land is more important to them than anything that has been offered to get at the coal underneath.

The bill as finally agreed to does guarantee to those landowners who really want to keep their homes, trees and livelihood that they will have that precious right. With me, that is a basic right well worth fighting for.

Mr. METCALF. Mr. President, I now yield to my friend who worked alongside me for many months and thousands of hours on this bill, the Senator from Wyoming.

Mr. HANSEN. Mr. President, I thank my distinguished colleague, the floor manager of the bill.

I wish to make some rather brief comments in response to the very eloquent statement of my good friend and admired colleague from Arkansas, Senator BUMPERS.

The situation to which the distinguished junior Senator from Arkansas referred earlier today was anticipated, I think, by the Members of the House and the Members of the Senate who have labored long and diligently on this bill. In order to make certain that there would be no speculation by people who do not qualify as those of us interested in trying to protect the rights of various owners, we placed this language in the bill:

(e) For the purpose of this section the term "surface owner" means the natural person or persons (or corporation, the majority stock of which is held by a person or persons who meet the other requirements of this section) who—

(1) hold legal or equitable title to the land surface;

(2) have their principal place of residence on the land; or personally conduct farming or ranching operations upon a farm or ranch unit to be affected by surface coal mining operations; or receive directly a significant portion of their income, if any, from such farming or ranching operations; and

(3) have met the conditions of paragraphs (1) and (2) for a period of at least three years prior to the granting of the consent. In computing the three-year period the Secretary may include periods during which title was owned by a relative of such person by blood or marriage during which period such relative would have met the requirements of this subsection.

I think the courts will be keenly interested in determining who indeed is a qualified surface owner, as cases may be brought to trial, if they are. However, it seems to me that this language is very clear in assuring the American public that people who are not farmers or ranchers will not be accorded the right to withhold mining under the terms of this particular section of the bill dealing with surface owner consent.

As has been pointed out, the State of Montana has a surface owner protection law which gives the surface owner the right to say whether or not mining may take place on lands of which he owns the surface.

We have a similar law in Wyoming. It was patterned after the language which was incorporated in earlier versions of this bill and which has been carried down into this bill because of its specificity. I make that point because the specter that has been painted for us by the Senator from Arkansas would have Members believe that we have created in this bill a provision that will yield fantastic amounts of money to a person who qualifies as a surface owner.

So I make this point: Since 1975, the State of Wyoming has had such a law. It has given a surface owner the right, without contradiction, to say whether or not mining may take place. There is no doubt about that. Since 1975, we have had transfers of ownership taking place. In some instances, a coal company not only has acquired the right from the surface owner to mine the land but also has bought him out.

What are we paying for these ranches in Wyoming? These are ranches that my friend from Arkansas says where just the right to withhold consent to mine could yield as much as—I think he pointed out that a 50-foot seam of coal on 1 acre of ground has been computed to have been 5,000 tons, and he says that at 50 cents a ton, the figure that he uses, it could yield $42,500 an acre.

The fact is I know of no sale of a ranch or farm in Wyoming to a coal company

that has exceeded $1,000 an acre. Now, there may be some, but I know of none.

I know of a number that have sold for $500 an acre. So I do not think there is any reason at all to worry one moment about what this surface-owner-protection clause holds for the American public, for the consumers of energy, insofar as a ripoff by a rancher or farmer in Wyoming goes.

There are, according to information we have from the BLM, 26 billion tons of coal already under Federal lease. I remind my colleagues that presently we are mining about 665 million tons of coal per year, surface coal, coal recovered by surface mining, as well as underground mining.

So the point that there are presently under lease 26 billion tons of coal that can be surface-mined alone assures the American public we have got a whale of a lot of coal in reserve that could be recovered just from land already under lease.

Just recently I read that the BLM or the Bureau of Mines, one or the other, or the USGS, to mention a third, had indicated that there was a far greater expansion of the available coal that can be mined in the West.

I make that point because we are getting down to this fact: Why should the Government of the United States give the owner of the surface the right to say whether or not these lands can be mined? Our friend from Montana, the junior Senator (Mr. MELCHER), has already pointed out that when the Federal Government started reserving its minerals back in 1909 there was not the kind of machinery we have today. No one contemplated the kind of a surface mining operation we have today.

I do not disagree at all that if we were to expand this concept to include the drilling and the production of oil and gas, of conducting an underground mine operation, and a lot of other things that we could think about, that we would, indeed, be creating a situation that might very well deserve the serious consideration of Congress.

That is not what we are talking about. We are talking about lands the surface of which was given to a farmer or a rancher by the Federal Government when the minerals were reserved, and when it was never contemplated that this kind of an operation, a surface-mining operation, was going to be taking place.

These ranchers and farmers—and I know a lot of them in the State of Wyoming—have lived and are living on farms and ranches that were patented many years ago. Their father and oftentimes their grandfather have operated on the land. In more cases than just a few, their parents and their grandparents are buried on that land.

All we are saying in this surface-ownership-protection provision is that the surface owner shall have the right to say whether or not his lands are to be surfaced-mined. We are not talking about a couple of years. A surface-mining operation can continue for as many as 40 years' time, and it is not simply a case of inconveniencing that rancher or farmer for a year or two. It means, in effect, for all practical purposes, once that surface-mining operation has started, and pending its final completion and the restoration of the land, which is called for and guaranteed by this bill, that rancher or farmer is going to have his way of life practically totally disrupted.

I think we have struck a very fair balance in determining what the rights of the landowner should be under this situation and, at the same time, what the rights of the Government should be.

Mr. President, I do not think there is much more that needs to be said and, perhaps, I have been—and I certainly have—repetitious already in saying what I have. But I want to have no one in this Chamber present now under any illusion that we are doing something here that is not fully consonant with what the Government of the United States did in the first place when it gave a farmer or a rancher the right to own the surface of the land.

When we move in now with a whole new technology and say, "We are not going to remove the coal," as was contemplated when we reserved the coal back in the early part of the century, but by a whole new technique now, which is going to virtually mean putting you off the land and keeping you off until long after you are dead and buried, that is a different situation.

I yield the floor.

Mr. METCALF. Mr. President, I would like to ask if the Senator from Arkansas would now yield some time. I would like to take not more than 10 minutes, probably 5 minutes, to close the debate. But I ask, Mr. President, what is the time situation?

The PRESIDING OFFICER. The Senator from Montana has 32 minutes and the Senator from Arkansas has 17 minutes remaining. I beg the Senator's pardon, 78 minutes remaining.

Mr. BUMPERS. You just caused my heart to flutter. [Laughter.]

The PRESIDING OFFICER. The Chair heard the heart fluttering.

Mr. BUMPERS. I have 2 or 3 more minutes of comment I would like to make, after which time I would like to put in a live quorum call, following which we would agree, that immediately after the quorum is established, we would finish with 30 minutes, to be divided evenly.

I would like to ask the Senator from Montana if that would be acceptable to him. I would be happy to yield on establishing the live quorum. I have 78 minutes left.

The PRESIDING OFFICER. The Senator from Montana has 32 minutes.

Mr. BUMPERS. The Senator has been very generous and cooperative, and I would be happy to at least start the quorum on my time until we get down to where I am even with him.

Mr. METCALF. The Senator from Arkansas has the right to put in a quorum call, and has the right to make a live quorum, but I would be pleased to agree to a quorum call now.

REQUEST FOR TIME-LIMITATION AGREEMENT

Mr. BUMPERS. Let me ask the Senator this: If I could change my proposition slightly, that we just put in a quorum call and go live, with the understanding, on a unanimous-consent request, that the minute the quorum is established we each have 15 minutes left, immediately following which the vote would be taken.

Mr. METCALF. I have no objection.

Mr. ROBERT C. BYRD. I would recommend that. I am glad the Senator has made that suggestion. Would he like to begin the live quorum now?

Mr. BUMPERS. I have 2 or 3 minutes, after which I would like to have the live quorum.

Mr. ROBERT C. BYRD. Very well, with the understanding that following the live quorum there will be 30 minutes equally divided.

Mr. METCALF. I have no objection.

Mr. HANSEN. Reserving the right to object—and I do not intend to object—I would call attention to the fact that there is a Department of Energy conference taking place now, I understand, and there is another conference in place that involves, I understand, Members of the minority, I would say to my good friend.

Mr. BUMPERS. Mr. President, I do not wish to be put in the position of objecting to my own request, but I have been advised that there is a Republican caucus taking place which started at 2 p.m. I wonder if the Senator from Wyoming has any idea when the caucus might terminate.

Mr. HANSEN. I am sorry. I do not know.

Mr. BUMPERS. I am most reluctant to start the live quorum as long as they are going because it would certainly defeat the purposes of a live quorum if Senators came in, answered the roll, and then went right back in caucus.

I wish, if at all possible, for the live quorum to take place immediately following the Republican caucus.

Mr. HANSEN. Of course, there is no way, as the Senator knows, of keeping a Senator in the Chamber once he has answered the roll. I would think all we can do is go ahead and call it.

Mr. BUMPERS. With that understanding, I withdraw my own unanimous-consent request and immediately after making a few comments I shall ask for a quorum call to be charged against my time so that we can find out when the caucus will be over.

Mr. METCALF. Mr. President, will the Senator agree to the other part, that after the quorum is over, whether it is called off or a live quorum, each side would have not more than 15 minutes?

Mr. BUMPERS. Do not get confused on this. With the Senator's permission, I wish to postpone that a minute. I shall put in a quorum call at my expense, and the Senator from Montana and I can discuss it and see if we can work it out.

Mr. METCALF. Very well.

The PRESIDING OFFICER (Mr. RIEGLE). The unanimous-consent request is withdrawn.

The Senator from Arkansas.

Mr. BUMPERS. Mr. President, I am not going to repeat any of the arguments I made this morning, but I do wish to point out the editorial from the New Times, which I believe has already been

made a part of the RECORD. While it is in the RECORD. I think there are some very salient points made in the editorial, and it is very interesting that this has not attracted the attention of the press or any of the media in this country. This is the only editorial I have seen that really goes to the heart of what this issue is all about.

We are talking about $50 to $250 billion that the American public is going to pay in the next 20 to 50 years. Maybe that is not very scintillating to write about.

But New Times has certainly hit the nail right on the head. If I may, I shall read just a couple paragraphs from it. It starts out by saying:

The Senate and the House soon will decide, in a conference committee, whether or not to sanction one of the greatest giveaways to private interests in American history. The House version of the strip-mining bill would hand tens of billions of consumer dollars to oil companies and major ranching interests in the mountain states.

It goes ahead and states that:

The story begins with the energy crisis of 1973 and the government's decision to shift to a heavier reliance on coal. Under the ground of the mountainous West, from the foothills of New Mexico to the grazing lands of Montana, lay vast coal reserves; their worth exceeds a trillion dollars. Eyeing them, the Ford Administration projected that Western coal production could be tripled to 300 million tons by 1985.

It goes on, but let me skip through the editorial and come down to the point:

Fred Simonton, the executive director of the Midwest Electric Consumers Association, a cooperative of consumer-owned utilities, is one of the few experts who has bothered to analyze the effects of granting surface owners the additional right to block the mining altogether. In a recent letter to energy czar James Schlesinger, Simonton warned that it would be a "giveaway of enormous proportions for the benefit of giant energy companies and a few landowners." And he's right.

For the energy companies will pass on to consumers the inflated cost of buying the consent of surface owners, who can set prices as high as they wish. Those prices will have to be paid because, as Simonton put it to Schlesinger, "the government is requiring a conversion [by utilities] . . . from oil and gas to coal."

Who will reap this windfall? Though precise statistics have not been compiled, most experts agree that the largest portion of the affected land belongs not to family farmers, but to agri-ranchers with their sprawling tracts of land. And it turns out that the other major holder of coal-rich Western land is the oil industry, which early on sniffed the breezes of this potential windfall. Quietly, big oil has gained control of five of the nation's seven largest coal companies—and, in turn, those coal companies, as Fred Simonton notes, previously had "bought up [many] surface owner consents." So as the other surface owners raise the price of giving their consent under the Melcher provision, the value of what the oil-coal conglomerates now hold will "automatically, drastically increase." For all coal—like oil—rises to the highest price of any of it. Thus, companies that already have purchased surface-owner consents cheaply could now sell the resulting coal, not at this cost plus a reasonable profit, but at an exorbitant level reflecting the higher costs of obtaining the consent of other surface owners.

That has already been printed in the RECORD, but I am pleased that at least one publication in this country has seen the magnitude of what we are debating here today.

QUORUM CALL

Mr. President, unless someone else wishes time, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk called the roll and the following Senators entered the Chamber and answered to their names:

[Quorum No. 19 Leg.]

Allen	Hayakawa	Roth
Anderson	Inouye	Sarbanes
Bumpers	McClure	Stevens
Byrd, Robert C.	Melcher	Talmadge
Case	Metcalf	Weicker
Chiles	Metzenbaum	Zorinsky
Church	Pell	
Hansen	Riegle	

The PRESIDING OFFICER. A quorum is not present.

Mr. ROBERT C. BYRD. Mr. President, I move that the Sergeant at Arms be directed to request the attendance of absent Senators.

The motion was agreed to.

The PRESIDING OFFICER. The Sergeant at Arms will execute the order of the Senate.

(Mr. FORD assumed the chair.)

Pending the execution of the order, the following Senators entered the Chamber and answered to their names:

Abourezk	Glenn	Morgan
Baker	Goldwater	Moynihan
Bartlett	Gravel	Muskie
Bayh	Griffin	Nelson
Bellmon	Hart	Nunn
Biden	Haskell	Packwood
Brooke	Hatch	Pearson
Burdick	Hatfield	Percy
Byrd, Harry F., Jr.	Hathaway	Provmire
Cannon	Helms	Randolph
Chafee	Hollings	Ribicoff
Clark	Huddleston	Sasser
Cranston	Humphrey	Schmitt
Culver	Jackson	Schweiker
Curtis	Javits	Scott
Danforth	Johnston	Sparkman
DeConcini	Kennedy	Stafford
Dole	Laxalt	Stennis
Domenici	Leahy	Stevenson
Durkin	Long	Stone
Eagleton	Lugar	Thurmond
Eastland	Magnuson	Tower
Ford	Matsunaga	Wallop
Garn	McGovern	Williams
	McIntyre	Young

Mr. CRANSTON. I announce that the Senator from Texas (Mr. BENTSEN) and the Senator from Arkansas (Mr. MCCLELLAN) are necessarily absent.

Mr. STEVENS. I announce that the Senator from Pennsylvania (Mr. HEINZ) and Senator from Maryland (Mr. MATHIAS) are absent on official business.

The PRESIDING OFFICER. A quorum is present.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there now be a limitation of 30 minutes, to be equally divided between Mr. BUMPERS and Mr. METCALF.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Who yields time?

Mr. BUMPERS. I yield myself 10 minutes.

Mr. President, obviously, the quorum call did not serve any useful purpose. I had hoped that a few Senators would be present to hear a summation of the arguments involving the issue. But I will go ahead and make the point that I already made this morning regarding this motion to recommit.

Mr. President, I think it would be instructive to note that the instructions in the motion to recommit are very narrow. Admittedly, under the precedents of the Senate, this does not preclude the conference, if the bill is recommitted, from going into other issues. But I make the point that I do not know of even one conferee who has any interest in reopening any issue in the conference report except the one we are talking about now—the surface-owner consent provision.

This is generally a good bill. The Senator from Montana is to be congratulated for his long years of work on it. Many controversial issues were resolved, and I think everybody wants them to stay resolved.

Mr. ROBERT C. BYRD. Mr. President, will the Senator yield?

Mr. BUMPERS. I yield.

Mr. ROBERT C. BYRD. Does the Senator want to ask for the yeas and nays on his motion now, while we have enough Senators present?

Mr. BUMPERS. Yes.

Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. BUMPERS. Mr. President, it was with serious reservations that I decided to move to recommit this matter, because I know, No. 1, it is almost impossible; and, No. 2, I did not want to deprecate the work that the conference committee did on most of the bill.

However, we are talking about the language that the Senate adopted after 2 days of debate, and was passed by a substantial majority, and from which the Senate conferees receded before the House even had an opportunity to say whether or not they liked the Senate language.

The chairman of the conference committee, Mr. UDALL, told me that he had no quarrel with the Senate language. And why would he? The Senate language for which I am fighting is the most liberal language in the history of this body.

The people who champion the House provision are saying, "We do not want to disturb those small farmers and ranchers out West," and I do not either. I champion their cause. I do not want them to have to move off. If they do have to move off because the coal belongs to us and we have to have it, I want to be certain they are well compensated. So what do we do in the Senate language? We gave them twice the value of the surface. We said if the Secretary elects to mine that coal, the surface owner is entitled to twice the value of the coal. He is entitled to 2 years' loss of profits. He is entitled to all his relocation costs. He is entitled to anything else he can conjure up and reasonably justify. Finally, Mr. President, he is entitled to get his land back in as good as or

better condition than it was before it was mined.

That does not show a lack of sensitivity or a lack of charity on the part of the Senate for the surface owners of the West.

That is not all. We also provided that the Secretary cannot mine land out there where the surface is owned by somebody else unless he finds it is in the national interest. What is wrong with that?

Somebody mentioned that Senator Mansfield, the former majority leader, did not want the coal mined at all. That is true, he did not. But what he said was where the surface owner is one person and the United States owns the coal under that surface, it should not be disturbed until it is absolutely necessary. That is all the Senate bill says. What is wrong with that?

There is a map; we have looked at it a hundred times in this Chamber. It has not changed any. It says that in the States of Wyoming, Montana, North Dakota, and South Dakota the Government owns 96 billion tons of strippable coal. It also says the surface over that 50 billion tons of coal is owned by somebody else.

Mr. President, we are not talking about peanuts. We are talking about a lot of money. I did a little calculation here on the blackboard this morning and I invite the Senate's attention to it again.

One way you might look at that is that if the surface owner demanded and got $1 an acre royalty for his veto, you know right now that ultimately somebody is going to pay $50 billion for that coal in those four States which belongs to the United States.

Do you know what the House of Representatives' position says? It says we own the coal; we started reserving the coal in the early part of the 20th century, and now we are saying, "We are going to give it back to you so you can sell it back to us." That is what this bill says, and anybody who votes for it ought to understand that.

But let me tell you whom we are protecting. We are not just protecting small ranchers and farmers. Most of that land is owned already by the oil companies, by the coal companies, by the agriranchers out there. What does that mean to them in dollars? The National Coal Association says that if I own coal 50 feet thick—and that is just about the average of the veins in Wyoming and Montana—it will produce 85,000 tons of coal an acre. The going rate right now for consent is 50 cents a ton. That means those ranchers and farmers and corporations and agribusiness interests can demand and get right now $42,500 an acre for their land. I submit that they can, with some prodding, be convinced to sell for that. If they own 640 acres with a 50-foot seam of coal under it—and that is a small spread in Montana and Wyoming—that section of land is worth $27,200,000. I submit that it will not be difficult to get a man to sell a section of land in Wyoming and Montana for that amount of money.

I submit you can buy the richest farmland in the United States for a fraction of that price.

What we are talking about is the national interest. What we are talking about is the issue of unjust enrichment.

Mr. President, someday a lot of people are going to start writing stories. The press is not interested in this now, and they never have been. As I said earlier, the New Times is the only magazine publication of any kind that has picked up on this issue.

Not long from now, as the scandals begin to unfold, and they are certainly going to unfold, somebody is going to come and look at the record to find out who the father of this thing is. It is not going to be the Senator from Arkansas. As reluctant as I was to offer this amendment, and in the certain knowledge that this body would almost certainly not vote for a motion to recommit, I, for one, was not going to let an issue of this magnitude go by unnoticed and untalked about.

You know what is going to happen and I know what is going to happen. The Kaneb Corp. of Houston, Tex., is in Campbell County, Wyo., and, according to the National Coal Daily, has recently acquired 5,800 acres, not of surface rights, let me repeat not of surface rights, gentlemen, but of the right to consent. That points out a loophole in this bill big enough to drive a wagon and team through.

They go out there and they say, "Look, I know you don't want your surface disturbed. You don't want the coal mined under your land. You just give us the consent because one of these days your children or grandchildren may want to consent, and we will pay you now for it."

You have the right. When the President affixes his signature to this bill, which he is very likely to do, Kaneb Corp. is going to be in Wyoming, Montana, North Dakota, and South Dakota in droves. Where are the people in this country who are so anxious to protect the consumers in this country? Who is going to pay this $50 billion to $200 billion ripoff? Why, the utility users of America.

I have heard at least half the Senators on this floor cry tears for the utility payers of this country. Yet they will come in here and with total abandon vote for a bill that will raise the price of the utility electrical rates in this country very substantially. Everybody who votes not to recommit ought to understand precisely what they are voting on.

I reserve the remainder of my time.

The PRESIDING OFFICER. Who yields time? The Senator from Montana.

Mr. METCALF. Mr. President, my colleagues from Montana and Wyoming have adequately covered, I believe, the problem. But just as Senator BUMPERS is reiterating many of the arguments he made this morning, I want to underscore some propositions we are voting for.

In the first place, we had in conference almost 200 differences between the House and the Senate. When this bill goes back to conference, if the motion to recommit is successful, every one of those 200 differences will be before the conference again.

Senator BUMPERS suggested he does not want to bring up anything other than surface-owner consent. I want to remind some of us who were in the conference for the bills that were vetoed, the two bills, we spent more than 90 hours debating this question of surface-owner consent. We were very divided in the Senate. They were divided over in the House of Representatives. We spent 2 hours, two conferences, discussing this matter with the House of Representatives when Senator BUMPERS was not there.

So when he tells you that this motion to recede took place without the House having anything to say about it, he does not recall that while we deferred until he was present, we did have some discussion with the Members of the House, and even on that last day when we voted, the fourth day after we deferred for three times, the Members of the House participated in the discussion.

Even if we take up only surface-owner consent, we go back into hours and hours and hours of discussion on the conference bill. But there is not any assurance that we will not take up alluvial valley floors, prime agricultural land, that the House will not raise many of these other questions.

We have a good bill. In my opinion we have a better bill than we had before. Some of the reasons we have a better bill are because we have had some assistance from such Members as the present occupant of the chair, the Senator from Kentucky (Mr. FORD), who comes from the largest coal-producing State in America, and he made substantial changes in this legislation.

The Senator from Ohio (Mr. METZENBAUM), also new to the conference, made an outstanding contribution.

Senator BUMPERS had participated in much of the markup, and also made a contribution.

But if we have to go back to conference there is not any assurance we will not have to go through the entire 12 days all over again and take up these entire matters again.

Mr. DOMENICI. Mr. President, will the Senator yield 2 minutes to the Senator from New Mexico?

Mr. METCALF. I would be delighted to yield because the Senator from New Mexico also made a contribution.

Mr. DOMENICI. I was going to ask the distinguished Senator from Montana a question. I heard the Senator from Arkansas in the last few minutes contend that these consent rights are going to be a marketable commodity, that the people are going to sell them and there will be holders of these who will own the right as a piece of commercial paper.

Am I reading the right conference report on this bill, the one that is on our desks that says "conference report to accompany H.R. 2"? That is the bill we are talking about; is it not?

Mr. METCALF. Yes.

Mr. DOMENICI. I am reading on page 89. It says for persons to give consent they have to hold legal or equitable title to the land surface; and they have to have their principal place of residence

on the land; or personally conduct farming or ranching operations upon a farm or ranch unit to be affected by surface coal mining operations; or receive directly a significant portion of their income, if any, from such farming or ranching operations.

That is still in the bill, is it not, I ask the distinguished leader?

Mr. METCALF. Yes, that is correct.

Mr. DOMENICI. I wonder if the Senator from Arkansas understands that that is still in the bill when he contends that these rights to consent will be sold and bartered away in the marketplace. Does he find some way in that language that a corporation could go out there and buy up his right to consent and then sell it 10 years from now?

Mr. BUMPERS. I am telling the Senator that they are doing it right now. It may be questionable and it may be litigable, but I am telling the Senator they have already done so to 5,800 acres.

Mr. DOMENICI. If they are doing it now, they are not doing it under the language here that has concern with whether or not the Secretary of the Interior can force this kind of mining activity on the ranch.

The PRESIDING OFFICER. The Senator's 2 minutes have expired.

Mr. McCLURE. Mr. President, will the Senator from Montana yield briefly?

Mr. METCALF. I yield to the Senator from Idaho.

Mr. DOMENICI. I thank the Senator.

Mr. METCALF. I thank the Senator from New Mexico for bringing that matter up.

The PRESIDING OFFICER. How much time does the Senator yield?

Mr. METCALF. Two minutes.

The PRESIDING OFFICER. The Senator yields 2 minutes.

Mr. McCLURE. I thank the Senator for yielding.

I follow what the Senator from New Mexico has said. I know the Senator from Arkansas feels very strongly about this, but I am afraid he is allowing his emotions to overcome his reason because certainly, even though they may be dealing in surface owner consent, the provisions of the bill do not provide any compensation for that consent or any requirement for that consent except under the carefully restrictive provisions of this bill.

And under the precise conditions the Senator from Arkansas has mentioned there would be no compensation under this bill, no consent required, so they are buying something that has no value.

Mr. BUMPERS. Will the Senator yield?

Mr. McCLURE. I have no time. I am glad to yield on the Senator's time.

Let me make just one further point, and that is in regard to the article in New Times to which the Senator from Arkansas has made reference. He is assuming that because oil companies have bought surface owner consent or surface rights that they have somehow increased the value of surface rights. The truth of the matter is once they have bought the surface rights the question has been removed. There is no question remaining. If as a matter of fact they bought it then the issue is moot. It does not raise the issue. It lays it to rest. So the very article that the Senator brings up lays to rest his own argument.

Mr. BUMPERS. If the Senator will allow me to comment on that, the point I am making is the surface owner will retain the right to consent but what the Kaneb Corp. is buying is the right to get the coal when he gives his consent. They are saying simply: "If you or your children or your grandchildren ever decide to give your consent you give it to me."

Tell me where in the bill that is prohibited.

Mr. MELCHER. Will the Senator yield?

The PRESIDING OFFICER. The 2 minutes of the Senator from Idaho have expired.

Mr. METCALF. Mr. President, I am in complete accord with the Senator from Idaho and the Senator from New Mexico.

When the Senator from Arkansas first raised this question and read from the New Times, or whatever it is, a publication I never heard of before, when he read it this morning I asked counsel for the committee to look into that. I am told that there is not any way to barter this surface consent off without complying with the provisions of the legislation and they are rather strict and they are rather difficult with which to comply.

But I want Senators to turn to that map back there which is completely and totally inaccurate. It is not a map that is up to date.

Two years ago, if I stood on the same side of this question as the Senator from Arkansas stands today, I might have talked about that map. But I have gone to clerk and recorder offices and talked to landowners whose land is pictured on that map, and they have already sold or leased the surface. The surface owner who does not want his coal mined is nearly all that is left in the State of Montana and the State of Wyoming. He is the surface owner who wants to continue to live on the ranch on which he and his father and his grandfather lived since the days that they homesteaded it.

Those are queer people. I do not understand why they do not lease their coal and move to Acapulco, or some place, but there are a whole lot of people out there who want to fork frozen hay in the middle of a 40-degree blizzard and live on this land. And this is all that is left today or almost all that is left anyway, I say to the Senator from Arkansas. We are giving those people who want to live there, live out on their ranch, the opportunity to say: "You are not going to mine my coal. I am not going to give consent to the mining."

He says that the big oil companies have acquired the surface. If they have acquired the surface, then the question is completely moot. The surface is there. The oil companies have acquired it. They can go ahead and give their consent and mine. The coal companies have acquired so much coal already that there is no problem about adequacy of coal. Down in the Crow Indian Reservation there is a big mining operation and we cannot find the Crow Indians to make an agreement on what the extension of the mine will be. So the coal companies said: "OK, if we cannot get the approval from the Crow Indians we will move someplace else."

There is so much coal already leased down in the southeastern part of Montana and the Powder River Basin of Wyoming that it will take years and years and years before they have to even get into this problem.

The only question that is left, Mr. President, is the question of whether or not we are going into that area and take away from these ranchers the right to continue to perpetuate their way of life.

We have a balanced bill. I think we have a better bill than we had before. I regret that the President has twice vetoed these bills. Had he not vetoed it we would have been underway in the matter of surface mining. But there is a little bit of a bonus here, in that we have achieved, I think, a better piece of overall legislation.

I hope that this will be the last time on the Senate floor that we will have to consider this after 7 years of effort to pass a bill that stabilizes the mining industry and at the same time provides for conservation, rehabilitation, and restoration of our natural resources.

I reserve the remainder of my time.

The PRESIDING OFFICER. Who yields time?

Mr. PERCY. Mr. President, will the Senator yield 2 minutes?

Mr. METCALF. I yield 2 minutes to the Senator from Illinois.

The PRESIDING OFFICER. The Senator from Illinois has 2 minutes.

Mr. PERCY. Mr. President, I express deep appreciation to the manager of the bill for having brought us a monumental piece of legislation. I think this bill will be very reassuring, indeed, to both those people who feel that we must move ahead rapidly with the development of our energy resources and to those concerned with protection of the environment.

I am particularly appreciative that the Senate conferees prevailed and the House receded on the amendment that I introduced dealing with prime farmland, section 410(d). Millions of acres of prime farmlands have coal reserves beneath them. It was a matter of grave concern to those who are anxious to keep our production high. This amendment also was important to those who are concerned about the amount of prime farmland being taken out of production every single year. This country is in urgent need of and greatly depends upon this land.

The language worked out by the conferees is certainly acceptable to the Senator from Illinois. It assures that any strip mining permits will take into account technological capabilities to restore that land to its original purpose once it has been mined——

The PRESIDING OFFICER. The Senator's time has expired.

Mr. PERCY (continuing). This has been my primary concern. I commend the managers of the bill on their accomplishment.

Mr. DOMENICI. Mr. President, will the Senator yield me 1 minute?

Mr. METCALF. If I have it.

Mr. DOMENICI. I just want to say to my good friend from Arkansas that I sympathize with his desire to have more Senators listen to the debates on this floor, but I do hope he will understand, from some of our positions—I am speaking personally to him—that I basically believe I have heard the arguments a number of times, and I hope he will understand, in terms of my not having been here, although he is right that I have a genuine interest as a conferee.

I did hear one thing new today in the half hour I have been here, and that one thing amazes me, because there are still plenty of ranchers holding on to their ranches. I really did not understand that, in the light of the Senator's last calculation that their lands may be worth $27 million an acre. I just do not believe there would be any around if anything like what he is suggesting were the case.

Mr. President, I do not believe the 50 major ranches in either of the two States involved are worth $27 million altogether, much less than much for 1 acre.

Mr. BUMPERS. Mr. President, first of all, to correct the Senator from New Mexico, I did not say $27 million an acre, I said $27 million a section, or about $42,200 an acre.

Mr. MELCHER. Mr. President, will the Senator yield?

Mr. BUMPERS. No, I will not because my time is limited.

As to the accuracy of this map, Mr. President, this map was prepared under the auspices of the Department of the Interior, the Department of Agriculture, the Environmental Protection Agency, and the State governments of Montana, Nebraska, North Dakota, South Dakota, and Wyoming.

Mr. HANSEN. As of what date?

Mr. BUMPERS. This map was commissioned in 1971, by a group representing those agencies.

Second, you can talk all you like about sending this bill back and opening up the whole strip mining bill. Gentlemen, you are not going to reopen the whole thing. The instructions say, and I think the conferees will abide by it, that we are going to consider this one point, that is, the surface owner consent provision.

What we are doing here, at least in North Dakota and South Dakota, is say to the Burlington Northern railroad, "You can come in and mine the coal and pay the surface owner his damages," but the United States cannot do that.

When the U.S. Government had the good sense to reserve all this coal upon releasing the surface for homesteading in the four States I mentioned earlier, we are now saying that did not mean anything. We are saying, "We are going to give it back to you so you can sell it back to us."

Mr. President, that does not make any sense, and will not make any sense to future historians, either.

We would not be here today if Senators BARTLETT had had an opportunity to vote on this issue in conference, because the motion to recede would have failed on a 5-to-5 vote. I regret that he was not permitted to vote on it, because he wanted to very badly.

Mr. President, I know I am not changing any minds here, but if this proposal gets one vote, I have no regrets about having done it, and I will be very pleased for all the investigative reporters and future historians to read the record of this debate today, and the debate that transpired in the Senate about a month ago.

What is happening out there right now in anticipation of the choice being made is the most significant thing that has happened on this bill; and what is going to happen in the future is going to be one of the most outrageous abdications of responsibility the U.S. Congress has ever been accused of. It will make Teapot Dome look like child's play.

I will repeat what I said this morning: The blame will lie right here. The U.S. Government, in a paternity suit, will be found guilty. It will have legitimized something for which we will all be sorry.

Mr. President, I yield back whatever time remains.

Mr. MELCHER. Mr. President, the Senator from Arkansas (Mr. BUMPERS) makes a strong and startling argument over the cost of surface owner's consent. It is a strong argument because it involves, under his arithmetic, a great amount of money for that consent, and it is startling because the figures he uses are so much greater than any amounts of money previously discussed.

During the 50 years when the surface owner's consent has been an issue regarding the strip mining bill, those of us supporting surface owner's consent have continually striven to determine what the amounts of money are per acre that are involved when a rancher or farmer agrees either to sell his land or to give his consent for the purpose of strip mining. I have talked to the Senator from Wyoming (Mr. HANSEN) a number of times on this point and neither of us knows of any instance where such a sale has been consummated that has been as high as $1,000 per acre. But, using what I feel is a high price per acre, $1,000, we have computed what that would mean in terms of cost to the consumers of electricity from coal that is burned in a utility plant that provides them with that electricity. I ask unanimous consent to have that printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

Cost to consumer when an electric company pays $1,000 per acre for the land over Federal coal:

55,000 tons/acre at $4.00/ton=$220,000 coal/acre; asking price for surface is $1,000 per acre at $1,000/acre=1.8 cents per ton.

Impact on the cost of a kilowatt of electricity:

The national average for coal-fired steam electric generation plants of the number of BTU's required to produce one kilowatt-hour of electricity in 1970 was 10,269 BTU's; for the Mountain region (Montana, North Dakota, Wyoming, South Dakota, etc.) this figure was 10,445 BTU's. Source: National Coal Association.

$$\frac{97 \text{ kilowatt-hours per million Btu's of heat}}{10{,}269 \text{ Btu/kWh } 1{,}000{,}000 \text{ Btu}}$$

BTU value of the Colstrip Mine coal is 8,750 BTU/pound or 8,750 BTU/lb. x 2000 lb. = 17.5 million BTU per ton.

Thus, one ton of Colstrip coal can produce: 17.5 million BTU x 97 kwhr/million BTU = 1697 kilowatt-hours.

With an increase of 1.8 cents per ton (based upon surface value of $1,000) the cost per kilowatt-hour is:

$$\frac{.0000106}{1697).018000} = \$.0000106 \text{ per kWh increase}$$

An average home uses about 600 kilowatt-hours of electricity per month, thus the increase in the cost of a ton of coal of 1.8 cents would amount to: $.0000106 per kwhr. x 600 kwhr.=$.00636 or .636 cents per month or approximately ⅔ of 1¢ per month.

The PRESIDING OFFICER. All remaining time having been yielded back, the question is on agreeing to the motion of the Senator from Arkansas. The yeas and nays have been ordered and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

The PRESIDING OFFICER (Mr. LEAHY). The Senate is not in order. It is becoming increasingly difficult to hear the votes. Senators are asked to keep the well as clear as possible. Those Senators having conversations of a noncritical nature will kindly retire to the cloakrooms. Voting will be suspended until such time as there is order in the Chamber.

The clerk will suspend until such time as there is order in the Chamber.

The clerk may proceed.

The legislative clerk resumed the call of the roll.

The PRESIDING OFFICER. The Senate will be in order. The clerk will suspend until there is order in the Senate. Senators have indicated to me they are unable to hear names being recorded on the recapitulation. The clerk will suspend until there is order in the Chamber. The Chair asks for the cooperation of Senators so we can get on with the rollcall. The rollcall will remain suspended until there is order in the Chamber.

The clerk may proceed.

The legislative clerk resumed and concluded the call of the roll.

Mr. CRANSTON. I announce that the Senator from Texas (Mr. BENTSEN), and the Senator from Arkansas (Mr. MCCLELLAN) are necessarily absent.

Mr. STEVENS. I announce that the Senator from Pennsylvania (Mr. HEINZ) and the Senator from Maryland (Mr. MATHIAS) are absent on official business.

The result was announced—yeas 43, nays 53, as follows:

[Rollcall Vote No. 309 Leg.]

YEAS—43

Abourezk	Eagleton	Pell
Allen	Hathaway	Percy
Anderson	Hollings	Proxmire
Bartlett	Humphrey	Ribicoff
Bellmon	Inouye	Riegle
Biden	Kennedy	Sarbanes
Brooke	Leahy	Sasser
Bumpers	Matsunaga	Stafford
Burdick	McGovern	Stevenson
Cannon	McIntyre	Stone
Chafee	Metzenbaum	Talmadge
Chiles	Morgan	Tower
Culver	Muskie	Williams
DeConcini	Nelson	
Durkin	Nunn	

NAYS—53

Baker	Gravel	Melcher

Domenici	Johnston	Stevens
Eastland	Laxalt	Thurmond
Ford	Long	Wallop
Garn	Lugar	Weicker
Glenn	Magnuson	Young
Goldwater	McClure	Zorinsky

NOT VOTING—4

Bentsen	Mathias	McClellan
Heinz		

So the motion to recommit was rejected.

Mr. METCALF. Mr. President, I move to reconsider the vote by which the motion was rejected.

Mr. CURTIS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

(The following proceedings occurred earlier and are printed at this point by unanimous consent.)

Mr. McCLURE. Mr. President, will the Senator yield?

Mr. METCALF. I yield.

Mr. McCLURE. I thank the Senator for yielding.

I should like to ask a question with reference to section 510(d)(2) which provides that the special requirements prescribed in that subsection for mining on prime farmland shall not apply to any permit issued prior to the date of the act, or to any revisions or renewals thereof, or to any surface mining operations for which a permit was issued prior to the enactment of this act.

The conference report explains that this exclusion for existing mine permits or renewals thereof after the date of the enactment was designed to assure continued operation of ongoing mines.

I am in complete accord with the expressed intention of the provision and merely wish to confirm my understanding of its purpose and effect. Am I correct that the exclusion will apply to continued operation of an ongoing mine beyond the acreage and time covered in the existing permit at the time of the enactment of the act, just so long as the continuance does, in fact, constitute a continued operation of an ongoing mine?

Mr. METCALF. Yes. I say to the Senator from Idaho that that would be my interpretation of this clause and this proposition as it was carried forward from the House and the Senate respective bills into the conference.

Mr. McCLURE. I thank the Senator for that comment.

I say to my colleagues that those of us who worked with this legislation over the last several years recognize that it does not do everything that everyone would like to have done. It is not a perfect piece of legislation in the minds of any of us, I suspect, but it is a good compromise, in my judgment.

I join my colleagues in commending the Senator from Montana for having done a fair job in conducting the hearings as well as his participation in the markup and the conference of this very, very difficult and important piece of legislation.

While I share with some of my colleagues some of the reservations about individual portions of the bill, I am as certain as I am standing here that if it is recommitted, we are not going to improve it; that we have done the best job that is possible to do in compromising the various points of view and bringing about what is a workable solution to the very real necessity of getting adequate reclamation upon the stripmined areas of this country, but still permitting strip mining under those strictures.

The bill has my support. I will oppose the motion to recommit it, because I do not think there is any useful purpose in trying again to do what has been done many times in many hours of a very difficult conference.

I commend the Senator from Montana for his efforts.

Mr. METCALF. I thank the Senator from Idaho. He has participated in this bill and the other two bills all the way. He has cooperated in many of the hours we have spent on the bill.

(This concludes proceedings that occurred earlier.)

Mr. METCALF. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator from Montana has 16 minutes remaining.

Mr. METCALF. Mr. President, if we could get to that point, I should like to have passage without the yeas and nays, in view of the fact that most of this debate has taken place on the motion to recommit. I am prepared to yield back the remainder of my time if the Senator from Wyoming is.

Mr. HANSEN. I yield back my time.

ADDITIONAL STATEMENTS SUBMITTED

Mr. HANSEN. Mr. President, in regard to section 714 of the conference report, accompanying H.R. 2, the Surface Mining Control and Reclamation Act of 1977, I would like to point out to my colleagues the Senate report on page 102 has some language which I think is very pertinent to some of the issues being discussed today. It says and I quote:

Special problems arise where coal deposits have been reserved to the United States but title to the surface has been conveyed to private individuals. This section establishes as Federal coal leasing policy a requirement that the Secretary of the Interior not lease for surface mining, without the consent of the surface owner, Federal coal deposits underlying land owned by a person who has his principal place of residence on the land, or personally farms or ranches the land affected by the mining operation, or receives directly a "significant portion" of his income from such farming. The Committee does not intend by this to impose an arbitrary or mechanical formula for determining what is "significant." This should be construed in terms of the importance of the amount to the surface owner's income. Significant is not intended to be measured by a fixed percentage of income. For example, where a person's gross income is relatively small, a loss of but a fraction thereof may be significant. By so defining "surface owner," the bill should prevent speculators purchasing land only in the hope of reaping a windfall profit simply because Federal Coal deposits lie underneath the land.

At the same time, so that there will not be any undue locking up of Federal coal, no stipulation has been placed upon the amount and manner of negotiation between the prospective lessee and the surface owner.

This section will insure that the valuable agricultural lands under which lie deposits of Federal coal will not be unduly disturbed by surface mining. By allowing direct negotiations between the lessee of the coal and the surface owner, individual safeguards can be agreed upon to benefit the land on a case by case basis, making it more likely that the surface owner will be able to remain on the land.

I think it was clear that the committee, and for that matter the House of Representatives who developed the language that is currently in section 714, clearly intended that the written consent could be given to any party including the Secretary and that they were fully aware that surface owners have already entered into agreements or consent to or with coal companies which intend to attempt to obtain Federal coal leases. Does the distinguished Senior Senator from Montana agree that written consent could be given to any party, including the Secretary, prior to leasing, prior to the date of enactment or in the future, as the surface owner may see fit?

Mr. METCALF. As the Senator from Wyoming knows, the conferees agreed to the House bill. In the joint explanatory statement of the conference committee the conferees stated it would require the Secretary to obtain the written consent of the surface owner, as defined before leasing any coal deposits underlying the surface owners land for surface mining. I think it is quite clear in the Senate report language and is the intention of the conferees the Secretary may obtain consent which is in fact evidence. He also may be given evidence of consent as given between the surface owner and the potential leasee, operator, or other party. As the Senator is aware, the committee and the conferees and the House of Representatives agreed that many surface owners have already entered into agreement with coal companies which intend to obtain Federal coal leases.

Section 714 does not apply retroactively to require new consents and payments to the surface owner where written consents have already been negotiated.

Mr. HANSEN. In that regard, I ask the distinguished floor manager of this bill, if prior to enactment of H.R. 2 a surface owner gave his consent to a hypothetical company A to enter his land and remove the coal, does that consent satisfy the consent requirement?

Mr. METCALF. Yes, I believe it does.

Mr. METZENBAUM. I should like to inquire of the chairman of the Senate subcommittee how the conference report would deal with overlap between section 515 performance standards which are a part of the interim program and performance standards which are only part of the permanent program. For example, does the bill require the Secretary of Interior to deal with the hydrologic consequences of roads on the mine site, a

source of serious disturbance of the hydrologic balance, in the interim program under section 515(b)(10) even though the more extensive regulations dealing with roads in section 515(b) (17) and (18) are only part of the permanent program.

Mr. METCALF. Sections 501 and 502 were designed to expedite the issuance of regulations during the "interim period" to control the more serious, adverse, environmental impacts of surface mining, both deep and surface. These impacts may fall into more than one of the categories we have established in section 515 (b). Thus, there may be overlap between standards in the interim program and those in the permanent program.

In the case of such overlap we expect the Secretary of Interior to implement fully the interim standards, regardless of whether by doing so the interim regulations have an impact on areas of concern reserved for the permanent program. The example you gave is appropriate. It will be necessary for the Secretary to address the hydrologic impacts of access and land roads and any other activity associated with mining in the context of section 515(b)(10) in the interim program.

Mr. METZENBAUM. I thank the distinguished chairman for his explanation.

Mr. FORD. Mr. President, I would address the manager of the bill, Senator METCALF, for a brief discussion relative to the initial cut of Earth in steep slope mining.

Mr. METCALF. I would be pleased to respond to the Senator's point.

Mr. FORD. The Senate bill S. 7 had this provision in what is now section 515 (d)(1) of the conference bill:

> Except that where necessary soil or spoil material from the initial block or short linear cut of earth necessary to obtain initial access to the coal seam in a new surface coal mining operation can be placed on a limited and specific area of the downslope below the initial cut if the permittee demonstrates that such soil or spoil material will not slide and that the other requirements of this subsection can still be met.

This provision was intended to insure that these would be no de facto prohibition of mining in steep slope areas, because the operator might have no place to put the spoil from the first cut.

An amendment to delete the provision was not accepted by the full Committee on Energy and Natural Resources. It was retained by the full Senate. The House bill had no such provision and the provision was dropped in the conference.

My question to the manager is: Does the absence of the provision affect in any way the ability to mine in steep slope area?

Mr. METCALF. I would assure my colleague that deletion of the provision was not intended to, nor in my opinion, does it restrict the ability to mine in any manner. In the course of developing this bill, we substantially revised spoil storage provisions. Several of these amendments were yours. These provisions now cover the first cut storage provision, for that is what the language in S. 7 that you cite was—a storage provision for first cut spoil.

Mr. FORD. Then, it is your considered opinion that a limited storage area for first cut spoil is permitted on the downslope if all the required standards can be met?

Mr. METCALF. Yes, it is, if there is no practical way that the first cut can be hauled off to an offsite storage area.

Senator FORD, you have demonstrated throughout this bill that you are as concerned as anyone about wholesale dumping of spoil over the side. Why, even on the last day of the conference you saved your natural barrier amendment that had not yet been adopted.

You have my assurance that the point you raise is taken care of in the bill. There is no backdoor prohibition.

Mr. FORD. I thank my colleague and friend.

Mr. METZENBAUM. I should like to inquire of the chairman of the Senate subcommittee whether it is his understanding that the interim regulatory program applies to the surface effects of deep mining in States that regulate any such effect.

Mr. METCALF. They do. Section 502 requires compliance with the interim regulations by "coal surface mining operations" which is defined to include the surface effects of deep mining. If a State presently regulates any surface effect of deep mining, then the interim regulation adopted under section 501 and the program under section 502 would apply in that State.

Mr. METZENBAUM. I thank the distinguished chairman for his explanation.

I should like to inquire of the chairman of the Senate subcommittee about the nature of the public hearings pursuant to section 521(a)(5) in or near the mine after the issuance of a cessation order. How does this public hearing relate to the formal adjudiciatory "public hearing" to which the operator is entitled?

Mr. METCALF. The public hearing provided for in section 521(a)(5) may be an informal hearing akin to a management review by an inspector's supervisor of the order closing part or all of the mine. Section 525(b) provides for a formal adjudicatory hearing and a final secretarial decision within 30 days of receipt of the application for review where the appeal is from a cessation order. This right makes a formal mine-site review clearly unnecessary. I might add that it was our intent in adjusting the various hearing requirements in conference that the regulatory authority have the flexibility to structure his hearing procedures to provide for less formality than formal adjudication unless the act specifically requires such formal adjudication.

Mr. METZENBAUM. I thank the distinguished chairman for his explanation.

Mr. HANSEN. I should like to address a question or two to the distinguished senior Senator from Montana concerning the effect of the surface owner consent provision on the rights of the holder of a Federal prospecting permit. It is my understanding that as the bill went to conference, section 714 of S. 7 would not have superseded or otherwise affected any rights which the holder of a Federal prospecting permit may have to the issuance by the Secretary of the Interior of a coal lease.

I should like to ask the distinguished floor manager whether my understanding is correct and, if so, whether the same is true of the provision as adopted by the conferees.

Mr. METCALF. Answering the first question put by my distinguished colleague, his understanding is, as usual, correct. The Senator will recall that his understanding was expressly confirmed by the Senate committee report at pages 102 and 103. The amendments adopted on the Senate floor had no effect on the rights of a prospecting permit holder. Whatever those rights may be, section 714 of S. 7 either as reported out or amended on the floor did not affect them.

Mr. HANSEN. I thank the Senator for his observations which accord entirely with mine. Now, may I request the distinguished Senator's response to my second question concerning the effect, if any, of the conference provision.

Mr. METCALF. The conference version likewise leaves unchanged and unaffected such rights as the holder of a prospecting permit may have. I might add that the conference version, like the House and Senate versions, is operative where federally owned coal is to be offered for lease under section 2(a) of the Mineral Leasing Act as amended. The rights of a prospecting permit holder to lease issuance arise under section 2(b) of that act as it stood prior to its amendment last year by the Coal Leasing Act amendments. By section 4 of the Coal Leasing Act amendments, Congress amended section 2(b) of the Mineral Leasing Act to eliminate the old prospecting permit system under which a permit holder became entitled to lease if he found coal in commercial quantities. In eliminating the prospecting permit system, however, the Congress reserved "valid existing rights" to the issuance of a coal lease under section 2(b) of the Mineral Leasing Act as it read prior to the amendment. In such cases, the Secretary does not "offer" the coal for lease; instead he fulfills the obligations that arise under the permit if coal was found in commercial quantities during the permit life.

Mr. HANSEN. I thank the senior Senator from Montana for his explanation.

Mr. METZENBAUM. Mr. President, the conferees resolved the matter of exemptions for small operators by compromising on length of time the exemption would be in effect. The exemptions to the small operators ceases on January 1, 1979. Upon reexamination of that provision, I became aware of the possibility that someone might misconstrue the scope of the exemption with regard to those persons who would qualify. I would like to pose a circumstance wherein a possible abuse of the exemption provision might occur and ask the distinguished Senator from Montana, and the very able conference cochairman if he agrees that such a possibility would not be permitted during the enforcement of this legislation.

The exemption provision on page 27 of

the conference report grants the exemption to surface mining operations in operation pursuant to a permit issued by the State before the date of enactment of this act to a person in existence prior to May 2, 1977, whose total coal production does not exceed 100,000 tons annually. The provision specifies that "person" in this instance, is the "person" as defined in section 701(19) on page 81. When I read that definition, I find that a company is also a person.

Therefore, I could be a person who owns or controls five coal companies or corporations, or partnerships, each having one surface mine in operation. Each mine produces 90,000 tons of coal annually. Thus, the aggregate amount of coal produced by my companies is 450,000 tons annually. This should eliminate me and each of my companies, corporations, or partnerships from being granted an exemption. However, the definition of "person" means a company also. Since none of my companies or other business entities produced more than 100,000 tons of coal annually, each is entitled to an exemption regardless of the fact that I, the owner, produced almost one-half million tons of coal.

I do not think this is what the conferees had in mind when this provision was adopted and I would like to ask my colleague from Montana:

Am I correct in assuming that, in the case of providing an exemption from requirements set forth in the interim program, the term "person" is not taken to mean a coal company but refers, instead, to an individual who owns or controls or has controlling interest in coal mining operations whose aggregate production does not exceed 100,000 tons of coal annually. I realize that an individual may control more than one coal company and still be producing less than 100,000 tons. He would be considered a small operator whom the conferees intended to help by providing additional time in which to come into compliance. However, those persons whose coal companies produce an aggregate of more than 100,000 tons would not have the right to an exemption.

Mr. METCALF. As the Senator will recall, the conferees deliberated this provision and adopted it with some reluctance among the House conferees. The debate was always focused on small operators which our colleague from Kentucky, Senator FORD, reminded us, would suffer hardships if the compliance deadline were not extended. However, small operators were looked upon as individuals who have invested their life savings in mining equipment in order to open a small mine or several small mines to produce coal. It was never intended that this exemption apply to individuals who own more than one company or controls or has controlling interest in more than one company if the aggregate production from all those companies exceeded 100,000 tons annually. That individual would not qualify for an exemption under this act.

The production must be combined, regardless of the business forms an operator chooses. If, for example, an individual owns or controls corporation A, which, in turn, owns or controls corporation C and corporation D, their separate production must be combined; and if together they produce more than 100,000 tons, none of the three corporations, or the individual, are entitled to the exemption.

There are many combinations and permutations of ownership and control: Part ownership, partnership, and joint ventures. In this area of concern, we expect the Secretary, as we stated in the conference report, to adopt regulations for the qualification of small operators based on the principle of tracing the patterns of ownership, control, or corporate relationship to insure that only genuinely independent operators whose total production is under 100,000 tons annually, are qualified.

The PRESIDING OFFICER. The question is on agreeing to the conference report.

Mr. BURDICK. Mr. President, I ask for the yeas and nays on passage of the conference report.

The PRESIDING OFFICER. Is there a sufficient second?

There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Minnesota (Mr. ANDERSON), the Senator from Texas (Mr. BENTSEN), the Senator from Mississippi (Mr. EASTLAND), the Senator from Minnesota (Mr. HUMPHREY), and the Senator from Arkansas (Mr. MCCLELLAN) are necessarily absent.

I further announce that, if present and voting, the Senator from Minnesota (Mr. ANDERSON) and the Senator from Minnesota (Mr. HUMPHREY) would each vote "yea."

Mr. STEVENS. I announce that the Senator from Pennsylvania (Mr. HEINZ) and the Senator from Maryland (Mr. MATHIAS) are absent on official business.

The result was announced—yeas 85, nays 8, as follows:

[Rollcall Vote No. 310 Leg.]

YEAS—85

Abourezk	Eagleton	Matsunaga
Allen	Ford	McClure
Baker	Glenn	McGovern
Bayh	Goldwater	McIntyre
Bellmon	Gravel	Melcher
Biden	Griffin	Metcalf
Brooke	Hansen	Metzenbaum

	Laxalt	Young

NOT VOTING—7

Anderson	Heinz	McClellan
Bentsen	Humphrey	
Eastland	Mathias	

So the conference report was agreed to.

Mr. METCALF. Mr. President, I move to reconsider the vote by which the conference report was agreed to.

Mr. JACKSON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

AUTHORIZATION FOR TECHNICAL CORRECTIONS IN ENROLLMENT OF H.R. 2

Mr. METCALF. Mr. President, I send a concurrent resolution to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The concurrent resolution will be stated.

The legislative clerk read as follows:

A concurrent resolution (S. Con. Res. 39) authorizing technical corrections in the enrollment of H.R. 2.

The PRESIDING OFFICER. Is there objection to the present consideration of the concurrent resolution?

There being no objection, the Senate proceeded to consider the concurrent resolution.

Mr. METCALF. Mr. President, the title of the concurrent resolution indicates the problem. This is merely to correct a minor error in the bill, and I am told it has to be done by a concurrent resolution. I have cleared it with the minority. It has the agreement of both sides.

The PRESIDING OFFICER. The question is on agreeing to the concurrent resolution.

The concurrent resolution was agreed to, as follows:

Resolved by the Senate (the House of Representatives concurring), That the Clerk of the House of Representatives is authorized and directed, in the enrollment of H.R. 2, An Act to provide for the cooperation between the Secretary of the Interior and the States with respect to the regulation of service coal mining operations, and the acquisition and reclamation of abandoned mines, and for other purposes, to make the following technical and conforming changes:

(1) in section 406(i) strike out "303(c)" and insert in lieu thereof "401";

(2) in section 701(4)—

(A) strike out "715" and insert in lieu thereof "714"; and

(B) strike out "712" and insert in lieu thereof "715"; and

(3) in section 710 add at the end thereof the following:

"(h) The Secretary shall analyze and make recommendations regarding the jurisdictional status of Indian Lands outside the exterior boundaries of Indian reservations: *Provided*, That nothing in this Act shall change the existing jurisdictional status of Indian Lands.".

ORDER OF BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. STONE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. MATSUNAGA). Without objection, it is so ordered.

TRANSPORTATION AND RELATED AGENCIES APPROPRIATIONS—CONFERENCE REPORT

Mr. BAYH. Mr. President, I submit a report of the committee of conference on H.R. 7557, and ask for its immediate consideration.

The PRESIDING OFFICER (Mr. MATSUNAGA). The report will be stated.

The assistant legislative clerk read as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 7557) making appropriations for the Department of Transportation and related agencies for the fiscal year ending September 30, 1978, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses this report, signed by a majority of the conferees.

The PRESIDING OFFICER. Without objection, the Senate will proceed to the consideration of the conference report.

(The conference report is printed in the House proceedings of the RECORD of June 29, 1977.)

Mr. BAYH. Mr. President, the pending conference report recommends $6,196,609,023 in new budget authority for fiscal year 1978 for the Department of Transportation and related agencies. This is an increase of $331,982,666 over last year's appropriation, but is $86,175,000 below the budget estimates for fiscal year 1978.

I am pleased to present this conference agreement to the Senate and to recommend its adoption. As chairman of the Senate conferees, I feel that while we were not able to bring back an agreement containing all of the Senate items, we did come away with a very good bill with all of the major Senate amendments still intact. Again this year, it was a pleasure to be working with the very knowledgeable and experienced House conferees on this bill—led by Chairman JOHN J. MCFALL and ranking minority member SILVIO CONTE. They are served by an excellent professional staff, as well—Tom Kingfield and Dave Olson.

Mr. President, the conference report and the statement of the managers was printed in the CONGRESSIONAL RECORD of June 29, 1977, on pages 21425-21428. I will not at this time go into a detailed discussion of all of the items that were considered in the conference, but I would like to highlight some of the matters that I feel are of particular importance to my colleagues.

First, for the Coast Guard, the conference agreement contains $236,000,000 for the acquisition, construction, and improvements activity. That is $20 million below the Senate bill, but still nearly $10 million over the budget. I have received copies from the chairmen of the House and Senate authorizing committees indicating that the intent of those committees was to establish a limit on the amount in the pollution fund of the Coast Guard at any one time and not to limit the aggregate appropriation into the fund. The fiscal year 1977 appropriation of $10 million is available to perform the Coast Guard's important cleanup work now and in fiscal year 1978.

Second, for the FAA, the agreement provides funding for virtually all of the controller and systems maintenance personnel, as well as the full $540 million authorization for airport development grants and $15 million for airport planning grants.

Third, for the Federal Highway Administration, I am gratified that, for the third year in a row, the House has agreed to accept the full Senate amendment for highway-related safety grants. This year's level will be $200 million, which is an increase of $50 million over the budget request and last year's level. These additional funds will be made available to the States for use in their highest payoff highway safety programs as determined by each State. We continue to receive reports of excellent results from this effort throughout the fiscal year, and I am glad to be able to participate in helping to achieve those results through these increased funding levels each year. I can think of no better place to increase the budget than in this area—where we end up saving peoples' lives through these very important and well-managed highway safety programs.

Fourth, for the programs of the Federal Railroad Administration, the conferees recommend appropriations totaling $1,410,650,000, of which $646.5 million is for grants to Amtrak and $400 million is for the Northeast Corridor improvement program. Also, the agreement includes $200 million for nationwide rail rehabilitation programs.

Fifth, for the Urban Mass Transportation Administration, $2,365,000,000 in commitments from the urban mass transportation fund are authorized for fiscal year 1978, including $1.4 billion for capital grants, $775 million in formula grants, $55 million for technical studies, $70 million for research, and $45 million for commuter rail operating payments. The House accepted $50 million of the $100 million Senate addition to the capital grant program. Of that increase, $35 million will be used in bus and bus-related grants and the other $15 million will increase the rail modernization program.

Mr. President, I want to point out that throughout the bill, in all safety programs, be it rail, highway, aviation, water, or transit, we have provided funding levels that should enable DOT to continue and improve upon their past record in all areas effecting the safety of our people.

Mr. President, the conference report was printed in the House proceedings in the CONGRESSIONAL RECORD as of June 29. If anyone has any questions, I shall be glad to deal with them.

I think it is most appropriate again, as we are discussing the conference action, to reiterate what I said while the Senate was discussing this bill originally: the distinguished Senator from New Jersey (Mr. CASE), the ranking Republican member on the committee, performed exceptionally in trying to sustain the Senate position, and his cooperation has been instrumental in getting us to the point where we now are. Also, I think we all owe a debt of gratitude to Mr. English, Mr. Leach, Mr. Berger, and Miss Talmont for the exceptional staff support they gave to the Senate conferees.

Are there any questions?

Mr. CASE. Mr. President, will the Senator yield?

Mr. BAYH. I yield to our colleague from New Jersey.

Mr. CASE. Mr. President, first of all, I compliment our chairman, the Senator from Indiana, for his outstanding work on this bill. As I indicated before, when we were considering this matter in the Senate initially, it is a pleasure to work with a man like him, and to work with the staff that he has assembled, and it turned out to be a pleasure to work with our colleagues from the House of Representatives and their staff. I think we have a good bill.

I would like to acknowledge the thoughtful consideration given to the many matters included in this bill by the chairman and ranking minority member of the House Subcommittee, Mr. JOHN MCFALL and Mr. SILVIO CONTE.

On June 23, in my remarks to accompany the Senate version of this bill, I mentioned a series of provisions which I felt were particularly noteworthy. I am pleased to report that the majority of these Senate provisions emerged intact from conference.

Mr. President, I would like to briefly highlight some of these provisions. First, I should note that the conference version of the bill represents $6.196 billion in budget authority. This is $86,175,000 below the administration's budget in budget authority and about $500 million below the first concurrent resolution in budget authority.

In the area of commuter and mass transit service, the House accepted the inclusion of an additional $5 million for section 17 urban mass transit funds, thus providing the fully authorized amount of $45 million for commuter rail service to communities in the Northeast and Midwest. These funds are badly needed for the renovation and repair of commuter rail equipment as well as for commuter rail subsidy payments. Equipment repair funds are particularly needed in Pennsylvania, Maryland, and New Jersey where many of the commuter cars now in service are quite ancient.

The conferees also agreed to include $50 million of the $100 million proposed by the Senate for upgrading existing subway systems and for the purchase of transit buses. Under the agreement reached in conference, $530 million will be provided for rail modernization in order to halt the further deterioration of the existing rail systems in New York, northern New Jersey, Chicago, Cleveland, Pittsburgh, Boston, Philadelphia, and San Francisco. The conferees also provided $395 million for the purchase of transit buses to assist other communities throughout the United States.

We also included language to increase the number of positions in the Urban Mass Transportation Administration. The additional 50 positions recommended will greatly improve the service that UMTA can provide to State and local jurisdictions. Most of these positions will be assigned to field offices to assist in the preparation of grant and subsidy applications and provide technical and planning assistance at the local levels.

For Amtrak the Senate accepted the House figure for operating expenses and the House agreed to increase Amtrak's capital grants by $13 million as urged by the Senate. The conferees feel that the $646.5 million is adequate to meet Amtrak's anticipated needs. Furthermore, the conferees expect Amtrak to reevaluate its route structure and service levels in order to make the system as effective as possible within the funds provided. The conference report sustains the position taken by our subcommittee that such route and service decisions should be based on the criteria and procedures for making route and service decisions approved by Congress. The use of this mechanism will assure that sufficient consideration is given to the social and environmental implications of passenger train service.

For the Federal Rail Administration, the conferees have included $3.5 million for the minority business resource center's venture capital program. This is $2.5 million above the House and $2.5 million below the Senate recommendation. The conferees agreed with the Senate position that this program can be of considerable value to minority businesses and further agreed to include language indicating their willingness to support additional appropriation requests in the future. A higher funding level would most likely have been agreed to if a mechanism for obligating the fiscal year 1977 and 1978 funds was already in place. The conferees also agreed with the intent of the Senate language on branch line rehabilitation. The conference report language instructs the Federal Railroad Administration to fund such rehabilitation projects at whatever level is cost effective in terms of increasing the transportation service provided or decreasing the need for Federal subsidy.

In the aviation area, the House agreed to restore 150 of the 177 air traffic controller positions previously cut and to include an additional $5 million for airport planning grants and State standard grants—making a total of $15 million available for these purposes. The funds provided for the Federal Aviation Administration also include $15 million for the replacement of VOR/VORTAC's with solid state equipment. This is $8 million more than recommended by the House. The committee does, however, intend to monitor closely this program to see whether the entire $104 million replacement program is cost effective.

The conference report includes language to add 150 positions to the Coast Guard for tanker inspection. Testimony provided during the hearings indicates that these positions can be effectively used to check the condition of foreign tankers using American ports. We understand that the Coast Guard may have to expand its training facilities in order to bring all these positions onboard in fiscal year 1978. It certainly is the intent of the conferees that the fully authorized number of inspectors be provided as soon as possible. The conferees also addressed the 200-mile fisheries enforcement zone. The conference report earmarks $5 million from the acquisition, construction or improvement funds for these enforcement activities. In addition, this committee intends carefully to monitor the activities of the Coast Guard to determine if more resources are needed in the future to adequately enforce Public Law 94-265.

In the safety area, the House receded to the $50 million increase proposed by the Senate for community highway safety grants. The Senate intended that the additional $50 million would be provided for such high priority items as enforcement of the 55-mile-per-hour speed limit, emergency medical services and alcohol safety. These programs are particularly effective in that they are developed at the State and local levels and are therefore responsive to the unique needs of these jurisdictions.

Mr. President, the Senate conferees agreed to accept $20 million of the $30 million recommended by the House for traffic control signalization demonstrations. Although we did not include any money in our bill for this item, it appears to be a worthwhile program designed to demonstrate signal light technology in order to increase the capacity and efficiency of existing highways. I understand that studies have shown that a 30 percent decrease in fuel utilization can occur through proper computerized signalization. I am anxious to see the results of these demonstration projects and assume that the administration will quickly develop a plan to obligate the $20 million provided in this bill and the $10 million that was provided for this purpose in the economic stimulus package.

The conference report also contains the additional $1 million recommended by the Senate for the development of energy conservation systems for buses and the $600,000 for the demonstration of an accelerated moving walkway.

All in all, I believe that the conference report represents a good compromise between the House and the Senate and I urge my colleagues to support it.

Mr. President, I am prepared to respond, as the chairman is, to any questions that may exist.

Mr. WILLIAMS. Mr. President, I have noticed in the section providing appropriations for transit projects substituted for interstate highway projects, the conference report states:

> Of the total amount provided, $15,000,000 shall be made available to northern New Jersey for the improvement of existing commuter rail service in the corridor previously owned by the Central of New Jersey railroad between Aldene and Phillipsburg, N.J.

Mr. President, the decision to proceed with a transit project has usually been made by the States and the Urban Mass Transit Administration. This is, I believe, as it should be.

The CNJ rail project to which the conference report refers has been extremely controversial in my State of New Jersey. The State favors an alternative project, the extension of PATH service to Plainfield. The U.S. Department of Transportation has allowed the State to decide how to use its Federal mass transit funds. The State is now in the process of applying for an interstate transfer to help fund the PATH extension.

I do not believe this issue was addressed in either the House or Senate reports on this bill. I would like to know whether the conference report language indicates that the conferees intended to earmark funds for the CNJ project, as opposed to the PATH extension.

Mr. BAYH. I would be happy to clarify this point for the Senator from New Jersey.

The conference report language makes it clear that these funds will be available if the State of New Jersey and the U.S. DOT decide to carry out the CNJ project. If an alternative project is selected, the funds could be used for the alternative. However, it would be appropriate for the DOT authorities to notify the committee if an alternative is selected.

Mr. President, I believe we have touched on sufficient items, and particularly since this matter has been available in the CONGRESSIONAL RECORD for more than 2 weeks for the consideration of our colleagues, I am prepared to yield back the remainder of my time and move the adoption of the conference report.

Mr. CASE. Mr. President, if I have any time, I yield it back.

The PRESIDING OFFICER. The question is on agreeing to the conference report.

The report was agreed to.

The PRESIDING OFFICER. The clerk will state the amendments in disagreement.

The assistant legislative clerk read as follows:

> *Resolved*, That the House recede from its disagreement to the amendment of the Senate numbered 12 to the aforesaid bill, and concur therein with an amendment as follows:
>
> In lieu of the sum proposed in said amendment, insert: $1,500,000.
>
> *Resolved*, That the House recede from its disagreement to the amendment of the Senate numbered 34 to the aforesaid bill, and concur therein with an amendment as follows:

In lieu of the matter stricken and inserted by said amendment, insert:

expended: *Provided*, That $12,243,000 of such amount shall become available upon the date of enactment of this Act: *Provided further*, That the Secretary of Transportation shall execute an agreement with the Authority whereby the Authority agrees to (1) issue no additional bonds under title I of Public Law 92-349, (2) provide a minimum of 20 percent of the Authority's unreimbursed debt service costs under title I of Public Law 92-349, and (3) develop and execute a plan, with the participating local governments, that will provide for the Authority to be financially responsible for the remaining capital and operating costs of the rail transit system in a manner consistent with the Urban Mass Transportation Act of 1964, as amended, the Federal-Aid Highway Act of 1973, as amended, and the terms and conditions the Secretary may require.

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 39 to the aforesaid bill, and concur therein with an amendment as follows:

In lieu of the matter inserted by said amendment, insert:

SEC. 318. Such funds as may be necessary shall be utilized from the appropriations above made available to the Federal Aviation Administration and to the Civil Aeronautics Board for the preparation of a plan to coordinate as promptly as possible the use of Midway Airport with O'Hare Airport in Chicago, Illinois, for service by regularly scheduled airline carriers in order to relieve air traffic congestion and to promote air safety in that area.

SEC. 319. Funds appropriated for grants to the National Railroad Passenger Corporation under Public Law 95-26 and for the fiscal year 1978 purchase payments for the Northeast Corridor shall be used for the payment of any principal and interest costs due or payable to the Consolidated Rail Corporation after March 11, 1977.

Mr. BAYH. Mr. President, I ask unanimous consent that the amendments in disagreement be considered en bloc.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAYH. I move that the Senate concur in the amendments of the House of Representatives to the amendments of the Senate numbered 12, 34, and 39.

The motion was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the conference report was agreed to.

Mr. BAYH. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, there will be no more rollcall votes today. I hope the cloakrooms will put out that word.

I will suggest the absence of a quorum, but I hope someone will summon Mr. CANNON and Mr. ALLEN so they can be present on the floor.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. HART. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

MILITARY CONSTRUCTION AUTHORIZATIONS — CONFERENCE REPORT

Mr. HART. Mr. President, I submit a report of the committee of conference on S. 1474 and ask for its immediate consideration.

The PRESIDING OFFICER. The report will be stated.

The assistant legislative clerk read as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendment of the House to the bill (S. 1474) to authorize certain construction at military installations, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses this report, signed by all of the conferees.

The PRESIDING OFFICER. Without objection, the Senate will proceed to the consideration of the conference report.

(The conference report is printed in the House proceedings of the RECORD of July 12, 1977.)

Mr. HART. Mr. President, the matter before the Senate is the conference report on S. 1474, the fiscal year 1978 military construction bill.

The Department of Defense requested new authorization for military construction for fiscal year 1978 in the amount of $3,576,517,000. This request provided for the construction of new facilities for the Active and Reserve forces, and for the operation and maintenance of the military's inventory of family housing.

On May 13, 1977, the Senate passed S. 1474, providing new authority in the amount of $3,726,663,000. Based on the recommendations of the Armed Services Committee, the Senate-passed bill reflects reductions in the administration's request of $229 million, additions to the request of $379 million, for a net addition of $150 million to the administration's request.

The House considered the companion bill on June 6, 1977, authorizing new programs at $3,508,560,000.

The conference committee agreed to new authority in the amount of $3,724,718,000. The bill, as contained in the conference report, is a good bill that adequately provides for the construction needs of the Services. I invite my colleagues' attention to the printed conference report for details which I do not intend to get into unless there are questions.

There are three important points in this bill that I do want to emphasize.

First, the Senate had added to this bill carefully selected projects in an amount totaling nearly $200 million designed to conserve energy and to control pollution sources on military installations. These same projects were not in the House bill, but the House conferees agreed in conference to include most of them in the final bill. I feel that this is an encouraging additional step toward making our military installations as environmentally clean and as energy efficient as possible. Through this bill and future military construction bills the Federal Government can use military communities to demonstrate new energy conservation and pollution abatement concepts to speed their acceptance by the general public; and we have challenged the Department of Defense to be aggressive and imaginative in applying its technological expertise to pioneer new energy conservation and pollution control measures at all of its installations.

Second, the House had added a provision to its bill which would require the Defense Department to install utility meters on all of its family housing units and to charge occupants of military family housing for energy consumption that exceeded an established norm. The premise behind this provision was that by metering and charging for excess consumption, energy would be conserved—some studies have predicted savings of 15 to 30 percent. While the Senate conferees strongly endorsed the intent of the provision—to save energy—there was concern that the provision impacted the entire pay and compensation question, which is to be the subject of study by a Commission recently appointed by President Carter, and that the administrative burdens of implementing such a program equitably might prove unmanageable. The conferees, therefore, agreed to conduct a test program of the concept to see if it can be managed fairly and to assess the value of such an effort. Two things should be emphasized regarding this new provision to meter family housing. First, no military occupant of family housing is going to be billed for energy consumption until the test program is completed and that will take at least 1 year and probably 2. Second, when and if this program is implemented, military family housing occupants will not be charged for all utilities—only that amount of energy used that is considered excessive. For the majority of occupants who are prudent in their conservation measures, there will be no charge; for those few who are careless or deliberately use excess energy, they will be billed for that excess consumption.

Finally, this bill includes, as permanent law, a provision concerning base realinements and base closures. As my colleagues may recall, a similar provision in last year's military construction authorization bill evoked a veto from President Ford. The base realinement provision in this bill has the endorsement of the Department of Defense. Base realinements are highly emotional issues because of their devastating impact on local communities. Previous Defense Department procedures of keeping base realinement decisions secret until they were announced for implementation, clearly could not continue. Likewise, some recent attempts at legislation to give the approval authority for base realinements to Congress would have completely tied the hands of the President and the Defense Department. Section 612 in this bill, which directs public involvement in the decisionmaking process—but clearly leaves the final decision with the Chief Executive—is, I feel, the best approach for handling base realinement proposals.

Mr. President, I will endeavor to answer questions if there are any. If not, I move the adoption of the conference report.

Mr. HATHAWAY. Mr. President, I appreciate very much the work of the Committee on Armed Services with regard to the 1978 military construction authorization measure, the conference report on which is now pending.

I particularly appreciate the efforts of the Subcommittee on Military Construction and Stockpiles ably chaired by the Senator from Colorado (Mr. HART) with respect to the provisions contained in section 612 of the pending measure.

That section establishes as permanent Federal law a sound procedure of congressional participation and review of any proposed base closure or significant realinement. Under these provisions, the Secretary of Defense or the Secretary of the military department involved is required to publicly announce, and notify the Senate and House Committees on Armed Services in writing of any proposed closure or realinement. The Secretary is then required to comply with all of the requirements of the National Environmental Policy Act of 1969 with respect to the proposal. The Secretary must submit his final decision to implement such a proposal to the committees accompanied by a detailed justification for the decision including statements of "estimated fiscal. local economic, budgetary, environmental, strategic, and operational consequences of the proposed closure or realinement."

Most importantly the Secretary is barred from taking any final irrevocable action with respect to the proposal until the expiration of 60 days subsequent to the submission of the final decision to the committees. In this way Congress is assured of having an ample opportunity to review the proposed closing or realinement from the standpoint of our national interest in its broadest sense.

If Congress does not agree with the reasons cited in the submissions to the committee, or if it feels that, notwithstanding those reasons, a particular base ought to be kept open due to an overriding national interest, it can nullify the decision of the Secretary by enacting legislation.

I commend the Senator from Colorado for including these procedures in his bill S. 1474, and for successfully steering them through the Senate on May 13, 1977.

I commend him also for convincing the conference committee to retain these important provisions, since they were not included in the House-passed version.

I was particularly pleased to see that the final conference report version of section 612 contains drafting changes which represent further improvement and refinement of the version which passed the Senate on May 13, 1977.

In particular, these changes should clarify the relationship between section 612 of the pending measure and section 612 of the Military Construction Authorization Act, 1977 (Public Law 94–431), and will, I believe, serve to underline the integrity and continuing applicability of the provisions already in existing law.

In this regard I was particularly concerned about the potential interpretation of a portion of the Senate passed version of May 13 which stated:

(d) This section shall not apply to any closure or realignment . . . if such closure or realignment was publicly announced prior to October 1, 1977.

This subsection was apparently required because the bill itself, the 1978 authorization, was intended to govern the authorization of funds beginning in the 1978 fiscal year, which did not begin until October 1, 1977.

The language of the subsection at the same time called into some question the status of proposed base closures and reductions which were publicly announced prior to October 1, 1977.

The language of the 1977 Authorization Act states, in the relevant subsection, the following:

(c) This section shall not apply to any closure or realignment . . . if such closure or realignment was publicly announced prior to January 1, 1976.

Thus the language in the 1977 act, now law, was intended to apply to any and all base closures or reductions announced subsequent to January 1, 1976. During the Senate floor debate on that measure, which occurred on September 15, 1976, it was made clear by me and a number of other Senators, including my colleague from Maine, that that provision was intended to be applicable, or capture, all proposed closures and major realinements made public subsequent to that date.

Specifically mentioned in the course of this debate by me and others as being captured by these provisions was the proposed reduction at Loring Air Force Base located in Limestone, Maine, which was announced publicly in March of 1976.

The legislative history therefore made it clear at that time that the Senate intended these provisions to apply prospectively to the proposed Loring AFB realinement, for as long as the proposal was pending.

The language in the bill before the Senate on May 13, 1977, however, cast some doubt as to whether this version of section 612 was intended to supersede the provisions of existing law, and whether, with its different trigger date, it might somehow take Loring AFB out from under the sound and rational review procedures in existing law.

To remedy this situation, I offered an amendment cosponsored by my colleague from Maine and the Senator from Massachusetts (Mr. KENNEDY) on June 29 of this year to H.R. 7589, the military construction appropriation bill that stipulated that no funds appropriated in that bill could be used to implement a closure or realinement until all of the provisions of both section 612 of the 1977 authorization in existing law and section 612 of the 1978 authorization legislation were complied with. I was pleased that the Senate approved this amendment and that it was incorporated into the appropriations legislation as it passed this body. I would urge the conferees to retain this language to plug any potential loophole and to make crystal clear that the principles of section 612 apply to any and all closures or reductions announced subsequent to January 1, 1976.

This thus removes any potential for the Air Force, or any other department, to engage in artful dodging of these vital provisions.

At the same time, I am greatly appreciative of the adjustments made in the pending measure since it was last before the Senate. These changes are responsive to the concerns I raised on the floor on June 29 and should further underline the continuing applicability of the original version of section 612 to those proposed reductions announced prior to the effectiveness of the pending measure.

In this regard, Mr. President, I ask unanimous consent that section 612 of the conference report be printed in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

BASE CLOSURES AND REALIGNMENTS

SEC. 612. (a) Chapter 159 of title 10, United States Code, as amended by section 504 of this Act, is amended by adding at the end thereof a new section as follows:

"§ 2687. Base closures and realignments

"(a) Notwithstanding any other provision of law, no action may be taken to effect or implement—

"(1) the closure of any military installation;

"(2) any realignment with respect to any military installation involving a reduction by more than one thousand, or by more than 50 percent, in the number of civilian personnel authorized to be employed at such military installation at the time the Secretary of Defense or the Secretary of the military department concerned notifies the Congress under subsection (b)(1) that such installation is a candidate for closure or realignment; or

"(3) any construction,, conversion, or rehabilitation at any military facility other than a military installation referred to in clause (1) or (2) (regardless of whether such facility is a military installation as defined in subsection (d)) which will or may be required as a result of the relocation of civilian personnel to such facility by reason of any closure or realignment to which clause (1) or (2) applies, unless and until the provisions of subsection (b) are complied with.

"(b) No action described in subsection (a) with respect to the closure of, or a realignment with respect to, any military installation may be taken unless and until—

"(1) the Secretary of Defense or the Secretary of the military department concerned publicly announces, and notifies the Committees on Armed Services of the Senate and the House of Representatives in writing, that such military installation is a candidate for closure or realignment;

"(2) the Secretary of Defense or the Secretary of the military department concerned complies with the requirements of the National Environmental Policy Act of 1969 with respect to the proposed closure or realignment;

"(3) the Secretary of Defense or the Secretary of the military department concerned submits to the Committees on Armed Services of the Senate and House of Representatives his final decision to carry out the proposed closure or realignment and a detailed justification for such decision, including statements of the estimated fiscal, local economic, budgetary, environmental, strategic, and operational consequences of the proposed closure or realignment; and

"(4) a period of sixty days expires following the date on which the justification referred to in clause (3) has been submitted to such committees, during which period no irrevocable action may be taken to effect or implement the decision.

"(c) This section shall not apply to the closure of a military installation, or a realignment with respect to a military installation, if the President certifies to the Congress that such closure or realignment must be implemented for reasons of national security or a military emergency.

"(d) As used in this section:

"(1) 'Military installation' means any camp, post, station, base, yard, or other facility under the authority of the Department of Defense—

"(A) which is located within any of the several States, the District of Columbia, the Commonwealth of Puerto Rico, or Guam; and

"(B) at which not less than five hundred civilian personnel are authorized to be employed. Such term does not include any facility used primarily for civil works, rivers and harbors projects, or flood control projects.

"(2) 'Civilian personnel' means direct-hire permanent civilian employees of the Department of Defense.

"(3) 'Realignment' includes any action which both reduces and relocates functions and civilian personnel positions, but does not include a reduction in force resulting from workload adjustments, reduced personnel or funding levels, skill imbalances, or other similar causes.

"(e) Except as provided in subsection (c), this section shall apply to any closure of a military installation, and any realignment with respect to a military installation, which is first publicly announced after September 30, 1977.".

(b) The table of sections at the begining of chapter 159 of such title is amended by adding at the end thereof a new item as follows:

"2687. BASE CLOSURES AND REALIGNMENT.".

(c) Section 611 of the Military Construction Authorization Act, 1966 (Public Law 89–188; 10 U.S.C. 2662 note), and section 612 of the Military Construction Authorization Act, 1977 (Public Law 94–431; 90 Stat. 1366), shall be inapplicable in the case of any closure of a military installation and any realignment with respect to a military installation, which is first publicly announced after September 30, 1977.

Mr. HATHAWAY. Mr. President, first, the language contained in this section acts to insert a new section into positive law of the United State Code, thus insuring that it will be interpreted as permanent law. But at the same time, it cleans up the potential difficulties in the prior draft.

This language cannot be seen as superseding the provisions of section 612 of Public Law 94–431 with respect to reductions proposed prior to October 1, 1977 since in subsection (c) of section 612 of the pending measure it states the following:

(c) Section 611 of the Military Construction Authorization Act, 1966 (Public Law 89–188; 10 U.S.C. 2662 note), and section 612 of the Military Construction Authorization Act, 1977 (Public Law 94–431; 90 Stat. 1366), shall be inapplicable in the case of any closure of a military installation and any realignment with respect to a military installation, which is first publicly announced after September 30, 1977.

Thus the existing law continues to be valid and fully applicable to all major reductions announced subsequent to January 1, 1976 and prior to October 1, 1977, including Loring Air Force Base.

This conclusion flows directly from the language which stipulates that the existing law does not apply to closures announced after September 30, 1977 and at that point 10 U.S.C. 2687 takes over.

The potential problem of the new language superseding the old is avoided, and section 612 of Public Law 94–431 continues to stand as valid law now and in the future.

Mr. President, in order to make entirely certain that this is the case and that there is no possibility for ambiguity, I would like to ask the distinguished floor manager, who also was the manager of the conference in behalf of the Senate, if this is the proper interpretation of the measure before us.

Mr. HART. I am pleased to respond to the inquiry of the Senator from Maine on behalf of the Senate conferees.

The Senator's interpretation is entirely correct. The changes made in conference referred to by the Senator do make absolutely clear that any base closure or realinement which is announced from January 1, 1976 to September 30, 1977, will continue to be captured and governed by section 612 of Public Law 94–431.

Section 612 of Public Law 94–431 is is no way superseded by the language in section 612 of the bill before us which will add section 2687 to title 10 of the United States Code.

As the Senator mentioned, the proposed reduction at Loring Air Force Base was specifically and repeatedly discussed during the floor debate on last year's bill, and it clearly continues to be governed by section 612 of that bill.

Mr. HATHAWAY. I thank the Senator from Colorado and appreciate his participating in this colloquy with me.

Mr. HART. Mr. President, I move the adoption of the conference report.

The PRESIDING OFFICER. The question is agreeing to the conference report.

Mr. BAKER. Mr. President, reserving the right to object, Mr. President, would the Chair withhold for a moment?

The PRESIDING OFFICER. The Senator from Tennessee reserves the right to object.

Mr. BAKER. Mr. President, if I could have the attention of the majority leader for a moment, or the distinguished manager of the conference report, I have a request from the distinguished Senator from South Carolina (Mr. THURMOND) to make a statement on this conference report. Therefore, while we are waiting for him to appear in the Chamber, I would suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. THURMOND. Mr. President, I rise in support of the conference report on S. 1474, the Military Construction Authorization Act for 1978.

This bill now represents the best compromise attainable by the conferees of the two bodies who met to hammer out many differences in the bills approved by the two Houses.

Needless to say, the final version does not meet all of my views, but on balance, it is the best compromise recognizing all of the concerns involved.

The most important military construction projects of the services are included in this legislation.

While I regret many needed projects were not recommended due to the base realinement study, it is expected these projects will be proposed next year.

Mr. President, the conference agreed to a new adjusted total of $3.7 billion, a modest increase of $148 million above the sum requested by the Defense Department.

The Senate added various pollution abatement and energy proposals which may well pay for themselves, in addition to high priority operational items. The House followed the same course, giving more emphasis to the operational needs of the various service departments.

Of major note was the conference decision to retain provisions establishing procedures for congressional participation in military base realinements and closures. This proviso is worthy of support as it gives Congress a voice in base shutdown without an outright veto of what the President may consider necessary.

One major concern not addressed by this bill is the critical shortage of dental facilities for military personnel, especially in the Army. The administration has assured me this will be given top priority in the legislation presented next year.

Mr. President, I wish to commend the able junior Senator from Colorado, Mr. HART, who ably handled this bill in the Senate hearings, on the floor and in conference. Also, I would like to recognize the expert assistance of Mr. James Smith, the committee professional staff member who assisted us during the course of this legislation. He was aided considerably by Mrs. Jean Kilgore, also of the staff.

In closing I urge the Senate approve this conference report.

Mr. BAKER. Mr. President, I have no further objection to the adoption of the conference report.

The PRESIDING OFFICER. The question is on agreeing to the conference report.

The conference report was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the conference report was agreed to.

Mr. HART. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MELCHER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Senator from Montana is recognized.

DEPENDENCE OF COMMUNITIES ON FOREST SERVICE TIMBER SALE BIDDING REGULATIONS

Mr. MELCHER. Mr. President, many small sawmills in the West specialize in wood products which require specific species of trees as sold in specific timber sales. Many of these mills and the communities they support rely almost exclusively on national forest materials, because in many areas the Forest Service is a virtual monopoly owner and seller of timber. These small operators depend upon the national forests for their survival. They must often obtain specific timber sales suitable for the characteristics of their own operations. If these sales are offered under sealed bidding methods, these operators are in a precarious position. They need the timber, but they do not know how much to bid over the appraised price to insure they will obtain the sale. They have but one chance to succeed.

Oral auction bidding has been the traditional bidding method used for Forest Service timber sales in most parts of the West for over 30 years. It has been a method judged to be in the best public interest, because it allows timber purchasers to respond to bidding competition in an open manner. But bidding methods were changed with the National Forest Management Act, passed by Congress in 1976. A section of this law required the use of sealed bidding methods, but also required special precautions to protect dependent communities. In implementing this section of the law, the Forest Service initially decided to virtually eliminate oral auctions for timber sales. The new final regulations are a significant improvement, but they require that up to 25 percent of national forest timber be sold under sealed bids, even in dependent community situations.

This is not what Congress intended. The necessity of providing a means by which western timber buyers can compete openly for national forest timber is the reason behind the legislation recently reported by two Senate committees to revert to traditional oral auction sale methods in the West. In the East, Midwest, and South, most timber buyers are relatively independent of Federal timber; they have alternative sources of supply. Sealed bidding has been traditional in these regions. But in the Pacific Northwest and Rocky Mountain States, the Forest Service owns most of the timber. In those parts of the country, oral bidding has become the norm.

In the East and South, the size of individual national forest timber sales is comparatively small—they averaged only 800,000 board feet between 1964 and 1972, whereas in Idaho and Montana the size of an average sale was 6.3 million board feet during this same period. Because they make up only about 6 percent of the timber supply in the East and South, the national forests are not as important a source of timber as they are in the West. In short, my part of the country contains many communities that are totally dependent on national forest timber.

Sealed bidding is not the best sale method for the West. Sealed bidding reduces the opportunity for the small independent sawmill to compete in the open for the timber he must have. The inability of a timber purchaser to buy a sale can be fatal to his company and his community. In an oral auction situation, however, the purchaser can continue to raise his bid if he must. He gets a second, third, or fourth chance to recalculate and bid again.

It has been charged by some that it is easier for operators to conspire to keep bid prices down under an oral auction system. That allegation remains unproven. First, the Government always receives the full value for the timber sold by oral auction, because no sales are made below the appraised value of the timber as set by the Forest Service. Second, there is no evidence that collusion is widespread. The Department of Justice has pursued only 10 investigations in the last 70 years, and there have been literally tens of thousands of timber sales during this period valued as high as $500 million annually. Furthermore, only two of those cases ever came to trial, and in only one was the Government able to get a conviction. Third, the ability of the Department of Justice to seek out and prosecute collusion is not impaired by oral bidding. The successful conviction occurred under an oral bidding situation.

The legislation that both the Agriculture Committee and the Energy and Natural Resources Committee have approved will provide the Secretary of Agriculture with the tools to stop collusion, should that activity be taking place. The main point of S. 1360, as amended, is to protect the small sawmills in the West. Those mills have been having a hard time of it as it is. In recent years, the volume of timber offered for sale in western national forests has been shrinking. In some areas, the Forest Service is barely selling enough timber to maintain existing mills on a break-even basis. A number of mills have closed—simply because there is insufficient timber being offered for sale by the Forest Service. As a result of this artificial scarcity of timber supply, competition for most Federal timber sales is keen. Under sealed bidding, the small operator is at a great disadvantage. After all he has been through in the past few years, it seems to me to be extremely unfair for us to ask him to cope with this added problem.

S. 1360 would modify the bidding provisions contained in the National Forest Management Act by eliminating the apparent mandate to use sealed bidding in all situations. It allows the Forest Service to return to historic bidding methods in the West, but it retains enough flexibility to allow sealed bidding, where appropriate, in situations where collusion is suspected.

The bill has broad support from both small and large timber operators who buy national forest materials. It is also supported by labor. When the bill comes before the Senate for approval, which I hope will be later this week, I shall urge my colleagues to support it.

Mr. President, I ask unanimous consent to have printed in the RECORD an amendment for S. 1360, which was jointly referred to the Committee on Energy and Natural Resources and to the Agriculture Committee.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

AMENDMENT No. 529

Strike all after the enacting clause and insert in lieu thereof the following:

That section 14(e) of the National Forest Management Act of 1976 (90 Stat. 2959; 16 U.S.C. 472a(e)) is amended to read as follows:

"(e)(1) In the sale of trees, portions of trees, or forest products from National Forest System lands (hereinafter referred to in this subsection as 'national forest materials'), the Secretary of Agriculture shall select the bidding method or methods which—

"(A) ensure open and fair competition;

"(B) ensure that the Federal Government receive not less than the appraised value as required by subsection (a) of this section;

"(C) consider the economic stability of communities whose economies are dependent on such national forest materials, or achieve such other objectives as the Secretary deems necessary; and

"(D) are consistent with the objectives of this Act and other Federal statutes.

The Secretary shall select or alter the bidding method or methods as he determines necessary to achieve the objectives stated in clauses (A), (B), (C), and (D) of this paragraph.

"(2) In those instances when the Secretary selects oral auction as the bidding method for the sale of any national forest materials, he shall require that all prospective purchasers submit written sealed qualifying bids. Only prospective purchasers whose written sealed qualifying bids are equal to or in excess of the appraised value of such national forest materials may participate in the oral bidding process.

"(3) The Secretary shall monitor bidding patterns involved in the sale of national forest materials. If the Secretary has a reasonable belief that collusive bidding practices may be occurring, then—

"(A) he shall report any such instances of possible collusive bidding or suspected collusive bidding practices to the Attorney General of the United States with any and all supporting data;

"(B) he may alter the bidding methods used within the affected area; and

"(C) he shall take such other action as he deems necessary to eliminate such practices within the affected area.".

FARMING

Mr. MELCHER. Mr. President, I would like to call the Senate's attention to two items concerning farming which came to my attention today.

The first is a reprint of one of Will Roger's comments, published 47 years ago, in May 1934. Rogers said:

If I was Secretary of Agriculture, I would say: Boys, you all are just too good farmers. You just raise too much. If you just wouldn't be so expert for a few years. It don't do any good to plow under every third row, if you are going to raise more on the other two than you did on three. Your efficiency is driving you into the poor house. So please, don't be such good farmers!

It is fortunate for everyone, except the farmers themselves, that the farmers did not follow Rogers' advice. Even in World War II, when we had food rationing to share some of our abundance with allies, we still had enough.

The consequence for farmers?

Well, the Small Business Administration has summarized the situation in a revision of its regulations in regard to agricultural loans, where it states, under the heading: "Farms Not Typical Business Venture," the following:

First, farms are not commercial operations in the sense of being reasonably efficient, economically viable ventures. Most farmers are carrying on a traditional way of life, not a for-profit venture.

That may not be what farmers want farming to be, but there is every indication that that is what farming will continue to be if we don't do better for agriculture than we are doing in the pending farm bill.

TIME-LIMITATION AGREEMENT—EXECUTIVE D (95TH CONGRESS, FIRST SESSION)

Mr. ROBERT C. BYRD. Mr. President, as in executive session, I ask unanimous consent that, when the Senate considers the resolution of ratification on Ex. D—95th Congress, 1st session—Calendar No. 3, debate on the resolution of ratification and any amendment, reservation, understanding, declaration thereto, and any debatable motion, appeal from the ruling of the Chair, or point of order in connection therewith that is submitted, be limited to 4 hours, to be equally divided and controlled by the Senator from Alabama (Mr. SPARKMAN) and the Senator from New Jersey (Mr. CASE), or their designees.

The PRESIDING OFFICER. Without objection, it is so ordered.

RE-REFERRAL OF BILL—S. 2

Mr. ROBERT C. BYRD. Mr. President, I yield to the Senator from Maine (Mr. MUSKIE).

Mr. MUSKIE. Mr. President, there is on the calendar, reported by the Committee on Government Operations, the so-called sunset bill, S. 2. I have discussed this matter dealing with that piece of legislation with the distinguished chairman of the Committee on Rules (Mr. CANNON) and the majority leader. Last year, when this legislation was considered, because it did involve some modification of the rules and for other reasons, it was referred to the Rules Committee under a time agreement, which the Rules Committee asked to have extended. Ultimately, the Rules Committee reported the bill to the Senate. We were unable to complete work on it.

We are at the same point this year. I have discussed the question of re-referral to the Rules Committee with Senator CANNON and the majority leader. I understand that the Rules Committee is under several mandates now, involving specific times for completion of work on various legislative items. Senator CANNON is reluctant to agree to a specific time for reporting back.

Taking that into account, we have agreed to a re-referral to the Rules Committee. Senator CANNON has been kind enough to assure me that he will do everything in his power to see that the bill is reported back to the Senate for action early in September. This arrangement is agreeable to me. I am sure that Senator CANNON and the Rules Committee will do their utmost, given their full committee load, to get the bill back to the Senate. I cannot ask more than that of any of my colleagues. So I should like to move, if it is agreeable to Senator CANNON, who is here on another matter, that the bill be re-referred to the Committee on Rules.

Mr. CANNON. Will the Senator yield?

Mr. MUSKIE. Yes, I yield to my good friend from Nevada.

Mr. CANNON. The Senator from Maine has stated the matter correctly. I have assured him that if it is re-referred to the Committee on Rules, we shall hold hearings early in September and will report it back at the earliest possible date. I cannot agree to a precise date, but we have no desire to delay the matter. We are under time constraints on several other matters that have to be reported back. We shall hold a hearing early in September and will report it back to the Senate at the earliest possible date.

Mr. MUSKIE. I appreciate that assurance from my good friend from Nevada.

With that, I make the motion, Mr. President.

The PRESIDING OFFICER. Would the Senator state his motion and the number of the bill he refers to?

Mr. MUSKIE. S. 2, Calendar No. 305, is the bill, and I move that bill be referred to the Committee on Rules.

The PRESIDING OFFICER Without objection, it will be so referred.

Mr. MUSKIE. I thank the Chair.

UNANIMOUS-CONSENT AGREEMENT ON PUBLIC FINANCING LEGISLATION—SENATE RESOLUTION 206 AND S. 926

Mr. ROBERT C. BYRD. Mr. President, earlier today in a colloquy on the floor the distinguished minority leader and I reached an understanding whereby no effort would be made to proceed to the consideration of the public financing bill until such time as the minority leader could consult with Members of the Senate on his side of the aisle, hopefully, with respect to an agreement that would allow the Senate to proceed to the consideration of the public financing bill on a designated date without going through the procedure of using a cloture motion in regard to the motion to proceed.

The distinguished minority leader has pursued those consultations and subsequent thereto he and I have had at least two meetings, and other Senators have been present in those meetings, and we have agreed on the following unanimous-consent proposal among ourselves.

I shall now promulgate that proposal to the Senate.

Mr. President, I ask unanimous consent that on Monday next, after the two leaders or their designees have been recognized under the standing order, the Senate proceed to the consideration of Senate Resolution 206, a resolution waiving section 402(a) of the Congressional Budget Act of 1974, with respect to the consideration of S. 926; provided further, that upon the disposition of that resolution, the Senate proceed to the consideration of S. 926, a bill to provide for the public financing of primary and general elections for the U.S. Senate; provided further, that the time on the congressional budget waiver resolution be equally divided between Mr. MUSKIE and Mr. BELLMON; provided further, that no motion to invoke cloture on S. 926, a bill to provide for public financing of primary and general elections for the U.S. Senate, be offered prior to Wednesday of next week.

Mr. President, that is the request.

Mr. BAKER. Mr. President, reserving the right to object, the distinguished majority leader, of course, accurately described the situation as we have been about to negotiate it during the course of the day.

I would say, Mr. President, as I said this morning, this is a matter of extraordinary importance. The question of public financing is so vital, in my view, and in the view of many of my colleagues, to the future of the political system in the United States as we know it, that it was imperative that we proceed with caution and care in trying to arrange the best, most orderly, most useful method for debating and disposing of this issue.

In keeping with that concept, I requested the distinguished Senator from Nebraska (Mr. CURTIS) to convene a conference for Republican Senators today, which he did at 2 o'clock.

We discussed the matter at hand, including the provisions of the unanimous-consent request just put by the distinguished majority leader.

It will be noted that the arrangement that is provided for in this unanimous-consent agreement bypasses all of the procedural steps that might otherwise occur and moves us directly to the question at hand; that is, the budget waiver resolution, and then immediately to S. 926.

I feel, as my colleagues on this side of the aisle feel, it is far better that we turn immediately to the question at hand than to consume the time of the Senate—indeed, the time and attention of the country—with preliminary and procedural moves.

I must frankly say that I also feel that procedure is the best test of the sentiment in the Senate for and against public financing.

I would also say, as the distinguished majority leader knows, that every effort will be made to resist cloture if an effort is made to invoke cloture against this measure.

The time for debate will be used freely to discuss the matter in detail, to identify our concerns, to propose amendments, to publish to the country our fears, and to explain to the country our understanding of this measure.

I think this unanimous-consent agreement as propounded by the distinguished majority leader provides for just that.

So, if it is granted by the Senate, the effect of the request will be to permit us, for the balance of this week, to proceed with the business of the Senate, other than S. 926 and the attendant budget waiver resolution; to turn to S. 926 and the budget waiver on Monday without sparring or maneuvering for position on procedural matters; to have free and unfettered debate on the issue itself and not collateral issues; and to debate in the best traditions of the Senate the matter at hand.

With that explanation, Mr. President, I would announce to the majority leader that I do not object to the unanimous-consent request.

I have one small modification that I would ask the majority leader to consider. I have a request from the distinguished Senator from South Carolina (Mr. THURMOND) for a special order on Monday, July 25, and I would like to include that in our order prior to the time we turn to the consideration of these matters.

Mr. ROBERT C. BYRD. Very well.

Mr. BAKER. Mr. President, other than that, I have no objection; and, on the contrary, I express my thanks to the majority leader for hearing our concerns, for negotiating in good faith, and for providing I believe, a reasonable method of approaching a difficult problem.

Mr. ROBERT C. BYRD. Mr. President, I thank the distinguished minority leader for his comments. I also thank him for his cooperation and for the cooperation that has been evidenced on the part of Members on his side of the aisle.

I think this agreement will indeed eliminate at least one phase of the struggle, that which would certainly ensue with respect to a motion to proceed to the consideration of the public financing bill and which could entail one, two, or three cloture votes or more.

It is an agreement that will allow the Senate, as the distinguished minority leader has pointed out, to work its will on other matters during the remainder of this week. It will assure Senators that there will be 2 days of debate—at least 2 days of debate—on the public financing bill itself, before a cloture motion is submitted, which should allow for ample airing of all sides of the question as to the merits or demerits of the bill.

Having said that, I now modify my request to include the suggestion by the able minority leader—to wit, that following the order or orders for the recognition of Senators on Monday next, the Senate then proceed to the consideration of Senate Resolution 206, the resolution waiving 402(a) of the Congressional Budget Act with respect to the consideration of S. 926.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. ROBERT C. BYRD. I thank all Senators.

The text of the agreement is as follows:

Ordered, That on Monday, July 25, 1977, after the Special Orders, the Senate proceed to the consideration of S. Res. 206 (Calendar No. 316), resolution waiving sec. 402(a) of the Congressional Budget Act of 1974 with respect to the consideration of S. 926, with the 1 hour for debate thereon to be equally divided and controlled by the Senator from Maine (Mr. Muskie) and the Senator from Oklahoma (Mr. Bellmon).

Ordered further, That following the disposition of S. Res. 206, the Senate proceed to the consideration of S. 926 (Order No. 277), a bill to provide for the public financing of primary and general elections for the United States Senate: Provided, That no cloture motion thereon be offered prior to Wednesday, July 27, 1977.

ORDER FOR RECESS FROM FRIDAY UNTIL MONDAY NEXT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business on Friday of this week, it stand in recess until 12 o'clock noon on Monday next.

The PRESIDING OFFICER. Without objection, it is so ordered.

SPECIAL ORDER FOR MONDAY NEXT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that after the two leaders or their designees have been recognized on Monday next, Mr. THURMOND be recognized for not to exceed 15 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I am awaiting the arrival in the Chamber of certain Senators who I believe have a conference report which may be called up. I hope we can dispose of another bill on the calendar before we go out. We should not be long about either of these matters.

I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

SALINE WATER CONVERSION ACT—CONFERENCE REPORT

Mr. ROBERT C. BYRD. Mr. President, on behalf of Mr. GRAVEL, I submit a report of the committee of conference on H.R. 4746 and ask for its immediate consideration.

The PRESIDING OFFICER. The report will be stated.

The assistant legislative clerk read as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 4746) to extend certain authorities of the Secretary of the Interior with respect to water resources research and saline water conversion programs, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses this report, signed by all of the conferees.

The PRESIDING OFFICER. Without objection, the Senate will proceed to the consideration of the conference report.

(The conference report is printed in the House proceedings of the RECORD of July 13, 1977.)

Mr. DOMENICI. Mr. President, I wish to state my support for the adoption of the conference report on H.R. 4746. This bill extends the provisions of the old Water Resources Research Act and establishes an important new provision to demonstrate usable technologies for saline water conversion under the Saline Water Conversion Act.

I do not have to tell my colleagues that our Nation confronts a possible era of severe water shortages. In the West, this danger is upon us now. Large sections of the West, as well as the East now face what many have termed a disaster. A prolonged national drought could have a catastrophic impact on virtually every aspect of our economy and our lives.

But we are fortunate in two respects. We have vast quantities of saline water reserves, and we should have the time to develop them, if we act quickly. Our ability to meet this challenge will depend in large measure upon the effort we will be willing to make now to augment water resources research and technology.

For this reason, enactment of H.R. 4746 is essential to our national water outlook. I would like to detail for my colleagues some of the aspects of this program and this bill.

The general water research program is carried out through the land-grant universities across the country, and the Water Resources Research Institutes established at each one. The bill provides continuing grant authorization of $250,000 for each WRRI, together with $5,000,000 in matching fund authorization. Also authorized is $10,000,000 for nonacademic water research.

That is an important program. But I would like to focus my comments on the need to see that research on the saline water program moves ahead. In this connection, H.R. 4746 directs that the Office of Water Research and Technology expand its program in saline water conversion research from a current level of about $7,000,000 to roughly $12,000,000 during fiscal year 1978.

This bill continues this authority for a single year, fiscal year 1978. While I supported a 2-year extension, the House made a persuasive case for the need for oversight this fall to examine the nature and direction of this program. I shall do what I can as one Senator to assure that oversight and a careful review is undertaken.

Mr. President, as I indicated earlier, the saline water conversion program offers the opportunity to provide an answer to many of our national water needs, if it can be stimulated at the Federal level. It is time to stop talking about the conversion of saline water and to take action to convert it to usable, fresh water. If we wait until all the surface waters in the West are fully allocated

and until our fresh water aquifers are gone, it may be too late. The time to do it is now. I hope that this bill and its legislative history will be a clear message to the administration that the Congress is very serious about water research in general and saline water research in particular.

To this end, the conference report authorizes the construction of four desalination plants to demonstrate the economic and technical feasibility of desalting brackish water at reasonable costs. At least two of these plants must be designed and built to use saline groundwater as a feed source.

I worked long and hard to obtain this authorization, Mr. President, and I would like to give you some numbers which explain why I believe that it is so vitally important. Of all the water on our planet, excluding that which is locked up in the oceans and the ice caps, fully 97.6 percent is groundwater. Of that amount, about two-thirds is saline, and therefore is not currently suitable for irrigation, domestic, or most industrial uses. As an example, we have a large groundwater deposit underlying the arid Tularosa Basin in the State of New Mexico. This aquifer contains enough water, I am told, to produce for many centuries a river the size of the Rio Grande. Yet, not a drop of it is being used today because of its salty quality.

I would anticipate, as the conference report indicates, that the Tularosa Basin, because of its vast potential for the entire Southwest, will be one of the sites for a desalination demonstration plant under this new authority.

I note that the conference report contains a procedure for continuing congressional review of these plants. This is to assure full consultation by the administration with the Congress. It must not become a tool for the Congress to second-guess executive agencies, or for delay.

Mr. President, I will conclude by pointing out that our original bill, S. 846, was reported out unanimously by both the Water Resources Subcommittee and the full Committee on Environment and Public Works. It was adopted unanimously by the full Senate. The aspects of the conference bill, as it affects the saline water program, is substantially similar to, and in some ways stronger than, the Senate bill for fiscal year 1978. I urge my colleagues to again act affirmatively on this legislation.

In addition, I ask unanimous consent, Mr. President, that excerpts from the summary and conclusions of an FEA study "Use of Brackish Ground Water Resources for Regional Energy Development, Tularosa Basin, New Mexico: Preliminary Evaluation," dated March 1977, be printed in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

SUMMARY

It is our conclusion, based upon this preliminary investigation of the Tularosa Basin's suitability for energy development projects, that there are no outstanding physiographic, social, or environmental barriers to preclude detailed analysis and planning for industrial development predicated on the use of extensive ground water resources in the Tularosa Basin. We believe that the ground water resources of New Mexico, as well as other states of the arid West, will inevitably become an important resource base for continued industrial expansion in the region, particularly in the energy industry.

This generally positive statement concerning the suitability of the Tularosa Basin must rest, however, on three qualifications, themselves guideposts for advanced planning for the Tularosa region:

(1) We have not spoken, obviously, to the economic feasibility of energy development projects in the region. The economic feasibility of a combined nuclear power, agricultural and recreation complex in the basin was the subject of an earlier study that emphasized the infeasibility of the proposal.* That study was premised on desalting 500,000 acre ft/year, most of which is assumed to be devoted to agricultural use or to trans-basin diversions, as opposed to applications in concentrated energy industries (energy center). Precedents in the arid states of the West suggest, however, that the recovery and use of ground water resources for application in the energy industry can be feasible economically, although as far as the Tularosa region is concerned, economic feasibility must await determination by industry officials.

(2) A great deal more field work and analysis must be devoted to the aquifer system underlying the Tularosa Basin. This would be required:

(a) To determine the optimum location in the basin for a well field. (A well field in the southern part of the basin may be as good, or better, than the well field location upon which this study is based, but less is known about the hydrology of the southern area.)

(b) To be able to calculate more precisely the effect of ground water withdrawals on land surface subsidence. Geophysical logs and cores from exploratory wells and consolidation tests on the cores would be required.

(3) The question of compatibility with present military land use in the basin must be assessed. Although Federal (BLM), private, and State lands do exist in the basin, any large-scale energy developments almost surely would impinge on military-use lands, at least to the extent of pumping and distribution facilities. Tradeoffs between future military ordnance testing requirements and the growth of the State and regional economies would have to be analyzed.

Based on the assumptions which guided this research effort, the following conclusions emerge.

The primary source of energy for producing electric power in the Tularosa Basin would probably be nuclear. Use of coal for either producing electric power or in coal conversion processes depends primarily on how difficult it becomes to acquire enough water near the major coal resources. Further investigations on the Sierra Blanca coal field may be warranted.

Preliminary aquifer-flow modelling indicates the feasibility of withdrawing up to 300,000 acre-feet per year of slightly saline ground water from the well field between Three Rivers and Alamogordo for power plant cooling. The resulting water table decline would interfere, however, with existing water rights, especially near the Village of Tularosa. Vertical and/or lateral encroachment of saline water on existing well fields is possible as water levels are lowered.

Circulating brackish water through a cooling loop consisting of a condenser and cooling tower or pond seems feasible and such practices are in operation presently, or planned, in other parts of the country.

The economic penalty for utilizing brackish water in cooling towers does not appear to be more than 10% over the costs of comparable fresh water cooling towers.

The land surface subsidence modelling indicates that as much as 20 ft. of subsidence could occur after 25 years of ground water withdrawal. Some disruption of existing facilities could be expected. Of course, lower withdrawals for a more modest level of energy development would have less pronounced effects.

The detrimental effect of subsidence on new energy facilities can be mitigated by advanced planning for subsidence, i.e., locating structures on outcrops of bedrock or constructing facilities on lower parts of the alluvial fans in the area.

In addition to subsidence, other principal environmental problems to be reckoned with include salt drift, brine disposal, degradation of present air quality, and possibly increased precipitation in the basin due to heat releases. Major alteration of the present configuration of the water table due to high rates of withdrawal of ground water could disrupt the hydrogeologic system which produces the eolian dunes of gypsum included in the White Sands National Monument.

Projected growth of demand for electric power in the Southwest suggests that the probable service area for a 12,000 MWe generating station in the Tularosa area would be within a 400-mile radius of the project site. Assuming a continued 7%/year growth in electrical demand, total demand in that area would be great enough by 2008 to use not only a full 12,000 MW Tularosa output, but that of other generating projects as well.

The Tularosa Basin seems ideally situated for solar and wind energy developments. Nowhere in the world does solar radiation exceed that in the Tularosa region by more than 10%. The potential for geothermal energy development exists but it may not be great. Further investigation is required.

Given the assumptions of project development in terms of employment and population impacts, new direct and indirect employment would create 16,589 new jobs in 1987 and decline to a steady 6000 by 2007. Depending on the quality of advance planning and the actual pace of development, living conditions for many people could become rather undesirable as large numbers of workers and their families surge into the area demanding housing, utilities, municipal services, and community facilities including schools and shopping areas which may exceed the area's capacity. Makeshift arrangements would be probable while the area struggles to provide for the greatly increased population in a relatively short time.

No rare or threatened biologic species were found during the field work, although one (the Arizona black-tailed prairie dog) is known to be there and a number of endangered birds might be expected to visit the small basin oases.

The proposal of increased energy-related industrial development in the basin, including nuclear generating units, enjoys a strong base of support among those citizens of the basin responding to a public attitude survey.

*Robert R. Lansford, et al., "An Economic Feasibility Study for the Establishment of an Energy-Water Complex in the Tularosa Basin," New Mexico Water Resources Research Institute, Report No. 068, February 1976.

The PRESIDING OFFICER. The question is on agreeing to the conference report.

The conference report was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the conference report was agreed to.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

EMERGENCY EDUCATIONAL ASSISTANCE ACT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent, at the request of Mr. PELL, that the Senate proceed to the consideration of Calendar No. 323.

The PRESIDING OFFICER. The bill will be stated by title.

The assistant legislative clerk read as follows:

A bill (S. 701) to provide Federal financial assistance to educational institutions in order to assist such institutions to meet the emergency caused by the high costs of fuel and fuel shortages and harsh weather conditions, and for other purposes.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Human Resources, with amendments, and which had been reported from the Committee on Energy and Natural Resources with an amendment.

Mr. PELL. Mr. President, I commend my colleagues, Senator JACKSON and Senator JOHNSTON, for reporting S. 701. They have done an excellent job completing a large amount of work in a short period of time, and they have produced a final version of the measure which I wholeheartedly endorse and which deserves the support of every Member of the Senate.

As the chairman of the Senate subcommittee charged with authorizing education programs, I first held hearings on the subject of the effect of the energy crisis on our schools 3 years ago. Since then, the energy crisis has become worse; and there has not been a clear national policy in regard to energy supply. With the new administration, there has finally developed a consensus of opinion in favor of a strong energy policy; and S. 701 was introduced to take advantage of that attitude. S. 701 was also timely, because it was introduced during one of the coldest winters in memory. During the cold months this year, the Nation's schools and universities suffered huge financial losses. The result of these losses was that many children, literally millions of students, missed days or even weeks of classes.

The weight of this loss was borne almost entirely by local taxpayers. Education is a major portion of local budgets and as a result, this loss of services and increase in operating costs hit citizens twice. Parents saw their children lose portions of their school year and, as taxpayers, they had to pay more for the shortened services that were maintained.

The energy crisis has had a similar effect on hospitals, further stimulating the inflation in costs that already are too high. Totally separate from the energy issue is the fact that the cost of health care is approaching 10 percent of our national product. Therefore, action here will help not only the energy crisis, but it will materially relieve a part of the crushing burden of health costs which we all must bear.

CHANGES IN THE BILL

Since the introduction of S. 701 and its passage through the Human Resources and the Energy and Natural Resources Committees, there have been a number of changes in the bill. These amendments have been necessary to make the measure conform to part C of the President's energy program. Once again, I have to thank Senators JACKSON and JOHNSTON in this regard, because theirs was the initiative to move this measure in place of the administration-proposed part C.

I will not go over every detail of the bill. But, I would like to mention the three most important changes made in the bill and three provisions in the original bill, which I consider most important, that have remained in the bill.

First, the changes. As I have said, the language of the bill was modified heavily to make it conform to part C of the energy program. This is a vital step since it would be foolish to go ahead with any new program, especially one as large as this, without putting it in harness with the rest of the team. I think the biggest problem we have had in the past few years, in regard to the energy crisis, has been a lack of unity. We have all been pulling in different directions. So, instead of making that error once again, we have succeeded in working in concert toward a national energy plan. This intention has made us adjust the bill's authorization and add hospitals as eligible recipients for the aid. These new steps have not weakened the bill, however, and, for all the reasons stated above, I welcome and support them.

The revised bill requires this program to be administered by the new Department of Energy. Once again, the purpose of this amendment was to tie our efforts in with the national energy program. That is, again, an added strength to the program. I have always been most concerned that these programs get underway at the earliest possible instant. Of course, it would be nice to have the grants dealt out by HEW as I originally proposed, but the program will be just as strong in the new energy department, so I support the change.

Finally, the last major change I will address is the new method of in-State administration. State energy agencies, now in operation, will handle the program and for the same reason as I support a national energy department taking over at the Federal end, I think State energy offices should carry the weight on their side.

Briefly, the three provisions maintained from the bill as introduced are the ones extending this aid to nonpublic schools, providing technical assistance to applicants, and increasing the Federal match from 40 to 50 percent of each project. These are initiatives I took to broaden the applicability and type of this aid as well as providing a stronger Federal stimulus for the program in general. I am happy that the Committee on Energy and Natural Resources maintained these provisions and repeat that they are deserving of the support of the Members of the Senate.

THE NEED FOR CONTINUED ACTION ON S. 701

I hope the Members of the Senate will not mind my raising a few more issues. This will take more time, and I have been speaking a long time already; but, then, I have been waiting for this moment, and I have been working toward it for 3 years. There is a lot that needs to be said.

I am concerned now that we should pass S. 701 and advance to a conference and enactment as rapidly as possible. If we continue acting on this bill with the speed that we have maintained up to now, then we can see these programs helping hospitals and schools before this winter. That is a prime concern.

We all are only too aware of the terrible sufferings of the last winter. We must not let that happen again without having taken action, without offering some relief, and this bill will do just that. It would be a great benefit to our citizens, and it would be a great credit to this Congress if we begin this program now; not sometime in the future, but immediately. Conversely, if we do not act, if we delay or waste time, then we shall have failed in our duty and we shall have failed the trust which the people have conferred on us. Therefore, not only must we pass this bill today, but we must continue working tomorrow to insure the entire Congress passes the measure and sends it on to the President as rapidly as possible.

SUPPORT FROM EDUCATORS FOR S. 701

I have one more point to make in my presentation. S. 701 was universally supported by the educational community when I introduced it 5 months ago. Last week, I contacted various representatives from the field once again, and I am pleased to tell the Members that those same associations have universally reaffirmed their support of the measure as reported by the Energy and Natural Resources Committee.

I ask unanimous consent to have several letters from the representatives to which I have just referred be placed in the RECORD at this point. And I hope the sincerity and unanimity of their support for S. 701, placed with the support of the Members of the two authorizing committees which handled this legislation, will convince the Members to vote in favor of this bill.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

JULY 20, 1977.

Hon. CLAIBORNE PELL,
Russell Senate Office Building,
Washington, D.C.

DEAR SENATOR PELL: As you know, NEA has supported S. 701, your bill to provide federal assistance to education institutions to meet energy emergencies. We are glad that the essential concepts of your bill are contained in the version reported by the Committee on Energy and Natural Resources as Part C of President Carter's proposed energy legislation.

We believe, however, that the chances of having this bill ready for implementation before the coming winter would be improved if the House were to move Part C separately.

Please let me know if there is anything we can do to help move this important legisla-

tion along. We are grateful for your interest and support.

Sincerely,

STANLEY J. MCFARLAND,
Director of Government Relations.

WASHINGTON, D.C.,
July 19, 1977.

Hon. CLAIBORNE PELL,
U.S. Senate, Washington, D.C.

DEAR SENATOR PELL: This is to express the support of the higher education community for prompt passage of S. 701 as approved by the Senate Energy and Natural Resources Committee.

The bill would authorize funds to help schools, colleges, and hospitals meet critical needs for reconstruction and reconversion of facilities to make them more energy-efficient. As we testified before your Education Subcommittee last March, the needs in this area are estimated to be $4 billion for higher education alone. Therefore, enactment of the bill and subsequent appropriations for these purposes are a matter of urgent concern to the nation's colleges and universities.

We appreciate your leadership in calling these concerns to the attention of the Congress through your sponsorship of the original legislation. This letter is written on behalf of the American Association of Community and Junior Colleges, the American Association of State Colleges and Universities, the American Council on Education, the Association of American Universities, the Association of Jesuit Colleges and Universities, the Association of Physical Plant Administrators, the National Association of College and University Business Officers, the National Association of Independent Colleges and Universities, the National Association of State Universities and Land-Grant Colleges, and the National Catholic Educational Association's College and University Department.

Sincerely,

CHARLES B. SAUNDERS, Jr.,
Director of Governmental Relations.

JULY 20, 1977.

Hon. CLAIBORNE PELL,
Chairman, Subcommittee on Education, Senate Committee on Human Resources, Dirksen Office Building, Washington, D.C.

DEAR SENATOR PELL: On behalf of the American Association of School Administrators, I would like to commend you for your efforts to assist educators in their continuing need to conserve energy in school buildings. As we have testified before your committee, and other Congressional committees, school superintendents have for some time been concerned over rapidly rising fuel costs and their increasing impact on school budgets.

Most schools in use today were built when space was critical and the oil barrel was bottomless. As a result, these "first cost" energy inefficient buildings are a great drain on the nation's energy reserves and on the taxpayer's educational pocketbook. These losses can be quantified, but the losses in educational opportunity for America's youth cannot be. The "Winter of '77" and its associated school closings dramatically demonstrated the price children are being asked to pay to meet energy needs. We should not, indeed cannot, ask such a price again in the coming winter, but we must act immediately if we are to avert it.

AASA is gratified that the schools' needs are addressed in S. 701, now known as the Educational and Health Care Facilities Energy Efficiency Act of 1977, which is now before the Senate. Matching federal funds will provide both the incentive and the dollars necessary for them to undertake effective energy conserving measures. Given the time needed for federal and state planning inherent in the bill, it is imperative that this legislation have quick action so that the relief S. 701 provides can reach the local school district level and meet the schools' critical energy needs as soon as possible.

School superintendents throughout the nation are anxiously awaiting the assistance they feel this legislation will provide. Thank you for your continuing assistance.

Sincerely,

SHIRLEY J. HANSEN,
Associate Director.

JULY 20, 1977.

Hon. CLAIBORNE PELL,
Chairman, Subcommittee on Education, Arts and Humanities, U.S. Senate, Washington, D.C.

DEAR SENATOR PELL: The Council of Chief State School Officers endorses the concept of providing assistance to schools for the promotion of energy conservation practices. We commend the Senate on its swift action on such an important issue.

In testimony before the Education Subcommittee on S. 701, the Council recommended that any assistance to public elementary and secondary schools be coordinated at the state level through the State Education Agency and the State Energy Office. It remains our firm belief that this is the most effective and efficient way to target energy conservation assistance to areas of the most need within each state. S701 as reported by the Committee on Energy and National Resources recognizes the need for state level coordination and flexibility through the state plan, and through state assistance in the preparation of applications. We hope, however, that the state role could be clarified further during floor debate on the bill especially with regard to the application process and the distribution of funds.

In view of the urgent need for energy conservation assistance, however, we urge the Senate to pass S701 so that the overwhelming energy problems in schools may be met before the coming winter. We appreciate your leadership in this important area of national concern.

Sincerely,

JOHN W. ADAMS,
Director, Federal/State Relations.

Mr. STAFFORD. Mr. President, the bill before us, the Emergency Educational Assistance Act of 1977, was considered carefully by both the Committee on Energy and Natural Resources and the Committee on Human Resources. So, it has had the benefit of double scrutiny.

Originally it was a product of our Subcommittee on Education, Arts and Humanities, chaired by Senator PELL. I am a cosponsor of the bill. Within the Committee on Human Resources, it has been supported unanimously, by all the Senators representing the minority party as well as by all those representing the majority.

The reasons for this very strong support are most straightforward. The Nation needs to conserve energy. Schools consume more than 11 percent of the energy used for heating and cooling in this country, and it has been estimated that at least half of that is wasted. Severe weather conditions last winter led to unusually large numbers of school closings in 20 States, in all parts of this country. Energy shortages caused prolonged school closings in 432 school systems in Kentucky and Ohio, plus additional school closings in several other States.

Most schools in this country were built in those postwar years in which space was needed badly and energy was cheap. Schools were built accordingly. Today, however, energy costs are the most rapidly increasing expense in the school budget. Those expenses have doubled and tripled within the last 3 years. Yet school budgets have not been keeping pace. The schools do not have money to undertake energy conserving modifications in their buildings. Because they are financially strapped, they can only afford construction-for-conservation by reducing their services in teaching. This is a national problem. It is in the national interest to keep the schools open, to keep the teachers teaching, to conserve our energy, and to limit our dependence upon foreign energy suppliers.

In this regard the Federal Energy Administration has calculated that K–12 schools consume more than 170 million barrels of oil per year. The FEA has suggested that if 30 percent of the Nation's schools were retrofitted, this country would save 25 million barrels of oil per year or 68,000 barrels per day. I should add that our committee heard testimony that the average school in the United States would be able to cut its energy use by 30 to 40 percent by spending $150,000 on energy conservation measures.

I should point out that the situation of our country's hospitals is in striking parallel to that of the schools. The Senate has been focusing upon the high cost of hospital care at a time that hospital energy costs are increasing sharply and hospitals, like schools, could be saving energy by conservation measures.

These situations brought us to the present bill. We believe it will be effective legislation. The conservation measures to be taken will be based upon existing technology. We are not seeking a research program, but rather an implementation program. We know how to do the job in most places; what is needed is the wherewithal.

This legislation authorizes expenditures for three kinds of activities:

It authorizes grants to support work in renovation, insulation, equipment repair, and updating, minor reconstruction, demonstration projects, and technical assistance.

I have received no mail in opposition to this bill, but have received numerous favorable comments concerning it. It creates jobs in the short run and saves money in the long run. It helps to meet a national need of our schools and the national need to conserve energy. I have no reservation about recommending this bill to my colleagues wholeheartedly.

Mr. MUSKIE. Mr. President, the pending bill, S. 701, authorizes a total of $900 million over a period of 3 years to assist schools and hospitals in making improvements in their facilities and operating procedures for the purpose of conserving energy.

The bill is the first portion of the national energy plan to be reported in the Senate. The two committees involved, Human Resources and Energy and Natural Resources, are to be commended for their prompt action. So is our distinguished majority leader whose determination to have the Senate act upon

portions of the energy plan this summer is critical to a satisfactory, timely response on the part of the entire Congress to the Nation's energy crisis.

As a Senator from Maine, I support S. 701. Schools and hospitals in Maine, where energy costs are extremely high, will benefit from the conservation program established in the bill.

I also support S. 701 as chairman of the Budget Committee. Funding for the bill's energy conservation program would be classified in function 300: Natural resources, environment, and energy. Currently, estimated spending in this function for fiscal year 1978 based on appropriations to date is well below the function 300 targets of the first budget resolution. S. 701, if enacted and fully funded, would result in additional spending of $200 million in budget authority and $45 million in outlays. These amounts could be accommodated in the present function 300 targets.

However, it appears that enactment and full funding of all of the elements in the President's energy plan, plus other possible later requirements in function 300, would require the function 300 targets to be adjusted. Recommendations on this adjustment will be made by members of the Budget Committee during the committee's consideration of the second concurrent budget resolution. The full Senate will then have the opportunity to review our recommendation when the second budget resolution is taken up after the August recess.

Mr. JOHNSTON. Mr. President, the legislation adopted by the Senate today is the first portion of the President's energy proposals to be enacted by either House of Congress. I would like to congratulate my good friend and distinguished colleague, Senator PELL and the entire Committee on Human Resources for the excellent cooperation they have extended to the Committee on Energy and Natural Resources throughout the consideration of this legislation. This cooperation should stand as a model of the achievements which are possible when the creative efforts of two committees are marshalled to reach a common goal.

This legislation is the first of several energy conservation proposals which the Congress will consider in the coming weeks. It will conserve energy in our Nation's schools and hospitals. It will also afford needed relief from the burdens of rising energy costs for our schools and hospitals. It will help retard the rate of growth in domestic energy demand which must occur if we are to formulate an effective and balanced energy program.

I think this legislation also shows that our institutions can and will work to develop the mechanisms which are needed to deal with our energy problems. Obviously, much more is needed both for conservation and for increased energy production, but this legislation marks a magnificent beginning.

Mr. President, I would like to submit for the RECORD at this point, a summary of the major provisions of the legislation as adopted.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SUMMARY OF MAJOR PROVISIONS

The bill authorizes the Administrator of FEA to make dollar-for-dollar Federal matching grants to public or nonprofit schools and hospitals. Eligible schools include public or private (nonprofit) elementary, secondary, and vocational schools and colleges, universities, and graduate schools. Each State desiring Federal assistance for its schools and hospitals is required to submit a State plan to the Administrator of FEA that describes the energy conservation measures that schools and hospitals in that State may implement. The FEA Administrator is to prescribe guidelines for the State plans. If a plan has not been approved by a specified time the Administrator shall establish a plan for that State in order to make its schools and hospitals nonetheless eligible for financial assistance.

The total appropriation for each year is allocated among the States on a per capita basis. Once a State's allocation is established, then the amount is further divided, 25 percent for hospitals, and 75 percent for schools.

An individual nonprofit hospital may apply to the Administrator for a grant but the application must first be submitted to the State's health care facilities agency and approved by that agency. In practice, that agency will control distribution of the Federal assistance to hospitals in the State. Furthermore, the hospital's application must be consistent with the State plan. The allocation to the hospitals in a State would be available until used unless no application is made by the end of fiscal year 1980.

Schools applying as individuals would be entitled to funds based on their enrollment. This allotment would be available until used unless no application is made by the end of fiscal year 1980. In general, the applicant for a particular school will be the highest governing body that has administrative control over that school. Should no such institution exist, for instance in the case of an independent private (nonprofit) school, then the school will apply directly to the Administrator. As for elementary and secondary public schools, the applicant is the public board of education for the respective political subdivision in the State. The board's share of the State's funds reserved for schools is proportional to the enrollment in that political subdivision's schools compared to the total enrollment in all the State's schools.

Private, nonprofit elementary, and secondary schools similarly will apply through a private, nonprofit institution recognized as their representatives, if such an institution exists. For instance, the local diocese will apply for its member parochial schools. Its allotment is, again, based on the enrollment of its schools.

Institutions of higher education may apply directly to the Administrator, but applications must be consistent with the State plan. Should a school or hospital receiving Federal assistance fail to comply with the provisions of the act, the Administrator may notify them that he is ceasing further payments until they do comply.

Authorization for appropriation under this bill is $200 million for fiscal year 1978, $300 million for fiscal year 1979, and $400 million for fiscal year 1980.

Mr. JACKSON. Mr. President, today's Senate passage of S. 701, that would authorize $900 million in matching grant funds for the implementation of energy conservation measures in our schools and hospitals is a significant day for this body and for the Nation as well.

This is the first of the legislation contained in President Carter's national energy package to pass either House of Congress. It is, of course, only the beginning of a succession of energy legislation that will rapidly follow, but I think that we should note the importance of this beginning.

The one aspect of this energy legislation that I want to emphasize is the several forms of cooperation that it represents.

Much of the credit for S. 701 and the prompt action on it goes to my colleagues Senator CLAIBORNE PELL and Senator J. BENNETT JOHNSTON. Senator PELL sponsored this measure and worked closely with Senator JOHNSTON who chaired the hearings on it and managed the markup in the Committee on Energy and Natural Resources. The cooperation exhibited between these two Senators in shaping and moving this bill is worthy of the Senate's attention.

Congratulations are also in order for the two committees that produced this legislation. S. 701 began in the Committee on Human Resources, was reported out and rereferred to the Committee on Energy and Natural Resources. The consultation back and forth between these two committees is, I think a fine example of how the committees of the Senate should coordinate to expedite action on President Carter's energy legislation. I am confident that this coordination will continue among our committees on the other parts of the National Energy Act.

There is another important form of cooperation implicit in this bill and that is the fact that S. 701 provides for matching Federal grants to public or nonprofit schools and hospitals. Funding from local government, from the States, and from private organizations will be combined to promote energy conservation in our schools and hospitals.

Finally, we look forward to close cooperation in conference with the House after they pass their similar measure.

Mr. President, I conclude these remarks by simply saying that personally, I am delighted with Senate passage of S. 701.

Mr. HATHAWAY. Mr. President, will the Senator yield?

Mr. PELL. I yield.

Mr. HATHAWAY. Mr. President, I commend the Senator for his diligent work. I am a cosponsor of this bill.

Mr. PELL. I thank my colleague very much.

The PRESIDING OFFICER. The question is on agreeing to the amendments en bloc.

The amendments were agreed to en bloc.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, was read the third time, and was passed, as follows:

S. 701

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Educational and Health Care Facilities Energy Efficiency Act of 1977".

FINDINGS AND PURPOSE

SEC. 2. (a) The Congress finds that—

(1) public and nonprofit educational institutions and hospitals throughout the Nation consume significant amounts of energy and have been and will continue to be especially burdened by the rising energy costs;

(2) substantial energy conservation can be achieved in educational and health care facilities through implementation of energy-conserving and maintenance and operating procedures and the installation of energy conservation measures; and

(3) financial assistance is especially needed by public and nonprofit educational institutions and hospitals to make necessary improvements to achieve greater energy efficiency, to conserve energy and reduce costs to the public.

(b) It is the purpose of this Act to authorize grants to public and nonprofit educational institutions and hospitals to assist in evaluating and implementing energy-conserving maintenance and operating procedures and energy conservation measures.

DEFINITIONS

SEC. 3. As used in this Act the term—

(a) "Administrator" means the Administrator of the Federal Energy Administration.

(b) "State" means, in addition to the several States of the Union, the District of Columbia, the Commonwealth of Puerto Rico, Guam, American Samoa, and the Virgin Islands.

(c) "Governor" means the chief executive officer of a State.

(d) "public or nonprofit institution" means an institution owned and operated by—

(1) a State, a political subdivision of a State or an agency or instrumentality of either; or

(2) an organization exempt from income tax under section 501(c)(3) of the Internal Revenue Code of 1954.

(e) "elementary school" means a day or residential school which provides elementary education, as determined under State law.

(f) "institution of higher education" means an educational institution in any State which (A) admits as regular students only persons having a certificate of graduation from a school providing secondary education, or the recognized equivalent of such a certificate, (B) is legally authorized within such State to provide a program of education beyond secondary education, (C) provides an educational program for which it awards a bachelor's degree or provides not less than a two-year program which is acceptable for full credit toward such a degree, (D) is a public or other nonprofit institution, and (E) is accredited by a nationally recognized accrediting agency or association. Such term also includes any school which provides not less than a one-year program of training to prepare students for gainful employment in a recognized occupation and which meets the provision of clauses (A), (B), (D), and (E).

(g) "local educational agency" means:

(1) a public board of education or other public authority legally constituted within a State for either administrative control or direction of, or to perform such a service function for, a group of public institutions of higher education within a State, public elementary or secondary schools of a city, county, township, school district or other political subdivision of a State, or such combination of school districts or counties as recognized in a State as an administrative agency for its public elementary or secondary schools, and includes any other public institution or agency having administrative control and direction of an institution of higher education a public elementary or secondary school; or

(2) a private nonprofit institution legally constituted within or otherwise recognized by a State for either administrative control or direction of, or to perform such a service function for, a group of private nonprofit elementary or secondary schools or institutions of higher education within such State.

(h) "secondary school" means a day or residential school which provides secondary education, as determined under State law.

(i) "school facilities" includes classrooms and related facilities of an elementary school, secondary school, or an institution of higher education, and initial equipment, machinery, and utilities necessary or appropriate for educational purposes; but does not include athletic stadiums, or structures or facilities intended primarily for athletic exhibitions, contests, or games or other events for which admission is to be charged to the general public.

(j) "educational institution" means any local educational agency, any institution of higher education and any nonprofit elementary or secondary school.

(k) "hospital" means a public or nonprofit institution which is—

(1) a general hospital, tuberculosis hospital, or any other type of hospital, other than a hospital furnishing primarily domiciliary care; and

(2) duly authorized to provide hospital services under the laws of the State in which it is situated.

(l) "hospital facilities" means buildings housing a hospital and related facilities, including laboratories, outpatient departments, nurses' home and training facilities and central service facilities operated in connection with a hospital, and also includes buildings housing education or training facilities for health professions personnel operated as an integral part of a hospital.

(m) "project costs" means costs incurred in the evaluation, design, acquisition, construction, and installation of energy conservation measures.

GRANT AUTHORIZATION

SEC. 4. (a) The Administrator is authorized to make grants to educational institutions and hospitals for the payment of the Federal share of project costs incurred in connection with projects undertaken pursuant to this Act.

(b) The Federal share of the project costs incurred in connection with any project shall not exceed 50 per centum thereof. The remainder of the project costs shall be provided from sources other than Federal funds.

STATE PLANS

SEC. 5. (a) The Administrator shall, by rule, at the earliest practicable date after the date of enactment of this Act, prescribe guidelines for the development of State plans with respect to the evaluation and installation of energy conservation measures in school facilities and hospital facilities, including guidelines indicating the types of measures appropriate for each region of the Nation. The Administrator shall invite the Governor of each State to submit, at the earliest practicable date after the effective date of such guidelines, a proposed State plan for such State. Such plan shall include—

(1) a description of the State's recommendations with respect to the evaluation and installation of energy conservation measures in school and hospital facilities in such State over the period for which funds are authorized to be appropriated pursuant to this Act including—

(A) the types of energy conservation measures to be considered for installation in school and hospital facilities under projects undertaken pursuant to this Act; and

(B) an estimate of the energy savings and cost effectiveness of energy conservation measures anticipated for each type of project.

(2) The procedures under which the State will provide technical assistance to educational institutions and hospitals within such State with respect to the identification, evaluation, and design of energy conservation measures in the facilities and maintenance and operating procedures of such institutions and hospitals.

(b) Each State plan shall be reviewed and approved or disapproved by the Administrator not later than thirty days after submission. A Governor may submit a new or amended plan at any time after submission of the original plan if the State obtains the consent of the Administrator.

(c) If, after the expiration of the fourth month after the appropriation of funds in the first fiscal year for which funds are appropriated under this Act, the State plan of any State has not been approved by the Administrator under this section, the Administrator shall take such action as is necessary to develop and implement a plan (and carry out the functions which would otherwise be carried out by the State under this Act) in order that educational institutions and hospitals in such State shall be eligible for grants under this Act, such plan to be effective until a plan submitted by the Governor of such State has been approved by the Administrator.

(d) Reasonable steps shall be taken to assure that plans submitted or implemented pursuant to this section are consistent with the applicable provisions of the Public Health Service Act describing State health plans.

FINANCIAL ASSISTANCE

SEC. 6. (a) The Administrator shall provide financial assistance to any applicant from sums appropriated for any fiscal year under this Act only upon approval of an annual application submitted to the Administration pursuant to section 7.

(b) The Administrator shall allocate sums appropriated for each fiscal year—

(1) to the educational institutions of each State an amount which bears the same ratio to 75 per centum of such sums as the population of the State bears to the population of all States; and

(2) to the hospitals of each State an amount which bears the same ratio to 25 per centum of such sums as the population of the State bears to the population of all States.

(c) The population of a State and of all States shall be determined by the Administrator on the basis of the most recent satisfactory data available to him from the Department of Commerce.

(d) The Administrator shall not provide financial assistance authorized in this Act to any hospital in any State unless the application for a grant by such hospital has been submitted through and has been approved by an established health care facilities agency (as defined by the term "State health planning and development agency" in section 1521 of the Public Health Service Act), or, if no such agency exists, an agency designated by the Governor of such State which is broadly representative of the public and private nonprofit hospitals in such State.

(e) Each educational institution in a State shall be allocated and shall be eligible to make application to the Administrator for financial assistance in an amount which bears the same ratio to the sums allocated to all educational institutions of such State pursuant to paragraphs (b)(1) of this section as the enrollment of such institution bears to the total enrollment of all educational institutions of such State.

(f) The enrollment of an educational institution and of all educational institutions within a State shall be determined by the Administrator on the basis of the data most satisfactory to the Administrator made available to him by the Governor of such State.

(g) The allocations available to all hospitals of a State and to each educational institution of a State pursuant to this section from sums appropriated to the Administra-

tor pursuant to this Act in any fiscal year shall remain available until used.

APPLICATIONS

SEC. 7. (a) Applications of educational institutions and hospitals for financial assistance under this Act shall be made annually to the Administrator during the fiscal years for which appropriations are authorized under this Act, shall be consistent with State plans approved pursuant to this Act, and shall contain or be accompanied by such information as the Administrator may reasonably require.

(b) The Administrator shall not provide financial assistance under this Act unless the applicant has provided reasonable assurances that it has—

(1) established procedures to assure that funds made available under this Act will be expended for project costs in compliance with the requirements of this Act and rules promulgated under this Act;

(2) establish procedures for implementation of energy conserving operational and maintenance procedures in those facilities for which projects are proposed;

(3) established policies and procedures designed to assure that financial assistance provided under this Act will be used to supplement, and not to supplant, State, local, or other funds, and, to the extent practicable, to increase the amounts of such funds that would be made available in the absence of Federal funds for carrying out this Act; and

(4) established procedures to provide reports to the Administrator in such form and containing such information (including information for evaluation purposes) as the Administrator may reasonably require and to keep such records and furnish access thereto as the Administrator may find necessary to assure the correctness and verification of such reports.

(c) Amendments of an application shall, except as the Administrator may otherwise provide, be subject to approval in the same manner as the original application.

ADMINISTRATION

SEC. 8. The Administrator is authorized to prescribe such rules as may be necessary in order to carry out the provisions of this Act.

AUTHORIZATION OF APPROPRIATIONS

SEC. 9. (a) For purposes of making grants pursuant to this Act, there is authorized to be appropriated not to exceed $200,000,000 for the fiscal year ending September 30, 1978; $300,000,000 for the fiscal year ending September 3, 1979; and $400,000,000 for the fiscal year ending September 30, 1980, such sums to remain available until expended.

(b) For expenses of the Administrator in administering the provisions of this Act, there are authorized to be appropriated such sums as may be necessary to carry out the provisions of this part.

WITHHOLDING

SEC. 10. Whenever the Administrator, after reasonable notice and opportunity for hearing to any educational institution or hospital receiving assistance under this Act, finds that there has been a failure to comply substantially with the provisions set forth in the application approved under section 7 of this Act, the Administrator shall notify the educational institution or hospital that further payments will not be made to such educational institution or hospital under this Act until he is satisfied that there is no longer any such failure to comply. Until he is so satisfied no further payments shall be made to such educational institution or hospital under this Act.

SEVERABILITY

SEC. 11. If the provisions of this Act or the application thereof to any person or circumstances be held invalid, the provisions of the other parts and their application to other persons or circumstances shall not be affected thereby.

TECHNICAL AMENDMENTS

SEC. 12. (a) Section 1502 of the Public Health Service Act is amended by adding at the end thereof the following new paragraph:

"(11) The promotion of an effective energy conservation and fuel efficiency program for health service institutions to reduce the rate of growth of demand for energy.".

(b) Section 1532(b)(2) of the Public Health Service Act is amended by deleting the period after "made" and inserting in lieu thereof ", or in the case of nonsubstantive reviews, provision for a shortened review period.".

(c) Section 1532(c)(9)(A) of the Public Health Service Act is amended by deleting the comma after "construction" and inserting in lieu thereof ", including the costs and methods of energy provision, and,".

(d) Section 1532(c) of the Public Health Service Act is amended by adding at the end thereof the following new paragraph:

"(10) The special circumstances of health service institutions and the need for conserving energy.".

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. PELL. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I congratulate Mr. PELL on his very able work in authoring the bill and in managing it on the floor.

This is one of the important aspects of the President's energy package. I compliment all Senators and the Senate on the expeditious handling of this bill. It has been acted upon by two committees.

I compliment Mr. JOHNSTON, on the Committee on Energy and Natural Resources, for his part in shaping the bill, considering it, and conducting whatever studies were necessary on the part of that committee. This measure has run the gamut of two committees—the Committee on Energy and Natural Resources and the Committee on Human Resources—and all Senators are to be commended for the work they have done.

Mr. PELL. I thank my colleague, the majority leader, for his kind words.

I am glad, too, that the bill has been passed. We held our first hearings on the bill—I hold the volume in my hand—January 7, 1974, before the cold winter of last year. I am very glad, indeed, that this bill, which has been 3 years in gestation, has finally come to passage.

Mr. ROBERT C. BYRD. I thank the Senator.

OREGON OMNIBUS WILDERNESS ACT OF 1977

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 306, S. 658.

The PRESIDING OFFICER. The clerk will state the bill by title.

The assistant legislative clerk read as follows:

Calendar No. 306, S. 658, to designate certain lands for inclusion in the National Wilderness Preservation System.

There being no objection, the Senate proceeded to consider the bill which had been reported from the Committee on Energy and Natural Resources with an amendment to strike all after the enacting clause and insert the following:

That this Act may be known as the Oregon Omnibus Wilderness Act of 1977.

SEC. 2. (a) In furtherance of the purposes of the Wilderness Act (78 Stat. 890), the following lands are hereby designated as wilderness and, therefore, as components of the national wilderness preservation system:

(1) certain lands within the Umpqua National Forest, Oregon, which comprise about nineteen thousand two hundred acres, are generally depicted on a map dated June 1977, and entitled "Boulder Creek Proposed Wilderness", and shall be known as the Boulder Creek Wilderness;

(2) certain lands within the Siskiyou National Forest, which comprise about eighty-two thousand, four hundred acres, are generally depicted on a map dated June 1977, and entitled "Kalmiopsis Wilderness Additions", and shall be included as a part of the Kalmiopsis Wilderness;

(3) certain lands within the Umatilla National Forest, Oregon and Washington, which comprise about one hundred and eighty-five thousand acres are generally depicted on a map dated June 1977, and entitled "Wenaha-Tucannon Wilderness—Proposed", and shall be known as the Wenaha-Tucannon Wilderness;

(4) certain lands within the Mount Hood National Forest, Oregon, which comprise about thirty-three thousand acres, are generally depicted on a map dated June 1977, and entitled "Mount Hood (Zigzag) Proposed Wilderness" and shall be known as the Mount Hood Wilderness Additions.

(b) As soon as practicable after this Act takes effect, the Secretary of Agriculture shall file a map and a legal description of each wilderness area designated by section 2 with the Interior and Insular Affairs Committee of the House of Representatives and the Energy and Natural Resources Committee of the Senate. Such legal description and map shall have the same force and effect as if included in this Act: *Provided, however,* That correction of clerical and typographical errors in such legal description and map may be made.

(c) Each wilderness area designated by section 2 of this Act shall be administered by the Secretary of Agriculture in accordance with the provisions of the Wilderness Act, except that any reference in such provisions to the effective date of the Wilderness Act shall be deemed to be a reference to the effective date of this Act.

SEC. 3. (a) In furtherance of the purposes of the Wilderness Act, the Secretary of Agriculture shall review as to its suitability for preservation as wilderness certain lands within the Mount Hood National Forest and the Willamette National Forest, Oregon, which comprise about forty-nine thousand acres, are generally depicted on a map dated June 1977, and entitled "Bull of the Woods (Hidden) Proposed Wilderness".

(b) In accordance with the provisions of the Wilderness Act, the Secretary shall complete his review and report his findings to the President and the President shall advise the Congress of his recommendations with respect to the designation of the Hidden Wilderness Study Area as wilderness not later than two years after the date of enactment of this Act.

(c) Subject to existing private rights, the area to be studied by this section shall, until Congress determines otherwise, be administered by the Secretary of Agriculture so as to maintain its presently existing wilderness character and potential for inclusion in the National Wilderness Preservation System, except that such management requirement shall not extend beyond a period of four years from the date of sub-

mission to the Congress of the President's recommendation concerning said area. Already established uses may be permitted to continue, subject to such restrictions as the Secretary of Agriculture deems desirable, in the manner in and degree to which the same was being conducted on the date of enactment of this Act.

(d) Nothing in this Act shall be construed to (1) limit the President in proposing, as part of his recommendation to the Congress, the alteration of existing boundaries of the area designated for study by this section or recommending the addition to such area of any contiguous area predominantly of wilderness value, or (2) limit the authority of the Secretary of Agriculture to establish, protect, study, or make recommendations to the President and the Congress with respect to additional wilderness study areas within national forests in the State of Oregon.

Mr. JACKSON. Mr. President, I wish to commend the distinguished Senator from Oregon, Mr. HATFIELD, for the work that he has done in the development of S. 658, the Oregon Omnibus Wilderness Act.

I am concerned, however, over certain aspects of the committee's treatment of those lands within the State of Washington which were included in Senator HATFIELD's original proposal of 200,000 acres but which were deleted from the bill as reported.

Mr. President, agreement was reached to delete approximately 15,000 acres from the proposed Wenaha-Tucannon Wilderness area only after delicate negotiations between the interested parties. Our colleague in the House of Representatives, the distinguished Chairman of the House Agriculture Committee, Mr. FOLEY, was instrumental in getting final agreement.

This agreement was predicated, however, on the inclusion of certain directions to the Department of Agriculture relative to the management of those lands deleted from the original bill. The committee report language generally reflects the terms of this agreement; however, I would like to discuss certain important elements of the agreement with the Senator from Oregon, Mr. HATFIELD, to help clarify the intent of the committee.

First, agreement was reached that the committee should direct the Secretary to prohibit the construction of new logging or recreational roads in those areas.

Second, the Secretary must require at least a 200-meter uncut buffer strip along class 1, 2, and 3 streams in this area so as to preserve and enhance water quality.

Third, there was general agreement that off the road vehicles or all terrain vehicles should be prohibited in those areas which were deleted from the bill.

Finally, it was understood that the Secretary would prohibit experimental or demonstration logging practices on these lands. It was also expected that no Federal funds would be used to supplement the cost of actual logging operations on these lands.

Mr. President, it is my understanding that language will be included in the House Committee Report to accompany H.R. 3454, the Endangered American Wilderness Act, clarifying and specifically setting forth the agreed to management directives. I would like, however, to have this matter also clarified in the bill before us.

While I recognize that this agreement is not totally satisfactory to any of the interested parties in the State of Washington, I do feel that it is a workable compromise that will protect and enhance these areas while at the same time providing for possible timber operations in the future, subject to advances in logging techniques.

Mr. President, I would appreciate hearing from the Senator from Oregon if he has any objections to these additional management directives. Again, they reflect a delicate compromise between the competing groups.

Mr. HATFIELD. Mr. President, I am aware of the negotiations that took place affecting these areas in the State of Washington, and concur in the statements made by the distinguished Chairman of the Energy and Natural Resources Committee regarding the intent of the committee.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended so as to read:

A bill to designate certain lands for inclusion and potential inclusion in the National Wilderness Preservation System.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. HATFIELD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

ORDER FOR PERMISSION TO FILE STATEMENTS IN CONNECTION WITH S. 658 UNTIL 7 O'CLOCK TODAY

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that Senators may have until 7 o'clock today to insert statements in the RECORD in connection with the adoption of S. 658, Calendar Order No. 306.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR THE RECOGNITION OF SENATOR HELMS TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on tomorrow, after the two leaders or their designees have been recognized under the standing order, that Mr. HELMS be recognized for not to exceed 15 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I do not think the Senate will be in much longer, but I am constrained to put in a quorum, and I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there be a brief period for the transaction of routine morning business. I take it that inasmuch as we are in a recess situation there is no need to ask that resolutions not come over under the rule, but if that is necessary I so request.

The PRESIDING OFFICER. Without objection, it is so ordered.

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Chirdon, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Presiding Officer laid before the Senate messages from the President of the United States submitting sundry nominations which were referred to the appropriate committees.

(The nominations received today are printed at the end of the Senate proceedings.)

MESSAGES FROM THE HOUSE

At 5:05 p.m., a message from the House of Representatives delivered by Mr. Berry, one of its clerks, announced that:

The House disagrees to the amendments of the Senate to the bill (H.R. 7589) making appropriations for military construction for the Department of Defense for the fiscal year ending September 30, 1978, and for other purposes; agrees to the conference requested by the Senate on the disagreeing votes of the two Houses thereon; and that Mr. MCKAY, Mr. SIKES, Mr. MURTHA, Mr. STEED, Mr. LONG of Maryland, Mr. CHAPPELL, Mr. MAHON, Mr. MCEWEN, Mr. REGULA, and Mr. CEDERBERG were appointed managers of the conference on the part of the House.

The House agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 6138) to provide employment and training opportunities for youth.

The House agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the House to the amendment of the Senate to the bill (H.R. 4975) to amend the Public Health Service Act to authorize appropriations for fiscal year 1978 for biomedical research and related programs.

The House has passed the following bills and agreed to the following resolution in which it requests the concurrence of the Senate:

H.R. 1550. An act to reduce temporarily the rate of duty on certain ceramic insulators used in spark plugs;

H.R. 1904. An act to suspend until July 1, 1980, the duty on intravenous fat emulsion;

H.R. 2692. An act to suspend until the close of June 30, 1980, the duty on wood excelsior;

H.R. 2849. An act to suspend until July 1, 1978, the rate of duty on mattress blanks of rubber latex;

H.R. 2850. An act to suspend until the close of June 30, 1978, the duty on certain latex sheets;

H.R. 3093. An act to provide duty-free treatment for certain copying lathes used for making rough or finished shoe lasts and for parts of such lathes;

H.R. 3790. An act to suspend until the close of June 30, 1980, the duty on concentrate of poppy straw used in producing codeine or morphine;

H.R. 3946. An act to suspend for a temporary period the rate of duty on wool not finer than 46s;

H.R. 4018. An act to suspend until the close of June 30, 1980, the duty on certain doxorubicin hydrochloride antibiotics;

H.R. 4654. An act to reduce until the close of June 30, 1980, the duty on unmounted underwater lenses;

H.R. 5052. An act providing for the temporary suspension of duty on photographic color couplers and coupler intermediates;

H.R. 5263. An act to suspend until the close of June 30, 1980, the duty on certain bicycle parts;

H.R. 5322. An act to provide duty-free treatment for istle;

H.R. 2661. An act for the relief of Patricia R. Tully;

H.R. 3081. An act for the relief of Mrs. Chong Sun Yi Rauch; and

H. Con. Res. 291. A concurrent resolution to authorize certain corrections in the enrollment of H.R. 6138.

ENROLLED BILLS SIGNED

The Speaker has signed the following enrolled bills:

H.R. 4088. An act to authorize appropriations to the National Aeronautics and Space Administration for research and development, construction of facilities, and research and program management, and for other purposes.

H.R. 7556. An act making appropriations for the Departments of State, Justice, and Commerce, the Judiciary, and related agencies for the fiscal year ending September 30, 1978, and for other purposes.

The enrolled bills were subsequently signed by the President pro tempore.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. CANNON, from the Committee on Rules and Administration:

Without amendment:

S. Res. 184. A resolution amending Rule XV of the Standing Rules of the Senate relative to reading of amendments when submitted for Senate consideration.

S. Res. 185. A resolution to amend Rule III of the Standing Rules of the Senate relative to the reading of and amendments to the Journal.

S. Res. 186. A resolution to amend Rule XXVII of the Standing Rules of the Senate relative to the reading of conference reports when submitted for consideration.

S. Res. 226. An original resolution to amend Rule III, Rule XV, and Rule XXVII of the Standing Rules of the Senate relative to the reading of and amendments to the Journal, the reading of amendments when submitted for Senate consideration, and reading of conference reports when submitted for consideration, respectively.

By Mr. ROBERT C. BYRD (for Mr. McCLELLAN), from the Committee on the Judiciary:

With an amendment:

H.R. 5864. An act to approve with modifications certain proposed amendments to the Federal Rules of Criminal Procedure, to disapprove other such proposed amendments, and for other related purposes (Rept. No. 95-354).

EXECUTIVE REPORTS OF COMMITTEES

The following executive reports of committees were submitted:

By Mr. EASTLAND, from the Committee on the Judiciary:

Charles E. Graves, of Wyoming, to be U.S. attorney for the district of Wyoming.

Joseph F. Dolan, of Colorado, to be U.S. attorney for the district of Colorado.

Edward L. Filippine, of Missouri, to be U.S. district judge for the eastern district of Missouri.

(The above nominations were reported with the recommendation that they be confirmed, subject to the nominees' commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

By Mr. STENNIS, from the Committee on Armed Services:

Antonio Handler Chayes, of Massachusetts, to be an Assistant Secretary of the Air Force.

Hans Michael Mark, of California, to be Under Secretary of the Air Force.

Walter Barber LaBerge, of Virginia, to be Under Secretary of the Army.

(The above nominations were reported with the recommendation that they be confirmed, subject to the nominees' commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

Mr. STENNIS. Mr. President, as in executive session, from the Committee on Armed Services, I report favorably the nominations of Lt. Gen. Sam S. Walker, U.S. Army, to be general; and Maj. Gen. Thomas H. Tackaberry, U.S. Army, to be lieutenant general; and Maj. Gen. Charles A. Gabriel, U.S. Air Force, to be lieutenant general. Also, there are 27 in the Regular Army of the United States, for appointment to the grade of brigadier general—list beginning with Maj. Gen. Richard H. Thompson; and there are six for appointment in the Reserve of the Air Force in the grade of brigadier general and major general—list beginning with Brig. Gen. Robert Buechler; and Adm. David H. Bagley, U.S. Navy—age 56—for appointment to the grade of admiral on the retired list. Also, Vice Adm. Shannon D. Cramer, Jr., U.S. Navy—age 55—for appointment to the grade of vice admiral on the retired list; and Lt. Gen. Frank A. Camm, U.S. Army—age 55—to be placed on the retired list in the grade of lieutenant general; and Maj. Gen. John R. Thurman, III, U.S. Army, to be lieutenant general. I ask that these nominations be placed on the Executive Calendar.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STENNIS. In addition, there are 44 in the Navy to be permanent and temporary commanders and below—list beginning with Timothy M. Aspery; and 40 for promotion in the Reserve of the Air Force to the grade of lieutenant colonel—list beginning with Major Gene A. Budig. Also, the are 44 in the Marine Corps Reserve for permanent appointment to the grade of colonel—list begins with Vincent P. Andaloro. Since these names have already appeared in the CONGRESSIONAL RECORD and to save the expense of printing again, I ask unanimous consent that they be ordered to lie on the Secretary's desk for the information of any Senator.

The PRESIDING OFFICER. Without objection, it is so ordered.

(The nominations ordered to lie on the Secretary's desk were printed in the RECORD of June 23 and July 11, 1977, at the end of the Senate proceedings.)

HOUSE BILLS REFERRED

The following bills were each read twice by their titles and referred to the Committee on Finance:

H.R. 1550. An act to reduce temporarily the rate of duty on certain ceramic insulators used in spark plugs;

H.R. 1904. An act to suspend until July 1, 1980, the duty on intravenous fat emulsion;

H.R. 2692. An act to suspend until the close of June 30, 1980, the duty on wood excelsior;

H.R. 2849. An act to suspend until July 1, 1978, the rate of duty on mattress blanks of rubber latex;

H.R. 2850. An act to suspend until the close of June 30, 1978, the duty on certain latex sheets;

H.R. 3093. An act to provide duty-free treatment for certain copying lathes used for making rough or finished shoe lasts and for parts of such lathes;

H.R. 3790. An act to suspend until the close of June 30, 1980, the duty on concentrate of poppy straw used in producing codeine or morphine;

H.R. 3946. An act to suspend for a temporary period the rate of duty on wool not finer than 46s;

H.R. 4018. An act to suspend until the close of June 30, 1980, the duty on certain doxorubicin hydrochloride antibiotics;

H.R. 4654. An act to reduce until the close of June 30, 1980, the duty on unmounted underwater lenses;

H.R. 5052. An act providing for the temporary suspension of duty on photographic color couplers and coupler intermediates;

H.R. 5263. An act to suspend until the close of June 30, 1980, the duty on certain bicycle parts;

H.R. 5322. An act to provide duty-free treatment for istle.

The following bills were each read twice by their titles and referred to the Committee on the Judiciary:

H.R. 2661. An act for the relief of Patricia R. Tully; and

H.R. 3081. An act for the relief of Mrs. Chong Sun Yi Rauch.

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

By Mr. ALLEN (for himself, Mr. BARTLETT, Mr. BROOKE, Mr. HAYAKAWA, Mr. HELMS, Mr. NUNN, Mr. ROTH, Mr. SPARKMAN, Mr. STONE, and Mr. THURMOND):

S. 1897. A bill to authorize the making of grants to developing institutions to establish endowments for developing institutions; to the Committee on Human Resources.

By Mr. PEARSON:

S. 1898. A bill to provide for improved air service to small communities, expanded programs for the rehabilitation of rural high-

ways and bridges and railroad branchlines, and for other purposes; to the Committee on Commerce, Science, and Transportation.

By Mr. JAVITS (for himself, Mr. HUMPHREY, Mr. MOYNIHAN, Mr. MATHIAS, Mr. CLARK, Mr. RIEGLE, Mr. BAYH, Mr. MCGOVERN, Mr. WILLIAMS, Mr. KENNEDY, Mr. BROOKE, Mr. CHAFEE, Mr. DOLE, Mr. JACKSON, Mr. HEINZ, Mr. GLENN, Mr. RIBICOFF, and Mr. CASE):

S. 1899. A bill to amend title 38 of the United States Code to provide for the payment of supplemental tuition allowances for certain veterans pursuing educational programs; to the Committee on Veterans' Affairs.

By Mr. MCINTYRE (by request):

S. 1900. A bill to clarify the treatment of banks and other depository institutions under State and local revenue laws; to the Committee on Banking, Housing, and Urban Affairs.

By Mr. GRIFFIN (for himself and Mr. RIEGLE):

S. 1901. A bill to provide that a portion of the savings which are realized by the Department of Defense as a result of the closure or realinement of a military base in a community shall be returned to the community for economic recovery and adjustment; to the Committee on Government Affairs.

By Mr. DOMENICI:

S.J. Res. 75. A joint resolution designating the pine tree as the national arboreal emblem of the United States; to the Commmittee on the Judiciary.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

(Statements in connection with the above introduced bills and joint resolutions are printed at the conclusion of Senate proceedings today.)

ADDITIONAL COSPONSORS

S. 514

At the request of Mr. RIBICOFF, the Senator from North Dakota (Mr. BURDICK) was added as a cosponsor of S. 514, to amend title XVIII of the Social Security Act.

S. 543

At the request of Mr. PELL, the Senator from Kansas (Mr. DOLE) was added as a cosponsor of S. 543, to amend title VII of the Social Security Act to provide that benefit checks shall be mailed for delivery on the day preceding a Saturday, Sunday, or legal public holiday, and to amend section 3020 of title 38, United States Code, relating to the time of delivery of benefit checks paid under laws administered by the Veterans' Administration.

S. 1167

At the request of Mr. DOMENICI, the Senator from New Mexico (Mr. SCHMITT) was added as a cosponsor of S. 1167, relating to the commercialization of native latex rubber.

S. 1571

At the request of Mr. MCINTYRE, the Senator from New Mexico (Mr. SCHMITT) was added as a cosponsor of S. 1571, to incorporate the National Ski Patrol System.

S. 1728

At the request of Mr. ANDERSON, the Senator from South Dakota (Mr. ABOUREZK) and the Senator from Vermont (Mr. LEAHY) were added as cosponsors of S. 1728, the Domestic Violence Prevention and Treatment Act.

S. 1745

At the request of Mr. MCINTYRE, the Senator from Minnesota (Mr. ANDERSON) was added as a cosponsor of S. 1745, to amend the Employee Retirement Income Security Act.

S. 1783

At the request of Mr. ANDERSON, the Senator from South Carolina (Mr. HOLLINGS) was added as a cosponsor of S. 1783, to amend the Internal Revenue Code.

S. 1872

At the request of Mr. CHURCH, the Senator from California (Mr. CRANSTON), the Senator from Michigan (Mr. RIEGLE), and the Senator from South Dakota (Mr. ABOUREZK) were added as cosponsors of S. 1872, to provide price support for sugar.

S. 1864

At the request of Mr. DOMENICI, the Senator from New Mexico (Mr. SCHMITT) was added as a cosponsor of S. 1864, to establish the Salinas National Monument in New Mexico.

SENATE CONCURRENT RESOLUTIONS 40—SUBMISSION OF A CONCURRENT RESOLUTION RELATING TO ILLEGAL PAYMENTS TO MEMBERS OF CONGRESS BY KOREA

(Referred to the Committee on Governmental Affairs.)

Mr. ROTH submitted the following concurrent resolution:

S. CON. RES. 40

Resolved by the Senate (the House of Representatives concurring),

SECTION 1. (a) There is established a Special Commission to Investigate Illegal Korean Payments (hereafter in this resolution referred to as the "Commission"), which shall be composed of six members, three members of which shall be recommended by the Committee on Standards of Official Conduct of the House of Representatives, to become effective upon approval, by resolution of the House of Representatives, and three members of which shall be recommended by the Committee on Ethics of the Senate, to become effective upon approval, by resolution of the Senate.

(b) Recommendations for membership on the Commission shall be based on the integrity, impartiality, and good judgment of the individuals recommended, and by their willingness and ability to conduct a thorough, vigorous, and objective investigation of illegal or unethical behavior by Members of Congress.

(c) The Commission shall elect a chairman and a vice chairman from among its members, and adopt rules and procedures to govern its proceedings. The vice chairman shall preside over meeting of the Commission during the absence of the chairman, and discharge such other responsibilities as may be assigned to him by the Commission or the chairman. Vacancies in the membership of the Commission shall not affect the authority of the remaining members to execute the functions of the Commission and shall be filled in the same manner as original appointments to it are made.

(d) A majority of the members of the Commission shall constitute a quorum for the transaction of business, but the Commission may fix a lesser number as a quorum for the purpose of taking testimony or depositions.

SEC. 2. It shall be the duty of the Commission to assist the Committee on Standards of Official Conduct of the House of Representatives and the Committee on Ethics of the Senate in carrying out their responsibilities by conducting investigations and making determinations of fact with respect to all serious and substantial allegations that Members of the Senate or House of Representatives, or officers or employees thereof accepted illegal gifts or payments from the government of Korea or individuals employed or compensated by the government of Korea or engaged in any other illegal activity or conduct reflecting adversely on the Senate or the House of Representatives encouraged by any individuals acting for or on behalf of the government of Korea.

SEC. 3. (a) Members of the Commission shall receive, for each day in which they are engaged in the performance of their duties as members of the Commission, compensation at a daily rate equal to the per diem equivalent of the highest rate of gross compensation which may be paid to an employee of a standing committee of the Senate; and shall be entitled to reimbursement for transportation expenses and to receive a per diem, in lieu of subsistence, at the same rate as is payable to employees of the Senate, for each day on which they are away from their home or regular place of business or employment and are engaged in the performance of their duties as members of the Commission or in traveling to or from the place where such duties are to be performed.

(b) The Commission shall appoint, prescribe the duties and responsibilities of, and fix the compensation of a staff director and such other employees as may be necessary to enable it to carry out its functions and duties. The staff director may be paid at a maximum annual rate of compensation not exceeding the maximum annual rate which may be paid to the two committee employees of a standing committee of the Senate referred to in section 105(e)(3)(A) of the Legislative Branch Appropriation Act, 1968, as amended and modified, and other employees of the Commission may be paid at a maximum annual rate of compensation not exceeding the maximum annual rate which may be paid to the four committee employees of a standing committee of the Senate referred to in such section.

(c) The Commission is authorized to procure the temporary or intermittent services of individual consultants, or organizations thereof, in the same manner and under the same conditions as a standing committee of the Senate may procure such services under section 202(i) of the Legislative Reorganization Act of 1946.

(d) The Commission is authorized to utilize the services, information, facilities, and personnel of the Library of Congress, and the General Accounting Office; and the Librarian of Congress, and the Comptroller General of the United States are authorized to furnish such services, information, facilities, and personnel as may be requested by the Commission.

(e) The Commission is authorized to subpoena witnesses and documents. Subpoenas may be issued by the joint committee acting through the chairman or any other member designated by him, and may be served by any person designated by such chairman or other member anywhere within the borders of the United States. The chairman of the Commission, or any other member thereof, is hereby authorized to administer oaths to any witnesses appearing before the Commission. The Commission shall make recommendations to the Senate and the House of Representatives regarding any willful failure by a witness to comply with a subpoena or to give testimony when summoned under the authority of this subsection.

(f) The Commission shall have access to any data, evidence, information, report, anal-

ysis, document, or papers relating to any of the matters the Commission is authorized to investigate and which is in the custody or under the control of any department, agency, officer, or employee of the executive branch of the United States Government having the power under the laws of the United States to investigate any alleged criminal activities or to prosecute persons charged with crimes against the United States or of any committee of the Senate or the House of Representatives and which will aid the Commission in making the investigations and determinations of fact authorized by this resolution.

(g) Office space and office furniture, furnishings, and equipment shall be provided to the Commission in the same manner as for joint committees of the Senate and the House of Representatives.

SEC. 4. Upon the completion of its investigation under this section, the Commission shall report in writing the results of the investigation and its determinations of fact with respect to any current or former Member of the House of Representatives, or officer or employee of the House of Representatives to the Committee on Official Standards of Conduct of the House of Representatives and the results of the investigation and its determinations of fact with respect to any current or former Member of the Senate, or officer or employee of the Senate to the Ethics Committee of the Senate. The determinations of fact shall also be submitted in writing to the individual who was the subject of the investigation.

SEC. 5. The Commission is authorized to make such expenditures as may be necessary to carry out its functions. One-half of such expenses shall be paid from the contingent fund of the Senate and one-half from the contingent fund of the House of Representatives upon presentation of vouchers approved by the chairman of the Commission.

SEC. 6. The Commission shall cease to exist on February 1, 1978.

Mr. President, I am today submitting a concurrent resolution to create a special, independent commission to conduct the investigation of Korean influence-peddling on Capitol Hill.

This Commission would be established much along the lines of the special ethics commission I proposed at the time the Senate considered the new Ethics Code.

It was my belief that the public would have little confidence in any procedure under which the Members of the Senate and the House of Representatives conducted investigations of allegations of unethical conduct by their own Members. Moreover, I believe it is difficult for our Ethics Committees, despite the very fine people who serve on them, to conduct investigations of their own friends and colleagues. Conflicts of interest or personal ties and friendships inevitably are involved.

For that reason, I suggested that an outside body, composed of people with the highest reputations for integrity and impartiality, be created. This body would do the actual investigating and factfinding, and then it would report to the Ethics Committee, which would be responsible for recommending any sanctions which, under the Constitution, would have to be voted upon by the Senate.

The Senate tabled my amendment, in large part, I believe, because it did not have adequate time to consider the matter and the special committee we established to revise the Ethics Code had not held any hearings on it.

I believe that Members looking at the current plight of the Ethics Committee in the House might now come to a different conclusion about the wisdom of this approach.

Here is certainly a case where the public has many doubts about the ability and willingness of the committee to conduct a full and careful investigation of allegations involving Korean bribery and influence-peddling reportedly involving as many as 115 present and former House Members. These doubts have been stimulated by the charges and resignation of the committee's special counsel. Quite frankly, there was little pressure for a speedy, full investigation until Mr. Lacovara's resignation.

Now the House leadership is frantically seeking a new special counsel with a national reputation to give the investigation some credibility. The question is why, 18 months after the first revelations concerning the activities of Tongsun Park first came to light, the committee should now still be only at the point of trying to substantiate its own credibility as an investigating body.

If there had been an independent factfinding body, I believe the investigation would have wrapped up long ago. Those involved would have been called to testify—none have so far—and the appropriate sanctions for those guilty would have been applied.

Why do we not establish such a commission to look into this matter right now and establish all the facts?

I think we could get some very good people on this Commission—Mr. Jaworski, for example, or former Senator John Williams, who was called the conscience of the Senate. The public, the press, and the Members of Congress would have confidence that a panel of this caliber would do the job completely, fairly and independently.

This would be a commission created by Congress—for the purpose of cleaning up Congress. It would show that Congress is serious about integrity and ethics, that Congress can clean its own houses.

The Commission would be charged with making its investigation and reporting back by January 15. It would be given access to all the information now in the files of both Ethics Committees relating to the Korean scandals and to subpena whatever further information or individuals it would need.

Mr. President, there is a report today that Mr. Jaworski is considering accepting the House Speaker's offer that he head the House Ethics Committee investigation. I believe that if Mr. Jaworski does accept, he will conduct a full investigation, and, for that reason, I would not press this resolution. However, I believe that as an approach to congressional ethics, the concept of an independent factfinding commission should be reevaluated. The very first major investigation by either Ethics Committee since the new codes were enacted earlier this year have come up against the very difficulties I had predicted.

SENATE RESOLUTION 226—ORIGINAL RESOLUTION REPORTED TO AMEND STANDING RULES OF THE SENATE

(Placed on the Calendar.)

Mr. CANNON, from the Committee on Rules and Administration, reported the following resolution:

S. RES. 226

Resolved, That paragraph 1 of rule III of the Standing Rules of the Senate is amended by striking out all after the words "unless by unanimous consent" and inserting in lieu thereof the following: "or on motion decided without debate. Motions to correct the Journal shall be privileged, shall be confined to an accurate description of the proceedings of the preceding day, and debate thereon shall be limited to twenty minutes to be equally divided and controlled between the mover thereof and the majority leader or his designee.".

SEC. 2. That rule XV of the Standing Rules of the Senate is amended by adding at the end thereof the following new paragraph: "The demand for the reading of an amendment when presented to the Senate for consideration, including House amendments, may be waived on motion decided without debate when the proposed amendment has been identified by the clerk and is available to all Members at their desks in printed form.".

SEC. 3. That rule XXVII of the Standing Rules of the Senate is amended by adding at the end thereof the following: "The demand for the reading of a conference report when presented may be waived on motion decided without debate when the report is available to all Members at their desks in printed form.".

AMENDMENTS SUBMITTED FOR PRINTING

TIMBER SALES PROCEDURE—S. 1360

AMENDMENT NO. 529

(Ordered to be printed and to lie on the table.)

Mr. MELCHER (for the Committee on Agriculture, Nutrition, and Forestry) submitted an amendment intended to be proposed to the bill (S. 1360) to establish an Advisory Committee on Timber Sales Procedure appointed by the Secretary of Agriculture for the purposes of studying, and making recommendations with respect to, procedures by which timber is sold by the Forest Service, and to restore stability to the Forest Service timber sales program and provide an opportunity for congressional review.

BLACK LUNG—S. 1538

AMENDMENT NO. 530

(Ordered to be printed and to lie on the table.)

Mr. JAVITS submitted an amendment intended to be proposed by him to the bill (S. 1538) the Black Lung Benefits Revenue Act of 1977.

ADDITIONAL STATEMENTS

(Additional statements are printed at the conclusion of Senate proceedings today.)

CONCLUSION OF MORNING BUSINESS

The PRESIDING OFFICER. Is there any further morning business? If not, morning business is closed.

AUTHORIZING CERTAIN CORRECTIONS IN THE ENROLLMENT OF H.R. 6138

Mr. ROBERT C. BYRD. Mr. President, I ask the Chair to lay before the Senate a message from the House of Representatives on House Concurrent Resolution 291.

The PRESIDING OFFICER (Mr. MATSUNAGA) laid before the Senate House Concurrent Resolution 291 to authorize certain corrections in the enrollment of H.R. 6138.

The PRESIDING OFFICER. The question is on agreeing to the resolution.

The resolution was agreed to.

U.S. CAPITOL GROUNDS

Mr. ROBERT C. BYRD. Mr. President, there is a measure on the Unanimous Consent Calendar that was placed there on yesterday for passage by unanimous consent. I ask unanimous consent that the Senate proceed to the consideration of Calendar Order No. 322.

The PRESIDING OFFICER. Without objection, it is so ordered.

The bill (S. 1859) to amend the act of July 31, 1946, relating to the U.S. Capitol Grounds, was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 1 of the Act of July 31, 1946, as amended (40 U.S.C. 193a), is amended to include within the definition of the United States Capitol Grounds the following additional areas and portions of streets which are situated as follows:

(1) that portion of D Street Northeast from the east curb of Second Street Northeast to the east curb of First Street Northeast;

(2) that portion of Second Street Northeast from the south curb of F Street Northeast to the south curb of C Street Southeast;

(3) that portion of Constitution Avenue Northeast from the east curb of Second Street Northeast to the east curb of First Street Northeast;

(4) that portion of Pennsylvania Avenue Northwest from the west curb of First Street Northwest to the east curb of Third Street Northwest;

(5) that portion of Maryland Avenue Southwest from the west curb of First Street Southwest to the east curb of Third Street Southwest;

(6) that portion of Constitution Avenue Northwest from the east curb of Second Street Northwest to the east curb of Third Street Northwest;

(7) that portion of Independence Avenue Southwest from the west curb of First Street Southwest to the east curb of Third Street Southwest;

(8) that portion of Maryland Avenue Northeast from the east curb of Second Street Northeast to the east curb of First Street Northeast;

(9) that portion of East Capitol Street from the east curb of Second Street Southeast to the east curb of First Street Southeast;

(10) that portion of Independence Avenue Southeast from the east curb of Second Street Southeast to the east curb of First Street Southeast;

(11) that portion of C Street Southeast from the east curb of Second Street Southeast to the east curb of First Street Southeast;

(12) that portion of North Capitol Street from the south curb of Massachusetts Avenue to the north curb of Louisiana Avenue;

(13) that portion of New Jersey Avenue Northwest from the north curb of D Street Northwest to the north curb of Louisiana Avenue;

(14) all that area contiguous to, and surrounding, square numbered 724 from the property line thereof to the contiguous curb; and

(15) those areas contiguous to, and surrounding, the areas comprising the grounds of the United States Botanic Garden from the property line of such grounds to the contiguous curb.

SEC. 2. Section 1 of the Act of July 31, 1946, as amended (40 U.S.C. 193a), is amended (1) by deleting "First Street Northeast to Second Street Northwest." and inserting in lieu thereof "Second Street Northeast to Third Street Northwest"; and (2) by inserting immediately before the colon preceding the proviso, a comma and the following: "Pennsylvania Avenue Northwest from First Street Northwest to Third Street Northwest, Maryland Avenue Southwest from First Street Southwest to Third Street Southwest, Second Street Northeast from F Street Northeast to C Street Southeast; C Street Southeast from Second Street Southeast to First Street Southeast; that portion of Maryland Avenue Northeast from Second Street Northeast to First Street Northeast; that portion of New Jersey Avenue Northwest from D Street Northwest to Louisiana Avenue".

SEC. 3. On and after the effective date of this section, that portion of C Street Northeast from the west curb of Second Street Northeast shall be under the exclusive jurisdiction and control of the Capitol Police Board and the Architect of the Capitol in the same manner and to the same extent as such Board or the Architect of the Capitol has over other streets comprising the United States Capitol Grounds, and the Architect of the Capitol shall be responsible for the maintenance and improvement thereof.

SEC. 4. The foregoing provisions of this Act shall take effect upon the expiration of the thirty-day period following the date of the enactment of this Act.

SEC. 5. The Capitol Police Board is authorized to detail police from the House Office, Senate Office, and Capitol Buildings for police duty on the Capitol Grounds and on the Library of Congress Grounds.

SEC. 6. (a) Notwithstanding any other provision of this Act, with respect to those squares occupied by the United States Supreme Court and the Library of Congress, those streets or portions thereof referred to in the first section of this Act which surround such square shall be considered a part of the Capitol Grounds only to the face of the curbs contiguous to such squares.

(b) Nothing in this Act shall be construed as repealing, or otherwise altering, modifying, affecting, or superseding those provision of law in effect on the date immediately preceding the date of the enactment of this Act vesting authority in the United States Supreme Court police and the Library of Congress police to make arrests in adjacent streets.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95-346), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

For many years, the Capitol Grounds comprised only the area lying between Independence Avenue and Constitution Avenue and First Street East and First Street West and totaled 58.8 acres. In 1929–35, the Capitol Grounds were enlarged by the acquisition and development of the area north of Constitution Avenue, lying between that avenue and the Union Station. Since that time, certain streets have been included in the Capitol Grounds for purposes of jurisdiction by the Capitol Police. Some of these, for example Constitution Avenue between Second Street NW. and First Street NE. were designed to be maintained by the District of Columbia, while others have been maintained by the Architect of the Capitol. When the District "home rule" bill (Public Law 93-198) was enacted, additional streets were added to the Capitol Grounds in order to further enable the grounds to be patrolled and security to be maintained by the Capitol Police.

Recently, it has become apparent that Capitol Police jurisdiction over traffic and other matters on the Capitol Grounds for security purposes would be strengthened by the addition of several streets that had not previously been included. The committee therefore deemed it appropriate to bring those within the definition of Capitol Grounds.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

ORDER FOR THE CONSIDERATION OF S. 1538 TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on tomorrow, after the two leaders have been recognized and special orders have been completed, the Senate proceed to the consideration of Calendar Order No. 312, the black lung bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

TIME-LIMITATION AGREEMENT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on that bill there be a time limitation of 2 hours to be equally divided between Mr. RANDOLPH and Mr. JAVITS; that there be a time limitation on an amendment by Mr. JAVITS of 2 hours; that there be a time limitation on an amendment by Mr. CHAFEE of 1 hour, and that there be a time limitation on all other amendments in the first degree of 1 hour; that there be a time limitation on any amendment to an amendment of one-half hour; that there be a time limitation on any debatable motion or appeal or point of order, if such is submitted to the Senate for its decision or if the Chair entertains discussion, of 20 minutes, and that the agreement be in the usual form.

Mr. President, I modify further the agreement on the black lung bill as follows.

I further ask unanimous consent that action on that bill be completed before the close of business tomorrow and that paragraph 3 of rule XII be waived.

The PRESIDING OFFICER. Without objection, it is so ordered.

The text of the unanimous consent agreement reads as follows:

Ordered, That on Thursday, July 21, 1977, after the Special Orders, the Senate proceed to the consideration of S. 1538 (Order No. 312), a bill to amend title IV of the Federal Coal Mine Health and Safety Act to improve the black lung benefits program established thereunder, to impose an excise tax on the sale or use of coal, and for other purposes, debate on any amendment in the first degree (except an amendment by the Senator from Rhode Island (Mr. CHAFEE), on which there shall be 1 hour, and an amendment by the Senator from New York (Mr. JAVITS), on which there shall be 2 hours) shall be limited to 1 hour, to be equally divided and controlled by the mover of such and the manager; debate on any amendment in the second degree shall be limited to 30 minutes, to be equally divided and controlled by the mover of such and the manager of the bill; and debate on any debatable motion, appeal, or point of order which is submitted or on which the Chair entertains debate shall be limited to 20 minutes, to be equally divided and controlled by the mover of such and the manager of the bill: *Provided*, That in the event the manager of the bill is in favor of any such amendment or motion, the time in opposition thereto shall be controlled by the Minority Leader or his designee: *Provided further*, That no amendment that is not germane to the provisions of the said bill shall be received.

Ordered further, That on the question of the final passage of the said bill, debate shall be limited to 2 hours, to be equally divided and controlled, respectively, by the Senator from West Virginia (Mr. RANDOLPH) and the Senator from New York (Mr. JAVITS): *Provided*, That the said Senators, or either of them, may, from the time under their control on the passage of the said bill, allot additional time to any Senator during the consideration of any amendment, debatable motion, appeal, or point of order.

Ordered further, That final passage on this bill shall occur not later than the close of business on Thursday, July 21, 1977.

ORDER FOR RECESS UNTIL 9:30 A.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business today it stand in recess until the hour of 9:30 a.m. tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER OF PROCEDURE TOMORROW

Mr. ROBERT C. BYRD. Mr. President, is the order entered that upon the conclusion of orders for the recognition of Senators on tomorrow the Senate will proceed to the consideration of the black lung bill?

The PRESIDING OFFICER. That is correct.

PROGRAM

Mr. ROBERT C. BYRD Mr. President, tomorrow the Senate will convene at 9:30 a.m. After the two leaders or their designees have been recognized under the standing order, Mr. HELMS will be recognized for not to exceed 15 minutes, after which the Senate will proceed to the consideration of the black lung bill, S. 1538, Calendar Order No. 312, under a time agreement. There will be rollcall votes throughout the day on motions and amendments in relation to that bill and action on the bill will be completed tomorrow.

Other measures may be taken up if cleared for action by the joint leadership if time permits.

I think that is about it. I should think that there is a likelihood that the Senate could be into the evening tomorrow. I hope it will not be, but I do not see any reason why the Senate would be in late on Friday. I also do not see any reason why the Senate would be in late on Monday in view of the agreement that has been reached in connection with the public financing bill.

I should think that on Monday sometime around 6 o'clock or 6:30 p.m. the Senate should be ready to go out.

RECESS UNTIL 9:30 A.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in recess until 9:30 a.m. tomorrow morning.

The motion was agreed to; and at 6:04 p.m. the Senate recessed until tomorrow, Thursday, July 21, 1977, at 9:30 a.m.

NOMINATIONS

Executive nominations received by the Senate July 20, 1977:

NATIONAL TRANSPORTATION SAFETY BOARD

James B. King, of Massachusetts, to be a member of the National Transportation Safety Board for the term expiring December 31, 1981, vice William R. Haley, term expired.

NATIONAL MEDIATION BOARD

Robert Oberndoerfer Harris, of the District of Columbia, to be a member of the National Mediation Board for the term expiring July 1, 1980, vice Kay McMurray, term expired.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

(Statements in connection with bills and joint resolutions introduced today are as follows:)

By Mr. ALLEN (for himself, Mr. BARTLETT, Mr. BROOKE, Mr. HAYAKAWA, Mr. HELMS, Mr. NUNN, Mr. ROTH, Mr. SPARKMAN, Mr. STONE, and Mr. THURMOND):

S. 1897. A bill to authorize the making of grants to developing institutions to establish endowments for developing institutions; to the Committee on Human Resources.

DEVELOPING INSTITUTIONS ENDOWMENT ACT OF 1977

Mr. ALLEN. Mr. President, I am introducing today a bill to authorize grants to developing institutions to help establish private endowment funds to assist those institutions in strengthening their reliance on private assistance and to lessen their reliance on direct Federal grants in aid. The legislation is entitled the Developing Institutions Endowment Act of 1977, and I am introducing it at the request of the Moton Foundation and the United Negro College Foundation.

The measure is designed to authorize the Department of Health, Education, and Welfare to expend funds from this year's HEW appropriation to assist developing institutions—covered under title III of the Higher Education Act of 1965—in initiating programs to allow such institutions to place increased reliance on private financial support.

As Senators know, title III of the Higher Education Act of 1965 does not extend beyond October 1, 1979, except under the saving provision contained in section 400 (14) of the General Education Provisions Act which would extend programs under title III on an emergency basis for 1 year. Therefore, as matters now stand, this year's appropriation of $120 million for title III programs may provide the last opportunity for grant disbursement to the institutions covered under title III.

Fortunately, the $120 million appropriated for fiscal year 1978 does increase the fiscal year 1977 appropriation by $10 million. Thus, existing title III programs can be fully funded for fiscal year 1978, and the additional $10 million would still be available in that year for the programs contemplated by the proposal.

Inasmuch as there does appear some substantial possibility that title III programs may not be authorized to continue beyond fiscal year 1979, the proposal is designed to permit HEW to provide Federal matching funds as seed money—approximately $250,000 per institution—for the establishment of private endowments for the benefit of 40 or more of the institutions involved.

The Federal seed money authorized by the bill would be utilized in an endowment funding plan which would encompass a combination of Federal funds, private gifts, and commercial loans invested over a period of time sufficient to provide: First, income to the institution's operating budget; second, repayment of the loan; and third, capital accumulation in the form of endowment. The endowment developed could represent as a minimum accomplishment at the end of an appropriate investment period the combined sum of all initial gift and loan moneys. The funding plan actually used by a particular institution selected for participation would obviously be subject to many variations but, as an appendix to my remarks, I am including an example of one such endowment plan which was developed by Dr. F. D. Patterson, president of the Moton Foundation.

Mr. President, there are many excellent institutions throughout the country that participate in Federal programs under title III of the Higher Education Act of 1965. Each of the 50 States contains an institution which would potentially benefit from this proposal. Moreover, higher education in general will benefit from enactment of the proposal since it does represent a logical approach to easing and assisting the transition from a high degree of direct Federal aid

under title III to increased private financial support for all developing colleges and universities as they work to establish an adequate base for funding from private sources.

Mr. President, I am joined in seeking passage of this legislation by Senators BARTLETT, BROOKE, HAYAKAWA, HELMS, NUNN, ROTH, SPARKMAN, STONE, and THURMOND. I am sure that each would also join me in urging that hearings be held at a very early date in the appropriate committee or subcommittee of the Senate so that this laudable plan advanced by the Moton Foundation and the United Negro College Fund can be given effect in this fiscal year. We anticipate that an identical measure will be introduced in the House of Representatives, and we hope that action in that House will also be prompt and favorable.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point the plan to which I previously referred developed by Dr. Patterson.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

NATIONAL DEVELOPING INSTITUTIONS ENDOWMENT ACT OF 1977

The Act passed in 1965 to provide monies to assist developing institutions upgrade their educational programs has over several years of funding provided participating institutions with an indispensable resource. This was accomplished by the basic institutional development program in the first several years of effort under the Act. In 1974 the Advanced Institutional Development Plan was added as a means of phasing out federal assistance to institutions that had achieved substantial progress. In order to do this larger grants considered terminal were made with the stipulation that over the 3 to 5 year expenditure period involved, such institutions would have found monies to replace the federal grants, thus retaining the quality of effort the federal monies had made possible. This stipulation has proven unrealistic and burdensome because if these colleges had been able to attain these monies, they would not have needed federal assistance.

It is necessary, however, to preserve the quality of effort achieved and it is felt that this can be done under a program of endowment development in which a portion of monies available as AIDP grants would be given to institutions as conditional or matching grants. The matching could be done either with new gift monies or with substantial loans placed in a trust arrangement and supervised by expert investment management. The College Endowment Fund Plan was developed to meet this critical situation and its institution would produce the following benefits:

1. Will enable the Office of Education to develop an orderly and sound arrangement for phasing out or discontinuing AIDP grants by providing the institutions involved with a plan to achieve the new funding expected to insure budget stability.

2. Experience covering grants from a wide variety of sources over a long period of years offers significant proof that grants made in the form of challenge and requiring matching are uniformly successful. Such grants, however, must be realistic in terms of the capability of the institutions involved. Developing institutions have less capability than advanced institutions; thus the terms involved in challenge grants should reflect this level of capability. A study of CEFP has indicated that one important way in which challenges may be successfully met is through matching loan funds.

3. Loans in the amount of 3 times the grant money and invested over a 25-year period in highest quality fixed interest securities will yield escalating income to the operating budget and achieve a final endowment equal to the combined value of the gift and the loan monies which initiated the process. Thus, grant terms along these lines will measurably strengthen the fund raising capability of developing institutions.

4. Unless these institutions are to regress in the quality of their performance substantial emphasis must be given to endowment building to provide an essential budget supplement or resource. Studies done show that student tuitions on the one hand and current gifts for operating expenses on the other, in view of inflation and mounting standards of performance leave a widening gap between the above resources and the monies required to adequately cover educational and general costs. Hence, the importance of the Endowment Plan.

5. This plan will be valuable for developing institutions regardless of race or the region in which they are located. Endowment will not meet the total need, but endowment building can and must be a continuing process given equal importance in educational funding to the generation of resources from tuition and current gifts.

6. By seeking loans from sources with long term monies to invest endowment building offers a new and significant opportunity to the free enterprise system to become a potent resource in strengthening higher education through loans as well as grants. The process reverses the trend of looking to the federal government for an ever increasing largess by facilitating the contact of the colleges with resources of a non-federal character.

7. Colleges will be strengthened because they will be rewarded in accordance with their ability to meet challenge grants with either gifts or borrowed monies from non-federal sources.

8. Challenge grants will stimulate colleges to manage their resources more effectively and to improve the quality of development efforts in order that they may be increasingly effective as they approach non-public sources.

Thus, the legislation proposed will foster institutional independence and will provide through the federal challenge grants a significant inducement to fund raising efforts from non-federal sources.

This plan will in all ways be similar in import and impact to the generous federal grants now being reported to the National Endowment For The Arts as challenges for endowment building. It should be noted, however, that the constituencies from which the matching monies must come in the case of developing colleges represents a more limited potential and therefore terms must be correspondingly generous.

MINI ENDOWMENT PLAN

The College Endowment Funding Plan represents a combination of gift and loan monies invested over a period of time sufficient to provide (1) income to the operating budget; (2) repayment of the loan; and (3) capital accumulation in the form of endowment which would represent as a minimum accomplishment the combined sums of gift and loan monies at the end of a 25-year period after all other obligations have been met. Since the above combination is subject to many variations, it was decided to use a very simple form in which gift monies would be matched by three identical sums of loan monies to constitute the investment package, which will be composed of fixed interest securities of the highest quality. The specific objective of endowment building to result from this combination is the achievement of an endowment fund of $1 million at the conclusion of the program. In order for this to occur, it is necessary that the income to the operating budget be 4 percent annually of the earnings beginning at the end of the first year. At the end of the first year, the amount going to the operating budget would be $10,000. Each year thereafter, because of capital accumulation, the amount going to the budget will increase annually and the endowment to be achieved when all obligations have been met, including interest payments, taxes and return of principal, will be $1 million plus dollars. In the meantime, the escalating 4 percent will enable the operating budget to receive approximately $500,000 over the 25-year period of the program.

When amortization has been accomplished and a $1 million of endowment is available free and clear, a college may wish either to continue the 4-percent input to the operating budget or $40,000 or a 5-percent input to the operating budget or $50,000. In either case, it is assumed that the $1 million, even if conservatively invested, would earn more than either 4 or 5 percent and therefore capital accumulation would continue. This, of course, will be necessary in view of inflation and other increased costs.

It is suggested that no fewer than five colleges will participate in this first undertaking each of whom will have $250,000 of gift funds to be matched by $750,000 of loan funds. This is the simplest plan that can illustrate endowment building without the use of the endowment component which would be required if the gift monies were for a specified program and would need to be spent during the first 10 years of the program's operation. By limiting the input to the operating budget of 4 percent of earned income, capital accumulation will be faster and lenders will be protected by the favorable capital accumulation which is retained over and above expenditures for budget, interest, taxes and loan payment.

It should be further explained that this plan which eliminates the necessity for an endowment component changes the ratio of loan to gift money to 3 to 1 as compared with the original version of 2 to 1 in which a 10-percent expenditure of the program gift was necessary.

A recent ruling from the Internal Revenue Service approves the operation of the College Endowment Funding Plan with the United Negro College Fund serving as the monitoring institution. It is understood that the services to be rendered by UNCF will not impair its tax exemption. IRS states that monies borrowed by individual colleges even though they are participating in a group activity, will be taxed to each college based on the amount said college has borrowed. This means the amount of tax will be minimal as contrasted with what the tax would be if the borrowings were taxed as a combined total.

The Equitable Life Assurance Society has agreed to make available $1,100,000 or one-third of the borrowed monies required by the $5 million dollar loan package of gift and borrowed monies and to serve as the lead lender, representing the other lenders. This will include guidance in the selection of securities, drafting of terms and selection of the financial institution to administer agreed to financial arrangements. It is assumed that the spread between the cost of borrowed monies and the investment return will be approximately 1¼ percent. Of course, earnings will be on both the gift and loan monies at the same level of return.

Contribution $250,000, loan $750,000

Total investment	Increase at 7 percent	Interest and principal at 8 percent	Loan principal	Tax	Current at 4 percent	Balance

By Mr. PEARSON:

S. 1898. A bill to provide for improved air service to small communities, expanded programs for the rehabilitation of rural highways and bridges and railroad branchlines, and for other purposes; to the Committee on Commerce, Science, and Transportation.

Mr. PEARSON. Mr. President, I introduce today for appropriate reference, a bill to improve the quality of transportation services available to our Nation's rural areas and small communities.

Mr. President, it is an established national transportation policy that all rural areas, together with the urban areas, shall be served by adequate transportation systems. Yet, the quality of transportation services available to our rural areas not only is not keeping up with rural growth, but is, in fact, deteriorating. Small communities have lost air service, unsafe roads and bridges have created safety hazards and adverse economic effects on affected communities, and rail abandonments have brought economic hardship to rural communities. I learned of these and other deficiencies in rural transportation services at a hearing on rural transportation which the Senate Committee on Commerce, Science, and Transportation conducted in Kansas in April of this year.

Mr. President, the Senate is beginning to address itself to the transportation problems of rural areas. Recently, the Senate passed and sent to the House S. 208, the National Mass Transportation Assistance Act of 1977, which would allow public transportation projects to use Federal assistance for operating expenses as well as for capital expenses. The availability of Federal assistance for operating expenses should encourage the development of public transportation projects in rural areas, particularly for the elderly and the handicapped, because resources to maintain such projects are especially scarce in our rural areas. But more must be done to improve rural transportation services. It is to these other unmet needs that my bill addresses itself.

IMPROVED AIR SERVICE TO SMALL COMMUNITIES

Mr. President, small communities in isolated rural areas depend upon regularly scheduled air service to maintain their economic health and to attract new industrial and commercial development. As rail passenger service has declined over the years to the bare-bones Amtrak system, the Nation's small communities have been forced to rely increasingly upon scheduled air services for intercity travel.

Unfortunately, the character and quality of air service to small communities has deteriorated since 1967 despite gradually increasing local air service subsidy from the Federal Government. In the past 10 years, over 70 small communities have lost certificated air service altogether. As the local service air carriers have shifted to larger equipment, service to the smallest communities has become increasingly uneconomic, despite the availability of Federal support.

In an effort to reverse this trend, I introduced in 1970 the Commuter Air Carrier Act, a bill which would have provided for expedited certification of commuter airlines, operating small aircraft tailored for small markets, and for subsidy payments to those airlines when justified by the economics of small community air service.

The Congress did not act on my bill in the 91st Congress; but the small community air service problems of declining frequency of service and deletion of points from air carrier certificates did not abate. With each passing year, additional communities suffered deterioration of service as schedules became more convenient for the long haul passenger and less convenient for the feeder traffic to the hub airports.

Two marketplace experiments have developed in recent years which have underscored the importance of the approach outlined in my bill in the 91st Congress: The Allegheny commuter program has been extremely successful in generating new traffic through increased frequency of service with small aircraft, and Air Midwest has been certificated by the CAB as an air carrier providing scheduled air service exclusively from small communities in Kansas to the Wichita, Kans., and Denver hubs. Air Midwest uses exclusively the small equipment designed for feeder or commuter-type operations in small communities.

Mr. President, on January 18 of this year, I introduced S. 292, a bill to provide for comprehensive regulatory reform of CAB practices and procedures. Contained in that bill is an updated version of the legislation offered in 1970. I am gratified to report that the Committee on Commerce, Science, and Transportation, during consideration of aviation regulatory reform this month, has incorporated in its bill the essential elements of my proposal to certificate a new level of air carriers which will specialize essentially in small community service with subsidy where economically justified.

Mr. President, the Rural Transportation Act of 1977, which I am introducing today, incorporates those provisions of the committee's draft legislation on aviation regulatory reform that reflect the service to small communities program which is so necessary if improved service in those markets is to be achieved. If this legislation, set forth as title I of the bill I am offering today, becomes law in this Congress, I am confident that the continual decline in small community air service will be arrested and reversed.

Because improved air service is an essential ingredient in any comprehensive program to upgrade the quality of rural transportation systems, I believe that the program outlined in this legislation is of major importance to the small communities of this Nation. Their efforts to attract new job opportunities, in many cases, will depend upon their ability to retain—and improve—the character and quality of regularly scheduled air transportation services to their communities.

AID TO RURAL ROADS

The movement of grain and other agricultural commodities from farm to market requires a well maintained system of rural highways and bridges. Farmers, however, are plagued by deteriorating roads and unsound and unsafe bridges. Farm equipment has been increasing in size to the point where some farm tractors weigh as much as heavy highway construction equipment. Modern agriculture requires such equipment, yet many rural bridges cannot bear the weight or are too narrow to accept farm implements.

Local governments are trying to keep up with the necessary improvements, but the financial burden is too great. My bill would aid States and local governments to meet this financial burden by increasing the level of Federal assistance to rural highways and by expanding the Federal bridge replacement program.

The bill would increase the authorization for the Federal-aid secondary highway system in rural areas from $400 million to $500 million for fiscal year 1978 and to $600 million for fiscal years 1979 and 1980. The authorization for the safer off system road program would be increased from $200 to $250 million for

fiscal year 1978, and $300 million for fiscal years 1979 and 1980.

The bill would expand the existing Federal bridge replacement program by increasing the funding level from $180 million to $400 million annually through 1990. Federal funds would be available for bridge repair as well as bridge replacement. The bill recognizes the special bridge replacement problems of rural areas by earmarking 15 percent of the funds for bridges which have been designated by county officials as in need of attention. Moreover, the bill would reduce the local matching share from 25 to 10 percent.

IMPROVEMENTS TO THE LOCAL RAIL ASSISTANCE PROGRAM

Mr. President, agriculture is highly dependent upon dependable, low-cost rail transportation. Today, however, many rural areas are faced with the prospect of losing their rail service. System maps, which the railroads were required to submit to the Interstate Commerce Commission, indicate that as much as 10 percent of the Nation's rail mileage may be abandoned in the near future. With passage of the Regional Railroad Revitalization Act of 1973 and the Railroad Revitalization and Regulatory Reform Act of 1976, Congress attempted to aid the States in addressing the problem of rail abandonments.

Those laws created State rail assistance programs which provided for Federal subsidies to rehabilitate rail lines and encouraged the States to become involved in rail planning. After a year of operation, the necessity for some improvements in the program has become apparent. The bill would make amendments to the local rail assistance program contained in these laws that would improve their administration and grant more flexibility to the States to determine which rehabilitation projects should be undertaken.

CONCLUSION

Mr. President, this bill represents a comprehensive approach to meeting critical rural transportation needs. In the past, rural transportation problems have not received the attention that they deserve. The bill that I am introducing is an effort, therefore, to bring together into one proposal the diverse elements of a coordinated rural transportation policy.

Mr. President, I ask unanimous consent that the text of my bill, together with a section-by-section summary of the provisions of the bill, be printed in the RECORD following these remarks.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 1898

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Rural Transportation Act of 1977".

SEC. 2. DECLARATION OF POLICY.

The Congress finds and declares the following:

(1) A safe and efficient multimodal transportation system is vital to the economic and social well-being of the Nation's small communities and rural areas.

(2) Improved air service to small communities is essential to link rural areas with the Nation's population centers and to stimulate the growth of small communities.

(3) The economic and efficient movement of agricultural commodities has been impeded by an inadequate system of rural highways and deteriorating railroad branchline service.

(4) Unsound bridges pose a serious safety hazard, contribute to energy consumption by forcing detours, increase the transportation costs of agriculture, and impose an adverse economic impact on affected communities.

(5) Funding levels in existing programs have been inadequate to address the growing deterioration of the Nation's rural highways and bridges; and

(6) More attention should be given to the promotion and maintenance of a safe, efficient, and economical transportation system for agriculture and rural development in the United States.

TITLE I—SMALL COMMUNITY AIR SERVICE IMPROVEMENTS

SEC. 101. COMPENSATION FOR SMALL COMMUNITY AIR SERVICE.

Subsection 406(a) and 406(b) of the Federal Aviation Act of 1958 (49 U.S.C. 1376) are amended to read as follows:

"AUTHORITY TO DETERMINE AMOUNTS OF COMPENSATION

"SEC. 406. (a) With respect to any air carrier entitled to receive compensation from the Board pursuant to an order of the Board issued under the provisions of this section for performance of services on January 1, 1977, the Board shall, during the 7-year period beginning on July 1, 1978, upon its own initiative or upon petition of such air carrier (1) periodically determine, after notice and hearing, the fair and reasonable rates of compensation for air transportation under the same general criteria used on January 1, 1977, the facilities used and useful therefor, and the services connected therewith, and make such rates effective from such date as it shall determine to be proper; (2) prescribe the method or methods for ascertaining such rates of compensation for each air carrier or class of air carriers; and (3) publish the same.

"(b) In periodically determining fair and reasonable rates of compensation under this section during such 7-year period, the Board considering the conditions peculiar to transportation by aircraft and to the particular air carrier or class of air carriers, may determine different rates for different air carriers or classes of air carriers, and different classes of service. In determining the rate for each carrier or class of carriers, the Board shall among other factors consider, (1) such standards respecting the character and quality of service to be rendered by air carriers as may be prescribed by or pursuant to law; and (2) the need of each such air carrier for compensation sufficient, together with all other revenue of the air carrier from the service for which the compensation is being paid (and after July 1, 1982, together with all other revenue of the air carrier from other sources also), to enable such air carrier under honest, economical, and efficient management, to provide air service of at least the same extent, character, and quality as that provided as of January 1, 1977, and to maintain and continue the development of air transportation to the extent and of the character and quality required for the commerce of the United States, the Postal Service, and the national defense.".

SEC. 102. COMPENSATION FOR ESSENTIAL AIR TRANSPORTATION TO SMALL COMMUNITIES.

Title IV of the Federal Aviation Act of 1958, as amended (49 U.S.C. 1371 et seq.), is further amended by adding at the end thereof the following new section:

"COMPENSATION FOR ESSENTIAL AIR TRANSPORTATION: AUTHORITY TO PROVIDE COMPENSATION

"SEC. 418. (a)(1) In furtherance of the congressional policy to encourage and foster the development of safe and reliable scheduled air transportation for small communities and isolated areas, the Board shall, according to the provision of this section, determine fair and reasonable amounts of compensation for, and make payments of compensation to, any eligible air carrier who is providing or will provide essential air transportaton to an eligible point, as provided in this section. Such compensation shall be made available from appropriations made to the Board for that purpose.

"(2) The Board shall, by rule, establish guidelines to be used by the Board in computing the fair and reasonable amount of compensation required to insure the continuation of essential air transportation at any eligible point. Such guidelines shall include expense elements based upon representative costs of air carriers providing scheduled air transportation of persons, property, and mail, using aircraft of the type or types determined by the Board to be appropriate for providing essential service to such points.

"AIR CARRIER ELIGIBILITY

"(b) An eligible air carrier, for purposes of this section, shall be an air carrier who—

"(1) holds either a certificate to engage in interstate and overseas air transportation issued under section 401, or a certificate to engage in local air transportation issued under section 419, or both; and

"(2) if such air carrier will be providing essential air transportation to an eligible point in the State of Alaska, holds authority to engage in such air transportation issued by the proper agency of the State of Alaska.

"POINTS ELIGIBLE FOR COMPENSATION

"(c) For purposes of this section, the term 'eligible point' shall include—

"(1) any point in any State or the District of Columbia which was on July 1, 1978, listed on the certificate, issued under section 401 before July 1, 1978, to any air carrier, regardless of whether authority to serve such point has been suspended by order of the Board; and

"(2) any other point designated by the Board under subsection (d) of this section.

"Each point designated as an eligible point according to paragraph (1) shall remain so designated until July 1, 1988. Before July 1, 1988, the Board shall review the points designated as eligible points under paragraph (1), and, applying the criteria established under subsection (d) of this section (as well as other criteria the Board deems appropriate), determine which of those points shall continue to be designated as eligible points after July 1, 1988.

"ADDITION OF ELIGIBLE POINTS

"(d)(1) By no later than July 1, 1979, the Board shall, by rule, establish objective criteria for designating points as additional eligible points. In establishing or modifying such criteria, the Board shall consider, among other factors, the level of traffic generated by the point concerned, its future traffic generating potential, the cost to the Government of providing essential air transportation to the point, the alternative means of transportation available for access to the national transportation system and its principal communities of interest, and the degree of isolation of the point from the national air transportation system. The Board may, from time to time, by rule, modify the criteria established by it under this paragraph.

"(2) By no later than July 1, 1979, the Board shall begin to review those points in

any State or the District of Columbia which were deleted from any certificate of public convenience and necessity between July 1, 1968, and July 1, 1978, to determine whether any such point shall be designated as an eligible point under the criteria established under paragraph (1). The review and designation of any such points shall be completed before July 1, 1981.

"(3) On or after July 1, 1981, the Board, upon application by any interested party, may designate any point as an eligible point under the criteria established under paragraph (1).

"(4) The designation of any point as an eligible point may be withdrawn, according to procedures established by the Board, if the point no longer meets the criteria for designation as an eligible point, except that the designation of a point under subsection (e)(1) as an eligible point may not be withdrawn before July 1, 1988.

"APPLICATION; REVIEW OF COMPENSATION

"(e)(1) When the Board determines that essential air transportation will no longer be provided to any eligible point without compensation under this section, the Board shall entertain and consider applications by eligible air carriers who are willing to provide essential air transportation to such point for compensation under this section. In reviewing such applications, the Board shall, among other factors, specifically consider—

"(A) the desirability of developing an integrated linear system of air transportation whenever such a system most adequately meets the air transportation needs of the communities involved; and

"(B) the experience of an applicant in providing scheduled air service in the vicinity of the communities for which essential air transportation is proposed to be provided.

"(2) The Board shall determine the amount of compensation to be paid any individual eligible air carrier, for the provision of essential air transportation at each eligible point, according to the guidelines established by it under subsection (a)(2). The Board shall continue to pay compensation to an eligible air carrier only for so long as the Board determines it is necessary in order to maintain essential air transportation at the eligible point for which compensation is being paid. The Board shall make payments of compensation under this section at times and in a manner determined by the Board to be appropriate.

"(3) The Board shall periodically review the amount of compensation being paid an eligible air carrier under this section. Based upon that review, using the guidelines established by it under subsection (a)(2), the Board may make appropriate adjustments in the amount of compensation which it will pay to that eligible air carrier after such review. If an air carrier fails satisfactorily to provide the essential air transportation to an eligible point specified by the Board, for the amount of compensation computed by the Board, then the Board may terminate compensation payments to such air carrier.

"COMPETING APPLICATIONS

"(f)(1) After July 1, 1982, the representatives of any eligible point, together with any air carrier holding a certificate issued under section 401 or 419, may file an application with the Board seeking to have any compensation provided under section 406 to the air carrier then serving such eligible point terminated in order to allow the applicant air carrier to provide air transportation to that eligible point for compensation under this section. The Board shall grant such application, taking into consideration the objectives specified in subparagraphs (A) and (B) of subsection (e)(1), if the applicant can show after notice and hearing that termination of the compensation being paid under section 406, and the provision of service by such applicant air carrier with compensation under this section will not result in a substantial—

"(A) improvement in the air service being provided such eligible point at the same level of compensation; and

"(B) decrease in the amount of compensation that will be required to continue essential air transportation to that eligible point.

"(2) After July 1, 1982, any air carrier holding a certificate issued under either section 401 or 419 may file an application with the Board seeking to have the compensation provided under this section to an air carrier which has been serving an eligible point for more than 3 years terminated in order to allow the applicant air carrier to provide essential air transportation to such eligible point for compensation under this section. The Board shall grant such application, taking into consideration the objectives specified in subparagraphs (A) and (B) of subsection (e)(1), if the applicant air carrier can show that termination of the compensation being provided to the air carrier then serving such eligible point, and the provision of essential air transportation for compensation under this section by the applicant air carrier will result in a substantial—

"(A) improvement in the air transportation being provided such eligible point; or

"(B) decrease in the amount of compensation that will be required to continue essential air transportation to that eligible point.

"(3) The Board shall set such application for hearing and dispose of each application filed with it under this subsection according to regulations established by the Board.

"ESSENTIAL AIR TRANSPORTATION

"(g)(1) The Board, after specifically considering the views of the communities affected and the proper State agency involved, shall establish criteria to be used in determining the essential air transportation for eligible points for which compensation may be provided under this section. Such criteria shall include, among other things, the minimum frequency of air transportation to an eligible point, the minimum specifications of the aircraft to be used in providing such air transportation, and the maximum fares.

"(2) For the purposes of this section, the term 'essential air transportation' means scheduled air transportation provided under such criteria as the Board determines satisfies the needs of the community concerned for air transportation to one or more communities of interest and insures access to the Nation's air transportation system, at rates, fares, and charges which are not unjust, unreasonable, unjustly discriminatory, unduly preferential, or unduly prejudicial. In no case, except with respect to points in Alaska, shall essential air transportation be specified as fewer than 2 daily round trips, 5 days per week.

"(3) The Board shall periodically review the specification of essential air transportation for each eligible point, and may, based upon that review, make appropriate adjustments to the specifications.".

(b)(1) Except as provided in section 418(f)(1) of the Federal Aviation Act of 1958, as amended, any air carrier who, on January 1, 1977, was providing interstate air transportation, under a certificate issued under section 401(d) of the Federal Aviation Act of 1958 (as such section read before it was amended by this Act), in any city-pair market for which it was receiving compensation from the Board under section 406 of that Act (as such section read before it was amended by this Act), shall not, during the 7-year period beginning on July 1, 1978, solely by reason of the enactment of the amendment made by subsection (a)—

(A) have such compensation payments suspended or terminated; or

(B) be required to obtain a certificate to serve such point under section 419 of that Act (relating to certificates for local air carriers).

(2) Notwithstanding any other provisions of law, if during such 7-year period any air carrier specified in paragraph (1) terminates air service to an eligible point, then the Board shall determine the amounts of, and eligibility for, any compensation payments made to another air carrier for providing air transportation to that point under the provisions of section 418 of that Act.

SEC. 103. LOCAL AIR TRANSPORTATION.

Title IV of the Federal Aviation Act of 1958, as amended (49 U.S.C. 1371 et seq.), is further amended by adding at the end thereof the following new section:

"LOCAL AIR TRANSPORTATION

"SEC. 419. (a) The Board shall issue a certificate to an applicant to engage in local air transportation of persons, property, and mail, if the Board determines that the applicant is fit, willing, and able to perform properly local air transportation, to conform to the provisions of this Act and the rules, regulations, and requirements of the Board made or issued under this Act.

"PROCEDURES

"(b) The Board shall dispose of applications filed with it under this section according to the provisions of this Act.

"LIMITATIONS

"(c) The Board shall not designate the geographical area, or the terminal or intermediate points, within or between which air transportation may be provided under a certificate issued under this section.

"SUSPENSION AND REVOCATION

"(d) The Board, upon application or upon its own motion, may suspend or revoke any certificate issued under this section, if the Board, after notice and hearing, determines that the air carrier holding such certificate—

"(1) is no longer fit, willing, and able to properly perform the local air transportation authorized by such certificate; or

"(2) has intentionally failed to comply with any applicable provision of this title, or any order, regulation, or rule issued by the Board under this title.

Any interested party may file with the Board a protest or memorandum in favor of or in opposition to any such suspension or revocation of a certificate issued pursuant to this section.

"TERMINATION OF SERVICE

"(e)(1) No air carrier providing local air transportation to any eligible point (as defined in section 418(c)(1)) shall terminate or suspend such local air transportation except after at least 90 days notice filed with the Board and served on each of the communities to be affected by such termination or suspension, unless the essential air transportation for that point will be performed by another air carrier. During that 90-day period the Board shall make every reasonable effort to secure another air carrier who is fit, willing, and able to perform the essential air transportation for that point. If no other air carrier can be found before such suspension or termination will take effect, then the Board shall arrange for the continuation of air transportation to that point under the provisions of section 418 of this Act.

"(2) With respect to any other point to which such an air carrier provides local air transportation, the Board may, by rule, prescribe a reasonable notice period (not longer than 30 days) to be adhered to by such air carrier when proposing to terminate or suspend local air transportation to that point.

"NONAPPLICABILITY OF CERTAIN PROVISIONS

"(f) The following provisions of this title shall not apply to an air carrier which holds a certificate issued under this section and does not hold a certificate issued under section 401, or to the performance of local air

transportation by any other air carrier holding a certificate issued under this section:

"(1) Sections 405(b), 407(b), 407(c), and, to the extent consistent with the public interest, 407(d).

"(2) Section 403, except the provisions of that section shall apply to—

"(A) tariffs for through rates, fares, and charges filed jointly with an air carrier or a foreign air carrier subject to the tariff filing requirements of such section 403;

"(B) tariffs, to the extent required by the Board, which relate to liability limitations with respect to persons or property in international air transportation; and

"(C) tariffs for rates, fares, and charges for the performance of essential air transportation, to the extent required by the Board under section 418.

"(3) Section 404(a), except—

"(A) such section shall apply to any essential air transportation provided under the provisions of section 418;

"(B) every air carrier shall at all times provide safe service, equipment, and facilities in connection with local air transportation; and

"(C) every air carrier shall observe just and reasonable joint rates, fares, and charges, and just and reasonable classifications, rules, regulations, practices as provided in tariffs specified by paragraph (2) to be filed jointly by such an air carrier with any other air carrier or foreign air carrier, and shall establish just, reasonable, and equitable divisions of such joint fares, rates, and charges as between air carriers participating therein which shall not unduly prefer or prejudice any such participating air carrier.

"(4) Section 404(b), except—

"(A) with respect to through service provided pursuant to tariffs specified by paragraph (2) to be filed jointly by such air carrier and any other air carrier or foreign air carrier; and

"(B) with respect to the provision of essential air transportation under the provisions of section 418.

"(5) Sections 408 and 409 with respect to any air carrier which holds a certificate issued under this section and does not hold a certificate issued under section 401, except that this paragraph shall not be construed as relieving any other person who is subject to such sections from the obligations of those sections with respect to any relationships, transactions, contracts, or agreements they may have with any such air carrier.

"LIMITATIONS ON AIRCRAFT SIZE

"(g) An air carrier holding a certificate issued under this section shall not provide or offer to provide local air transportation under that certificate with an aircraft having a maximum certificated gross takeoff weight of more than 40,000 pounds, and a passenger capacity of more than 36.

"(h) An air carrier holding a certificate issued under this section shall not provide or offer to provide local air transportation under such certificate between points both of which are in the State of Alaska, or one of which is in the State of Alaska and the other in Canada, unless such air carrier also holds authority to provide such air transportation from the State of Alaska.

"(i) Each air carrier holding a certificate issued under this section shall maintain in effect liability insurance as required by the Board.".

TITLE II—RURAL ROAD AND BRIDGE SYSTEM IMPROVEMENTS

SEC. 201. INCREASED AUTHORIZATION FOR THE FEDERAL-AID SECONDARY HIGHWAY SYSTEM.

Section 105(a)(1) of title I of the Federal-Aid Highway Act of 1976 (Public Law 94-280) is amended to read as follows:

"(1) For the Federal-aid primary system in rural areas, including the extensions of the Federal-aid primary system in urban areas, and the priority primary routes, out of the Highway Trust Fund, $1,350,000,000 for the fiscal year ending September 30, 1977, and $1,350,000,000 for the fiscal year ending September 30, 1978. For the Federal-aid secondary system in rural areas, out of the Highway Trust Fund, $400,000,000 for the fiscal year ending September 30, 1977, $500,000,000 for the fiscal year ending September 30, 1978, $600,000,000 for the fiscal year ending September 30, 1979, and $600,000,000 for the fiscal year ending September 30, 1980.".

SEC. 202. INCREASED AUTHORIZATION FOR SAFER OFF-SYSTEM ROADS.

Section 105(b)(17) of title I of the Federal-Aid Highway Act of 1976 (Public Law 94-280) is amended to read as follows:

"(17) For safer off-system roads under section 219 of title 23, United States Code, $200,000,000 for the fiscal year ending September 30, 1977, $250,000,000 for the fiscal year ending September 30, 1978, $300,000,000 for the fiscal year ending September 30, 1979, and $300,000,000 for the fiscal year ending September 30, 1980.".

SEC. 203. SPECIAL BRIDGE REPAIR AND REPLACEMENT PROGRAM.

(a) Section 144 of title 23, United States Code, is amended to read as follows:

"§ 144. Special bridge repair and replacement program

"(a) Congress hereby finds and declares it to be in the vital interest of the Nation that a special bridge repair and replacement program be established to enable the several States to repair or replace bridges over waterways or other topographical barriers when the States and the Secretary find that the bridge is significantly important and is unsafe because of structural deficiencies, physical deterioration, or functional obsolescence.

"(b) The Secretary in consultation with the States shall (1) inventory all bridges located on any of the Federal-aid systems over waterways and other topographical barriers of the United States; (2) classify them according to their serviceability, safety, and essentiality for public use; and (3) based on that classification, assign each a priority for repair or replacement.

"(c) Each State in consultation with the county officials of that State shall (1) inventory all bridges located on any non-Federal-aid system public road over waterways and other topographical barriers of such State; (2) classify them according to their serviceability, safety, and essentiality for public use; and (3) based on that classification, assign each a priority for repair or replacement.

"(d) Whenever any State or States make application to the Secretary for assistance in repairing or replacing a bridge which the priority system, established under subsections (b) and (c) of this section, shows to be eligible, the Secretary may approve Federal participation in the reconstruction of a comparable facility. In approving projects under this section, the Secretary shall give consideration to those projects which will remove from service bridges which are most in danger of failure and give consideration to the economy of the area involved. Approval of projects and allocation of funds under this section shall be without regard to allocation or apportionment formulas otherwise established under this title. Not less than 15 percent of the funds authorized to any State to carry out the provisions of this section may be expended for the emergency repair or replacement of bridges on and off the Federal-aid system, as determined by the State highway or transportation director in consultation with county officials to have the greatest need for replacement or rehabilitation, which are under the sole jurisdiction of the county authority in any State.

"(e) The Federal share payable on account of any bridge repair or replacement under this section shall not exceed 90 percent of the cost thereof.

"(f) For the purposes of carrying out the provisions of this section, there are authorized to be appropriated out of the Highway Trust Fund $400,000,000 per fiscal year in the period beginning October 1, 1978, and ending September 30, 1990. Such funds shall be available for obligations at the beginning of the fiscal year for which authorized in the same manner and to the same extent as if such funds were apportioned under this chapter.

"(g) Notwithstanding any other provisions of law the General Bridge Act of 1946 (33 U.S.C. 525-533) shall apply to bridges authorized to be repaired or reconstructed and bridges constructed to replace unsafe bridges under this section.

"(h) The Secretary shall report annually on projects approved under this section with any recommendations he may have for further improvement in the special bridge repair and replacement program authorized in accordance with this section.".

(b) The analysis of chapter 1 of title 23, United States Code, is amended by striking out

"144. Special bridge replacement program."

and inserting in lieu thereof

"144. Special bridge repair and replacement program.".

TITLE III—EXTENSION OF HIGHWAY TRUST FUND AND CERTAIN RELATED PROVISIONS

SEC. 301. EXTENSION OF THE HIGHWAY TRUST FUND.

(a) Subsections (c) and (f) of section 209 of the Highway Revenue Act of 1956 (relating to the Highway Trust Fund; 23 U.S.C. 120 note) are amended—

(1) by striking out "1979" each place it appears and inserting in lieu thereof "1990"; and

(2) by striking out "1980" each place it appears and inserting in lieu thereof "1991".

(b) Subsection (e)(1) of section 209 of such Act is amended by striking out "September 30, 1980" and inserting in lieu thereof "September 30, 1990".

SEC. 302. TRANSFER FROM LAND AND WATER CONSERVATION FUND.

Subsection (b) of section 201 of the Land and Water Conservation Fund Act of 1965 (16 U.S.C. 4601-11) is amended—

(1) by striking out "1979" and inserting in lieu thereof "1990"; and

(2) by striking out "1980" each place it appears and inserting in lieu thereof "1991".

SEC. 303. POSTPONEMENT OF CERTAIN EXCISE TAX REDUCTIONS.

(a) The following provisions of the Internal Revenue Code of 1954 are amended by striking out "1979" each place it appears and inserting in lieu thereof "1990":

(1) Section 4041(c)(3) (relating to rate of tax on fuel for noncommercial aviation).

(2) Section 4041(e) (relating to rate reduction).

(3) Section 4061(a)(1) (relating to imposition of tax on trucks, buses, etc.).

(4) Section 4061(b)(1) (relating to imposition of tax on parts and accessories).

(5) Section 4071(d) (relating to imposition of tax on tires and tubes).

(6) Section 4081(b) (relating to imposition of tax on gasoline).

(7) Section 4481(a) (relating to imposition of tax on use of highway motor vehicles).

(8) Section 4481(e) (relating to period tax in effect).

(9) Section 4482(c)(4) (defining taxable period).

(10) Section 6156(c)(2) (relating to installment payments of tax on use of highway motor vehicles).

(11) Section 6421(h) (relating to tax on gasoline used for certain nonhighway purposes or by local transit systems).

(b) Section 6412(a)(2) of such Code (relating to floor stock refunds) is amended—

(1) by striking out "1979" each place it appears and inserting in lieu thereof "1990"; and

(2) by striking out "1980" each place it appears and inserting in lieu thereof "1991".

TITLE IV—IMPROVEMENTS TO THE LOCAL RAIL SERVICE ASSISTANCE PROGRAM

SEC. 401. FEDERAL SHARE.

(a) Section 5(g) of the Department of Transportation Act (49 U.S.C. 1654(g)) is amended to read as follows:

"(g)(1) The Federal share of the cost of any rail service assistance program described in paragraph (3) of subsection (f) of this section shall be (A) 100 percent for the period beginning July 1, 1976, and ending September 30, 1978, (B) 90 percent for the period beginning October 1, 1978, and ending September 30, 1979, (C) 80 percent for the period beginning October 1, 1979, and ending September 30, 1980, and (D) 70 percent for the period beginning October 1, 1980, and ending September 30, 1981.

"(2) The Federal share of the cost of any rail service assistance program described in paragraph (1), (2), or (4) of subsection (f) of this section shall be (A) 100 percent for the period beginning July 1, 1976, and ending June 30, 1977, (B) 90 percent for the period beginning July 1, 1977, and ending September 30, 1978, (C) 80 percent for the period beginning October 1, 1978, and ending September 30, 1979, and (D) 70 percent for the period beginning October 1, 1979, and ending September 30, 1981.

"(3) For the period beginning on October 1, 1979, and ending September 30, 1981, the Secretary may make such adjustments in the percentage level of the Federal share as may be necessary and appropriate so as not to exceed the maximum amount of funds authorized under subsection (o) of this section. The Secretary shall, within 1 year after the date of enactment of this subsection, promulgate standards and procedures under which the State share of the cost of any rail service assistance program may be provided through in-kind benefits such as forgiveness of taxes, trackage rights, and facilities which would not otherwise be provided.".

(b) Section 402(a)(1) of the Regional Rail Reorganization Act of 1973 (45 U.S.C. 762(a)(1)) is amended by striking out the last sentence thereof and inserting in lieu thereof the following: "The Federal share of the cost of any such assistance for the rehabilitation and maintenance of rail properties shall be 100 percent for the 24-month period following the date on which rail properties are conveyed pursuant to section 303(b)(1) of this Act. The Federal share of the cost of any such assistance for purposes other than the rehabilitation and maintenance of rail properties shall be (A) 100 percent for the 12-month period following such date of conveyance, and (B) 90 percent for the succeeding 12-month period.".

SEC. 402. EXCESS IN-KIND BENEFITS.

(a) Section 5(g) of the Department of Transportation Act (49 U.S.C. 1654(g)) is further amended by adding at the end thereof the following new sentences: "In-kind benefits which a State provides for any period in excess of such State's share of project costs for such period shall be applied toward such State's share in any subsequent period. The date of initiation of any maintenance, rehabilitation, improvement, or acquisition project shall determine the period from which rail freight assistance to which a State is entitled shall be provided for such project. Whenever the costs of an approved maintenance, rehabilitation, improvement, or acquisition project exceed the amount of unobligated rail freight service assistance to which a State is entitled for the period in which such project is initiated, the Secretary may provide assistance in any subsequent period to cover the costs of such project, at the percentage level and from the Federal share established by this subsection for such subsequent period.".

(b) Section 402(a)(2) of the Regional Rail Reorganization Act of 1973 (45 U.S.C. 762(a)(2)) is amended by adding at the end thereof the following new sentences: "In-kind benefits which a State provides for any period in excess of such State's share of project costs for such period shall be applied toward such State's share in any subsequent period. The date of initiation of any maintenance, rehabilitation, improvement, or acquisition project shall determine the period from which rail freight assistance to which a State is entitled shall be provided for such project. Whenever the costs of an approved maintenance, rehabilitation, improvement, or acquisition project exceed the amount of rail freight service assistance to which a State is entitled for the period in which such project is initiated, the Secretary may provide assistance in any subsequent period to cover the costs of such project at the percentage level and from the Federal share established by this subsection for such subsequent period.".

SEC. 403. STATE ENTITLEMENT FORMULA.

(a) The first sentence of section 5(h) of the Department of Transportation Act (49 U.S.C. 1654(h)) is amended to read as follows:

"(h) Each State which is, pursuant to subsection (j) of this section, eligible to receive rail service assistance is entitled to an amount authorized and appropriated for such purposes, multiplied by a fraction whose numerator is the sum of the rail mileage in such State (1) for which the Commission has found that the public convenience and necessity permit the abandonment of, or the discontinuance of, rail service on the line of railroad; (2) which was eligible for assistance under title IV of the Regional Rail Reorganization Act of 1973 (45 U.S.C. 761–763); (3) which is identified as 'potentially subject to abandonment' or as a line for which a carrier plans to submit an application for a certificate of abandonment or discontinuance as those terms are used in section 1a(5)(a) of the Interstate Commerce Act (49 U.S.C. 1a(5)(a)); and (4) lines for which an abandonment or discontinuance application is pending before the Commission; and whose denominator is the sum of all such rail mileages in all of the States which are eligible for rail service assistance under this section, except that the mileage of any line or portion of line of railroad shall not be included more than once in the calculation of the numerator or the denominator of the fraction."

(b) The first sentence of section 402(b) of the Regional Rail Reorganization Act of 1973 (45 U.S.C. 762(b)) is amended to read as follows:

"(b) ENTITLEMENT.—(1) Each State in the region which is, pursuant to subsection (c) of this section, eligible to receive rail service continuation assistance is entitled to the total amount authorized and appropriated for such purpose multiplied by a fraction whose numerator is the sum of the rail mileage in such State which are (A) those rail services of railroads in reorganization in the region, or persons leased, operated, or controlled by any such railroad, which the Final System Plan does not designate to be continued; (B) those rail services on rail properties referred to in section 304(a)(2) of this Act; (C) those rail services in the region which have been, at any time during the 5-year period prior to the date of enactment of this Act, or which are, subsequent to the date of enactment of this Act, owned, leased, or operated by a State agency or by a local or regional transportation authority, or with respect to which a State, a political subdivision thereof, or a local or regional transportation authority has invested (at any time during the 5-year period prior to the date of enactment of this Act), or invests (subsequent to the date of enactment of this Act), substantial sums for improvement or maintenance of rail service; (D) those rail services in the region with respect to which the Commission authorizes the discontinuance of rail services or the abandonment of rail properties, effective on or after the date of enactment of this Act; (E) those rail services which are identified as 'potentially subject to abandonment' or as lines for which a carrier plans to submit an application for a certificate of abandonment or discontinuance as those terms are used in section 1a(5)(a) of the Interstate Commerce Act (49 U.S.C. 1a(5)(a)); and (F) lines for which an abandonment or discontinuance application is pending before the Commission; and whose denominator is the sum of all such rail mileages in all of the States which are eligible for rail service assistance under this section, except that the mileage of any line or portion of line of railroad shall not be included more than once in the calculation of the numerator or the denominator of the fraction."

SEC. 404. RAIL LINE ELIGIBILITY.

(a) Section 5(k) of the Department of Transportation Act (49 U.S.C. 1654(k)) is amended—

(1) by striking out "or" immediately after "project"; and

(2) by striking out "; and" immediately after "1973" and inserting in lieu thereof ", or (C) the line of railroad which is related to the project is identified as 'potentially subject to abandonment' or as a line for which a carrier plans to submit an application for a certificate of abandonment or discontinuance as those terms are used in section 1a(5)(a) of the Interstate Commerce Act (49 U.S.C. 1a(5)(a)) or is a line for which an abandonment or discontinuance application is pending before the Commission: in which case, the eligibility for financial assistance shall be limited to projects which have as their principal objectives the elimination of deferred maintenance and the rehabilitation of such rail line, with such line being ineligible for rail service continuation assistance unless and until such line becomes eligible pursuant to subsection (1)(A) of this paragraph and".

(b) Section 402(c)(2) of the Regional Rail Reorganization Act of 1973 (45 U.S.C. 762(c)(2)) is amended—

(1) by striking out "or" at the end of subparagraph (C) thereof;

(2) by striking out the period at the end of subparagraph (D) thereof and inserting in lieu thereof a semicolon; and

(3) by adding at the end thereof the following new subparagraph:

"(E) those rail services which are identified as 'potentially subject to abandonment' or as lines for which a carrier plans to submit an application for a certificate of abandonment or discontinuance as those terms are used in section 1a(5)(a) of the Interstate Commerce Act (49 U.S.C. 1a(5)(a)) or those lines for which an abandonment or discontinuance application is pending before the Commission; in which case, the eligibility for financial assistance shall be limited to projects which have as their principal objectives the elimination of deferred maintenance and the rehabilitation of such rail line, with such rail line being ineligible for rail service continuation assistance unless and until such line becomes eligible pursuant to subparagraph (B), (C), or (D) of this subsection.".

SEC. 405. FEDERAL-STATE RELATIONSHIP.

(a) Section 5(l) of the Department of Transportation Act (49 U.S.C. 1654(l)) is amended by adding at the end thereof the following: "The authorization of the appropriation of Federal funds or their availability for expenditure for the purpose of subsections (f) through (o) of this section shall in no way infringe on the sovereign rights of the States to determine which projects shall be federally financed. The Secretary shall not withhold approval of a State rail freight program or project solely on the grounds that the State initiated the program or project without the prior approval of the Secretary. The provisions of subsections (f) through (o) of this section provide for a federally assisted State program.".

(b) Section 402(e) of the Regional Rail Reorganization Act of 1973 (45 U.S.C. 762(e)) is amended by adding at the end thereof the following new sentences: "The authorization of the appropriation of Federal funds or their availability for expenditure for the purpose of this section shall in no way infringe on the sovereign rights of the States to determine which projects shall be federally financed. The Secretary shall not withhold approval of a State rail freight program or project solely on the grounds that the State initiated the program or project without the prior approval of the Secretary. The provisions of this section provide for a federally assisted State program.".

SEC. 406. STATE RAIL PLANNING.

The second sentence of section 5(o) of the Department of Transportation Act (49 U.S.C. 1654(o)) is amended to read as follows: "Of the foregoing sums, not to exceed $10,000,000 shall be made available for planning grants during each of the 4 fiscal years ending September 30, 1977, September 30, 1978, September 30, 1979, and September 30, 1980.".

SECTION-BY-SECTION SUMMARY OF THE RURAL TRANSPORTATION ACT OF 1977

DECLARATION OF POLICY

Section 2 of the bill establishes the findings and declarations of the Congress that small, isolated communities depend upon a safe and efficient multimodal transportation system, that improved air service is essential to maintain effective communications and commercial relations with the nation's population centers, that improved roads and rail systems are needed to serve the requirements of agriculture, that major improvements in existing bridge structures are needed, and that increases in funding levels for basic rural transportation systems are required to promote a safe, efficient and economical transportation system for agriculture and rural development in the United States.

SMALL COMMUNITY AIR SERVICE IMPROVEMENTS

Title I of the bill amends the Federal Aviation Act of 1958 to establish a new program of specialized small community air transportation consistent with the public convenience and necessity.

Under section 101 of the bill, existing subsections 406(a) and (b) of the Federal Aviation Act of 1958 are repealed. In their place is established a limit of seven years, beginning July 1, 1978, on the current program of subsidy for regularly scheduled certificated air transportation services to small communities. The Civil Aeronautics Board would be obligated, under the provisions of this section, to maintain subsidy payments during the seven-year period adequate to ensure no deterioration in the kind, character and quality of air transportation services provided with subsidy on January 1, 1977.

The program which would succeed the current local air service subsidy for small community service is established in sections 102 and 103 of the bill, which are described below.

Under section 102 of the bill, the Federal Aviation Act of 1958 is amended by adding at the end of Title IV thereof, a new section 418. Proposed section 418 establishes a new program of small community air service compensation which would be phased in during the seven year period that section 406 subsidy payments are to be phased out.

Those communities, or points, eligible for compensation under new section 418 would include all points listed on a certificate to engage in interstate and overseas air transportation issued by the CAB under section 401 of the Act. No point so listed could be removed from eligibility until after July 1, 1988.

Beginning no later than July 1, 1979, the CAB would be directed to review those points that have been deleted from the certificates of air carriers since July 1, 1968—about 70 in number—for eligibility for renewed status as certificated points under new criteria to be established by the Board.

Beginning July 1, 1981, the CAB would have the opportunity to designate any other point as eligible for compensated air service under the objective criteria to be established by the Board.

Thus, this section provides not only that points listed currently on air carriers' certificates are assured eligibility for compensation for ten years, but it also provides access to the national air transportation system for additional points which have been deleted within the past ten years, as well as other points that have not received any certificated air carrier service since July 1, 1968.

Those air carriers which would be eligible for compensation under 418 include not only those carriers now providing service, but also newly certified air carriers who will specialize in small community air service with small equipment.

Under proposed section 418(g), the CAB would establish the level of "essential air transportation" for which compensation would be paid. In no case, within the "lower 48" States, would the definition of essential air service be specified as fewer than 2 daily round trips, five days per week, as part of a linear route system to a principal community of interest.

While the incumbent air carriers in small communities now receiving service are eligible to receive the current section 406 payments for up to seven years, this section does provide for a phase-in of specialized small community local air carriers, compensated for essential air transportation services under proposed section 418, beginning in four years.

Proposed section 418 is designed to provide an orderly transition to the new compensation program for air service to small communities without disruption of service to any point. As the new program of compensation is phased-in, it is anticipated that additional communities will be included in the national air transportation system. Overall subsidy cost to the government should be reduced over time, as increasingly the compensation payments will be based upon representative costs of efficient carriers operating smaller equipment, with higher frequency of service, at the smallest points.

Under section 103 of the bill, Title IV of the Federal Aviation Act of 1958 is further amended by adding at the end thereof, a new section 419. This new section establishes the conditions for certification of a new class of air carrier that will specialize in "local air transportation" to small communities.

Because of the administrative burdens of traditional section 401 certification proceedings, this new class of air carrier will be certificated under expedited procedures and the class will not be required to conform to certain requirements of the Federal Aviation Act that apply to other air carriers certificated under section 401.

Of most significance, air carriers certificated under proposed section 419 will be limited, with respect to operations under section 419, to aircraft with a maximum gross takeoff weight of 40,000 and a maximum passenger capacity of 36 passengers.

Under section 419, certificated air carriers will be required to maintain adequate insurance and otherwise prove fitness, willingness, and ability to provide air transportation services. But these carriers will hold certificates that will not restrict their operations, with small aircraft, to any particular geographic locations.

After the transition period is completed, it is anticipated that air carriers, certificated under section 419 and receiving compensation for services to small communities under section 418, will be providing essential air transportation services with increased frequency and convenience to the traveling public to those small communities for which air service with larger aircraft is not economically justified.

INCREASED AUTHORIZATION FOR THE FEDERAL-AID SECONDARY SYSTEM

Section 201 of the bill would increase the authorization for appropriations for the Federal-aid secondary highway system in rural areas by $100 million for the fiscal year ending September 30, 1978. Section 201 would also establish authorizations for the Federal-aid secondary system of $600 million for the fiscal year ending September 30, 1979 and for the fiscal year ending September 30, 1980.

INCREASED AUTHORIZATION FOR SAFER OFF-SYSTEM ROADS

Section 202 of the bill would increase the authorization for appropriations for the Safer Off-System Road Program by $50 million for the fiscal year ending September 30, 1978. Section 202 would also authorize $300 million for off-system roads for the fiscal years ending September 30, 1979 and September 30, 1980.

SPECIAL BRIDGE REPAIR AND REPLACEMENT PROGRAM

Section 203 of the bill would amend the current Federal bridge replacement program in five ways. First, section 203 would make Federal funds available for bridge repair in addition to bridge replacement. Second, funds would be earmarked for the repair or replacement of bridges, both on and off of the Federal-aid system, that county officials in consultation with State departments of transportation have designated as in the greatest need of attention. Third, the States would be required to inventory, classify, and assign a priority for repair or replacement to bridges not on the Federal-aid system. The current national bridge inventory is limited to on-system bridges. Fourth, the local matching share would be reduced from 25 to 10 percent. Finally, the level of funding for the program would be increased and funding would be authorized through 1990.

EXTENSION OF THE HIGHWAY TRUST FUND

Section 301 through 303 of the bill would extend the existence of the Highway Trust Fund, which would otherwise expire at the end of 1979.

FEDERAL SHARE

The Railroad Revitalization and Regulatory Reform Act of 1976 (4R Act) created the Local Rail Assistance Program in section 5 of the Department of Transportation Act (DOT Act) (49 U.S.C. 1654(g)) to aid the States in addressing problems caused by the abandonment of rail freight service. A Federal-State program, the Federal share of the program's costs was to be 100 percent in the first year of the program with the Federal share decreasing to 70 percent over a three-year period. States could not qualify for the 100 percent assistance for rail rehabilitation projects until after they had completed state rail plans approved by the Federal Railroad Administration (FRA). By the time the States complete their rail plans and qualify

for Federal assistance, the initial period of 100 percent Federal assistance will have expired.

Section 401(a) of the bill would amend section 5(g) of the DOT Act (49 U.S.C. 1654 (g)) to extend the period during which rail rehabilitation projects could qualify for 100 percent Federal assistance. Section 401(b) of the bill would make a parallel amendment to section 402(a)(1) of the Regional Railroad Reorganization Act of 1973 (3R Act) (45 U.S.C. 762(a)(1)), which established a state rail assistance program to aid States affected by the failure of the northeastern railroads.

Section 401 of the bill would also amend section 5(g) of the DOT Act (49 U.S.C. 1654 (g)) to make the local rail assistance program's funding periods coterminous with the Federal fiscal year.

EXCESS IN-KIND BENEFITS

Section 5(g) of the DOT Act (49 U.S.C. 1654(g)) allows the State share of the costs of rail freight assistance programs to be provided through in-kind benefits such as shipper donations and forgiveness of taxes. The regulations implementing section 5(g), however, do not allow States to carry over excess in-kind benefits and apply them to a subsequent year's State share. Section 402(a) of the bill would amend section 5(g) to expressly provide that States could carry over excess in-kind benefits to satisfy a subsequent year's State share.

The bill would also improve administration of the Local Rail Assistance Program by providing that the date on which a State initiates a rail rehabilitation project will determine the annual period during which the FRA will fund the project.

Section 402(b) of the bill makes parallel amendments to section 402(a)(2) of the 3R Act (45 U.S.C. 762(a)(2)).

STATE ENTITLEMENT FORMULA

Under existing law, a State's share of Local Rail Service Assistance funds is determined by the amount of rail mileage in the State that the Interstate Commerce Commission has approved for abandonment or discontinuance of service. Section 403(a) would amend the entitlement formula, which is contained in section 5(h) of the DOT Act (49 U.S.C. 1654(h)), to base a State's share on the rail lines in that State which have been approved for abandonment by the Commission, rail lines which the railroads plan to abandon, and rail lines that are the subject of pending abandonment petitions.

Section 403(b) of the bill would make a similar amendment to section 402(b) of the 3R Act (45 U.S.C. 762(b)).

RAIL LINE ELIGIBILITY

Under current law, a rehabilitation project on a rail line is eligible for Federal assistance under the Local Rail Assistance Program only after the ICC has approved that rail line for abandonment or discontinuance of service. Section 404(a) would amend section 5(k) of the DOT Act (49 U.S.C. 1654(k)) to make rehabilitation projects on rail lines that the railroads were considering for abandonment eligible for Federal assistance. This amendment would give the States flexibility to revitalize rail lines before such lines deteriorated to the point of being abandoned.

Section 404(b) similarly expands the rail lines eligible for Federal local rail assistance pursuant to section 402(c)(2) of the 3R Act (45 U.S.C. 762(c)(2)).

FEDERAL-STATE RELATIONSHIP

The purpose of the amendment contained in section 405(a) is to indicate that the States should have the primary role in deciding which projects should be carried out under the Local Rail Assistance Program. This section would also address a problem of regulatory decay by giving States the flexibility to undertake urgent projects under the Local Rail Assistance Program without waiting for final approval from the Federal Railroad Administration.

A similar amendment is made to the 3R Act by section 405(b).

STATE RAIL PLANNING

The 4R Act established a five-year Local Rail Assistance Program. Funds for State rail planning were provided only for the first three years of the program. Section 406 of the bill would extend Federal funds for state rail planning through the life of the program and would increase the authorization for state rail planning assistance from $5 million to $10 million for each of the two additional years.

By Mr. JAVITS (for himself, Mr. HUMPHREY, Mr. MOYNIHAN, Mr. MATHIAS, Mr. CLARK, Mr. RIEGLE, Mr. BAYH, Mr. MCGOVERN, Mr WILLIAMS, Mr. KENNEDY, Mr. BROOKE, Mr. CHAFEE, Mr. DOLE, Mr. JACKSON, Mr. HEINZ, Mr. GLENN, Mr. RIBICOFF, and Mr. CASE):

S. 1898. A bill to amend title 38 of the United States Code to provide for the payment of supplemental tuition allowances for certain veterans pursuing educational programs; to the Committee on Veterans' Affairs.

VETERANS TUITION EQUALIZATION ACT OF 1977

Mr. JAVITS. Mr. President, I am pleased to introduce for myself and Senators HUMPHREY, MOYNIHAN, MATHIAS, CLARK, RIEGLE, BAYH, MCGOVERN, WILLIAMS, KENNEDY, BROOKE, CHAFEE, DOLE, JACKSON, HEINZ, GLENN, RIBICOFF, and CASE, a bill which will enable thousands of veterans to utilize the GI bill education benefits which are their right, but which are effectively denied to them by widely differing tuition costs, both public and private, not taken into account by the present GI bill.

Far too few New York veterans use their GI bill opportunities. This is generally the case throughout the Northeast and Midwest. A prime reason for this is the fact that today's GI bill, unlike the World War II legislation, fails to take into account State differences in educational costs.

The Senate recognized this in 1974 by passing a tuition equalizer provision which attempted to give veterans a more equitable subsistence allowance. Unfortunately the provision was rejected by the House in Conference. In introducing similar legislation, it is my hope that the House will recognize that since 1974, in the expenditure of an additional $10 billion of GI bill benefits, the United States has continued to discriminate against veterans in Eastern and Midwestern States.

In 1976 California ranked second among States in cumulative GI bill use rate among eligible veterans. New York, with the second largest population of veterans eligible for benefits, ranked 30th. Given the open ended GI bill financing, California's opportunities are not at the expense of New Yorkers. It comes about principally because of a highly developed junior and 4-year college system in California.

Of course, we in New York have spent substantial sums developing State and city university systems. At the same time, we get no credit for our substantial private college system, which was built up with public support and by private initiative and whose students who pay a substantially greater share of the actual cost of education than do those in public colleges.

Both the Veterans' Administration and the House Veterans Committee have taken the position that the abuses of the World War II GI bill require that we do not use a tuition system. However, President Eisenhower's Commission on Veterans Pensions, headed by Gen. Omar Bradley, made the most careful study on record of veterans legislation and found relatively little abuse by colleges. The Commission's staff noted—

> The curious fact is that the Korean GI Bill recognized the additional cost of dependents at the rate of $25 per month, but does not recognize tuition differences of three times that amount.

Under today's formula, which is a simple adoption of the Korean war GI bill formula, only one payment is made to a veteran no matter what his tuition is. The World War II GI bill formula provided that each veteran would have the same amount of money to live on, $75 a month in the case of a single veteran and a direct tuition payment of up to $500 would be made by the Federal Government to the school of the veteran's choice. Thus, all veterans were on the same footing as far as the amount of money on which they had to live. They could attend whichever educational institution their educational interests and abilities permitted.

Under today's system we have the anomaly that a veteran can attend a 4-year college such as San Francisco State, pay $190 for tuition and the average cost for books of $208, and then have 85 percent of his GI bill left for subsistence. In contrast, the veteran attending a 4-year college in Philadelphia—Temple University—has to spend 57 percent of his GI bill for tuition and books and is left with only 43 percent, or $1,130, for subsistence. This is $1,110 less per year than his compatriot in California with whom he may have served in the same combat company in Vietnam.

The tuition equalizer bill I am introducing today is similar to one introduced in the House by Congressmen JONATHAN B. BINGHAM and SILVIO O. CONTE. It would pay 80 percent of the veteran's tuition above $400 up to $1,400, for a maximum tuition assistance payment of $800. This approach should be substituted for the present system which ignores tuition costs, so that all veterans are afforded a more equal opportunity to use their once in a lifetime chance to attain adequate education and training, regardless of State of residence.

The voucher system that is the mechanism for the tuition payment assistance would give a veteran a certificate along with his check that would be good for payment of part of his tuition when presented by the school to the Federal Government. This would prevent the use of the GI bill as an income supplement program, which some critics contend it could be used for. I would hope that the committee in its markup will give this legislation careful consideration, particularly in view of the fact that this ap-

proach has already received the support of the Senate as part of the 1974 bill.

I commend the Senate Veterans' Affairs Committee chairman, ALAN CRANSTON, and Senator JOHN A. DURKIN for introducing their accelerated payments plan on June 22. While this is another approach to this problem, I would hope that the two approaches can be melded so that veterans in more expensive educational systems can begin to use their GI bill more effectively.

Mr. President, I would like to close my explanatory remarks by inserting for the RECORD a New York Times editorial of June 28, 1974 in support of the Senate-passed tuition equalizer amendment; a Washington Post editorial of July 19, 1977 which again points out the inequitable treatment of Vietnam era veterans under the present GI bill; and a chart which sets forth relative utilization rates of GI education benefits among the States.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the New York Times, June 28, 1974]

FAIRNESS FOR VIET VETS

The Senate-House conference now working on the 1974 G.I. Bill amendments has an opportunity to correct large inequities which afflict veterans of the Vietnam war. The major issue up for resolution is whether the Vietnam veterans' educational benefits will be raised to reasonable parity with those accorded to veterans of World War II a generation ago.

The key issue is over college tuition payments. The World War II veteran received full tuition assistance, plus a living-expense payment that was roughly equivalent to what Vietnam veterans now receive monthly for all educational and living expenses. The Senate version of the 1974 amendments would remedy this discrepancy by providing a reasonable portion of tuition costs in addition to the living expense stipend. The House bill makes no provision at all for tuition assistance.

The Senate bill is preferable not only because it provides assistance closer to that received by World War II veterans, but also because it would equalize educational opportunities for poor veterans throughout the United States. As it stands now, Vietnam veterans living in states where moderately priced college tuitions are unavailable find college prohibitively expensive, even with the currently available assistance. Veterans living in Ohio, Pennsylvania and New Jersey, where tuition costs are high, are less able to avail themselves of G.I. Bill benefits than are those living in California and Texas, where tuition costs are considerably cheaper. Elemental fairness requires adoption of the Senate bill.

[Washington Post editorial, July 19, 1977]

VIETNAM VETERANS AND THE GI BILL

The Congress is discovering, and rightly so, that the unfinished business having to do with equity and reasonable opportunity for the veterans of the Vietnam era cannot be wished away. The other day we talked about the efforts of sensitive and responsible members of Congress to rescue the administration's program for speedier review of less-than-honorable discharges. Today, as the Senate Veterans Affairs Committee begins to debate amendments to improve the GI Bill, we would like to take note of another effort by those in Congress who recognize the importance of working for fair and humane solutions to the particular problems confronting the veterans of Vietnam as a consequence of the particular nature of that conflict.

Sens. Alan Cranston (D-Calif.), John Durkin (D-N.H.), Jacob Javits (R-N.Y.) and Hubert Humphrey (D-Minn.) are aware of the flaws in the current provisions of the GI Bill. But doing repair work on this legislation is not one of the appealing pursuits in Congress. For one thing, the GI Bill is perhaps the best known of the veterans programs, which means that its failures receive the most publicity. For another, when Vietnam veterans are involved in the failures, a kind of general, anti-Vietnam prejudice sets in. A few years ago, when abuses involving Vietnam veterans began to be reported—overpayments, payments to those who didn't attend classes, creation of training courses that had no substance—the critics seemed not to remember that similar abuses occurred after World War II and Korea; only the glowing successes of those programs were well remembered. That almost nobody seemed to remember any *successes* of the GI Bill for Vietnam veterans may have something to do with a general inclination on the part of politicians as well as the public not to want to be reminded about anything having to do with the first war America lost.

In any case, Sens. Cranston and Durkin have set out, first of all, to correct some of the abuses that have come to light. This is expected to be handled without great difficulty by balancing the needs of the schools with a prudent use of federal funds. Other problems will not be resolved so easily. For example, the GI Bill as it is now operating favors veterans in states that have educational systems providing low-cost schools—unlike the World War II program, which gave all veterans equal amounts to live on. An example of this, as Stuart Feldman has pointed out in a report to the National League of Cities and the U.S. Conference of Mayors, is that "a veteran at Temple University, the public college in Philadelphia, would have to pay $1,498 for tuition fees and books. A veteran attending San Francisco State would have only to pay $200 tuition. When coupled with expenditures for average book and supply costs, this means that the California vet, who may have served in the same company with the Philadelphia vet has to spend only 15.1 per cent of his yearly GI Bill benefits for education costs—while the Philadelphia vet has to spend 57 per cent of his benefits. The California vet has $122 more per month to apply to his living expenses."

Sen. Cranston would take a step toward correcting these inequities allowing veterans whose tuition is more than $1,000 a year to use their benefits at a faster rate to cover the differences. This is the "acceleration provision," which was part of the World War II GI Bill. It has the support of the VFW and American Legion. An alternative, which also has merit and which passed the Senate in 1974, is being offered by Sens. Javits and Humphrey. It would pay 80 per cent of a veteran's tuition between $400 and $1,400. The Javits-Humphrey proposal would help veterans who are now locked out of high-cost schools that may be the only ones in their area. A third alternative, favored by the Veterans Administration, is to provide a five per cent increase in educational benefits. But this does little to affect the geographical inequities.

Another proposal, offered by Sens. Cranston and Durkin, would allow veterans whose benefits have run out to pick them up again so they can complete their training or schooling. This would extend the delimiting period that cut off benefits to veterans whose time has or will run out 10 years after eligibility began.

Although the GI Bill legislation is in only the markup period in the Senate, it is important that a strong bill emerge now. In the past, the leadership of the House Veterans Committee has resisted such proposals as the tuition-equalization plan, accelerated payments and delimiting date removal. The President has an obvious role to play in the debate. In his campaign, he spoke out in behalf of Vietnam veterans. He now has the opportunity to involve his administration in insuring that the money that it has already committed goes to those legislative approaches that promise to serve veterans with the greatest need.

CUMULATIVE GI BILL USE RATES FOR COLLEGE AND JUNIOR COLLEGE

States ranked by GI bill college participation rate	1976 Viet veteran population	Junior and 4-year college GI bill use rate	
		Rank	Percent

By Mr. McINTYRE (by request):

S. 1900. A bill to clarify the treatment of banks and other depository institutions under State and local revenue laws; to the Committee on Banking, Housing and Urban Affairs.

Mr. McINTYRE. Mr. President, upon request of the American Bankers Association, the National Savings and Loan League, the U.S. League of Savings Associations, and the National Association of Mutual Savings Banks, I introduce a bill entitled the "Interstate Taxation of Depositories Act of 1977".

I ask unanimous consent that the bill be printed in its entirety at this point in the RECORD, along with a digest and an explanation of the bill.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 1900

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act be cited as the "Interstate Taxation of Depositories Act of 1977".

TITLE I—JURISDICTION TO TAX

SEC. 101. UNIFORM JURISDICTIONAL STANDARD: BUSINESS LOCATION TEST.

No State or political subdivision thereof shall have power to impose a doing-business tax on a depository unless such depository has a business location in the State or political subdivision during the taxable year.

TITLE II—MAXIMUM PERCENTAGE OF INCOME, RECEIPTS, OR CAPITAL ATTRIBUTABLE TO TAXING JURISDICTION

SEC. 201. OPTIONAL TWO-FACTOR FORMULA.

(a) A State or political subdivision thereof may not impose for any taxable year on a depository taxable in more than one State a doing-business tax measured by an amount of net income, gross receipts, or capital in excess of the amount determined by multiplying the depository's base by an apportionment fraction, the numerator of which is the sum of the payroll factor and the receipts factor and the denominator of which is 2. For this purpose the base to which the apportionment fraction is applied shall be such depository's net income, gross receipts, or capital for that taxable year as determined under State law, with the exceptions provided for in section 205.

(b) TAXABLE IN MORE THAN ONE STATE; TAXABLE IN A STATE. For purposes of this title, a depository is taxable in more than one State if, pursuant to title I, more than one State has jurisdiction to impose a doing-business tax upon the depository regardless of whether, in fact, any State does or does not impose such a tax.

For purposes of this title, a depository is taxable in a State if, pursuant to title I, that State has jurisdiction to impose a doing-business tax upon the depository regardless of whether, in fact, that State does or does not impose such a tax.

(c) COMBINED REPORTING.

(1) Except as provided in subparagraph (2), a participant State may require, or a depository may elect, that its net income, gross receipts, or capital be determined by reference to the combined base and apportionment factors of all corporations of an affiliated group of which the depository is a member, except a corporation organized under Section 25(a) of the Federal Reserve Act having its principal office located outside the State.

(2) A State may not require a depository not having its principal office in the State, nor may such depository elect, to combine or consolidate for the purpose of determining its net income, gross receipts, or capital with the net income, gross receipts, or capital of the following:

(A) A corporation which is not a depository as defined under this Act,

(B) A corporation which is incorporated outside of the United States, or

(C) Any corporation which derives more than 90 per centum of its income from sources without the United States.

SEC. 202. PAYROLL FACTOR.

(a) IN GENERAL. The payroll factor is a fraction, the numerator of which is the total amount paid in the State by the depository as compensation and the denominator of which is the total amount paid in all States by the depository as compensation during the taxable year.

(b) LOCATION OF COMPENSATION. Compensation is paid in a participant State if paid to an employee considered to be located or as having a regular presence therein, as provided in section 306. All compensation paid by a depository to an employee located in a State in which the depository is not taxable shall be deemed to have been paid in the State in which the depository has its principal office.

SEC. 203. RECEIPTS FACTOR.

(a) IN GENERAL. The receipts factor is a fraction, the numerator of which is the receipts of the depository which are located in the State during the taxable year and the denominator of which is the total receipts of the depository within the United States during such taxable year.

(b) LOCATION OF RECEIPTS FROM LOANS. All interest, discount, net gain and other receipts from each loan which is secured primarily by real estate, shall be included in the numerator of a participant State if the predominant part of such security property is or will be located in such State, as determined in accordance with section 305; and the interest, discount, and net gain from each unsecured loan and each loan secured primarily by tangible or intangible personal property, or any participating interest therein, shall be included in the numerator of a participant State if such loan was originated in such State. All interest, discount, net gain and other receipts from loans which are located in a State in which the depository is not taxable shall be included in the numerator of the State in which the depository's principal office is located.

(c) LOCATION OF CERTAIN OTHER RECEIPTS.

(1) Fees, commissions, service charges, and other receipts from the sale of depository or financial services shall be included in the numerator of the State in which the service is performed. Sales or services rendered in two or more States shall for purposes of the numerator be included in the numerator of the State in which the greater portion of the income-producing activity is performed, based on costs of performance.

(2) Receipts from the lease of tangible property shall be considered to be located in the State in which the property is located.

(3) Interest, dividends, and net gains from securities (whether held for investment or trading purposes) and money market instruments are included in the numerator of the State in which the principal trading activities are conducted.

(d) ALL OTHER RECEIPTS. All receipts other than those described in subsections (b) and (c) of this section shall be excluded from both the numerator and the denominator of the receipts factor for all participant States.

SEC. 204. LOCAL TAXES.

The maximum net income, gross receipts, or capital attributable to a participant political subdivision for tax purposes shall be determined under this title in the same manner as though such political subdivision were a State; except that the denominators of the depository's payroll factor and receipts factor shall be the denominators applicable to all States and political subdivisions. For this purpose, the numerators of the depository's payroll factor shall be determined by treating each reference to a participant State as a reference to a participant political subdivision.

SEC. 205. EXCLUSIONS FROM NET INCOME, GROSS RECEIPTS, AND CAPITAL.

(a) EXCLUSIONS FROM NET INCOME AND GROSS RECEIPTS. The net income or gross receipts of a depository shall not include (1) dividends received from a corporation in which such depository owns at least 80 percent of the voting stock or (2) net income or gross receipts which are derived from the conduct of business at an office, branch, agency or other fixed place of business located outside the United States.

(b) EXCLUSIONS FROM CAPITAL. The capital of a depository shall not include investments in, and advancements to, affiliated corporations.

TITLE III—DEFINITIONS AND MISCELLANEOUS PROVISIONS

PART A—DEFINITIONS

SEC. 301. DOING BUSINESS TAX.

The term "doing business tax" means any tax imposed on, or measured by, net income; any tax which is imposed upon or measured by gross income or gross receipts; or any tax imposed for the franchise, privilege, excise, or license for the doing of business of banking in the State or providing other lending or depository services based on the value of property, assets, or capital employed in the State.

SEC. 302. DEPOSITORY.

The term "depository" means any bank the deposits of which are insured under the Federal Deposit Insurance Act, any institution the accounts of which are insured by the Federal Savings and Loan Insurance Corporation, or any thrift or home financing institution which is a member of a Federal home loan bank; any other bank or thrift institution incorporated or organized under the laws of any State which is engaged in the business of receiving deposits; or any company organized or created under the laws of a foreign country which maintains or owns a branch or subsidiary in the United States which receives deposits.

SEC. 303. STATE.

The term "State" means any of the several States of the United States and the District of Columbia.

SEC. 304. BUSINESS LOCATION.

(a) GENERAL RULE. A depository shall be deemed to have a "business location" in a State in a taxable year only if (i) such depository maintains an office in such State; (ii) one or more employees of the depository has or have a regular presence in such State; (iii) such depository regularly leases to others tangible personal property located in such State; or (iv) such depository owns and uses tangible property involved in funds transfers in the State.

If a depository has a business location in a State solely by reason of (iii), such depository shall be considered to have a business location in that State only with respect to such leased property.

(b) APPLICATION OF GENERAL RULE.—For purposes of subsection (a), a depository shall not be deemed to have a business location within a State during any taxable year merely by reason of (1) the acquisition or purchase of loans, secured and unsecured, or any interest therein, from one or more independent contractors having a business location in the State; (2) the maintenance of an office in the State by, or the business activities in the State of, one or more independent contractors, including but not limited to the collecting and servicing of loans in any manner whatsoever and the making, on behalf of such depository, of physical inspection and appraisals of real or personal property in such State securing any loans or proposed to secure any loan; (3) making loans through or in participation with other depositories having offices in the State; (4) holding, sale, assignment, transfer, collecting or enforcing any loans, or the foreclosure or other disposition thereof, including acquisition of title to property securing such loans by foreclosure, deed in lieu of foreclosure, or otherwise, as a result of default under the terms of the mortgage or other security instruments relating thereto, or the holding, protection, rental, maintenance and operation of said property so acquired or the disposition thereof: *Provided,* That such de-

pository shall pay real estate taxes on said property, and shall not hold, own or operate said property for a period exceeding 5 years from the final date of its acquisition; or (5) by reason of the use of tangible property involved in funds transfers owned by independent contractors.

The term "independent contractor," as used in reference to a particular depository, means any individual, corporation, partnership, voluntary association, trust, or other entity, other than such depository engaged in business activities on behalf of more than one principal, including such depository, but such term shall not include an employee of such depository.

(c) POLITICAL SUBDIVISION. For the purpose of determining whether a depository has a business location in a political subdivision, subsection (a) shall be applied by treating each reference therein to a State as reference to a political subdivision.

SEC. 305. LOCATION OF PROPERTY.

(a) GENERAL RULE. Except as otherwise provided in this section, tangible property, including real property which is security for a loan, shall be considered to be located in the State in which such property is physically situated.

(b) MOVING PROPERTY LEASED TO OTHERS. Tangible personal property which is characteristically moving property, such as motor vehicles, rolling stock, aircraft, vessels, mobile equipment, and the like, and which is leased to others for use, shall be considered to be located in the State if—

(1) the operation of the property by the lessee is entirely within that State, or the operation without the State is occasional or incidental to its operation within the State; or

(2) the operation of the property by the lessee is in two or more States, but the principal base of operations from which the property is sent out by the lessee is in that State.

(c) POLITICAL SUBDIVISION. For the purpose of determining whether property is located in a political subdivision, subsections (a) and (b) shall be applied by treating each reference therein to a State as a reference to a political subdivision.

SEC. 306. LOCATION OF EMPLOYEE.

(a) IN GENERAL. An employee shall be considered to be located in a State or to have a regular presence therein if—

(1) the employee's service is performed entirely within the State;

(2) the employee's service is performed both within and without the State, but the service performed without the State is incidental to the employee's service within the State; or

(3) some of the employee's service is performed in the State; and

(A) the base of operations, or if there is no base of operations, the place from which the employee's service is directed or controlled is within the State; or

(B) the base of operations or the place from which the service is directed or controlled is not within any State in which some part of the service is performed but the employee's residence is within the State.

(b) EXCEPTED ACTIVITIES. An employee shall not be considered to be located or to have a regular presence in a State if his or her only business activities within such State on behalf of his or her employer are any of the following:

(1) The solicitation of applications for loans which are sent outside the State for approval, of deposits which are received and maintained at an office outside the State, and of financial or depository services which are performed outside the State;

(2) The making of credit investigations and of physical inspections and appraisals of real and personal property securing or proposed to secure any loan;

(3) The filing of a security interest; the enforcement of any loans by trustee sale, the judicial process or deed in lieu of foreclosure; or the maintaining or defending of any action or suit; and

(4) Acting as an executor of an estate, trustee of a benefit plan, employe's profit sharing or retirement plan, testamentary or intervivos trust, corporate indenture, or in any other fiduciary capacity, including but not limited to holding a title to real property in the State. This subsection shall not apply with respect to the business activities carried on by one or more employees within a State if the employer (without regard to those employees) has a business location in such State.

(c) POLITICAL SUBDIVISION. For the purpose of determining whether an employee is located or has a regular presence in a political subdivision, subsections (a) and (b) shall be applied by treating each reference therein to a State as a reference to a political subdivision.

SEC. 307. COMPENSATION.

"Compenstion" means wages, salaries, commissions, and any other form of remuneration paid to employees for personal services.

SEC. 308. SECURITIES.

The term "securities" means United States Treasury securities, obligations of United States Government agencies and corporations, obligations of State and political subdivisions, corporate stock and other securities (excluding stock of corporations the dividends of which are excluded from net income or gross receipts), and participations in securities backed by mortgages held by United States or State government agencies.

SEC. 309. MONEY MARKET INSTRUMENTS.

The term "money market instruments" means Federal funds sold and securities purchased under agreements to resell, commercial paper, purchased banker's acceptances, and purchased certificates of deposit.

SEC. 310. AFFILIATED CORPORATIONS.

Two or more corporations shall be deemed to be members of an "affiliated group" comprised of one or more corporate members if they are connected through stock ownership with a common owner, which may be either corporate or non-corporate, in the following manner:

(a) 80 percent or more of the voting stock of each member other than the common owner is owned directly by one or more of the other members; and

(b) 80 percent or more of the voting stock of at least one of the members other than the common owner is owned directly by the common owner.

SEC. 311. EMPLOYEE.

The term "employee" has the same meaning as it has for purposes of Federal income tax withholding under chapter 25 of the Internal Revenue Code of 1954, as amended.

SEC. 312. INCOME FROM SOURCES WITHOUT THE UNITED STATES

"Income from sources without the United States" means income from sources without the United States as defined by the Internal Revenue Code of 1954, as amended.

SEC. 313. TANGIBLE PROPERTY INVOLVED IN FUNDS TRANSFERS.

The term "tangible property involved in funds transfers" shall include, but not by way of limitation, automated teller machines, point of sale terminals, clearing house facilities, wire systems and other telephonic or electronic credit authorization and direct payment systems.

SEC. 314. PARTICIPANT STATE.

The term "participant State" means a State in which a depository has a business location during a particular taxable year.

SEC. 315. PARTICIPANT POLITICAL SUBDIVISION.

The term "participant political subdivision" means a political subdivision in which a depository has a business location during a particular taxable year.

SEC. 316. ORIGINATION OF LOANS.

A loan shall be deemed to have been orignated in the State if the loan application, including any application for prearranged extension of credit, is received for approval at an office within the State or by an employee within the State who has a regular presence therein and who is authorized to approve such loans.

PART B—MISCELLANEOUS PROVISIONS

SEC. 351. PROHIBITIONS AGAINST DISCRIMINATION.

No State or political subdivision may impose a doing business tax on any depository not having its principal office within such State which would not be imposed, or at a higher rate than would be, if such depository had its principal office in the State.

SEC. 352. APPLICABILITY OF ACT.

Nothing in this Act shall be considered—

(a) to repeal section 548 of title 12, United States Code, or section 1464(h) of title 12, United States Code; or

(b) to prevent a State or political subdivision from enacting legislation that would result in a lesser tax liability than provided in the Act.

THE INTERSTATE TAXATION OF DEPOSITORIES ACT OF 1977

The national goals of fostering an efficient banking system and the free flow of commerce among the states, cited by Congress in P.L. 93–100, require the enactment of Federal legislation which clearly defines the limits on the powers of the states to tax out-of-state depositories and allows such depositories to determine the tax consequences of their interstate transactions. As mandated by P.L. 93–100, the Interstate Taxation of Depositories Act of 1977 (ITDA) establishes uniform and equitable rules for determining jurisdiction to tax and divides the depository tax base among the states. ITDA is similar in format and concept to a number of bills regulating the interstate taxation of non-depository businesses introduced in Congress, with appropriate changes to reflect the special problems of depository institutions.

The jurisdictional standard of ITDA provides that a state (or a local subdivision) may tax an out-of-state depository only if that depository has a business location within the state (or local subdivision). In summary, a business location of a depository is defined as:

(1) an office in the state;

(2) the ownership of tangible personal property leased to others for use in the state;

(3) the performance of certain activities in the state by employees regularly present in the state; or

(4) the ownership of EFT facilities in the state.

The jurisdictional standard recognizes the Federal and state statutory and regulatory limitations on interstate branching and other depository activities in non-domiciliary states. Yet, it allows non-domiciliary states to tax depositories which have established business locations within their borders. Similar to P.L. 86–272, which governs the taxation of non-depositories, it exempts minor, incidental, or occasional activities (such as the solicitation of loans) which would produce minimal state revenues, but would impose heavy bookkeeping and compliance burdens,

particularly on small- and medium-sized depositories. ITDA does not allow for discrimination as between Federally and state-chartered depositories.

ITDA does not require substantial changes in existing methods of taxation which the individual states now apply to their depositories. ITDA does not restrict the type of doing-business tax (net income, gross receipts, or capital stock) which a state may impose on out-of-state depositories or the rates of tax which may be applied to depositories. ITDA also allows each state to define the tax base under its chosen method of doing-business tax, subject to certain exclusions to avoid double taxation, *i.e.*, it excludes dividends from and investments in affiliated corporations and foreign branch income which already has been heavily taxed by foreign jurisdictions.

ITDA provides division of tax base rules, which the Federal Reserve Board in its study of the taxation of depositories in 1972 recognized as being necessary to avoid overtaxation of the depository state tax base and to promote uniformity. ITDA allows any state, which has jurisdiction to tax an out-of-state depository, to adopt its own apportionment formula or other division of base rules, subject to the maximum determined by the optional apportionment formula. The two-factor apportionary formula of ITDA based on payroll and receipts reflects the particular nature of the financial business conducted by depositories.

In summary, ITDA provides a comprehensive approach to a very complex issue. It clearly defines those activities which establish state authority to tax an out-of-state depository and provides equitable rules for determining the maximum amount of the depository tax base which may be assigned to a state. Within these limits, ITDA strives to preserve the fiscal autonomy of the states to continue existing methods of taxing depositories and to extend these rules to out-of-state institutions. By removing the uncertainties that depositories wou.d face under the current diverse state systems of taxing depositories, ITDA minimizes the impact of tax considerations on the interstate flow of credit, which has been a long-time concern of the Federal Reserve Board and Congress.

TECHNICAL EXPLANATION OF THE INTERSTATE TAXATION OF DEPOSITORIES ACT OF 1977

General.—The Interstate Taxation of Depositories Act (ITDA) embodies concepts which are similar to those contained in various bills governing the interstate taxation of *non*-depository businesses which have been introduced in Congress. This approach provides parallel interstate tax treatment, where possible, between depositories and non-depositories. ITDA adopts specific provisions which differ from other interstate taxation bills in order to reflect the particular problems and operations of the depository industry.

Section 101.—Uniform Jurisdictional Standard.—The Act adopts the business location standard for jurisdiction provided in the other interstate taxation bills. It is the intent of this provision that no state may tax a depository unless there is a business location in the state, and that no political subdivision may tax a depository unless there is a business location in the political subdivision. In other words, a depository must have a business location within a political subdivision before it is subject to a local doing business tax even though it may have a business location elsewhere in the State. The definition of business location is contained in Section 304.

Section 201.—Optional Two-Factor Formula.—(a) The formula is optional, which means a state may apply its own apportionment formula or other division of base rule to divide the applicable state tax base of any depository taxable (but not necessarily taxed) in two or more states.

However, in order to prevent over-apportionment, the formula establishes the maximum percentage of that base which may be taxed by a state having jurisdiction—that is, the sum of the percentages in all states may not exceed 100 percent of a depository's tax base. The formula applies to the measure of doing business tax (whether net income, gross receipts, or capital) selected by the states.

A two-factor formula based on the location of payroll and receipts is used. A property factor, commonly provided in the three-factor formula used by the states to apportion the income of non-depositories, is not included. Tangible property is not as significant to financial institutions which conduct more of a service-type business, and the location of depository premises and equipment tends to be duplicative of the location of payroll. The location of intangible personal property, dependent upon the rules adopted, would be duplicative of the location of receipts or payroll, and would tend to double such factors. Moreover, problems arise as to non-income producing intangibles such as cash, reserves, balances with other banks, and collection items. Under the two-factor formula, equal weight is given to the sales or receipts factor (the marketing function) and the payroll factor, which recognizes the contribution of the deposit-gathering, lending and servicing functions, to the production of depository income or capital.

In recognition of the existing fiscal policies of the several states, no definition of tax base is provided (except that income from foreign branch operations and subsidiary dividends or investments are excluded to avoid double taxation). All income is basically treated as apportionable business income (that is, it is assigned by the formula, rather than specifically assigned to a single state) because the lending and investment activities are integral parts of the depository business.

(b) Taxable in More Than One State.—In subsection (b) the concept of "taxable in more than one state" is introduced to clearly establish when the formula is applicable to a depository. The phrase "taxable in a state" prevents those states which have jurisdiction to tax a depository from claiming the portion of the tax base attributable to any state which has jurisdiction to tax but does not do so because it adopts a higher jurisdictional standard or refrains from taxing out-of-state depositories to implement state policy of encouraging credit flows into that state.

(c) Combined Reporting.—The general rule allows most states to continue to apply existing combined reporting practice to depositories which have their principal office in the state and to other members of affiliated groups of which such depositories are members. Under ITDA, those states which require the combination of depositories with non-depository affiliates under their current rules, generally may continue to do so. However, ITDA prohibits the states from combining out-of-state depositories with non-depositories, which are subject to different jurisdictional rules, and with non-U.S. corporations, as to which the claims of non-domiciliary states to tax are much more remote.

Without these limitations on combined reporting, overtaxation may result due to distinct and often non-uniform methods of taxing depositories and other corporations in the various states and countries. The ITDA rule does not deprive the states of any existing authority as to non-domiciliary depositories and allows the states to continue their current policies on combination as to other members of an affiliated group. This approach also parallels the other interstate taxation bills which do not allow combination which "excluded corporations," a term which includes financial and non-U.S. corporations.

Section 202.—The Payroll Factor.—The payroll factor follows the other interstate bills and locates compensation in accordance with the Model Unemployment Compensation Act which simplifies recordkeeping and assigns employees to a single state. These rules are set forth in Section 306. Payroll in states in which a depository is not taxable is assigned to the principal office state so that the total of the numerators equals the denominator, thereby avoiding the tax base being assigned to a state which lacks jurisdiction to tax the depository.

Section 203(b).—Receipts Factor.—Under the receipts factor, interest from loans secured by real property is assigned to the state where such property is located. Interest from other loans is assigned to the state in which the loan was originated. As defined in Sec. 316, a loan is originated in the state if the loan application is made at an office or received by an employee authorized to approve the application Loans attributable to a state in which a depository is not taxable are "thrown back" or "recaptured" by the principal office state which prevents the assignment of the receipts to the numerator of a state in which a depository is not taxable.

Section 203(c).—Other receipts.—Service income is assigned to the state where the service is substantially performed. This avoids the difficulty of apportioning service income among several states. Rentals from tangible property, whether real or personal, are assigned to the state where the property is located. The property location rules in Section 305 apply. Because investment activities of depositories are significant, interest, dividends, and gains from securities and money market instruments are included in the receipts factor and are assigned to the state where the trading activities are conducted. Other receipts, such as sales of tangible property, are excluded from the numerator and denominator because they are outside of the normal trade or business of the depository, or they may distort the receipts factor, or they are incidental and minor.

Section 204.—Local Taxes.—The apportionment formula will apply to a depository having a business location in more than one political subdivision, thereby allowing the political subdivision to tax the portion of the depository's tax base attributable to its business location under the same rules. The rule for local taxes will prevent overtaxation at local levels by assuring that the sum of the apportionment percentages for all political subdivisions does not exceed 100 percent.

Section 205(a).—Exclusions From Net Income and Gross Receipts.—Foreign branch income is excluded from net income and gross receipts to avoid making this income (which is subject to foreign tax at national, state, provincial, canton or local levels) also subject to tax by states and localities of the United States. The formula would not properly avoid such double taxation, because it would not properly recognize differences in exchange controls, currency fluctuations and foreign banking regulations that affect the methods of operation in foreign countries. The inclusion of foreign factors would distort the formula and would not truly reflect the income from domestic operations. Dividends received from affiliates, which were already taxed at the state and local level on the income from which the dividend is paid, are also excluded to avoid double taxation. Similarly, in Section 205(b), investments in affiliates are eliminated from a capital stock tax base.

Section 301.—Doing Business Taxes.—The phrase "doing business tax" is defined to include those taxes which are construed to be within the purview of Public Law 93-100. Under a recent Supreme Court decision, there are no longer any limitations upon the power of the states to impose on interstate businesses franchise taxes measured by income. Therefore, a state may impose a franchise tax measured by income on an out-of-state depository which maintains a business location in the state. Therefore, interest from Federal obligations may be included in the tax base without amendment to the Public Debt statute.

Section 303.—States.—Unlike P.L. 93-100, the bill is limited only to the states of the United States and the District of Columbia. It was considered to be unwise to treat territories and possessions as "states" which is inconsistent with their special treatment under the Internal Revenue Code. Furthermore, application of the Act to territories and possessions may affect their revenues provided by taxes imposed under existing organic Acts adopted by Congress.

Section 304.—Business Location.—A "business location" is defined as the maintenance of an office location, the regular presence of employees, and the ownership and use of an EFTS facility. Under ITDA, a business location also includes the leasing of tangible personal property for use in the state, but leasing does not extend jurisdiction to tax income derived from unrelated lending or investment activities unless the depository otherwise maintains a business location therein.

The Act also enumerates a number of activities which in themselves do not constitute a business location in the state, and thus do not subject a depository to the state's taxing jurisdiction. Section 306(b) clarifies that a depository is not considered to have employees regularly present in the state where the employees' only activities are the solicitation of loans or those necessary to perfect a lien or enforce a loan. The performance of these activities, which are merely incidental to loans that are approved, funded and serviced outside the state, are accorded the same protection provided for the solicitation of sales by non-depositories in P.L. 86-272. Similarly, under Section 304(b) a depository will not be subject to a state's jurisdiction because of such activities performed on its behalf by independent contractors which have a business location within the state, or because of correspondent relationships or loan participations with depositories located in the state. ITDA also excludes jurisdiction based on the ownership of EFTS facilities in the state by independent contractors or based on the ownership of real property acquired through foreclosure. Basing jurisdiction on the acquisition of real property through foreclosure would deter interstate mortgage loans, particularly those acquired through secondary markets.

Section 305.—Location of Property.—A presumption of location is provided for moving property leased to others to avoid a depository being subject to jurisdiction to tax in a multiplicity of states and political subdivisions merely because of the temporary presence of the leased property. This rule also assigns the rental receipts from movable property.

Section 306.—Location of Employee.—The rules for determining the location of an employee are adopted from the other non-depository interstate taxation bills. As noted above, mere solicitation (of loans, deposits or services) by a depository employee does not constitute a business location within a state where the loans are approved and serviced outside the state, the deposits are made at an office outside the state or the services are performed outside the state. The other excepted activities of an employee allow minimal contact to perfect, hold or enforce a loan. The last sentence of Section 306(a) clarifies that the employees' activities are not "excepted" if the employer has a business location in the state.

Section 351.—Prohibition Against Discrimination.—This prohibition is not intended to require that uniform taxation be imposed upon banks and thrift institutions. The language of this provision protects out-of-state depositories, whether national or state-chartered, from being taxed at higher rates than similar domiciliary institutions. Therefore, the power to tax will not be used to impede the interstate flow of credit.

Section 352.—Applicability of the Act.—Existing provisions of Federal law requiring non-discrimination as to state and Federally chartered institutions are ratified. The second paragraph clarifies that the states in order to attract out-of-state loans, or for other reasons, may elect not to extend their jurisdiction to the fullest or may elect not to apportion income or capital to the extent allowable by the Act. As noted above, the reference to "taxable" in Section 201(c) prevents other states from recapturing this income or capital.

By Mr. GRIFFIN (for himself and Mr. RIEGLE):

S. 1901. A bill to provide that a portion of the savings which are realized by the Department of Defense as a result of the closure or realinement of a military base in a community shall be returned to the community for economic recovery and adjustment; to the Committee on Governmental Affairs.

Mr. GRIFFIN. Mr. President, today, Senator RIEGLE and I are introducing the Defense Economic Development and Recovery Act, a bill designed to meet the needs of those regions which have been severely impacted by the closure or realinement of major military installations. A similar bill has been introduced in the House by Congressman PHILIP RUPPE.

It is a fact of life that the closure of major military installations causes severe social and economic problems for the affected nearby communities. In 1977, five major military bases will be closed, one of them being Kincheloe Air Force Base in the State of Michigan.

According to the Department of the Air Force's own environmental impact statement unless some relief is provided, closure of the Kincheloe Air Force Base in northern Michigan will affect the local area with a 24 percent population loss, a 43.4 percent unemployment rate, a 22 percent cut in the payroll of the surrounding area, and a housing market approaching depression levels.

Frankly, Federal assistance for communities caught in such a situation is far from adequate. For example, the Office of Economic Adjustment is limited to providing up to $30,000 for studies and some technical assistance. Title IX of the Economic Development Act is helpful, but competition for the grants available under that legislation is fierce and the application process is too lengthy to be very meaningful for such communities.

Therefore, we are proposing a program which would be administered through existing Federal agencies and departments to help alleviate the economic hardships of base closures. In short, it would provide that:

First, 10 percent of the 10-year savings which the Government claims it will save by closing a military installation be set aside to help the local communities directly impacted by such closures, and

Second, funds so set aside would be distributed as grants upon approval of community applications for projects providing productive jobs and improving opportunities for industrial or commercial enterprises in the impacted areas.

In addition, the bill requires annual reports on expenditures and calls for updated comprehensive planning to insure local accountability.

We believe that such a program is fair and reasonable, and that the bill we introduce should be enacted.

By Mr. DOMENICI:

S.J. Res. 75. A joint resolution designating the pine tree as the national arboreal emblem of the United States; to the Committee on the Judiciary.

Mr. DOMENICI. Mr. President, it is with pride and pleasure that I introduce a proposal to designate the pine tree as the official national tree of the United States. Not only will the approval of this resolution finally designate a national symbol, but it will illustrate to 31 students and all Americans that they may have actual input to their elected representatives and the American democratic process.

The proposal for designating an official national tree originated with a sixth-grade class at Barea Middle School in Greenville, S.C. While compiling information on the Nation and its 50 States, the students were astonished to learn that the United States had never selected a national tree. Soon the students decided to pursue the goal of finding a national tree which was uniquely suited to become the national tree. Thus in September of 1976, the students formed a permanent committee to gather information and data on trees preferred and designated as official State trees. Soon after corresponding with the Governors of each State in the Union, it became clear that only one tree grew in every State, and that was the pine tree. In reaction to this minor surprise, the students conducted research on the pine tree and soon learned that it has played a most significant and noted role in our Nation's history.

For instance, the pine tree was depicted on the very first coin in America and also on three flags during the Revolutionary War period. From the earliest beginnings of this country, the pine tree has been used for many necessary and varied purposes.

As a matter of fact, the pine tree was one of the first trees to be used by early settlers for the construction of homes, naval stores, coffins, and canoes.

The important role it has played in the individual States is indicated by the mere fact that the pine tree has been selected as the official tree of 18 States, which represents about one-third of the

Union. I am happy to note that my State of New Mexico has designated the pinon pine, a member of the pine tree family, as its official State tree.

Economically, the pine tree still plays a major role. Research conducted by the 31 students shows that the pine tree is still the No. 1 tree in total use in the United States. Surely no other tree on Earth is more universally recognized and enjoyed than the pine tree, both for recreational and industrial purposes. The pine tree's needles, bark, cones, smell, shape, and color are nationally familiar to every American.

However, besides these substantive reasons for selecting the pine tree as the official national tree of the United States, I believe this resolution should receive favorable consideration, because of the illustration this entire effort will be to these 31 students and all Americans interested in helping this Nation. If this resolution is approved, then I feel very confident these young but sincere Americans who have dedicated more than 9 months to this project, will see that they too may play the ultimate role in a democracy by bringing proposals to their elected representatives and having their collective thoughts and ideas enacted into actual governmental policies and in this case—official designations. This is the most important lesson we can teach any student, because if they learn it well, they will not only be good students in the classroom, but more importantly, active and contributing citizens in our democracy.

Already, Congressman MANN has introduced this resolution in the House as House Joint Resolution 389. I urge my colleagues to act quickly on this resolution.

I ask unanmious consent that the full text of the resolution be in the RECORD at this point.

There being no objection, the joint resolution was ordered to be printed in the RECORD, as follows:

S.J. RES. 75

Whereas the peoples of the world have from time immemorial adopted emblems (flags, birds, and flowers) for their countries, representative of their national virtues; and

Whereas the people of the United States have similarly adopted emblems (the American flag and the American eagle) to represent the virtues of this country; and

Whereas each of the fifty sovereign States of the United States, in addition to its State flag, has an arboreal emblem which it cherishes as its own; and

Whereas the pine symbolizes the American past more appropriately than any other tree in that the pine tree was represented on three flags of the American Revolution, provided the first settlers with food and shelter, and is still found today flourishing in all fifty sovereign States of the United States; and

Whereas the pine tree represents the character of the United States in that it is a noble tree whose grandeur and significance is manifested in the harmonies of its distribution and varying aspects throughout the season; and

Whereas the pine tree represents the strength of the United States with its superior powers of enduring variation of climate and soil as well as its longevity and capabilities for individual expression, original and picturesque; and

Whereas pines represent the spirit of the United States because they are sky-loving trees that must necessarily aspire or die, towering grandly above their companions with steadfast resilient strength; and

Whereas the pine tree represents the renewable resourcefulness of the United States more appropriately than does any other tree in that it is hardy and frequently springs up in devastated and impoverished land; and

Whereas pines are valued for their durability and have long supplied most of the soft-wood lumber produced in the United States: the billions of board feet used each year for such purposes as beams, house frames, furniture, and interior finish come mainly from the pine tree, and the pine supplies many industries with huge quantities of naval stores (resin, tar, and turpentine) while young pines, which have no value for timber or resin, make satisfactory newsprint: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled. That the tree commonly known as the pine is designated and adopted as the national arboreal emblem of the United States of America, and the President of the United States is authorized and requested to declare such fact by proclamation.

ADDITIONAL STATEMENTS

THE ADMINISTRATION'S "INSTANT REGISTRATION" PLAN

Mr. HARRY F. BYRD, JR. Mr. President, the administration has made a wise decision in abandoning at least that portion of its election bill calling for federally mandated instant voter registration on election day.

I have just received the results of a survey on this issue conducted among Virginia's chief election officials in the State's 136 counties and cities. Eighty-seven percent of Virginia's registrars responded to the survey.

All of those officials except four indicated their opposition to the administration's "instant registration" plan, most citing the likelihood of fraud as one of the major reasons for opposing the federally dictated procedure.

Of the 118 who responded, 114 opposed "instant registration" and only four in favor.

The views of the registrars was best summarized by Mr. William Thomas, president of the Voters Registrars Association of Virginia and registrar for Pulaski County, Va. Mr. Thomas' comment follows:

The greatest concern with this legislation voiced by the Registrars is the open invitation to uncontrollable fraud and the chaotic conditions it could create at the polls on Election Day. The so-called safeguards against fraud only guarantee as much as the enforcement personnel are able by numbers to enforce. Laws without follow-through teeth are almost useless. Once a vote is recorded on a voting machine there is no way to retrieve it, short of throwing out the election. We are concerned that the one vote per person could be diluted enough to sway close elections.

I commend to my colleagues the results of this survey, as well as an editorial from the Washington Post. I ask unanimous consent that the statement issued by the Voter Registrars Association of Virginia and the Washington Post editorial be printed in the RECORD.

INSTANT REGISTRATION

The Voter Registrars Association of Virginia today released the results of a survey questionnaire which was sent by the association to all General Registrars in the Commonwealth. The survey was generated by a Bill, H.R. 5400.

Alarmed at the possibility of severe technical problems with the administration of the Election Day Registration and Voting Legislation now before Congress and with a desire to be of assistance, this association, prompted by requests from Capitol Hill, conducted a state-wide survey among personnel who would be responsible for the administration of this Act. The Bill, H.R. 5400, is just now beginning to receive notice. Requests have come to V.R.A.V. members from some Congressmen asking for technical and professional in-put which may help them in reaching a decision for or against this change in registration and voting procedures.

Congressman Caldwell Butler in speaking before a joint meeting of the Virginia Electoral Boards Association and the Voter Registrars' Association of Virginia about President Carter's Universal Voter Registration Bill asked that he be given in-put from these groups who would actually be responsible for the administration procedures on the grass roots level if the bill is enacted into law.

A committee from the Voter Registrars' Association spent much time in the study of the bill and presented its findings as to possible effects which might be expected to occur.

It also presented amendments which might make the bill more palatable as well as alternate proposals for accomplishing the same purpose, that of facilitating the participation of citizens in the electoral process, but which would present fewer problems in administration and fraud potential.

In a follow-up of this committee's report, questionnaires were mailed to the General Registrars of each of the 136 cities and counties in Virginia. A summation of results of this questionnaire follows:

Of the 87% responding, all but four answered "No" to the question of whether or not the Bill should be passed. Additional opinions expressed were that the measure was too extreme and manipulation-prone and that registration was not the real reason for voter *non*-participation.

In answer to another question, several felt that further study was needed, especially in states where the system has been tried, in order to prove conclusively that election day registration does not increase fraudulent voting.

In answer to a query about possible problems which could face the public as well as the officials whose duty and responsibility it is to administer elections smoothly, efficiently and with the highest level of integrity, all but four gave vital reasons for not supporting H.R. 5400. These few stated that only after much trial and error could judgment be made.

It was felt that the measure was too extreme and was not the real reason, but merely the "scape goat," for low voter turn-out.

The overwhelming response, based on experience and technical knowledge was that voter participation would probably be discouraged because of confusion to the voter, brought about by long lines and serious delays, even for voters who registered in advance and that the chaotic condition and ease of multi-registration would promote widespread fraud of the most flagrant nature.

Sixty-four percent predicted that more (from 30% to 50% more each year) persons would wait until Election Day to register, regardless of the incentives to register ahead of time. While a lesser number felt that voters going to the wrong polling places would

be a large problem, causing unnecessary anger and confusion to the voter, an even greater number felt that the very difficult responsibility of assigning a voter to the correct precinct would be error-prone, especially in very rural areas or in large metropolitan areas where precinct boundaries are in the middle of streets or roads.

Further complicating the process and adding to the possibility of challenged elections, is the difficulty of the proper ballots to be voted when Congressional or State Offices are split within jurisdictions or precincts.

Over one fourth were vitally concerned by increases in election and registration expenses due to the uncertainty of the numbers of extra officials, materials, ballots, machines, etc., needed for standby equipment and personnel.

The seeming impossibility to plan orderly elections and maintain correct records concerned 29% of the responding officials who feared that the extreme problems in administration would make it virtually impossible to attract competent, trainable personnel willing to serve as election officers or registrars and that election administrators would consider it an undue hardship to manage such elections.

An inability to check the state master registration file as well as insufficient information would make proper and prompt i.d. certification impossible. Many responders expressed concern that such a change in registration procedures might indeed bring on the deterioration and breakdown of an orderly electoral system in the Commonwealth.

Some of the Registrars stated that administration could be worked out only after much experience, and a lesser number felt that fewer problems would arise with the use of a Central Registration Location on Election Day.

Of those responding to the question on how to determine the number of election officers and voting machines for use or for standby, a significant number said that this could be done based on population in each precinct. A much larger number, however, felt that it would be impossible to determine thereby causing too many or too few in some precincts.

Most of the Registrars answered that they would need at least one additional registrar per precinct. Nearly 25% felt that it would require two or more per precinct.

When asked how many persons would one registrar be able to certify (register) in a 13-hour day, which is the time the polls are open, the answers covered a rather wide range based on type of voter i.d. required and amount of trained experience the registrar had. Generally, it was indicated that 150 registrations would be possible per registrar.

The types of communities in Virginia range from very stable to extremely transient. Those transient areas showed a range of from 5% to 30% turnover yearly.

Included with the survey was a list of five alternate proposals for stimulating voter participation. A "National Registration Holiday" to be held shortly (at least 30 days) before but other than on Election Day received the most favorable responses. The use of an "occupant mailing" as a reminder to register as well as for information regarding issues and candidates rated a second choice.

Some Registrars felt that allowing registration and voting during the period when the books are normally closed should be considered. The year-round addition of extra night hours and extra Saturdays for registration in addition to those required received little positive response, based on actual experience. Election Day Registration at only one Central Registration Location received little support.

"The greatest concern with this legislation voiced by the Registrars," according to Mr. William Thomas, Pulaski Co. Registrar and President of the Registrars Association of Virginia, "is the open invitation to uncontrollable fraud and the chaotic conditions it could create at the polls on Election Day." "The so-called safeguards against fraud only guarantee as much as the enforcement personnel are able by numbers to enforce. Laws without follow-through teeth are almost useless. Once a vote is recorded on a voting machine there is no way to retrieve it, short of throwing out the election!" "We are concerned that the one vote per person could be diluted enough to sway close elections."

In Virginia, the responsibility of the registration of voters is imposed upon the General Registrars, and the Electoral Boards are delegated the responsibility of the conduct of elections. This is a check and balance system which may be unique in that many other states combine these two responsibilities under one administrative head.

Virginia may also be unique in that the funding of the electoral processes for the most part is done by local governing bodies who may or may not be willing to use local tax dollars to accomplish programs mandated at the federal or state levels.

[From the Washington Post, July 17, 1977]

THAT INSTANT-VOTER BILL

At first glance, it may seem that the Carter administration and the House Democratic leadership have vastly improved their Election Day registration bill by agreeing to make the program voluntary. After all, the most persuasive and least partisan objection to the bill has been that it would compel every state to adopt by 1980, at least for federal elections, a new instant-registration system that could easily lead to widespread fraud and confusion at the polls. If the program is now to be optional forever, that criticism has been swept away. States with histories of Election Day problems, such as Rhode Island, Louisiana, Maryland and Illinois, will be free to go on requiring would-be voters to register in advance. States with less turbulent traditions may try out the new approach.

That sounds just fine . . . but wait a minute. If the program is to be optional, why is it needed at all? The states are free to adopt instant-registration or no-registration systems any time. What would the legislation add? Just one thing: money. Federal money, to be precise, through grants for administrative overhead and fraud control and "voter outreach" programs and the like in states that do agree to open their registration rolls on Election Day.

That's why the bill is still alive—and why we still object to it. We have no quarrel with federal inducements in principle; the carrot is often more effective than the stick. But the idea of federal aid for state and local electoral activities has its own problems. Without careful supervision, "voter outreach" could quickly turn into voter roundups for the benefit of one party, faction or candidate. With federal monitoring, on the other hand, would come federal regulations and bureaucracy—and equal-opportunity rules for precinct workers would not be far behind.

It doesn't help that the federal largesse would go only to willing states. On the contrary, the states most cordial to Election Day registration are likely to be those with the fewest voting problems—and the least real need for federal aid. One could argue in fact, that if the aim is to shore up state and local election boards, the greatest help should go to those that don't dare risk instant registration at all. But bolstering election administration seems to be a secondary interest for the Democrats. Their first hope is to get more people to the polls. They ought to try to do that in the customary ways, through good grass-roots organizations, attractive candidates and issues, and strong campaigns.

DEFENSE APPROPRIATIONS, 1978—THE NAVY "BUILD AND CHARTER" PROGRAM

Mr. MUSKIE. Mr. President, the bill now pending contains $6.1 billion for Navy ship construction so that the Navy may procure vessels consistent with its missions and in accord with the carefully considered approval of the Congress. A primary aspect of the approval by Congress is that the shipbuilding program is subject to both, and I repeat both, the authorization and appropriation legislative processes.

Mr. President, there has been in existence within the Department of Defense a "build and charter" program which operated in the following manner. The military sealift command, within the Department of the Navy, contracted with groups of private investors to secure the construction of certain ships. The investors in turn contracted with a shipbuilder for the actual construction of the ship. Although the investors owned the ship and financed the construction, the Navy made a commitment to charter the vessel, upon completion, for a period of time equivalent to the economic life of the ship. By leasing or chartering ships, instead of making a purchase, the Navy could apply operation and maintenance funds to the charter payments. This particular use of O. & M. funds, unlike procurement funds in the shipbuilding construction account, did not require specific authorization by the Congress.

Mr. President, as chairman of the Senate Budget Committee, I am concerned that this method of obligation of U.S. funds has serious implications for the integrity of the budget process.

First, Mr. President, the "build and charter" program that I just described is removed from the effective control of the Congress. Because operation and maintenance funds are used to charter, and not purchase vessels, the normal authorization and appropriation process is circumvented. Nor can the budget process effectively control the obligation of these funds for two reasons: First because the budget process is not a line item control mechanism and second, the amount of any 1-year obligation in relationship to the budget totals is too small to permit effective congressional review. Thus, these programs are uncontrollable and unresponsive to current year decisions.

In addition, Mr. President, when spending obligations are not reflected in the budget documents that we consider, the effectiveness of the budget process is undercut. If the numbers, upon which we base our budget decisions are inaccurate, the process itself is weakened as a tool with which the Federal resource is directed. The Budget Committee has a duty to strengthen the process. A "build and charter" program's method of obligating U.S. funds without an authorization review weakens the congressional budget process. When the Congress makes a decision to spend x amount of

dollars for a particular mission, we have every right to expect that our decision is based on an understanding of the total Federal outlays that result from our decision.

This is not the case with a "build and charter" program that avoids authorization for a specific number of ships. Only a small fraction of the ultimate costs show up; if at all, in the budget for the year in which a commitment is made to huge future year costs.

Any funding program that is put forward should conform to sound, honest, and above board accounting practices. I understand that the Navy has circulated within DOD a proposal to modify the "build and charter" program that they have operated in the past. I welcome such a proposal and I understand any new "build and charter" proposal will subject such a policy to both the authorization and appropriation process.

Mr. President, the "build and charter" program must undergo the scrutiny that the budget process requires if we are to insure that constitutional checks and balances and the integrity of the Congress are upheld.

HARD ENERGY VERSUS SOFT ENERGY

Mr. GARN. Mr. President, the key point of Amory Lovins Foreign Affairs article, "Energy Strategy: The Road Not Taken?" is the possibility of immediate conversion to solar heating and cooling for homes. Sheldon H. Butt, president of the Solar Energy Industries Association, has commented perceptively on this contention. Obviously, as the president of solar energy association, Mr. Butt cannot be accused of a bias against solar energy.

His point, however, is that however desirable it may be to use maximum solar energy in home heating and cooling, it is a delusion to think that this source can supply 100 percent of our needs now. As he says, solar energy is cost-effective for 40 to 60 percent of heating and cooling needs in the United States now, but that simply doubling costs does not produce a 100-percent system as Lovins implies. Costs increase exponentially, so that it costs almost three times as much to reach 85 percent efficiency as it does to reach 60 percent. Most projections do not go beyond that point, simply because the size and cost of the installation needed to supply 100 percent of needed energy is too great to be seriously contemplated.

I ask unanimous consent that Mr. Butt's article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A SOLAR VIEW OF THE SOFT PATH

(By Sheldon H. Butt)

As I see it, the basic justification for our technological society, as it has evolved over a period of somewhat less than two centuries, lies in the exceptionally broad opportunity it has provided citizens for individual expression and initiative. At no time in past history have more individuals had the opportunity to devote a large proportion of the product of their labor to those things that express their own desires than they do today.

But, our recent history also tells us that the maintenance of a society providing for broad individual election and for widespread exercise of individual initiative depends upon individual rewards, which may be interpreted to mean individual betterment—and, particularly, betterment as defined by the individual's perceptions. And the vast majority of individuals in our society have perceived individual betterment in material terms, whether this is ownership of a dishwasher or the opportunity to travel. Even totalitarian states have found it necessary to provide considerable material incentive to the population.

It may well be that there is a sufficient gap between the subsistence needs and economic productivity of the population to accomplish a transition to the purely "soft" energy technology Lovins advocates. However, it is implicit in the changes he proposes that the population must sacrifice a great deal in terms of material well-being. If we are going to replace our existing energy industry with a new decentralized, "soft" energy technology, it would appear to follow that, somehow or other our existing assets—which have been paid for by the past "gap" between gross production and personal consumption—must be replaced, thereby greatly diminishing that which is available within the system to provide rewards for the population. Indeed, Lovins proposes to replace a substantial portion of our energy production and conversion capability not once but twice within fifty years—first by converting to the direct burning of coal and then replacing this with "soft" energy technologies.

In addition, Lovins proposes that energy consumption in the transportation industry[1] be reduced by two-thirds. It is reasonable to conclude that this reduction would require a very large-scale use of mass transit. But greatly increasing our use of mass transit implies much more than an investment in buses, rapid transit lines and the like.

Because the pattern of our urban-suburban residential and industrial development does not lend itself to the cost-effective use of mass transit to the extent needed to achieve the level of transportation energy efficiency Lovins glibly represents as being "a reasonable estimate for early in the next century," the sought for energy savings would appear to require a massive restructuring of our metropolitan areas; and with it, massive replacement of residential and commercial structures. Again, a process of forced abandonment of our capital stock and its replacement.

Generating the capital required for the least capital intensive approach to resolving our energy problems must certainly be regarded as a difficult problem. The process of capital formation is, of course, no mystery. Very simply, it is the difference between production and consumption. To the extent that we adopt plans requiring accelerated capital formation, we must increase this difference. However, if we reduce the product available for consumption, we necessarily reduce or eliminate the material incentives available to meet individual expectations of betterment. And recent history has shown us that nations can only briefly—and then only in times of great perceived danger—gain acceptance for policies which reduce consumption, without resorting to severe repression of individual liberties.

Lovins claims that the transition to a soft energy technology society can be effected while maintaining economic growth, by identifying his future society as one of elegant frugality and one in which individuals pursue intellectual rather than materialistic goals. He further claims that the tally of the ballot box supports his contention that a substantial—but invisible—social movement supporting his concept of an ideal, elegantly frugal society already exists. I think most analysts of the last election will tell you that the central issue of the election was economic and that, generally, the winners were those who convinced the voters that their policies were the ones best suited to accelerating economic growth.

SOLAR ECONOMICS

Lovins advocates widespread use of solar heating and cooling, stating that solar heat is cost competitive with electric heat throughout most of the United States. This is true—but only if the solar system is limited in size so that it may operate efficiently. The fraction of the heating and hot water load which can be cost-effectively met by a solar installation varies significantly with climatic conditions. In the United States, it varies generally over a 40% to 60% range.

But Lovins goes on to imply that a doubling of capital cost for a 100% solar heating system as compared to that for a 66% or 75% system is a liberal estimate. This is simply not true.

Many careful analyses of the relationship between solar system size and the percentage of total heat requirements supplied by the system have been made. One of the more reliable of these studies[2] indicates that a system intended to provide 85% of heating needs would be 2.8 times as large as one designed to carry 60% of the needs. In greater detail, system size for various percentages of solar heating follows this pattern:

60 percent	1.0
70 percent	1.28
75 percent	1.65
80 percent	1.94
85 percent	2.80

As is typical of such studies, a 100% solar system has not been calculated simply because it would be too large to be of interest.

Since climatic conditions will not change radically in fifty years, I must logically take the position that, although solar heating can make a major contribution to our national energy budget in the next fifty years, it cannot reasonably be a 100% source of heating energy. Consequently, there will be a continuing need for "conventional" energy sources to provide that portion of the heating load which cannot be logically provided by solar energy.

Lovins' article carries us one step further forward into the realm of fantasy when he suggests that "active" solar systems, using separate collectors and storage, can be replaced in new construction with entirely "passive" systems. It is true that, as a solar system is designed to carry an increasingly larger percentage of the total heating load, thermal storage requirements increase exponentially. This is part of the reason for the exponential increase in cost of active systems designed to carry overly large percentages of the heating load. The problems of providing long-term heat storage in passive systems are, however, much more severe than in active systems. Therefore, a passive

[1] While we must find a substitute for liquid transportation fuels derived from petroleum, I fail to understand Lovins logic in insisting that the alternative must be alcohol produced from farm crops. For example, we may logically ask why this method of converting solar energy into a useful form should be considered desirable while dismissing as undesirable the use of solar generated electricity. After all, the conversion efficiency of solar electric devices is ten or twenty times higher and can make use of roof-tops or of land area unsuitable or unavailable for cultivation.

[2] Pacific Regional Solar Heating Handbook," Report LA-6242-MS, Los Alamos Scientific Laboratory. Location of study: Fresno, California, which climatically, is somewhat better for solar than the average for the United States.

system carrying 100% of the heating load becomes even more difficult to achieve than the "100%" active system.

It is quite true, as Lovins states, that the storage of low and medium temperature solar generated thermal energy is technically quite straightforward, using water tanks, rock beds, or perhaps fusible salts. However, the economics of long-term storage of medium temperature thermal energy cannot be ignored. If one assumes a relatively wide operating temperature range, approximately 120 Btu per pound of water can be stored. Fusible salt storage technology, which is still not fully developed, promises to increase storage capabilities by a factor of at most six.

On the other hand, coal provides 10,000 to 12,000 Btu of energy storage per pound. Even when this is discounted by two-thirds to reflect the loss of energy in electric power generation and transmission, we find that energy storage in coal is substantially the more efficient mode. Thus, it is easy to see why the high capital cost of long-term, high-volume solar thermal energy storage is one of the reasons why "100% solar" is difficult to achieve.

The optimization of solar energy storage has also been studied extensively. And it appears that the optimum situation is to provide sufficient storage for both supplementary and (primary) solar energy to make it possible to restrict the demand for supplementary energy to off-peak periods.

Somewhat over 20 percent of the nation's energy budget is used as low temperature heat to heat domestic hot water and to heat and air-condition building space. We in the Solar Energy Industries Association think we can provide about one-fifth of this, or 4 percent of the nation's total energy budget, by the early 1990's; and can ultimately—by 2025—provide about 60 percent of these needs or 12 percent of our total budget. Another large increment of the national energy budget falls in the category of industrial process heat. Solar thermal energy can provide a substantial contribution here as well; although for technical reasons, the rate at which the solar contribution can be realized will be somewhat slower than in the case of heating and cooling. Less precisely, we estimate that 2 percent of the national energy budget may be solar process heat by the early 1990's and 10 percent by 2025. Although the percentages may seem modest, the magnitude of energy requirements is such that their importance is very great.

The immediate problem which the nation faces is to develop replacements for petroleum and natural gas. The extent to which we depend upon these energy resources is several times greater than the potential solar contribution.

Such information as we have been able to gather, relative to the potential contribution from other energy alternatives, convinces us that we must exploit not one but several energy sources. Among these, we include the "hard" technology of solar thermal and solar photovoltaic electric generation, as well as other "hard," non-solar technologies.

ENERGY TRUST FUND

Mr. RIBICOFF. Mr. President, I am pleased to learn that the chairman of the House Ad Hoc Energy Committee, Representative THOMAS L. ASHLEY, with the President's support, has proposed a special energy trust fund. With revenue to be derived from a four cents a gallon increase in the Federal gasoline tax, this trust fund would be used for mass transit systems and for research and development of alternative sources of energy.

Important energy savings will occur through various conservation programs. But conservation is part of the answer. We must look for other alternative fuel sources if we are to lessen our dependence on fossil fuels and insure that we will have future energy resources. However, the development of alternative sources of energy is a vast undertaking. It will cost in the vicinity of a trillion dollars over the next decade. Private capital alone cannot do the job. Serious long-term work on alternative energy sources demands greater governmental support. If we intend to make a real effort to develop the full potential of geothermal energy, coal gasification and liquifaction, nuclear fusion, ocean currents, wind power, solar energy and synthetic fuels within the near future, we must be willing to invest the necessary capital.

An increase of four cents a gallon in the gasoline tax is expected to generate approximately $4 billion annually. These funds can be effectively utilized for research and development in the field of alternative energy sources as well as more efficient public transportation. The action proposed by Representative ASHLEY is a welcome and constructive development in the effort to come to grips with the energy challenges facing America. I am particularly encouraged that the President has indicated his support for such a program.

Mr. President, if we are to explore and utilize alternative energy sources and take meaningful action to promote improved mass transportation, an energy trust fund must be established. The tax revenues which the National Energy Act will generate represent an appropriate and available source for capital for research, development, and demonstration of new energy technologies and efficient public transportation.

I ask unanimous consent that articles from this morning's New York Times and Wall Street Journal on the energy trust fund proposal be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal, July 20, 1977]

HOUSE UNIT EXPECTED TO CLEAR DOUBLING OF TAX ON GASOLINE

(By Albert H. Hunt)

WASHINGTON.—The House Energy Committee, with the blessing of the Carter administration, is expected to approve an increase of four cents a gallon in the federal gasoline tax.

Following a private caucus of committee Democrats yesterday, sources said there was nearly unanimous agreement to back this tax as part of the major energy legislation the panel is considering. It would be imposed two cents this year and two cents in 1978. Action on the provision is likely to come either today or tomorrow.

The four-cent tax boost has been pushed by the committee chairman, Rep. Thomas Ashley (D., Ohio), and yesterday he received signals the White House would actively support the plan today.

President Carter had proposed an increase in the four-cent-a-gallon federal gasoline tax of eventually as much as 50 cents.

The revenue raised by the Ashley proposal—about $4 billion a year—would go into a special trust fund to be used for mass transit systems, for research and development of alternative energy sources, and some of it would go directly to the states.

The general distribution formula that Mr. Ashley and the committee Democrats agreed on yesterday would give 50%, or two cents, of the tax to the federal government for "energy related" expenditures. The exact nature of these outlays would be determined later.

Another half cent would go to the states to defray any loss of revenue from state gasoline taxes. The other 1½ cents would be earmarked for mass transit and a special plan to have the government partly finance car-pooling arrangements around the country through such devices as purchasing large passenger vans.

The committee Democrats, who constitute more than a two-to-one majority on the Energy Committee, discussed the proposal at some length yesterday. Although a few expressed reservations, sources said there's little doubt a strong majority will vote for the proposal.

A four-cent boost in the gasoline tax, many energy experts believe, would be mainly a symbolic gesture. A relatively small increase wouldn't change driving habits much and thus wouldn't have any real conservation impact. Moreover, some liberals complain it's a regressive measure because it has a greater impact on lower-income persons.

But Mr. Ashley argues that the trust fund expenditures in areas such as mass transit could produce real energy conservation. And the House Democratic leadership is behind the plan chiefly to thwart charges that Congress is watering down the Carter proposals.

[From the New York Times, July 20, 1977]

CARTER REPORTED AGREEING TO SEEK GASOLINE TAX RISE OF UP TO 5 CENTS

OFFICIALS SAY MONEY WOULD BE USED TO FINANCE TRANSPORTATION OR OTHER U.S. PROGRAMS

(By Steven Rattner)

WASHINGTON, July 19.—President Carter agreed today to seek an increase in Federal gasoline taxes of up to 5 cents to finance transportation or other Government programs, according to administration officials.

The new tax proposal would replace a stiffer standby gasoline tax that was advanced in April but rejected by the House Ways and Means Committee in June. That tax, which would have been imposed if there were excessive increases in gasoline consumption, could have reached 50 cents a gallon by 1985.

The new formula is intended as a quick, one-time increase in the current tax of 4 cents a gallon. Unlike the earlier proposal, which was intended as a mechanism for reducing the use of gasoline, the new formula would most likely be too modest to have a significant effect on consumption. Instead, proponents of the tax, led by Transportation Secretary Brock Adams, hope to use the funds for transportation programs.

Based on Mr. Carter's April calculations, a 5-cent tax would raise nearly $6 billion annually and would presumably be retained by the Federal Government. The President had intended to rebate collections under the original formula.

Whether the tax will be enacted is problematic, particularly in view of the opposition displayed in the House Ways and Means Committee to both the President's standby tax and a committee proposal for a 3-cent tax.

However, strong support for a proposal similar to that approved by the President today has come from Representative Thomas L. Ashley, Democrat of Ohio, who is chairman of the House's ad hoc energy committee.

Mr. Ashley has repeatedly said that he favors a gasoline tax of 3 to 4 cents to be used for transportation, including mass transit

and carpooling experiments. The ad hoc energy committee, which begins its deliberations tomorrow, is expected to consider the gasoline tax on Thursday.

The President's decision, which was made this afternoon at a meeting with top economic and energy officials, came on a proposal from Mr. Adams, who was also present at the session.

PERMANENT SYSTEM SUGGESTED

The Transportation Secretary, in a confidential memorandum, suggested a more permanent financing system for transportation programs. That system, which would be known as the National Transportation Account, could be financed by revenues from either the new tax on domestically produced crude oil or an added gasoline tax.

According to a source familiar with the President's views, Mr. Carter rejected the former option on the ground that he was committed to returning those tax collections to consumers.

Another Administration source familiar with the gasoline tax deliberations suggested that the potential proceeds from a gasoline tax were not yet committed to transportation and could easily be diverted to other purposes, such as reduction of the deficit.

As originally proposed, the President's energy program would have had an almost negligence effect on the Federal deficit because collections and disbursements under the various aspects of the program were in almost perfect balance.

However, changes made by House committees will result in $30 billion to $40 billion in added Federal deficits over the next eight years, according to Administration estimates.

In his memorandum to the President, Mr. Adams said "our economic models indicate the tax would have to amount to at least 7 cents per gallon to have any impact on demand," and that "there is little likelihood that a tax at this level could be passed this year, and even less likelihood of passage in 1978, an election year."

PSYCHOLOGICAL IMPACT CITED

Mr. Ashley, on the other hand, believes that even a modest tax could help to cut the consumption of gasoline, particularly if the proceeds were used for such transportation programs as carpooling, which could yield further reductions in gasoline use. Some Administration officials believe that any increase in gasoline taxes would be desirable because of its psychological impact on the driving public.

Mr. Adams wrote to the President: "I am prepared under your direction to fight this battle on Capitol Hill. I believe the passage of such a tax this year or next year to be possible, if the amount is reasonable."

However, the Transportation Secretary cautioned that passage of a "minimal tax" of 2 or 3 cents could "lull the Congress and the public into the erroneous impression that the funding need has been responsibly met."

Mr. Adams indicated that there would be a gap of at least $4.2 billion a year between grant commitments and trust fund revenues between 1978 and 1982. He said that if proceeds from the gasoline tax were not diverted for this purpose, "the transportation financing problem will become more difficult."

SENATOR MOYNIHAN'S ADDRESS CONCERNING THE LAW OF THE SEA CONFERENCE

Mr. JAVITS. Mr. President, on June 18 my distinguished colleague from New York (Mr. MOYNIHAN) was the guest of honor at the launching of our Navy's newest nuclear attack submarine, the *New York City*. Quite appropriately, Senator MOYNIHAN addressed his comments to the Law of the Sea Conference, to which I am one of the Senate advisors to the U.S. delegation headed by Ambassador Elliot Richardson. Senator MOYNIHAN points out the critical importance of this 114 nation effort to arrive at a mutually satisfactory convention and states his concern that a final text acceptable to the United States may prove to be unattainable. I share this concern and hope very much it will not turn out to be the case. This is a most important issue which appears now to be approaching a critical stage. I commend consideration of Senator MOYNIHAN's comments to Senators interested in this issue and ask unanimous consent that his speech be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR DANIEL PATRICK MOYNIHAN

Trying to describe what Venice meant to the Mediterranean world of the 15th or 16th Century, the French historian Fernand Braudel writes: "Venice dominated the 'Interior Sea' as New York dominates the western world today."

We welcome this newest dimension to our influence, the nuclear attack submarine *New York City*. I would like to take this occasion to comment on developments now in evidence at the United Nations Law of the Sea Conference, now underway in New York City.

It will seem odd, perhaps, but my thoughts on the occasion go back three years almost to this day when I found myself sitting on the bank of the Thimphu Chu River which flows past the palace in the Himalayan kingdom of Bhutan, where I was attending the coronation of His Majesty Jigme Sinye Wangchuck. It was a memorable occasion on several scores. Of the greater personal significance was the day's fishing. A Scotsman devoted the first quarter of this century getting brown trout into those incomparable streams, but the Bhutanese, as Buddhists, won't kill them. So there they were awaiting me, and for the first and last time in my life I caught all the fish I could hope for. Indeed I grew weary of the work, and fell into conversation with the young Foreign Minister of Bhutan who was watching, tolerantly, from the stream bank. How much, I said, I would regret leaving this incomparable country, at the very top of the world, touching the heavens if any country could be said to do, the very outermost reach of human habitat. The Foreign Minister remarked that he, too, was sorry that he would be leaving. For what, I inquired? Why, for the Law of the Sea Conference, he answered.

That was indeed a bright confident morning, and it seems so far past. In 1970 the United Nations Seabed Committee declared that the resources of the seabed and the ocean floor were the "common heritage of mankind." The United States, far from resisting this proposal, embraced it in the most forthcoming manner. President Nixon's statement on U.S. Oceans policy of that year supported the concept, and the United States entered the negotiations which led to the opening of the Law of the Sea Conference in Caracas, Venezuela on June 20, 1974.

Three years have passed, however, and confidence is fading. Just this week our chief negotiator Elliot L. Richardson, who has played a singular role in American government over so many years now, and who commands a unique respect among the American people and in the United States Congress, spoke of stalemate, and warned that the entire effort "now hangs in the balance."

This is not good news. Not for the seafaring nations of the world; not for the landlocked, not for those, as it were, in between. For the assertion that the seabeds were a common heritage gave to nations everywhere a common interest—Bhutan no less than Iceland, Hungary as much as New Zealand—in how this common heritage is shared.

Nor is it good news that the Soviets appear to have judged that the prospects for failure are sufficiently strong that they should no longer invest any energies in pursuing success. For a long period the Soviets in effect acknowledged that they shared the common interests of the seafaring and technologically advanced nations in getting a good treaty. Now they appear to have cut any ideological losses that might have occasioned, and are routinely supporting the most counterproductive demands of the Group of 77. Thus if the Conference fails, they will have been on the side that will blame us for the failure. If it succeeds, we will have won for them the terms they desire.

Let me state that the United States negotiators do not at all share the Soviet view. Ambassador Richardson's statement on June 13 had the desired effect of bringing forth a new draft which could be described as very substantially improved—from, that is, its predecessor which was plain unacceptable.

Some general comment might accordingly be of use from someone who was marginally involved in these negotiations at an earlier stage, and who will be one of those assessing the final result if, hopefully, a treaty is agreed upon at an early date and sent to the Senate for ratification.

I speak now to the Group of 77, now 114 countries in all, and I shall speak to what I believe to be the two principal questions involved here.

First, do the developing nations understand that by entering into these negotiations, and remaining faithfully with them, the United States and the western nations generally have agreed to negotiate for and, in the bargaining sense, to pay for rights which exist in the absence of a treaty? We did not have to do this; we wanted to do it. We wanted to do it, among other reasons, because we wanted to establish a regime for the use of the resources of the seabed which would produce resources that would be shared with the farmers of the Thimpu Chu River in Bhutan—and the Yangtze, and the Congo, and the Amazon. We did not have to do this. We have under existing international law, including as Dr. S. Fred Singer has noted, the 1958 Geneva Convention, the perfect right to extract mineral resources from the deep ocean beyond the continental shelf. Moreover, we have the technology to do so.

I remember at the United Nations I had breakfast one morning with officers of the Kennecott Corporation, which has its headquarters on 42nd Street in New York. We spoke of the matter, and I asked the company's President: if it were decided to go into deep sea mining that day, how long would it be before manganese nodule copper would be used in lamps on sale in Brooklyn? 1985 was his reply. That was two years ago, and so I assume his answer today would be 1987. We have lost two years and the developing world has lost two years also.

And, we need some of those metals. We now import 82 percent of our nickel and manganese, 72 percent of our cobalt. We are dependent on other nations for minerals which verge on the strategic. And we would not have to be—we could quickly become almost wholly self-sufficient—if we simply went ahead to do what we have the right to do and the know-how to do.

What we do not have to do is to bog down in an endless parley in which every concession we make is instantly transformed into the next item to be negotiated.

There is a second and larger question. It is well known that the greatest obstacle to agreement at this point has to do with the nature of the Seabed Resource Authority. How will it be run? Will it have complete control over who may or who may not undertake seabed mining, or will there exist a right of access by all parties, public and private?

The Group of 77 clearly opts for an all powerful international authority. Their newest draft states: "All activities in the area shall be conducted on the Authority's behalf." ". . . All activities in the area shall be conducted, organized, and controlled by the Authority . . ." We resist this. We want to make sure, among other things, that the seabeds will be open to private businesses which meet internationally agreed standards for such operations. We remind ourselves of Grotius' great dictum: the oceans "can neither be seized nor enclosed." (Mare Liberum)

Here once again we glimpse what my senior colleague Senator Javits, in a brilliant address to the Senate reporting on the recent (and failed) North-South conference in Paris (the Conference on International Economic Cooperation), termed "the abyss of difference between the developing countries and the developed world."

There is a simple point to be made here. The members of the Group of 77 will not like hearing it, but if they really want a Law of the Sea Treaty they are going to have to try to understand us, just as we must try to understand them.

The simple point is this: Most of us in the West—not all of us, by any means, but most of us—regard free economic activity as an indispensable condition of free political activity. We know that most nations in the Group of 77 do not believe this, or don't think it matters. We do not ask them to change their views. But we do ask them to understand that we do believe this and we do think it matters.

It comes to this: Of the 114 nations in the Group of 77, the Freedom House survey can find only sixteen that could be listed as free, which is to say, these are nations in which citizens enjoy free political activity. Now obviously for many of the governments of the other 98 nations free economic activity—after a point at least—poses as much a threat to their way of doing things as would free political activity. And so they will not have it. Which is all well and good.

But they must not tell us that we cannot have it. For to do so is to tell us that we must risk losing the political freedoms that are precious to us beyond all things.

The Group of 77, so adept at asserting principles, must understand that for us, too, there is an issue of principle at stake in these negotiations.

We will not abandon the economic and political principles that have created our society in order to provide ideological sanction for the dictatorships of the Group of 77. I speak not as a negotiator of course, but as a Senator. I speak in the desire that there should be a treaty, but in the conviction that nothing would be worse than a bad treaty. I speak as one who wholly supports the efforts of Senator LEE METCALF of Montana to make it possible for American firms to get on with the job pretty soon now, treaty or no treaty.

We want a treaty. We want a regime of shared responsibility and shared resources. But we remind the new nations of the world that by law the seas are free today, and we are not about to negotiate away that freedom in order to provide international sanction for political systems that are so painfully different from and usually opposed to our own. Do not suppose we do not understand you on this. We understand you well enough.

Do not suppose it is going to come as any surprise to us when some regime accuses a Woods Hole survey of stealing vital secrets of its continental shelf. The freedom of science is as threatening to repressive regimes as is any other freedom.

But this does not mean we cannot work together. It means only that we must seek agreement in open awareness of the complexity of each other's concerns.

At whatever cost in the small change of diplomatic niceties, the Group of 77 must acquaint themselves with the full range of our interests in this negotiation and the steadfastness of purpose with which we will pursue these interests.

THE ART OF ECONOMICS

Mr. GRAVEL. Mr. President, the Brazilian Ambassador to Britain, Roberto Campos, has written a precis on the prospects of economics as a science, especially as used in solving third-world problems.

Mr. Campos is himself a development economist, and he presented his paper over the British Broadcasting Corporation in the course of a series on political growth in third-world nations.

Mr. Campos reaches three conclusions:

First, that economists "must acquire a new humility" and recognize that some of the so-called fine-tuning they are asked to provide may in fact be beyond their capability—a wider field of inquiry, described by the older name of "political economy," may be a more valuable pursuit, he says;

Second, that a solid contribution which economists should be able to make in developing countries is the "formulation of guidelines to reconcile income distribution with economic growth;" and,

Third, the developed Western nations, where capital accumulation and democratic government grew together, may not be a viable model for much or most of the third world—he asks for an end to the "black and white approach to political systems, in terms of democracies versus dictatorships," saying this kind of distinction "fails naively to differentiate modes and degrees of authoritarianism."

Mr. Campos' ideas are indeed provocative. They come from a thoughtful citizen of a nation which is now coping with the conflicting demands of economic growth and political liberty.

I commend the paper to my colleagues and ask unanimous consent that the paper be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

THE ART OF ECONOMICS

Described as the "dismal science" not a very long time ago, economics came closer than any other social discipline in our generation to claim unwarranted prestige as a true science, capable of quantification and prediction. This was made possible by assuming, on the one hand, fairly rational patterns of behaviour in the household and the market place; and on the other, by a massive infusion of mathematics and statistics, the first requiring simplifying assumptions and the second reliable only if used as the drunkard uses the lamp-post—for support, rather than illumination . . .

Perhaps the apex of the prestige of economics as a science came in the immediate post-Keynesian period some thirty years ago. Then we appeared to have reached an ultimate understanding of the recipes for economic stability. It looked as if the old scourge of business cycles had been finally mastered through purposive government intervention. And, new light having been cast on the mechanics of savings and investment, all the necessary ingredients seemed to be at hand for a theory of growth.

In the last few years however, the transition was swift indeed from high status to low esteem. Economists found themselves unable to predict the severity of the 1973/74 inflation and the breadth of the ensuing recession, or of agreeing on recipes to cope with a new hybrid animal—stagflation—this sinister marriage between rising prices and rising unemployment. Those were evils that economists had learned to fight as single beasts not as a consorted monster. Things must be bad enough for the profession when the Wall Street Journal dares say that nowa-days the only purpose of hiring an economist is "to systematize one's mistakes".

Development economics did not escape this humiliating reappraisal of the limits of economics as a science. In Adam Smith's inquiry into the causes of the wealth of nations, development economics played a central role. Subsequently, when Ricardo for technical reasons, Marx for political reasons, the welfare economists for ethical reasons, brought to the foreground the problem of income distribution, development economics was relegated to play second fiddle to other branches of the science.

In the perspective of time, development economics—which is my special interest—appears also to have reached its zenith in the immediate post-war period when technical recipes appeared to be at hand, and international political cooperation forthcoming, for reducing the gap between rich and poor countries. This also proved a forlorn hope. The newly acquired humility of development economists stems from the increasing realisation that the success of their craft has as much to do with social motivation and political institutions than with the manipulation of economic variables. The theory of economic growth has to be interdisciplinary if it is to mean anything. Thus, while it loses its capacity for prediction and quantification, it becomes more relevant to current day problems of the developing countries that still encompass three fourths of mankind.

As every other social science, economics is subject to fits and faddishness. Initially, underdevelopment was interpreted largely as a scarcity of resources. Subsequently, it was found out that perhaps inefficiency and waste in the application of resources rather than scarcity itself was the main culprit. In a welcome broadening of horizons, investments in upgrading human capital (through education and technology) came to be recognized as perhaps more important than the traditional inputs—land, capital and the quantity of labour. Finally, the stage has been set for a fully interdisciplinary approach to the problem of development by recognising that certain patterns of social behaviour—including achievement—motivation, social discipline and political institutionalisation—are essential for reducing destabilising tensions of the modernisation process itself.

The bicentennial of the publication of Adam Smith's "The Wealth of Nations" is an opportune time to look back at the development of economics—which he founded as a science—as well as at the economics of development—which was the central concern of his inquiry. Both have proven to be an unended quest for solution of three basic problems that came to the foreground, with different emphasis at different stages, and which for lack of better terms I shall label—the philosophical question, the social question and the political question.

The philosophical question centres on whether the economic man is perfectible and whether economic growth is a continuous process without visible bounds or whether the stationary state is inevitable.

The "science" or "art" of economics can be credited with surviving several waves of pessimism. Malthus saw a barrier to growth in the race of population against hunger. Ricardo feared the diminishing rent of less fertile land. Marx predicted the explosion of capitalism through the decline in the rate of profits. Stuart Mill envisaged the fatality of the stationary state. Schumpeter saw dangers in the dearth of inventions and the declining enterpreneurship. Some of the early Keynesians predicted the onset of an era of stagnation due to the slowing down of population growth, the scarcity of new frontiers to discover and the ending of the era of great innovations. Quite recently the Club of Rome—congregating economists, political scientists and enterpreneurs—weaved those pessimistic strains into the "theory of the limits of growth" resulting from the population explosion, pollution and the diminishing supply of natural resources. Or stagnation might come from the satiation and boredom of the consumer society.

Invariably these fears have either proven unfounded or doomsday has been postponed. In the end the economic man proved to be perfectible, consumption wants rather elastic, and the boundaries of economic growth vastly expansible.

The social question stems from the difficulty of reconciling acceleration of economic growth with improvements in income distribution. Are the two really compatible? Is an option necessary? And if not how can these two goals be reconciled?

At the outset two extremes can be distinguished: that of the cynics and of that of the utopians.

The cynics would accelerate economic growth whatever the social cost, and rely on the market, eventually to spread the benefits to lagging regions and underprivileged persons. The utopians would immediately activate the distributory mechanisms of the welfare state, in the hope that this will not reduce savings and investment needed for the growth of output.

Quite clearly, a more sophisticated approach is needed to guide developing countries in the task of compatibilising distribution and growth. As noted by the American economist Professor Hollis Chenery, the policy alternatives can be reduced to four basic variants: the productivist approach, which seeks to maximise the current rate of economic growth, by concentrating investments on the highest yielding sectors and regions; the welfare approach, which gives priority to enhancing the level of consumption of goods and services by low income groups through government expenditures and subsidies; the confiscatory approach, which purports to redistribute assets and property obtained through confiscation from wealthier groups; the eclectic approach, which advocates a reorientation of investment by increasing the share of socially productive investment (health, education, housing) in the hope that the slower growth of physical plant will be offset by increased productivity of the human factor.

Of those, the last seems to be the most promising. The first approach—the productivist one—assumes sufficient waiting patience of those underprivileged groups that do not share in the fruits of growth—a politically dangerous assumption. The welfare approach is likely to slow down the feasible growth of production, because of inadequate investment, thus resulting in a less unjust slicing of a stagnant cake. The confiscatory approach is very conflictive and, unless used with moderation, may provoke social turmoil and substantially reduce the growth of productivity.

The final question is the political one. Is there a correlation positive or negative, between political and economic development? Is some form of authoritarianism a fatal, if unpleasant, accompaniment of some phases of rapid capital accumulation?

The answer to those questions lies beyond the reach of economic science; or rather, it brings economics back to its original vocation—political economy—less pretentious in terms of scientific precision and more ambitious as to its field of inquiry.

Let me first dispose of a forlorn hope: that economic and political development would be so intertwined that the advancement of economic growth would also promote political democracy. If experience has shown something it is that there is a disgustingly low correlation between the two. Economic development has occurred under all sorts of political institutions: modernizing autocracies such as Imperial Germany and Japan, and more recently, Spain; ideological dictatorships, as in communist countries; democratic institutions, as in the Anglo-Saxon world and most of Western Europe. The latter outcome—development and freedom—is what it is: a coincidence, not a correlation. Nazi Germany of yesterday was quite developed in industry and technology and yet an example of political barbarism.

If we look at the 140 odd nations that compose the current political universe, one begins to think that we live in the age of the "normalcy of the abnormal". For no more than two score of these nations—and few, if any, developing countries—could be identified as representative democracies in the Western sense of the word.

The majority of developing countries of the Third World either have never known democracy or have lapsed into authoritarian interludes, but many of them remain nevertheless culturally committed to liberal values and democratic institutions.

The implantation of full-bodied democratic systems in developing countries faces a number of difficulties. Historically, they have to telescope the process. That is, to modernise politically in an age of mass consumption, mass societies, and mass culture, while the Western industrialised democracies had a chance to complete the modernisation process before the age of mass politics.

Another source of limitation to the exercise of the democratic apparatus stems from what might be called "mobilisation economics". The need for rapid capital accumulation, deferment of consumption, and strict observance of national priorities requires more often than not placing restraints on two traditional distributory mechanisms in Western democracies; the spending power of Parliament, whose duty it is to respond to constituency appeals, and the reinvidicatory freedom of trade unions, which place greater value on current consumption than on future development.

I have arrived at the end of this disquisition with more fatigue than satisfaction. I will be happy if three conclusions survive. The first is that economists, and particularly those concerned with economic growth, must acquire a new humility and recognise the overwhelming importance of getting a better knowledge of social motivation and political behaviour. In this sense, economics must become less "econometrics" and more "political science". The second is that the formulation of guidelines to reconcile income distribution with economic growth is perhaps the best service that economists can render to the desirable objective of making democratic institutions viable. The third is that the black-and-white approach to political systems, in terms of "democracies versus dictatorships", fails naively to differentiate modes and degrees of authoritarianism. And what is more important, fails to recognise that the double problem of developing countries—telescoping in a few years the long process of development of industrialised countries and administering "mobilisation economics" geared to rapid capital accumulation—may require political arrangements and institutions such as authoritarian-liberal regimes, different from those that proved effective in the industrialised societies. I feel I have committed the sin of attempting to draw sufficient conclusions from inadequate premises. But, as Samuel Butler, I believe, once said, this is after all the business of life. . . .

CAMBODIA: THE FACE OF EVIL

Mr. GARN. Mr. President, 2 years ago this month, we began to receive the first few reports out of Cambodia of the forced exodus of people from the major cities. Unfortunately, the reports have continued to only leak out since these initial ominous stories related the horror of the Khmer Rouge takeover.

While reporters have continued to root out every possible story of corruption or malfeasance in the United States or among our allies, few concerted attempts have been made to find out just what has transpired in Cambodia since the unconditional surrender to the Communist force. Yet what has taken place under this cloak of ignorance is a gruesome spectacle that probably dwarfs what transpired in Nazi Germany 40 years ago.

According to reliable and probably conservative estimates, over one-fifth of the population of the country has died either directly or indirectly at the hands of the new communist rulers—in other words, over 1 million people.

Mr. President, 2 years of peace in Cambodia has led to more deaths and suffering than 5 years of actual warfare. For all those who said that no bloodbath would follow the American departure from Indochina, they need only look to Cambodia. The limited reports out of Laos and Viet Nam indicate severe repression and massive imprisonment—again, 2 years after the conclusion of hostilities.

But in Cambodia, the worst tragedy has undoubtedly unfolded, there the government has simply engaged in the wholesale slaughter of any real or imagined opponents of the regime—and given the nature of the regime, nearly everyone must be an opponent.

Fortunately, the enormous gap in coverage of the slaughter in Cambodia has now been substantially filled by a study by John Barron and Anthony Paul. In their recently published book, "Murder of a Gentle People," they provide a detailed examination of what has happened in Cambodia since the military conquest by the Communists in April 1975. Fortunately, part of this study has already appeared in Reader's Digest so that a much larger number of Americans might become aware of the fate of Cambodian people. One would hope that world attention would focus on this gruesome situation and the United Nations and other international organizations would take whatever actions they can to stop the slaughter of innocent people.

The publication, Human Events recently conducted an extensive interview

with John Barron that deals with some of the most important questions concerning Cambodia. In the interview Barron relates the basic information he has gathered through numerous personal interviews with refugees and other information from the scene of the tragedy. He points out the incredible regimentation in Cambodia today and how even minor infractions of work rules can lead to death sentences. Even marriages are carefully controlled and "if you don't follow the prescribed procedure you can be shot."

Barron also points out how the use of Cambodia as a sanctuary by seven North Vietnamese divisions in March 1970, precipitated the escalation of war in Cambodia, and not the brief American incursion in response 3 months later. Similarly only the continued support from their Communist allies made the success of the Khmer Rouge possible. Since the takeover, the Communist Chinese have continued to furnish critically needed supplies to their allies.

The fiction about the origins of the Cambodian phase of the war continues to appear in our local newspapers from time to time, generally put forth by those whose interests have been from the beginning to produce a Communist victory in Southeast Asia, and repeatedly unthinkingly by the reporters and editors of our media. Mr. Barron's article provides a useful counter to this disinformation.

But possibly the major point that Barron drives home in this article is the appalling lack of concern about the plight of Cambodia today. He points out that in 1975 massive demonstrations occurred throughout the Western world against the American actions in Indochina, allegedly because of the suffering inflicted upon the people living there. But now, in the absence of war, we have much greater suffering and far more people being killed, yet virtually no outcry at all. Barron quite properly points out that if the incidents before 1975—were worthy of protests, surely we've got our priorities and standards out of balance when we fail to say anything about the extermination and continuing extermination of hundreds of thousands of Cambodians.

This point is very well taken and one would hope that the Congress will thoroughly investigate the plight of our former allies in Indochina. What will our allies around the world think of their continuing relationship with the United States if we can so callously ignore the suffering of allies who joined us in battle a few years ago. We should direct our Ambassador at the United Nations to demand that the General Assembly take up this issue and bring any pressure they can to stop the unending slaughter of people.
